THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Couper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 21, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.
PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.
Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is THE JOURNAL for Investors, Speculators, and business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by an financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to all buyers. SPECIMEN COPY POST FREE.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YOKOHAMA: SATURDAY, SEPT. 29TH, 1894.

SUMMARY OF NEWS.

MANY foreign residents have contributed money towards the war expenses.

MOST of the Ministers of State are now at Hiroshima in attendance on the Emperor.

THERE has been a great influx of Japanese traders into Korea since the fall of Pyong-yang.

FOREIGN military attachés are following the Japanese troops by permission of the War Department.

THE Chinese Government now intend to refuse to give up the *Tenkyo Maru* until the close of the war.

THE Diet has been convened to meet at Hiroshima on the 15th prox. for a session of seven days.

THE members of the House of Peers have presented 551,500 cigarettes to the Japanese soldiers in Korea.

A JAPANESE clerk in the service of the Ordnance department at Tientsin, has been decapitated.

ONE hundred and ninety cattle were destroyed in a fire which broke out on Miyake Island, Okinawa, on the 15th inst.

LORD RANDOLPH CHURCHILL, who has returned from Miyanoshiba, and is now in Nikko, is said to be improving in health.

ALL the big towns of the Empire are sending deputations to Hiroshima to convey congratulations.

utions to the Emperor on the recent naval and military victories.

THE application for the establishment of the Tokyo Commercial Bank was sanctioned by the Government on the 22nd inst.

SEVERAL changes among local officials have taken place in consequence of the promotion of Mr. Kono Chuzo, to be Governor of Okayama.

FROM the 1st of August up to the 21st inst. public subscriptions to the amount of yen 224,832 were received by the Naval Department.

MAJOR VON HANNEKEN, is reported in China to have rejoined the Chinese Fleet, having only been wounded in the battle of the Yellow Sea.

MR. OTANI KANGI, the great Japanese tea-merchant of Yokohama, has presented a thousand bags of tea to the War and Naval Departments.

THE value of gold dust, silver specie, and Korean money captured by the Japanese army after the occupation of Pyong-yang is estimated at yen 955,520.

THE *Togaku-to* are again causing some trouble in Korea. A Japanese lieutenant, who was in charge of a reconnoitering party, was killed by them the other day.

LI HUNG-CHANG has been deprived by an Imperial decree dated the 17th inst. of his peacock feather and yellow riding jacket, for dilatoriness in preparing for war.

PAINCK KOMATSU YORIHITO, who has been travelling through Europe and America *incognito* as Count Mishima, returned on Wednesday by the O. & O. steamer *Belgie*.

MR. SONE, Chief of the National Debt Bureau, was recently deprived of his gold watch while passing the Rokumeikan, Tokyo. The article was eventually discovered at Fujisawa.

SEVEN fishermen of Takehira, Tojiki District, Fukui Prefecture, were caught in the storm of the 11th inst. Their wrecked boat having discovered, they have been given up as lost.

THE election of President and Vice-President of the Guild of Japanese Commission Merchants, Yokohama, has resulted in the return of Messrs. Tanikawa Fukutaro and Tajiro Ichijiro respectively.

THE officers of the Nippon Yusen Kaisha in Tokyo, and the Branch at Yokohama held a banquet at the Koyo-kan, Shiba, Tokyo, on Saturday last to celebrate the victory of the Japanese Navy and Army.

A CHINESE troopship was wrecked near Wenchow recently. When her passengers, consisting of some 1,000 Hunan troops, made the land, they at once decapitated the steersman and mutilated other members of the crew, alleging treachery as an excuse for their diabolical behaviour.

SERVICES in commemoration of the spirits of those who fell during the Satsuma rebellion, took place on Noge-yama on Saturday and Sunday. Prayers were also offered for the success of the Imperial forces in the present war.

DR. LOWSON, of the Hongkong Civil Hospital has been the recipient of many dinners and receptions among the Japanese medical profession. On Saturday he was presented in Yokohama with a pair of vases of local manufacture. Drs. Kitazato and Aoyama received gold medals

early, and has not been preceded for the last ten years. It is fifteen days earlier than the previous year, which preceded the date of the first snowfall in ordinary years by eleven days.

COUNT ITAGAKI, leader of the *Jiyu-to*, leaves the capital on the 1st prox. for Hiroshima to convey congratulations to H.I.M. the Emperor on behalf of the Radical partisans.

WE read in the *Yokyo Asahi* that Commander Endo Masuzo has been appointed to the *Tsao-kiang*, the Chinese ship captured at Phung-do, and now a ship the Japanese Navy. The appointment of other officers and personnel took place yesterday.

REUTER telegraphs that it is stated that, at the instance of the British and Russian Ministers, Li Hung-chang had accepted their proposal for an armistice, but that Japan had refused, and is hurrying on preparations for a winter campaign. The statement is untrue. An article in *The Times* says that Great Britain's policy with regard to Japan is an entirely benevolent one, as Great Britain and Japan have no conflicting interests. The article, however, warns Japan that Russia is hankering after a suitable harbour in the Pacific, the acquisition of which would be equally threatening to Great Britain and Japan. In the event of foreign intervention, *The Times* expects that Great Britain and Japan would be found standing together. The Czar is suffering from Bright's disease. Native tribesmen are besieging Kilwa (or Quiloa) on the coast of Zanzibar, and are menacing Lindi. German gunboats have been despatched to the spot. An Italian Editor at Cairo has been ordered to leave Egypt owing to certain diatribes published in his paper against the British. A syndicate has bought from Portugal the port of Delagoa Bay in S. E. Africa. It is rumoured that the purchase has been effected on behalf of the Transvaal Government, but the agents of the syndicate declare that the transaction is purely a commercial venture. The Moors have attacked the British and Danish Vice-Consuls at Casa Blanca, and officials were stripped of their clothing by their assailants.

THE Import trade is much as last reported. Yarns continue in fair demand, and in Grey Shirtings a good current business has been done, both for "spot" and deliveries at an early date, and though previous bargains have been promptly taken over, a somewhat heavy stock remains, which precludes the possibility of an immediate rise in values. Turkey Reds have been taken in moderate quantities at current rates, but Woollens are generally dull, though Flannels and Blankets continue to move off the market. The Metal trade is not so brisk as it might be, dealers complaining of want of transport facilities. The Kerosene market is not much changed, deliveries keep moving and sales are moderate at quotations. A fair amount of business has been done in Sugar of Manila and Formosa kinds, but at a reduction in price, and the market closes weak. There is a moderate demand for White sorts at late rates, and these close firm, though the stock has been largely increased. The Silk trade has not been brisk, and the business done has been in buyers' favour slightly, though sellers are slow to give way. There is more activity in Waste, the parcels weighed being mostly for Europe. The Tea trade is quiet, and arrivals have exceeded sales, as most of the leaf offered is of the lower grades which are not in strong demand. Exchange has hardened in sympathy with quotations in China.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

During the past week the vernacular press touched upon many topics of considerable importance, discussing them in a spirited tone, and—what is almost miraculous with the newspaper fraternity, so rich in petty chiefs and “island heroes”—not a shadow of party difference was apparent. When the press is united, one can not doubt that the nation is at one. The saying that a common foe converts enemies into friends is literally realized on the occasion. The Parliament which is to meet at Hiroshima next month has a leader or two devoted to it by all the papers, without a single exception. The *Nichi Nichi* invokes the Houses and the Cabinet Ministers to forget everything but the fact that the Emperor is superintending the affairs of the war in person, not from his palace either, but from a cottage in a provincial town. Given that one thought, and the rest, our contemporary says, will follow in natural sequence. It tells the Diet not to oppose any manner of obstacle to such departures from prescribed routine as the Cabinet may seek to make in order to meet the pressing requirements of the moment. The *Yomiuri* advises the two Houses to remember that nothing is more important than to present an Address to the Emperor congratulating him upon the victories gained by his arms both afloat and ashore, and blessing him for his great moral influence, “which is enough to make each and all of his subjects smile even in death for his sake, and which augments an army’s strength a hundred times; and to pass a vote of thanks to the forces abroad, before they enter upon the fresh tasks ordered by their Sovereign.” As to the Diet’s actual work, the Progressionist organ says that two things only need be discussed:—(1) the nation’s willingness to defray the expenses necessary for the prosecution of the war; and (2) the people’s views as to the method of bringing the war to a termination. Our contemporary further advises the Houses to spare no pains to prove themselves a worthy legislature, “the eyes of all the world are now upon the nation and its institutions. The *Shin Choyd*, after saying many things of the above nature, adopts the tone of large-minded statesmen, and exhorts the Diet and the Cabinet to consider how the commerce and manufactures of the country may be kept in a thriving condition, side by side with the energetic prosecution of the war. It justly fears that, if the nation’s money-earning capacity be crippled during the war, the country when peace is restored, will find itself face to face with terrible disasters. Other papers write nearly in the same strain, not one of them omitting to tell the peers and the people’s representatives that the eyes of foreign Powers are fixed more sharply than ever upon their proceedings. They are bid to think well how to show themselves worthy legislators of a country, whose military prowess has made not a few foreign journals speak with admiration of Japan.

The *Kokumin* draws a parallel between the naval engagement at Trafalgar and that off the Yalu river. It says that the former gave to England command of the her enemies’ seas as the latter has given it to Japan, and that the duration of the fighting—four hours and forty-five minutes—exactly the same in both engagements, may be the ultimate limit of human and mechanical powers in a sea struggle. The same journal declares in a separate leader that not England alone can henceforth boast of progress at sea, and that no reasonable newspapers, excepting of course those of China, can now grudge the epithet of “great” to this country.

The *Kokumin*, it seems, has on its staff some writer poorly versed in foreign affairs. In speaking of the recent battles in Korea, it invites the attention of foreigners at large and of missionaries in particular, to Japan’s manner of fighting. It narrates how the Summer Palace was unjustifiably stripped of its treasures and finally destroyed by Lord Elgin’s troops, and

then asks that this be compared with its country men’s conduct in the peninsular kingdom. But Lord Elgin’s troops did not sack the Summer Palace. The *Kokumin*’s history is at fault.

The *Nippon*, the *Kokumin*, the *Mainichi* and some other journals state that now is the time when diplomatic talent is most needed by Japan. They assert that, while they do not doubt that much depends upon military success as regards Japan’s emergence from the present war, more depends upon the tact and talent of her diplomatic functionaries. Their arguments are obscure. We fail to follow them. One paper states that it would be unwise for Western Powers, from motives of jealousy or ambition, having already witnessed the barbarism and weakness of China beaten by the civilization and strength of Japan, to side with the former and thus give umbrage to the latter. These papers declare that China, in her present state, is a country that all rational men should despise as the enemy of human nature itself.

The *Kokumin* devotes a corner of its leading columns to the question of the social evil in Tokyo. It says that the number of women of doubtful character, besides licensed prostitutes, is estimated at 9,860, a total nearly equalling that of brothel occupants and other abandoned women in Paris. Our contemporary also notes that the number of packs of flower-cards sold at famous stores during the last half-year was 644,500, which, to use the *Kokumin*’s language, “must have carried a host of evils and disasters in their train.” This moral journal remarks that, even when the nation’s attention is called abroad as at present, the amelioration of social manners at home is not a subject to be lost sight of.

The *Nippon* has an article in which Viscounts Kabayama and Aoki are spoken of as men great enough, the one to represent the best qualities of Satsuma in the *Meiji* Revolution, and the other, those of old Choshu. Their candid conduct in the Lower House, when they were in office a few years ago, is applauded as sufficient to prove them widely different from other Ministers and ex-Ministers of Sat-Cho extraction.

Several metropolitan papers have discussed the question of the termination of the present war. The *Nippon*’s argument is the most elaborate and outspoken. It has devoted three leaders to the subject. It advises the Government to go to lengths such as no other country would surpass, were she called on to negotiate with China after a complete victory. The *Nippon* leaves it to the judgment of the Cabinet to determine what terms shall be dictated to the Middle Kingdom after the fall of Peking, which event it speaks of as though it were an accomplished fact. But one thing it emphatically advises the government not to overlook; namely that China is a country ready at any time to resort to perfidy and foul play and therefore whatever promise she makes must be guaranteed by ample security. As to that security, which the Tokyo journal thinks indispensable to the independence of Korea and the future maintenance of peace in Eastern Asia, several proposals are advanced. First, as essential to Korean independence, these things are mentioned:—

1. To make China consent not to station her troops within a certain number of miles from the Korean boundary.
2. To forbid any Chinese war-ship from entering a Korean harbour without giving notice to Japan.
3. Not to allow any Chinaman to enter the Korean Kingdom with arms in his hands.

Secondly, as necessary for future peace in Eastern Asia, the following are stated:—

1. To establish the right of placing a Japanese force at such places in China as the Japanese Government may think fit.
2. To set limits to the construction of works of defence at the entrance to the Gulf of Pechili, and to permit Japanese vessels to ply on the Yellow-Kiang.

Then, this bold-toned journal, proceeding to speak of the war indemnity, says that it should take one of the three following forms:—

1. To demand a sum amounting to ten times as much as the actual war expenses incurred by Japan.
2. To demand a sum sufficient for improving the military system of Japan to the full satisfaction of the Japanese Government.
3. To dictate terms such as will materially lessen the fighting capacity of China.

The *Nippon* goes on to enumerate the following as indispensably necessary in dealing with China:—

1. To make China pay at once the whole sum agreed upon, before withdrawing the Japanese forces from her Capital.
2. To make China agreed to the temporary occupation of a part of her territory, if the payment be in several installments.
3. If there be no prospect of getting an indemnity paid up at once or in a short space of time, to take from China such portion of her territory as may be useful to Japan from either an economical or a military point of view.

The *Mainichi* refers to misrepresentations in some Russian and English newspapers which allege the object of Japan in fighting China is to annex Korea. “Japan,” it writes, “may have ambitious men who think of annexing China, not now of course, but some time in the distant future. But she has not a madman who dreams of absorbing Korea as the result of the present war.”

The *Yiji* gives a series of tables to prove how seriously the Chinese fleet was crippled in the recent naval engagement and laughs at any strength the Canton and other two Chinese Squadrons may possess. It states with quiet confidence that the control of the Chinese seas is already held by the Japanese navy. This sober journal and the spirited *Shin-Choya* unite in declaring that England follows a mistaken policy if she inclines to favour China as a rampart against a Russian invasion of her Indian possessions. China, they say, is like an age-stricken beast too helpless and disfigured to be either loved, feared, or used. Some other Tokyo journals, writing in the same strain, go so far as to doom the colossal Kingdom to Poland’s fate.

The *Kokkai* regards the successes that have attended Japan’s arms as the dawn of civilization in Asia at large. It condemns China as the enemy of civilization and enlightenment in Asia, and states that, this foe laid low, other Asiatic countries will spring up to vigorous progress and will no longer groan helpless under the civilized oppression of Europe. The recent victories will, in course of time, alter the whole aspect of political Asia, to the advantage not of Asia alone, but of Europe too, for what the latter may lose politically or territorially, will be more than counterbalanced by the growth of its commercial interests.

The *Yomiuri* advises Li Hung-chang, in a sarcastic tone, to imitate Osman Pasha, as a desperate means of redeeming his lost fame. Osman Pasha, says our contemporary, though beaten by the tide-like force of the Russian army, left behind him an enviable name. The “old knave” (we quote from the Tokyo journal) cannot by any means come up to the Turkish general’s standard, but, if he imitates him, his memory may be pitied by the world and even adored by his countrymen.

The *Yiji*, in its issue of yesterday, says that no proposals of peace will come from the Chinese Government until the gates of Peking have been blown in by the Japanese. Then, and then for the first time, the ostrich-like Ministers of the Celestial Empire will learn of the defeats that the Chinese forces have suffered both on land and sea. Until then, these personages will be dreaming of the greatness of China and the invincible strength of her army and navy.

EDITORIAL NOTES.

ARREST OF TWO JAPANESE STUDENTS IN SHANGHAI.

We find in the *Nippon* and other metropolitan journals particulars concerning the arrest of two students of the Japanese-Chinese Commercial Institute at Shanghai, the charge preferred against them by the local Taotai being that they were spies. The names of the unfortunate young men are Kusunouchi Tomojiro and Fukuhara Rintaro. It appears that some weeks ago the Taotai made an announcement to the effect that all Japanese conforming to Chinamen in outward appearance were spies, and that any Chinese subject who would inform the authorities of the whereabouts of such Japanese should receive a money-reward. The two young men happened thereafter to take lodgings at a certain hotel in the French Concession, whereupon the landlady, eager to obtain the promised reward, secretly laid information against them, they being, in accordance with the rules of the Institute to which they belonged, habited in Chinese style. Immediately upon the receipt of this intelligence the Taotai despatched constables to the spot and had them arrested. In the meantime, the matter came to the knowledge of the French Consul who at once called upon his American colleague and gave it as his opinion that it was inconsistent with international courtesy to permit such an arrest on French territory to pass unnoticed; for the two students had put up at the hotel with the avowed intention of investigating commercial matters only. The American Consul should, he concluded, as guardian of the Japanese residents in Shanghai, demand the surrender of the two suspects. Acquiescing in this view, the American official immediately began negotiations with the Taotai for the extradition of the Japanese. To his representations the Taotai assented, and handed over the prisoners. A few days later he sent again to the American Consulate and demanded, in the name of the Emperor of China, that the liberated men should be returned to his custody. They had, he declared, been arrested as suspected spies, in which case it was contrary to all law to surrender them to a third party; he had therefore been commanded by his Sovereign to take the necessary steps against them when they had been returned to him. To this the American Consul replied that he, as the representative of a free and independent state, was not concerned with commands issued by the Chinese Emperor, and that he could not give up the men under the protection of his Government. This reply was met by the Taotai contending that as the Japanese Government had compelled Chinese subjects staying within the limits of its jurisdiction to conform to Japanese laws, the Chinese Government was surely on its part entitled to proceed in like manner against Japanese residents within its borders. Now it seems that when the United States agreed to extend its protection to Japanese subjects staying in China, all American Consuls in that Empire received explicit instruction not to interfere in any case where the Chinese Government acted as prosecutor in matters pertaining to Chinese military regulations; and for this reason the American official now thought it incumbent upon him to acquiesce in the Taotai's demands. The two young men were therefore once more given up to the mercies of the Chinese authorities; the formal surrender taking place, according to the metropolitan press, on the 2nd inst., in the presence of the American Consul, the Taotai, and a Mr. Ueda, a Japanese who acted as interpreter.

Six other Japanese attending a certain commercial institute in Shanghai narrowly escaped meeting a similar fate. On suspicion of espionage the Taotai requested the Settlement Police Force to arrest and surrender them to the Chinese authorities. The Council immediately convened a meeting and came to the resolution that the presence of persons suspected by the Chinese Government was injurious to the preservation of public tranquillity; that therefore the supposed spies should be delivered

ed up. The members of this body are all foreigners, and one of them, an American in the employ of the Shanghai Branch of the Yokohama Specie Bank, having been present at the deliberation and therefore acquainted with the tenor of the resolution, at once communicated the result of the meeting to the head of the Japanese Association in that port, requesting him to take prompt measures to secure the safety of the six men in question. The gentleman in question at once proceeded to the American Consulate and asked for advice, and was told that the only thing to be done was to get the men out of the country without loss of time. Fortunately a vessel was advertised to start for Japan on that same day, the 6th or 7th inst.; tickets were procured for the suspected Japanese and they quietly left Shanghai. It is further stated that when the Taotai, in the presence of the American Consul, opened and examined the personal effects they had left behind them not so much as a letter or anything else of the slightest suspicious nature was found. These two cases were sufficient warning. Knowing that they would have in future to submit to Chinese rule if they stayed in Shanghai, the Japanese residents still in that port started for home on the 8th inst., about fifty taking passage on the *Melbourne* belonging to the Messageries Maritimes, while one hundred and sixty others went on board a chartered steamer of the Yusen Kaisha. The only Japanese subjects now left in Shanghai are about one hundred women, all of whom are in the employ of foreigners or Chinese. Situated as they are, it is believed that they run no risk whatever.

As a corollary to the above, we note that a day or so ago, some excitement was aroused in Shinagawa by the report that a Chinese spy had been discovered. It appears that a somewhat foreign-looking personage, though habited in the national costume, entered a local restaurant and gave orders for a plentiful and sumptuous repast. He kept his hat on, however, during the course of his meal, and one of the waitresses soon noticed something peculiar about his hair, evidently a queue twisted into a neat coil. She at once told the landlord of her discovery, who informed the police, and soon a number of detectives were watching the supposed spy from the convenient obscurity of a large screen. Somehow or other the "Chinese emissary" seems to have suspected the presence of his would-be captors. Walking quietly up to the screen he begged that they would take no further trouble, as he was a native-born and pure-bred Japanese. He had papers about him which fully substantiated his claims, and it eventually appeared that he was one of the Japanese who had been studying at the above-mentioned Commercial Institute in Shanghai, where the Chinese coiffure is *de rigueur*, the adventure ended in a hearty laugh all around and the pseudo-Chinaman hastened to order a new course of refreshments for his countrymen.

CURIOUS AMMUNITION.

A somewhat remarkable story is told by a Tokyo *Ko Shimbunshi* which, if authentic, gives an insight into the workings of Chinese officialdom. A foreign gentleman residing in Tientsin recently had occasion to make some repairs in a fire-place, and ordered a Chinese mason to bring the necessary clay for the purpose. The gentleman was greatly surprised the next day to see the mason approach with a cart-load of what appeared to be full grown cannon-balls. Upon telling the man that he wanted clay and not ammunition, the artisan replied, with a quiet chuckle, that the suspicious objects were really nothing but sun-dried globes of clay, painted black. Some time before the actual declaration of war with Japan, Viceroy Li had taken the fancy to inspect a number of the vessels belonging to the Northern Squadron. Many of the ships, however, were insufficiently supplied with ammunition, the money paid out for that purpose having been otherwise "appropriated." As this little story would probably not meet with the approval of the Viceroy,

a number of bricklayers were at once set to work manufacturing cannon-balls out of clay, the spheres being modelled after the real objects, painted black, and being quite a work of art when completed. These innocuous missiles were then smuggled on board several of the vessels, and when the inspection was held proved a complete success. Viceroy Li never for a moment suspecting that his idol was made of clay. This is the story said to have been told by the veracious mason to the Tientsin foreigner; and though one must make allowance for a pardonable anti-Chinese bias in Japan just at present, the tale as it stands has an undeniable Chinese ring. Bret Harte is not our sole authority for the artfulness of the inhabitants of the Middle Kingdom.

LEFT FOR DEAD.

In the *Tokyo Asahi Shimbun* and several other metropolitan journals we find a description of the fearful maltreatment of a Japanese missionary priest in Korea. Konishi Senkichi went over to the Peninsula in the early part of the present year to teach the Koreans the "true path," though our contemporaries do not mention what sectarian definition of this broad term the young priest—he is not yet thirty—made the basis of his instruction. Not meeting with any great success, he wandered through the country as a devotee, and happened to be in the vicinity of A-San just after the Japanese troops had made things unpleasantly warm for their enemies. Some few of the flying Chinese got hold of the priest, whom they at once discovered to be a Japanese, and on whom they began to wreak their cowardly vengeance, beating him with clubs, bespattering him with filth, and finally leaving him naked and senseless on the roadside. Sympathetic Koreans came a few hours later to his rescue and found him still unconscious and in a truly pitiable plight. Besides being a mass of bruises and contused wounds, his teeth had been knocked out and his face cut open in several places, not to speak of other nameless injuries. This outrage occurred on the 5th inst. and the poor devotee was still alive, according to letters that reached Tokyo on the 14th.

THE TOKYO ACADEMY OF MUSIC.

It has been a matter of some speculation among those interested in the above institution as to what arrangement would be made for continuing the work recently relinquished by Professor Dittrich. We are now in a position to state that the Directors have secured the able services of Mrs. Patton and Miss Bloxham, who will carry on the musical education of the students. When Mrs. Patton came to Japan five years ago, it was for the express purpose of introducing the Tonic Sol-fa system of vocal music to the Japanese, as being by far the best method of teaching music to all nationalities. Mrs. Patton found, however, that she was too late in the field, the Japanese Government having already adopted a system compiled for its use by Luther Mason some years previously, and this system continued to be used by Professor Dittrich during his directorship. Now, however, a special request has been made to Mrs. Patton that she should introduce the Tonic Sol-fa system into the Academy, and those who have watched the result of her educational work in Yokohama cannot but feel that the Authorities have come to a wise decision, and with Miss Bloxham associated in the work, whose system of voice training has found such favour amongst the most musically cultivated of the foreign residents here, we feel that the future progress of the students is assured, and that these appointments are as much a matter of congratulation to them as they are flattering to the ladies selected.

"TRUTH'S" OPINION ON THE "KOWSHING" INCIDENT.

THE case of the sinking of the *Kowshing* by the *Naniwa*, says *Truth* of Aug. 9, is an interesting one in its international aspect. The Japanese had forbidden the Chinese to land troops in Korea. The Chinese hired the *Kowshing*

of British owners to carry troops there. On the ship, with about 1,000 Chinese troops on board, nearing Korea, it was met by the Japanese warship, *Naniwa*. The Japanese appear to have boarded the vessel, and, on the return of the boarding party, to have signalled that the officers in charge of it should quit the ship. This, the Captain replied, the troops would not allow them to do. On this the *Kowshing* was fired into and sunk. Whether the British flag was flying is not clear. But, in any event, if a neutral carries troops of a belligerent, and if the neutral officers declare their inability to obey the signals of a warship of the belligerents' enemy, owing to the mutiny of the troops on board, the neutral ship becomes a pirate. In firing into the ship the Japanese were in their right, unless it can be shown that Japan was not at war with China. But here again occurs the question, What is a state of war? If the Japanese had notified the Chinese that these troops could not be allowed to land in Korea, and the *Kowshing* carrying troops insisted on proceeding on its journey there, this fact itself created a state of war. I have rather a weakness for the Japanese, and with the information at present before us it is somewhat strong for us to assert that they committed "an outrage on the British flag, and that the attack on the *Kowshing* was a brutal massacre."

ADMIRAL TING.

THE statement recently wired by Reuter to London that Admiral Ting had been degraded for cowardice and incapacity, and the rumour subsequently circulated that he had been removed from the command of the Peiyang Squadron but, through the Viceroy Li's influence, appointed to the charge of the Taku forts, were evidently canards, for according to the Chinese accounts of the recent naval battle at Hai-yang, the old officer was directing the movements of the Squadron until disabled or killed. Chinese reports now say that he was wounded only, but the first account said "killed." We sincerely hope that the former version may prove incorrect. Admiral Ting is—we refrain from writing "was"—a debonnaire stout-hearted officer, thoroughly liked by all that knew him. He has been written of in most contemptuous terms because of his Fabian policy. Certain newspaper editors appear to think that sheer cowardice was his only inducement for hiding the Peiyang Squadron and avoiding an encounter with the Japanese. But there can be no question that in thus acting Admiral Ting simply obeyed instructions. No commanding officer would, of his own motion, deliberately keep his ships concealed from the ken of an enemy nominally inferior in fighting power. Admiral Ting had his orders, and we are persuaded that no one liked them less than he did himself. If the report of his death be true, China has lost a gallant and capable officer.

ODES, WISE AND OTHERWISE.

REFERENCE has already been made to the apparent absence of any popular demonstrations of joy when the news of the great Pyōng-yang victory reached Tokyo. The news of the successive defeats of the Chinese is of course received with pride and gratitude, yet they are generally taken as a matter of course, so great is the confidence in the superiority of the arms of Japan. In print, however, things look different. Each "extra"—and some enterprising journals have of late been sending out as many as three or four in one day—is as a rule starred with huge ideographs conveying the national cheer: *Nippon Teikoku Banzai*; or when it is the navy that has been victorious the legend reads *Waga Kaigun* (or *gunkan*) *Banzai*! "Hurrah for our Navy!" or "Hurrah for our Fleet!" In the columns of the daily papers one notices another instance of exuberance of national enthusiasm in scores of poems and short odes written on themes connected with the war, and generally speaking in forcibly sarcastic terms of the Chinese. Japanese newspapers being generally a forbidden book to foreigners, especially when they drop into poetry, we here reproduce a half-dozen topi-

cal poems taken from a recent edition of the *Miyako Shimbun*, always distinguished for its fondness for satirical verse. All are written in the *hokku* or *haikai* style: poemlets of seventeen syllables only, which do not give much range to the imagination and are often unintelligible when translated literally into English. Witness Sir Edwin Arnold's rendering of the famous *hokku* which runs thus:—

Asagao ni
Tsurube torarete,
Moyai-mizu,

or as Sir Edwin puts it

Convolvulus
Bucket-taking,
I-borrow-water,

which is a fairly correct but sadly inadequate translation. To return to the poets of the *Miyako Shimbun*, one of their best effusions gives a tolerably accurate snap-shot picture of Viceroy Li:—

Wakete ohashi
Ri-ya ga shibugaki
Kutta tsura.

"The most laughable thing is Grandpa Li's face after having eaten an unripe (astringent) persimmon." The fruit here is, of course, in allusion to the immature preparations of the Chinese host at Pyōng-yang. Another ode refers to the skill of the Chinese in retreating rapidly:—

Donguri no
Tsubute ni buta no
Hashiri Keri.

Which means that the "pigs ran away on being hit by the falling acorns." For "pigs" construe "pigtail-wearers," and for "acorns" read "bullets." The *Kowshing* affair is described in the following terms:—

Tsutu saki ni
Chūbōtsu shidari
Kabocha-bane.

"The melon-ship was sunk by the mouth of the guns," i.e. the guns ate up all the melons. This is somewhat obscure until we remember that *Kabocha*, a general term for melons of all kinds, is written with ideographs that can mean "China," for it is popularly supposed that melons were originally brought thence to Japan. A "melon-ship" is therefore one with Chinese on board. Li Hung-chang comes in for another hard knock in the next effusion:—

Kiku saite
Mekki hage-keri;
Ri sō toku.

"With the blossoming of the chrysanthemum the gilding rubs off, General Li!" The "blossoming of the chrysanthemum" is a pretty metaphor for Japan's victories; the gilding being rubbed off means, as might be supposed, the exhibition of the true character; the loss of the veneer of fame. The palm is, however, given to the following, which breathes the spirit of true loyalty:—

Hatsu-arashi
Yagate kiku no
Hiyori kana.

Or "with the first wind came at once the day-blossoming of the chrysanthemum." The interpretation is obvious. So soon as the Emperor moved southwards came the news of the victory at Pyōng-yang. The beauty of this little couplet is enhanced by the use of two significant ideographs in the phrase *hi-yori*: *hi*, the first, is of course the former half of the word *Nippon* (日), while *yori* is written with the ideograph (和), otherwise read *Yamato*. *Mul-tum in parvo* would be a good motto for Japanese *hokku*-writers.

EMIGRATION AFTER SUCCESSFUL CONCLUSION OF THE WAR.

MR. SAKUMA TEIICHI, one of the originators of the Kissa Emigration Company, has conceived a scheme which he desires to put into execution so soon as the war with China shall have been successfully concluded. While emigration is of such great importance to Japan, he regrets to note that so little success has hitherto been attained in this direction. So far there has been no suitable opportunity to achieve the desired result, but a rare chance will shortly be available. When the Franco-Prussian war ended with a decisive triumph for the Germans,

Prince Bismarck utilized the national prestige in encouraging colonization, in order to foster the spread and growth of the German race so as to provide against their social agitation which the victory might well be expected to create in the economic world. There could be no better precedent, nor any more worthy of adoption by Japan. Among the many reasons pointing to the necessity for colonization enterprise upon the successful termination of the war with China, are the lack of immediate business opportunities for the returned and disbanded troops, their former places in Japan having been taken over by their elders; then the factor of their high-wrought vigour; and finally the large number of people who will have derived great profit from the war in one way or another. Presuming that the conflict with China will terminate entirely in Japan's favour, colonization should be undertaken without loss of time. With regard to localities favourable to the establishment of colonies, Mr. Sakuma adheres to the opinion embodied in a recent disquisition of the *Fiji Shimpō* on a similar topic, which has already been transcribed in these columns. It amounts to this:—As matters stand at present Korea is preferable to all other places for colonization purposes. Japan is under the obligation not only of extending her protection to Korea in the latter's relations with foreign lands, but she has also to exert a similar influence over the domestic affairs of the Peninsular Kingdom; hence the colonization of that sparsely inhabited land would prove advantageous to Japan in more ways than one. Moreover, as frequently happens in the case of semi-civilised countries, the Koreans lack the spirit of industry, with the result that many of their natural resources are imperfectly developed, while not a few others are wholly neglected, should Japan therefore conclude a fair reciprocity treaty with Korea, enabling her subjects to enter and settle freely in the country and there engage in various vocations, the incomers would unquestionably aid the Koreans in developing the resources of their at present impoverished land. This intimate intermingling with the Japanese would naturally result in the formation of very close and friendly ties between the two nations, thereby perpetuating the objects for the achievement of which the present war has been undertaken, not to speak of acting as an efficient precaution against possible emergencies in time to come. Finally, the colonization of Korea may be more easily accomplished from Japan than by any other land, such exceptional facilities of communication existing. The inhabitants of Chugoku, Shikoku, and Kyushu can, for instance, sail across to the Korean littoral even in frail fishing-boats. Mr. Sakuma therefore earnestly hopes that the example set by the Iron Chancellor will not fail to be adopted by the Japanese so soon as a fitting opportunity arrives: "and we shall not have long to wait for this," concludes the public-spirited man.

ESTABLISHMENT OF A CLEARING HOUSE ASKED FOR IN NAGASAKI.

IN Nagasaki, says the *Nippon*, an appreciable difference has arisen between the purchasing power of hard money and notes, to the no small inconvenience of Japanese merchants engaged in foreign trade. Representatives of these merchants have therefore submitted to the Nippon Ginko a document asking that a clearing house be established in Nagasaki. The silver *yen* and paper *yen*, says the document, showed no difference whatever in their purchasing power for many years, and commercial transactions in Nagasaki went on quite smoothly. Lately, however, probably owing to the war, the foreign merchants in this port have begun to dislike the paper currency and decline to receive it in payment unless at a certain discount. At first this discount was at the rate of about 0.375 per cent., but it soon grew to 0.5 per cent., and it present it is double of the latter figure, with every prospect of a further increase. This state of affairs is ascribed by the signatories to the cupidity of foreign merchants who, taking advantage of the want of a clearing house in Nagasaki, seek to obtain an excessive profit. Foreign ships-of-war, the Hongkong and Shanghai Bank, and

the Chartered Bank have declined to receive the paper *yen* at all. Since money now shows a disposition to become tight, such a discount on paper money is not only likely to aggravate the mischief and to affect the prosperity of commerce at Nagasaki, but must also reflect upon the dignity of the Empire. It is exceedingly desirable therefore that the Bank, appreciating the situation in Nagasaki, should afford facilities for converting notes into silver, and help the commerce of the port out of the present difficulty.

CHINESE POLICY.

To cut off the supply of an enemy's provisions is recommended in Chinese military treatises of the most remote eras, and conservative China still swears by these old authorities. The *Nippon's* Shanghai correspondent tells an interesting story about a new strategical device conceived by a certain military authority of China. When news reached China that the Chinese officers and seamen captured at the battle of Phung-do had been sent to Japan, the Chinese people supposed that their unfortunate countrymen would be put to death in cold blood. They were therefore much surprised to learn subsequently that the prisoners were treated with kindness and that their condition was even better than it had been at home. Their surprise grew into a suspicion that the discipline of the Japanese army was defective, and at last a certain would-be military authority employed the affair to elaborate a new strategical device. He submitted a representation to the Authorities in Tientsin to the effect that, though the *Wō-nu* seemed courageous, they were really cowards. Thus, even at a time like the present, when the two countries are at war, the Japanese are afraid of the majesty of the Middle Kingdom and being anxious not to provoke its lasting displeasure, hesitated to put to death their Chinese captives, numbering more than a hundred, but treated them with hospitality. Their ruling motive was to curry favour with the Chinese and thus avert dangers that were likely to overtake themselves in the future. Now *Wō* being a small country inhabited by poor people, should the Chinese in large numbers throw themselves into the hands of the enemy and become pretended prisoners, Japan's resources would soon become exhausted, for her store of rice could never hold out against the demands of tens of thousands of additional mouths. The *Nippon* does not know whether this ingenious plan will be adopted or not, but events seem to point in that direction.

WAR AND THE TRADE IN MARINE PRODUCTS.

It was thought, writes the *Fiji*, that if the export of marine products from Japan was affected by the war, the change would be felt at Shanghai, and not at Hongkong, which is a foreign port. The forecast has not been verified by the event. Precisely the contrary result has to be noted in the two markets. The reason commonly assigned for this unexpected state of affairs is connected with the action of the Governors of Kwang-tung and Fu kien, who issued edicts forbidding the import of Japanese marine products into those provinces, subsequent to the 17th instant. This news reached Yokohama some weeks ago, and created great alarm not only among Japanese merchants but also among the Chinese who had remained in Japan to carry on business as before; for, it must be remembered, the import of marine products into China has been virtually monopolized by Chinese resident merchants for years past. Later intelligence allayed this alarm to a great extent, for it became known, as suspected at first, that the issue of the interdict was an arbitrary act on the part of the two Governors, and that it had not the approval of the Central Government, for otherwise a similar notification must have been published in Shanghai. Moreover, this measure affects the Chinese only and does not extend to foreigners, who may therefore import Japanese marine products with impunity. Even to the Chinese it may not prove so disastrous as had been supposed at first, for if a few precautions be taken, they can, without encountering any particular inconvenience, smuggle in Japanese goods. Thus the

interdict is not likely to inflict any loss upon Japanese merchants. Indeed it is thought not improbable that the main motive of enacting such arbitrary laws is to subject the Chinese merchants to inconveniences with the object of extorting bribes from them. No words, concludes the *Fiji*, are too strong to condemn such indifference on the part of Chinese officials to the best interests of their nationals, at a time when the country is threatened with grave disasters. But we doubt whether the *Fiji's* judgment is not over-harsh. It seems much more probable that the two Governors were really influenced by patriotic considerations, according to their lights, and that, in forbidding the import of Japanese marine produce, they expected to inflict heavy loss upon Japan.

HEROISM.

THE war-correspondents of the metropolitan press neither can nor do attempt to give particularised descriptions of each battle. The general facts are noted and details roughly sketched in, but little or nothing is said of single instances of pluck or daring. The story of such feats belongs to the future, though it cannot be doubted that many brave acts will remain forever unrecorded. We find, however, two incidents related in simple and unvarnished terms, that deserve a wider fame. While a body of newly re-enlisted men was marching through the town of Fukui, in Echizen, one of the soldiers was taken violently ill, fatal symptoms developing within an hour after the first seizure. He was promptly removed to the nearest hospital and everything possible done to relieve the extreme pain; but when the attendant physicians urged him to unclasp his sword-belt and let the gun, which he still held convulsively, out of his hand, he refused to do either. That death was near he knew, and he deemed it a disgrace to die before fighting for his Emperor and his country; the gun was a precious charge and he would hold it to the last. And so, clasping the gun to his dying breast, in full uniform, he calmly met his death. Not less heroic was the act of a bugler in the battle of Sōng-hwan. He had been told to blow the quick, stirring notes of the "Charge" (*susume*), and had just given a blast when a bullet struck him full in the breast, inflicting a fatal wound. Several ran to raise him, but he and they at once saw that nothing could be done. They told him to lay the bugle aside, urging that any fresh exertion would only make the hemorrhage more quickly fatal. His sole reply to this was to raise the bugle once more and for the last time to his lips, and with a final, clear, ringing "Charge!" the bold spirit passed away.

MR. TAGUCHI ON KOREAN FINANCIAL REFORM.

THE following is an epitome of a lecture delivered by Mr. Taguchi before the Economic Society at a meeting of that body held at the Fujimi-ken on the 15th instant. The reform of the financial system of Korea must precede all others, for with the country's finances left as they now are national improvement and progress cannot be expected, to say nothing of the obligations under which Korea is to Japan—owing to which she may be considered the latter's debtor—for having placed the independence of the nation on a firm basis. With a view to financial reform a radical change should, first of all, be made in the system of taxation, which is the foundation of Korean finance. The taxes are, at present, still paid in kind and not in currency, and this is the fruitful source of most the evils attendant upon that country's financial condition. The imperfect system now in vogue should be replaced with that adopted by civilized lands, and this would be the first essential step in effecting any sensible reform. The evils consequent upon the payment of taxes in kind are numerous, the most serious being the possibility of speculation on the part of the receiving officials; and it is particularly because of this reason that, without any special profit to the Treasury, the people are groaning under the oppressive burden of the taxes. For the same reason the Koreans have ceased to ply their avocations with diligence, and the

farmers, to take an example, are content with a harvest only large enough to keep them from actual starvation, believing — they do that the assiduity spent in raising large crops would benefit only grasping tax-collectors and not themselves. It is, under these circumstances, impossible to expect any improvement in the financial position of the Korean Government; to continue as at present could only mean the gradual impoverishment of the country and its resources. Moreover, with the revenue in such a ruinous state, no improvement tending to ensure national progress can be effected. It is, of course, quite impossible to obtain precise information with respect to the amount of the revenue enjoyed by the Korean Government; yet the lectures held the opinion that if cast payments could be made to replace than in kind it would be comparatively easy to derive an annual income of from thirty to forty million *yen*. In introducing the proposed radical financial reform, it would be necessary to adopt a method of the simplest nature and as inexpensive as circumstances might permit. Mr. Taguchi does not think it feasible to follow the same lines laid down by Japan at the time of the Restoration for her own financial rehabilitation. On the contrary, the system practised under the Tokugawa Shogunate, in a modified form, should be adopted in Korea, the utmost precaution being taken at the same time to avoid the possibility of dishonesty. After working in this manner for some years a second change could be effected, upon which all taxes should be made payable in currency. Under a reform of this nature a deficiency of the circulating medium, a fall in the value of agricultural products, etc., might not be avoidable; still such contingencies would be of short duration. With the development of increased facilities of transport and communication all these evils would sooner or later disappear, to be followed by conditions tending to promote the real interests of the people. "My ideas," concluded the lecturer, "may be condemned as premature, seeing that Chinese troops are still in the Peninsula and not yet driven beyond its borders; yet I do not think thus, and would rather contend that it is necessary for those interested in the welfare of Korea to inquire, and that thoroughly, into the subject at the present moment."

THE PEARS AT KAWASAKI.

It is accounted a great wonder by a number of metropolitan journals that several large wistarias in Tokyo are now blossoming for the third time this year, the flowers being a pale pinkish blue and exceptionally odorous. Still more marvellous is the fact that the majority of the pear-trees in the great orchards near Kawasaki are blossoming for a second time, and this despite the fact that the season is by no means unusually warm or otherwise abnormal. It goes without saying that the peculiar rejuvenation of the pear-trees is considered to be indicative of a crushing defeat of the Chinese. The pear is popularly supposed to have been introduced from the Middle Kingdom, this second blossoming can come to naught; no fruit will ever ripen again this year. And so the efforts of the Chinese will be too late and have no effect; like the fruit, they will be *nashi*.

KOREAN MILITARY DISCIPLINE.

THE war correspondents of several minor metropolitan journals speak in very disparaging terms of the military discipline of the Korean troops. They are dressed in ill-fitting uniforms, or else in cast-off odds and ends picked up on the battle-fields. The infantry are general armed with cavalry sabres, which they experience great difficulty in managing properly, the scabbards red with rust, having an inherent tendency to get between the legs of the wearer. When on picket or sentinel duty, the average Korean leans his whole weight on his gun, as if life were a burden too great to be borne; on the march the same useful weapon is carried anyhow, frequently muzzle downwards. The men are always hungry, and all is fish that comes to their net, they being apparently quite as willing to eat raw

vegetables as mouldy grain and various kinds of the minor rodents. This description may be, and probably is, a good deal exaggerated; nevertheless it is evident that a radical reform is necessary not only in Korea's finances. With regard to the fighting qualities of these ill-fed, ill-clothed men, they are said to be much better combatants than the Chinese and to make a much more determined stand. A body of Chinese soldiers will crack off their guns, at a safe distance, so long as the ammunition holds out. If the men are thereupon charged, the first thing is to throw away their useless weapon and whatever of their impedimenta can be hastily cast off, and then make a run for it. The Koreans are also good runners, but prefer to keep their guns and swords in hand. The Chinese make poor prisoners and are treacherous foes after the battle is over; while the Koreans, once divested of their arms, submit quietly to the inevitable with despondent fatalism. Intense superstition and crass ignorance are distinguishing features of the Chinese captives, combined with knock-kneed fear of their captors; stories of cannibalistic tendencies among the Japanese having found ready credence with the Son of Han. On the other hand, the Koreans are far from being weaklings, lose none of their native dignity when captured, and are not given to fetishism or those childish superstitions so characteristic of the lower class of Chinese.

A COMBINATION SUICIDE.

It has, from time immemorial, been customary in Japan for despairing lovers to seek to quit this weary world at one and the same time: either to commit suicide simultaneously or for the man to kill his mistress and then himself. Such deaths are known as *shinju*, and as a *pis aller* they have until recently been considered rather honourable than otherwise to the principal actors, as significant of their deep love and personal courage. The graves of such unfortunates used, in celebrated instances, to be made the objects of distant pilgrimages, and it frequently occurred that despairing lovers would immolate themselves before the tombs of those whose regrettable example had inspired them to take so rash a step. Haply *shinju* are now-a-days by no means so customary as they once were; still no week passes without one or more instances being reported from various parts of the Empire; while the vernacular journals describe the particulars of such cases with a lingering fondness and sentimental bathos calculated to render the unfortunate custom attractive rather than repellant to weak-minded infatuates. From Saitama Prefecture comes a story of an unusual nature in this context, the suicide, or rather the attempted suicide, involving the death or serious wounding of no less than three persons. Isojiro (25), Taro (20) and Oyoshi (17) were all the inhabitants of Kuna-mura, an out-of-the-way hamlet in the western part of Saitama. Taro and Oyoshi were lovers of the old type: fond, inseparable, and penniless. Their parents would not hear of a marriage, and the final announcement of this resolution led Taro to propose *shinju* to his *inamorata*. The foolish girl, inspired by the grandeur of the idea, and possibly by the subsequent immortalization of their loves, consented to this proposal. Taro then let his bosom friend Isojiro into the secret of the compact, at which the latter was properly shocked. He begged the despondent lovers to reconsider the matter, and used all his eloquence to dissuade both him and Oyoshi from committing so rash and criminal an act. Finding, however, all his representations of no avail, he swore to join them in death, and it was finally arranged that all three should leave the world at the same time: Taro and Oyoshi for the sake of their mutual love, and Isojiro because of his loneliness should Taro predecease him. The night of the 17th instant was chosen, and the three young fools went out into a deserted field near Kagemori-mura, some distance from their homes. Isojiro acted as executioner. He first cut the girl's throat, then Taro's, and watched the result. The girl died at once, the knife having severed an artery; Taro also fell, and

deeming his work accomplished, Isojiro then turned the weapon against himself. He managed to give himself an ugly but by no means fatal wound, and on returning to consciousness of his surroundings found Taro trying to struggle to his feet and not dead by any means. Just then a party of villagers, whose suspicions had been aroused by the absence of the three young people, reached the spot. Isojiro and Taro were promptly removed and received medical aid. They will recover, it is said, and, in accordance with old-time views, both will be branded with indelible shame, not to speak of the just vengeance of the law awaiting them.

CUSTOMS RETURNS.

The following is a summary of the Customs Returns for August showing the foreign trade of the empire for the month:—

	1893. SILVER YEN.	1894. SILVER YEN.
Exports	8,485,652.240	11,131,786.090
Imports	5,925,564.530	10,782,848.260
Total exports and imports	21,914,634.350	348,937.830
Excess of imports		348,937.830
CUSTOMS DUTIES.		
Exports	276,781.713	
Imports	329,043.067	
Miscellaneous	11,825.843	
Total	617,650.623	

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

	Exports, Silver Yen.	Imports, Silver Yen.	Total, Silver Yen.
Hongkong	1,250,321.730	1,325,923.083	2,576,244.813
China	1,113,181.430	667,099.050	1,780,280.480
British India	266,497.460	1,216,990.910	1,483,488.370
Annam & other French India	50,000	436,047.210	486,047.210
Korea	154,400.240	104,863.430	259,263.670
Philippine Islands	10,033.140	17,345.180	27,378.320
Russian Asia	80,000.000	63,061.730	143,061.730
Siam		23,105.200	23,105.200
Great Britain	433,065.570	3,036,513.660	3,469,579.230
France	2,677,338.000	370,000.040	3,047,338.040
Germany	75,771.400	808,184.380	883,955.780
Italy	306,774.810	4,460.360	311,235.170
Switzerland	187,421.300	51,450.080	238,871.380
Belgium	475,000	169,220.060	644,220.060
Austria	84,885.000	133.480	85,018.480
Spain	2,700.000	3,871.080	6,571.080
Holland	2,616.500	758.200	3,374.700
Turkey	2,248.100	1,486.200	3,734.300
Russia	395.000	1,096.380	1,491.380
Sweden & Norway		1,176.180	1,176.180
Denmark		351.000	351.000
Portugal		150.000	150.000
United States of America	4,023,186.030	1,078,669.800	5,101,855.830
Canada & other British America	200,257.800	1,700.030	201,957.830
Peru		399.800	399.800
Australia	59,940.050	13,770.040	73,710.090

MR. CLEVELAND AND THE NEW TARIFF BILL.

In the end of August the Tariff Bill became law without the signature of the President. His dislike to the measure as amended by the Senate was so great that some thought it possible that he might veto it. It does not, however, appear that he ever contemplated taking a

step so extreme; he considered the mutilated bill better than no bill at all; and he was contented with showing his sentiment in the matter by withholding his signature. In a letter to the Hon. T. C. Catchings on August 27th, Mr. Cleveland explained his reasons for the course he took. When the subject of tariff legislation was undertaken by Congress, he had, he said, fully expected that the measure passed would be one he would be able promptly and enthusiastically to endorse. But there are provisions in the Bill, it appears to him, that are inconsistent with honest tariff reform, and therefore, though he will not so far separate himself from the Democratic party organization as would be implied by his vetoing the Bill, yet he is determined to withhold his signature. None the less the Bill presents a vast improvement to existing conditions. "It will certainly lighten many tariff burdens that now rest heavily on the people. It is not only a barrier against the return of mad protection, but it furnishes a vantage ground from which must be waged further aggressive operations against protected monopoly and governmental favouritism." With the rank and file of the Democratic party he refuses to accept the results embodied in this bill as the close of the war. The most important step in tariff reform is the provision of free raw materials, and the President is encouraged by the extent to which this is recognized in the legislation already secured.

In spite of the transformation of the "Wilson Bill" into a "Gorman Bill," it remains an enormous advance, from the freetrader's point of view, on the McKinley Tariff. It secures free wool, free timber, free salt, and also large reductions on almost all finished and unfinished products that form the chief necessities of life. But the large and growing party that advocates a "tariff for revenue only" hailed with delight Mr. Cleveland's declaration that the present bill is to be regarded merely as a stepping stone for further advance.

The most striking utterance of the opposition party is a speech by Mr. Marriot Brosius of Pennsylvania, published in the Congressional Record. It consists largely of ballads describing the turpitude of his opponents and the fate kept in store for them by an outraged people. We may perhaps find room for several of these ballads later: at present we publish one only, describing the "Big Storm" to come next November:—

Now the South is in the saddle and the Bourbons rule the roost,
With their outfit of free traders, cranks and Coxeyites to boot,
As they strive to topple over thrift's fair temple in a day,
And sit down on Northern progress in the true old Southern way,
But the voters will be heard from ere this devil's work is done,
With an avalanche of ballots that will startle Washington,
November's blasts will chill their souls, from Congressmen to bums,
And they'll hustle for their cellars

When The Big Storm Comes.

According to telegrams received in New York it appears that the new American tariff will provoke retaliatory measures on the part of Cuba. Cuban sugar will be excluded from the States by the duty charged under the new bill, and in return Cuba will levy the maximum rate of Cuban duties on all imports from the United States. As beef, flour, rice, and various manufactured articles are exported from the States to Cuba, this will be a definite, though by itself of course trifling, blow to the American export trade.

A NEW SECT.

Is the formation of new sects the sign of strength in a religion? If so, Christianity is in a condition of vigour that has not been surpassed since the days of the early Christian heresies. The latest of these mushroom growths has arisen in Brooklyn, and the name of its leader is D. Steller Moulton. The sect starts with high pretensions. "We have declared," says the above-named gentleman, "that we will

absolve from his allegiance to the Bishop of Rome any Catholic who wishes to join us." What a fine flavour of forgotten centuries do we not taste in this lofty way of speaking of the impostor who falsely calls himself God's Vicegerent on earth "and that we will absolve any Protestant from any obligations he may be under." It was not unnatural to ask the upholder of these lofty pretensions from whence he derived his authority. "I am the supreme High Priest of God," he replied, "and in that capacity I have the power."

We have a passable acquaintance with the literature of Christian heresies, and it is a well-known fact that most of the modern heresies were anticipated centuries ago, but we believe that the essential tenet of the sect under consideration—which is called, by the bye, "the Saints of the Most High"—is entirely novel. It is that John the Baptist was the true Messiah, and that his fame and title were usurped by Christ.

The moral aims of the new sect are identical with those of Christianity, namely, to establish the kingdom of righteousness, and to abolish sin and suffering. The sect has been in progress for about two years, and is said to have more than two thousand members.

AUSTRALIA AND CALIFORNIA AS RIVALS.

THE *San Francisco Chronicle* sounds a note of alarm on the destined rivalry of Californian products by Australian in the markets of the world. According to this journal the danger to California arises from the encouragement given by the Australian governments to pastoral and agricultural enterprises, in order to assist an escape from the severe and widespread financial embarrassment that beset the Australian colonies last year. The proprietors of the Melbourne *Argus* and *Australasian*, says the American journal, sent to California a special commissioner to report on dairy-farming, wheat and fruit growing, canning, and improved harvesting machinery. The reports of this commissioner showed the way. Californian machinery and methods were adopted, and if a Californian farmer were instantaneously transferred to a typical Victorian farm he would not realise that he was out of his own state.

In the case of the United States the tariff, in the case of European countries distance, will act as barriers against effective competition on the part of Australia in markets open to Californian products, but in the Orient Australia will compete with considerable advantage. The Government of Victoria realized this, and with a view to establishing a great trade with India, the Straits Settlements, China, and Japan, sent an imposing commission to those countries last January. The Australians have already obtained a considerable proportion of the trade with India and the Straits in such characteristic Californian products as flour, hay, maize, canned meats and fruits, wines and brandies, preserved butter, honey, and cheese. A proposed reduction in the freight from Australia to China and Japan will, says the American journal, give the Australians the advantage over California in these latter countries also.

THE NEW TARIFF BILL.—ITS INCOME-TAX PROVISION.

It is generally believed, by free-traders and protectionists alike in the United States, that the passing of the new Tariff Bill will be followed by a general revival of trade. Whatever views the respective parties may hold about the Bill itself (and both condemn it, one partly because it goes too far, the other because it does not go far enough), they agree that the uncertainty which has prevailed for a year as to what would be the form finally taken by the measure, has had a paralysing effect on trade, and that the removal of this uncertainty will immediately be followed by a rebound.

The income-tax section of the Bill provides that for five years from January 1st, 1895, every citizen of the United States, whether residing

at home or abroad, and every person not a citizen residing in the United States, who has an income in excess of 4,000 a year, shall pay a tax of two per cent. on all his income in excess of \$4,000. This proposal met with violent opposition, even from the democrats, on various ostensible grounds, one of the most important being that the Bill divided the nation into two classes, a taxed and an untaxed, and was therefore fundamentally unjust.

POLYGAMY AND MORMONISM.

THERE is no practical doubt that Utah will soon be admitted as a State of the American Union, and the question arises whether the Mormons will avail themselves of the legislative powers Utah will then possess in such matters as marriage laws to revive the practice of polygamy, abandoned under Federal pressure some years ago. The opposition offered by many prominent religious bodies to the admission of Utah to statehood was based on a fear that such would be the case. When it was pointed out that the Mormons in Utah were in a minority, the reply was made that as soon as statehood became an accomplished fact, the Mormons would summon the inhabitants of Mormon colonies in other states, so that they would speedily outnumber the Gentile population.

It seems probable, however, that there is no danger of any attempt to revive polygamy, for Mormon sentiment is believed to be no longer in its favour. A representative of a New York paper was recently in Salt Lake City and had interviews with various prominent persons there, to whom he put questions on this subject. Among the Mormons whose opinions were obtained were the President of the Mormon Church, one of the twelve Apostles, and a son of Brigham Young. A former Chief Justice of the Territory, a former Governor, the present United States Attorney for Utah, one of the Territory's representatives in Congress, the Mayor, and the Chief of Police of Salt Lake City, also gave their views. These persons were unanimously of opinion that there was no danger whatever of a return to polygamy, and most of them stated that Mormon sentiment was now opposed to the idea of any such return.

A NEW ACTOR.

It was Grimaldi, if we remember correctly, who made one of his best hits by appearing on the stage with a live goose under one arm and a sucking pig under the other. Since that era domestic animals have quite frequently been made use of in comic or tragic situations. In Japan, however, such a thing is unknown, or rather was, until a few days ago. An admirer of Kawakami, the well-known *soshi*-actor, recently sent him a live pig, in allusion to the play now having such a run at the Asakusa Theatre; and this led to a most amusing scene the following day. The melodrama always closes with a triumphal dance, representing the Japanese troops in possession of Peking. Just as the dance was about to end, the pig was sent squealing from out the wings on the stage; the soldiers immediately drove their spears into it, despatched it and then carried it gleefully on their spear points around the scenes. This touch of realism set the audience into a perfect *furor* of enthusiasm; the shouts and hand-clapping made a great uproar, the people seeming to have lost their senses in the delight afforded them. It was admirably calculated to appeal to a Japanese audience, especially one in the throes of fervid patriotism.

NEW YACHT AT KOBE.

THE *Kobe Chronicle* gives the following account of a new yacht launched at Kobe on Thursday:—The *Haidee* has been built for the popular Commodore of the Kobe Yacht Club, Mr. H. L. Baggallay, by the Kawasaki Ship-building Yard, under the superintendence of Captain Bards. Both builders and superintendent are to be congratulated on the work, which is of a very high class, and Mr. Baggallay has reason to be proud of owning such a well-built and beautiful vessel. She was

designed by Mr. Croal, of Shanghai, and is a splendid specimen of a modern racing yacht. Her dimensions are as follow:—Length over all, 53 ft. 9 in.; length at water line, 36 ft.; beam, 11 ft. 4 in.; draught aft, 6 ft.; displacement, 17½ tons. The yacht has eight tons odd of lead bolted to her keel, and requires no inside ballast. As will be seen by the difference between length over all and length at water line, the overhang both fore and aft is considerable. Her keel, stem, stern-post, and frames are of kiaki, planking hinoki, and deck teak. The cabin is very tastefully fitted up with different coloured woods. There are two wide comfortable bunks for sleeping accommodation, a lavatory and other conveniences, galley, good-sized sendoes' quarters, and plenty of light from sky-light. The cockpit is long, and will afford accommodation for a host of friends, and the yacht being of great length there is plenty of deck room. She has a nice little winch for hoisting the anchors, and will have a steering wheel as well as a tiller. The sails arrived some time ago, and are made by the famous firm of Laphorn and Ratsay of England. The mast is of red sugi wood. As to her speed as a sailer, although she has not the amount of canvas she would have sported had she been intended to sail against some of the home cracks, the *Haidee* has enough to enable her to show her stern to anything likely to race against her in this part of the world for some time to come.

TOO REALISTIC.

FOR the third time this season, Kawakami's *soshi* actors at the Asakusa Theatre have had to suffer from the attack of enthusiastic spectators, who, lost to all sense of time and place, have seen in the fictitious enemies of Japan none but veritable Chinese—and acted accordingly. In one of the scenes the Chinese General An Kokuritsu (Japanese pronunciation) is attacked by a number of Japanese troopers. The acting is excellent just at this point, and in order to make the valour of the Japanese all the more apparent, the Chinaman fights with skill and address, so that the combat seems quite undecided for a time. This bit of realism never fails to call forth yells of rage from the audience, who cover the pseudo-Chinaman with abuse and grow indignant if his assailants are not promptly victorious. It was just then that one countryman, absorbed in the play, forgot that what he saw was a mere picture, not a reality. Enraged at the seeming prowess of the Chinese General, he sprang on the stage, seized the actor, beat him unmercifully before any one had time to interfere, and finally sent him flying over into the pit, where he fell unconscious. Upon recovering his senses the actor was disposed to take the matter in good part and dismissed the incident with a laugh—which was kind, to say the least—but a number of *Ko Shimbunshi*, in relating the above, add the following observation, the same words appearing in each journal:—"If our brave countrymen can act so courageously in mimic warfare, and so successfully hold their own against the enemy, how great must be their valour on the actual field! The Chinese must melt away before them, like dew beneath the sun's rays."

A TEXT-BOOK WAR.

SOME months ago an Imperial Ordinance enjoined the using of some work on practical ethics or morality in every school from the lowest to the highest. The necessity for such a step is just what we had been urging a little before the appearance of the Ordinance in question; and it seems that the educational authorities had long been discussing the matter and making inquiries into the possible nature of a work warranted not to offend any of the many creeds professed by Japanese students. The problem now appears to be satisfactorily solved: a number of most excellent text-books have been compiled by famous writers, and all or nearly all of these have received the approval of the Educational Department, *i.e.* the publishers are permitted to sell them to Primary schools. But now the question of choice comes in. There being several works of almost equal excellence,

the selection is left wholly in the hands of the Principals of the thousands of Primary schools throughout the Empire. No compulsion is used. Each school may choose its own book, for all follow the same lines and embody very similar ideas. Between eight hundred thousand and one million copies, will, at a moderate calculation, be demanded yearly; so it follows that both the author and the publisher of the most popular text-book have just cause to expect a golden harvest. It is perhaps partly for these reasons that we find such well-known names among the competing authors: Count Higashikuze (publisher, Yao Shinsuke); Amano Tameyuki of the Semmon-gakko (publisher, Fusam-bō); Suyematsu Kencho (publisher, Meiho-do); Prof. Dr. Shigeno of the Imperial University; and several others of almost equal celebrity. For elegance of illustration and general clearness of typography, the palm is given to Count Higashikuze's book, entitled *Shogakko Shushin-sho*, or "A Book of Practical Ethics for Primary Schools." On the other hand Mr. Suyematsu's work is conceded to be the finest and most finished in style. And with regard to Prof. Amano's text-book, he is accused, and quite publicly at that, of rank plagiarism. The *Nippon*, always hasty and inconsiderate of other people, declares in so many words that the illustrations are stolen from Count Higashikuze, while the text is only a distorted version of Mr. Suyematsu's work, with copious literal thefts. This is a very grave charge, the refutation of which might be found in the fact that Prof. Amano's work is immensely popular and slowly ousting its rivals from the field. In the mean time several publishing firms are approaching bankruptcy, while two or three well-known houses are *in articulo mortis*. The initial expenses are so heavy that failure in this one direction often implies ruin to the firm or person engaged in the venture. And even after the Educational Department has conceded its *imprimatur*, success or non-success is greatly dependent on the popular verdict of the moment. Clerks and "persons interested" travel from prefecture to prefecture, to every town and larger village, appealing directly for patronage and setting forth the real or supposititious superiority of the books they represent. Every chance is here given for corruption, and ugly stories have not infrequently been heard of late years. It seems unfortunate that, so far as public schools are concerned, the Authorities cannot make a definite selection of some one work. It is theoretically generous to let each author have a chance and each work stand or fall on its own merits. Yet the system is apt to degenerate and dishonest advantage is often taken of it, not to speak of such unpleasant tales as that to which the *Nippon* gives time and space—the public besmirching of distinguished scholars and eminent thinkers.

ON A BETTER FOOTING.

It is reported that the War Department has given the *Gomu Seiso Kaisha*, or Rubber Manufacturing Co., of Kamezawa-cho, Honjo, Tokyo, an order for a great number of boots, inside leather and thickly coated with rubber so as to be impervious to moisture. The boots are to come above the knee and fit well to the legs, so that they will be both warm and comfortable. Provided with foot gear of this description it is confidently believed that the troops will experience no difficulty in marching over the cold, marshy land beyond the Chinese border. So, at least, says the vernacular press, but we know of no particularly cold, marshy land to be marched over. Large orders have also been given for flannel underwear, which account for the great demand in Yokohama at present. Canned goods of a superior quality are required for the officers in the field, and an inquiry is being made for Australian beef. The price of meat in the metropolis has never been so high as at present, owing to the large quantities bought up by manufacturers of preserved beef and the like.

COALS FOR CHINA.

INTENSE feeling exists with regard to the export of coal to China which, although not officially interdicted, comes under the heading of

contraband of war. In Kobe, Nagasaki, and other ports, careful watch is being kept to see that resident Chinese are not served with or allowed to purchase more coal than they actually need for their personal use; and even this moderate supply is viewed with suspicion. Every ship carrying coal from Japan, no matter under what flag she may be sailing, is subject to the scrutiny of Japanese cruisers, who keep her movements under the strictest surveillance. Despite all this, there are certain Japanese merchants in Tokyo, whose names are not given by the local journals, known to be making efforts to smuggle coal out of the country; while two anonymous Chinese residents in Yokohama are spoken of as acting as principals in the matter. It is expected that all this underhand business will shortly be made public and the money-loving Japanese traders become the objects of popular execration. With coal insufficient for the actual needs of the nation in forty or fifty years to come, it is certainly nothing short of treachery to seek to supply Japan's enemies with this most necessary commodity at present.

HARMSTON'S CIRCUS IN TOKYO.

SOME years ago the *Jiji*, always given to philosophising, gravely delivered opinion that a greater amount of amusement was obtainable for the same amount of money from a visit to the circus than to any theatre in the metropolis. The consensus of public opinion has hitherto upheld this view. Under the circumstances, therefore, and with the long line of new attractions, not to speak of Mr. Stripes of Bengal—for the Japanese are as fond of seeing the tiger as any Europeans—Harmston's Circus ought to do exceptionally well in Tokyo. The people, are not overburdened with money just now, but they have not much to distract their attention, and even Kawakami's versatile troupe palls after a couple of visits. The papers are full of the Circus.

THE LABOUR QUESTION IN THE UNITED STATES.

Two important investigations connected with the labour question have recently been authorised by Congress. One is for an investigation into the effects of machinery on labour, with reference to its influence on productive power, on wages, on hours of work, and on the employment of women and children; the second for an investigation of the extent of employment of women and children, and the conditions under which they work. Both inquiries will be conducted by the Commissioners of Labour. These inquiries, being more limited in scope than those of the English Royal Commission on Labour, are likely to elicit some information of practical value.

DERATIONALISED CHINESE.

SEVERAL Chinese residents in the coast-ports are reported to have applied for naturalization as Japanese citizens. One man in Nagasaki has already changed his nationality, cut off his queue, and now goes about in foreign clothing and wearing that inevitable accompaniment of Anglo-Japanese civilisation, a full-blown stove-pipe hat. Another Chinese merchant in Yokohama who is a naturalized British subject, has also cut his queue and donned European garments of old-fashioned cut and sombre hue. His head-gear is the much abused hard felt bowler, round which he has swathed some heavy bands of black crepe. But he disclaims any suggestion of mourning for his lost silken robes of easy and capacious fit.

THE "MATSUSHIMA KAN."

It will be remembered that among the stories circulated by newsmongers who delight in discovering Japanese disasters, one related to the *Matsushima Kan*. She had not been seen for several weeks, it was said, entering any Japanese port, and therefore the conclusion was jumped at that she had been lost. Then came a circumstantial tale that she was lying somewhere on the north-west coast, having been taken there to be quietly abandoned lest the public should learn of the severe treatment extended to her by the Chinese. Well, the *Matsushima* has apparently come off the north-west coast. She

was in the thick of the Hai-yang fight on the 17th, and according to all reports the Chinese Squadron would have been much more comfortable had she remained away.

CABLING TO AUSTRALIA.

A TELEGRAPHIC message from New York to Australia, says an exchange, has to go nearly twenty thousand miles. Of this nearly fifteen thousand miles is by submarine cable. It takes some little time to send a message, as on the way it has to be handled by fifteen operators at various stations, at each one of which it is relayed. The longest continuous submarine cables are the Transatlantic, which are some 2,000 miles long. The longest continuous land line is not, as many suppose, in America. Although there is direct communication from New York to California, it is not over a continuous wire. The longest land wire in the world is across the continent of Australia. It extends from Port Darwin to Adelaide, a distance of 2,150 miles.

DR. KITAZATO IN YOKOHAMA.

A WARM reception was given by the residents of Yokohama on the 22nd inst. in the rooms of the Yokohama Gakko to Drs. Kitazato, Aoyama, Kinoshita, Miyamoto, Takagi, and Lawson. During the course of the proceedings an address was delivered by Mr. Nakano, Governor of Kanagawa, to which Dr. Kitazato replied on behalf of the other guests. Dr. Lawson also spoke. The citizens of Yokohama presented gold chains and medals to Drs. Kitazato and Aoyama, a medal each to Drs. Kinoshita, Miyamoto and Takagi, and a pair of vases of local manufacture to Dr. Lawson. Refreshments were afterwards served.—*Nippon*.

THE ADULATORY LION.

A TOKYO contemporary published on the 25th inst. a caricature pregnant with meaning. It represented a lion licking the feet of a pig—which otherwise bore a strange general resemblance to a Japanese pug—while the latter was evidently telling the noble brute something or other. A newspaper lay beneath the lion's paws, and the lion's tail being for the nonce converted into a pencil, it was writing on the sheet, in large capitals, the words "The Real Situation." The pig stands of course for China, and the obvious suggestion is that the English local press is seeking to curry favour with that Empire by believing only the Chinese reports of each engagement or battle.

THE BIG BANK ROBBERY.

THE hearing of the case brought against Kuga Yasutaro, who is said to have obtained by fraud yen 28,000 from the Yokohama Branch of the First National Bank, which crime is alleged to have been instigated by Mr. Suwa Mankichi, formerly Vice-Manager of the Branch, took place in the Yokohama Chiho Saibansho on Tuesday, before Judge Maruyama. Kuga was brought forward for examination. Messrs. Asakusa Tomotetsu and Hamachi Hachiro, advocates, appeared for the accused.

VISCOUNT MUTSU AND MR. WATANABE.

THE Minister of Finance, Mr. Watanabe, left Shimbashi by the 11.40 a.m. train yesterday for Hiroshima, on business, it is said, connected with the War Loan. The Minister of Foreign Affairs, Viscount Mutsu, accompanied by his private secretary, Mr. Nakada, proceeded to Hiroshima yesterday by the first train. It is said that Count Inouye, Minister of Home Affairs, who is said to have received frequent requests from the Minister President to go down to Hiroshima, will leave the capital in a few days.

SILK IMPORTS INTO THE UNITED STATES.

FOLLOWING are the imports of Raw Silk at the Ports of New York and the Pacific Coast:—

New York	472...	80,975...	269,339
Pacific Coast Ports..	2,482...	314,208...	897,445

2,854... 395,179... \$1,166,784

Imports of Waste, Noils, and Cocoons in the same period were:—

New York	206...	87,200...	\$22,381

WAR ITEMS.

A telegram received in Tokyo on Saturday confirms the news of Major von Hanneken's death in the naval engagement on the 17th instant, but says that Admiral Ting was not killed, only severely wounded. Mr. von Hanneken's fate will be mourned by many friends in China. He was a man of high military capacity and splendid physique, in the prime of life, with every prospect of many years of active usefulness before him. The fact that, despite his country's proclamation of neutrality, he consented to play an active part in China's belligerent operations against Japan, has been strongly animadverted on in some quarters, and referred to as impairing his claim to respect during life or sympathy at the end. Such a verdict seems harsh. Mr. von Hanneken had served the Chinese for many years in times of peace; had planned their forts; superintended their military works, and assisted in the organization of the Viceroy Li's famous army. All his military interest must have been enlisted on the Chinese side, and he doubtless possessed many personal friends among the Chinese. There are not a few men who think that to the country of their adoption in time of peace they owe their devotion in time of war, provided that the dictates of patriotism be not violated. Major von Hanneken may have been such an one.

It seems from later intelligence that the Chinese ships which caught fire in the engagement on the 17th instant were not destroyed, but reached Wei-hai-wei where, doubtless, they will be repaired. Thus the total loss on the Chinese side was four cruisers—the *Lai-yuen*, *Yang-wei*, *Chao-yung*, and *Chih-yuen* or *Ching-yuen*—aggregating 7,800 tons.

A Chinese officer who escaped from A-San at the time of its capture by the Japanese, has been taken prisoner at Kokusan in Korea. Being wounded in the foot, he was unable to continue his flight northward. This intelligence is telegraphed by Surgeon-Major Ishiguro from Hiroshima. The capture took place on the 6th instant. In consequence of the officer's name being telegraphed phonetically as Fu To-shaw, it is impossible to decipher his Chinese name, but the Japanese newspapers conjecture that, since he is evidently an officer of high rank, he may be the Second in Command at A-San, General Seb.

Surgeon Mori, who is in charge of one of the military hospitals at the seat of war, wires that, so soon as the wounded Japanese under his care heard of the victory at Pyöng-yang, they earnestly begged to be allowed to rejoin their corps.

Probably the Japanese medical staff at Pyöng-yang has, by this time, a large number of wounded Chinese in charge. Surgeon Kikuchi, of the Fifth Division, telegraphs under date of the 17th instant, that 77 had just been carried into his hospital.

Premising that they discuss the subject purely for the sake of its abstract interest and not at all because of its mercenary aspect, Japanese journals estimate the value of the ingots and coins captured at Pyöng-yang. On the supposition that there is gold among the treasure, its total value is about 230,000 yen. Assuming that there is 10 per cent. of gold, the aggregate value becomes 700,000 yen. In either case the capture will be a welcome booty to the troops.

It is understood that the First Division, now under immediate orders for foreign service, contributes 15,000 men to the war. This Division, if the First Reserve be included, aggregates 25,000 in round numbers. Six thousand are stationed in and about Yokosuka for purposes of protection, and it consequently follows that four thousand remain in Tokyo. Of course the Imperial Guard, 15,000 strong, inclusive of the First Reserve, is also stationed in the capital. Recently, when estimating the forces hitherto despatched to Korea, we assumed that not more than 3,000 out of a total of 44,000, comprising the Hiroshima and Nagoya Divisions, had been kept in Japan when the Divisions were shipped for the seat of war. But in all probability a

much greater number remained for home service and the generally accepted estimate of 30,000 men now in the peninsula is sufficiently near the truth.

The Second, or Sendai Division is to contribute 5,000 to the contingent now proceeding abroad. Thus from the First and Second Divisions we have a total of 20,000. Of course these figures may be only approximations, but they represent the generally received opinion. We should imagine that if any operations on a large scale be contemplated, the Sixth Division, which has its headquarters at Kumamoto, will be called on to contribute. This Division, including its First Reserve, aggregates 24,000 of all ranks. But whether it stands next on the roster for foreign service, and if so, how many men it will be required to furnish, are matters of conjecture.

It appears that the troops which the Peiyang Fleet had just conveyed to the mouth of the Yalu river when the collision occurred with the Japanese squadron on the 17th instant, were not destined to form the nucleus of a reserve army for the defence of the Manchurian frontier as was at first supposed, but were intended to reinforce the Pyöng-yang garrison. This fact illustrates the extraordinarily perfunctory character of China's proceedings. On the very day when the Japanese assaulted Pyöng-yang and carried it by storm, the Chinese were landing troops for the garrison's assistance at a point 120 miles distant. It is said that the Viceroy Li did not at first believe in the possibility of reverses inflicted on his country's troops by the Japanese. Perhaps that scepticism may explain, in some degree, the dilatoriness that has marked all his military proceedings, especially this last fiasco.

What was the strength of this contingent sent from Taku, or Port Arthur, to Wiju we have not been able to learn exactly. The various estimates vary considerably, the balance of opinion pointing to 5,000 of all ranks. But we find it difficult to imagine that the whole of the Peiyang Squadron would have been employed to convoy such a handful of men. We find it also difficult to conceive that the Viceroy's capacity to despatch reinforcements at this comparatively early period of the struggle, was limited to a paltry brigade of five thousand. The Wiju contingent looks very like China's answer to the change in Japan's programme by which a column advancing from Gensan was added to the forces directed against Pyöng-yang. To be sure, the movement of the Chinese re-inforcement was a fortnight late. But a fortnight does not count for much in China. Can it be that the Viceroy himself was deceived by the assiduously circulated tales of repulses suffered by the Söul column in its first advance against Pyöng-yang, and that he really expected the assailants to be held at bay until his tardy reinforcements arrived? If so, he suffers from the most crippling misfortune that can befall the director of a campaign—deceitful subordinates.

The despatch of troops by China over-sea to the Yalu river for employment in the defence of Pyöng-yang forces us to draw one of two conclusions—either that the march overland from Manchuria is too arduous and involves too great difficulties of commissariat to be lightly undertaken, or that the Manchurian troops are not considered trustworthy as against Japanese. According to the most recent accounts, the Manchurian Army numbers 180,000 men, in three Divisions, viz., these of Fengtien, Kirin, and Heilung-kiang. Of these it is supposed that some 80,000 have received training in modern methods and carry arms of precision. A writer in *The Times* says that several English travellers recently witnessed a review held by the Governor of Kirin at which there were present 15,000 men armed with modern rifles. The Fengtien (or Moukden) district is supposed to possess the best army in Manchuria; 30,000 men armed with Remington repeating rifles and Enfields and having Krupp field-guns. These troops were supposed to be most easily available for service in Korea. Where are they? Why did the Viceroy find it necessary to send a paltry force of 5,000 men

by sea, instead of moving one of the three Manchurian armies to roll back the Japanese?

Experts say that if the Japanese forces continue their advance northward from Pyöng-yang, the Chinese cannot make any opposing stand at the Yalu river, but must await their assailants' onset in the interior of Manchuria. If that be so, the last contingent of troops landed at Wiju must march as best it can into Manchuria to find support and a position. It must begin operations by retreating. How it is to supply itself with provisions we can not conceive. The Yalu was doubtless its intended base of supplies, but after the recent naval engagement, no Chinese ships are likely to be seen in the neighbourhood of the Yalu for some time.

The *Hochi Shimbun* publishes a story manufactured, we suspect, out of whole cloth. It rests upon one little pivot of truth, namely, the fact that Admiral Viscount Kabayama, Commander-in-Chief of the Navy, was in the *Saikyo Maru*, a merchant steamer, throughout the fierce engagement on the 17th instant. It is a fact that Viscount Kabayama was in the *Saikyo*, and it may be taken for granted that he would never have been in such a vessel had he anticipated a rencontre with Chinese ironclads and cruisers. But the *Hochi's* romance is that the *Saikyo* was alone when she sighted one of the enemy's men-of-war, separated like herself from its consorts; that in obedience to the Admiral's command, she went for that man-of-war, albeit she herself was only a mail-steamer with a few quick-firing guns on board; that presently, being surrounded by four cruisers, she rammed one of them, stuck her bows into it, and in that position was nearly blown out of the water, when, by the mercy of heaven, the two ships fell apart, and the Japanese squadron came to the rescue. Does not the *Hochi* think it a little premature to write romances about the war at this stage?

There is some talk about the exploit of a Japanese steamer, the *Ariake Maru* belonging to the Mitsui Bussan Kaisha, which is said to have made her way out of Hongkong harbour under the guns of two Chinese men-of-war. It is alleged that the Chinese were watching the vessel and that her capture seemed inevitable if she attempted to escape. The master, however, after consultation with the agents of his owners determined to make the attempt. He commenced by dismissing the whole of the crew of his ship so as to deceive the Chinese as to his intentions, and then having enlisted the services of any Japanese he could find, he hove up his anchor under pretence of changing his berth and shipped out of port. The *Fomiori*, from which doubtful source we take the story, says that the *Ariake* was not able to exceed a speed of 3 knots an hour at first, but that she gradually worked up to 7 and finally reached Nagasaki after an exciting trip.

Count Oyama, Minister of State for War, has issued the following notification to the army:—

Belligerent operations being properly confined to the military and naval forces actually engaged, and there being no reason whatever for enmity between individuals because their countries are at war, the common principles of humanity dictate that succour and rescue should be extended even to those of the enemy's forces who are disabled either by wounds or disease. In obedience to these principles, civilized nations in time of peace enter into conventions to mutually assist disabled persons in time of war without distinction of friend or foe. This humane union is called the Geneva Convention, or more commonly the Red Cross Association. Japan became a party to it in June, 1886, and her soldiers have already been instructed that they are bound to treat with kindness and helpfulness such of their enemies as may be disabled by wounds or disease. China not having joined any such Convention, it is possible that her soldiers, ignorant of these enlightened principles may subject diseased or wounded Japanese to merciless treatment. Against such contingencies the Japanese troops must be on their guard. But at the same time they must never forget that however cruel and vindictive the foe may show himself, he must nevertheless be treated in accordance with the acknowledged rules of civilization; his disabled must be succoured and his captured kindly and considerately protected.

It is not alone to those disabled by wounds or

sickness that merciful and gentle treatment should be extended. Similar treatment is also due to those who offer no resistance to our arms. Even the body of a dead enemy should be treated with respect. We cannot too much admire the course pursued by a certain Western country which in handing over an enemy's general complied with all the rites and ceremonies suitable to the rank of the captive. Japanese soldiers should always bear in mind the gracious benevolence of their august Sovereign and should not be more anxious to display courage than charity. They have now an opportunity to afford practical proof of the value they attach to these principles.

(Signed) OYAMA IWAQ, Count,
Minister of State for War.

(Dated) September 22nd, 27th year of Meiji.

Vice-Admiral Ito, who commanded in the naval engagement on the 17th instant, has sent in the following report, which appears in the *Official Gazette*:—

Acting in concert with the land force, I reached Chemulpo Bay on the 12th instant, and on the 14th, leaving the Second Flying Squadron and the *Yayeyama Kan* in that Bay, I set out with the rest of the ships and made the mouth of the Ta-dong river on the 15th. The Third Flying Squadron, accompanied by the sloops *Banjo Kan* and *Amaki Kan* and torpedo-boats, pushed up the river as far as Chyor Island and aided the military operations. On the 16th instant, the Principal Squadron, together with the First Flying Squadron, namely, the *Akagi Kan* and the *Saikyo Maru*, making in all 12 vessels, set out from the Ta-dong river, under my command, and passing Haiyang Island at dawn on the 17th instant reached the bay of Taku-shan harbour in Manchuria. There we found fourteen of the enemy's war-ships and six torpedo-boats. A fierce engagement ensued, lasting from 12.45 p.m. until past 5 in the evening. We sank or destroyed four of the enemy's ships, the *Lai-yuen*, the *Yang-wei*, the *Chao-yung*, and either the *Ching-yuen* or the *Chih-yuen*, and many of the others were seriously damaged by our fire. The *Ting-yuen* and *King-yuen* took fire, and great confusion was observed on board. Towards dusk, observing that the enemy's fleet was retiring in the direction of the Gulf of Pechili, we took a direction calculated to intercept them, but being obliged to keep at a considerable distance during the night owing to the enemy's being provided with torpedo-boats, we lost sight of them. Expecting, however, that we should be able to pick them up at daylight, we held on to Hope Sound, but failed to see anything of the enemy. It being therefore uncertain whether he might not have returned to his original position, we steamed back to the scene of the preceding day's fight, and observed the smoke of two or three vessels a long way off but could not discover whither they were making. Having therefore taken steps to break up the *Yang-wei*, which, being on fire, had been run ashore by the enemy, we returned here (mouth of the Ta-dong river). The *Saikyo Maru*, with the Commander-in-Chief (Admiral Viscount Kabayama) on board was frequently in imminent peril, but happily made her escape and returned hither before the rest of the Squadron. We lost none of our ships, but of course received some injury. The *Matsushima Kan* was the most severely handled, but is in no way incapacitated for duty. Our losses are 10 officers and 69 men killed, and 160 officers and men wounded. The heaviest casualties were in the *Matsushima Kan*, the *Akagi Kan*, and the *Hiyei Kan*. In this fight the *Hiyei Kan* and the *Akagi Kan* were most hotly engaged. The *Hiyei*, after a gallant fight, left the Squadron temporarily, returned here, and having placed her wounded on board a transport, set out, I understand, in company with the *Kaimon Kan* to rejoin my command.

The above report confirms the telegrams originally sent from Shanghai as to the scene of the action. It proves also that the Japanese Squadron had no expectation of meeting the Chinese. Admiral Viscount Kabayama would never have been cruising in the *Saikyo Maru* had there been any suspicion that the Peiyang Fleet would have been encountered. We may note *en passant* that whereas some reports speak of 11 Japanese ships, others mention 12. The explanation of this discrepancy is that the *Saikyo Maru* is included in the latter total, whereas, for fighting purposes, she counts for virtually nothing.

The *Matsushima Kan* must have had an exceedingly hot time in the action of the 17th instant. She had no less than 110 of her crew put *hors de combat*. Yet she fought on to the

bitter end. The total casualties in the Squadron were 239. Hence the *Matsushima* suffered nearly as much as all the rest put together. It would be very interesting to know exactly how that occurred. According to what we have learned, a shell from one of the enemy's big guns struck the second gun on the starboard side of the vessel. The *Matsushima* has six guns mounted forwards, three on each side. Thus, when in action, a great number of her crew are collected in one part of the ship, and it appears that the blow which temporarily disabled No. 2 starboard gun caused great carnage among the men. The ship herself, however, can not have suffered much. She proceeded to Sasebo on the 18th and was able to put to sea again on the following day.

The *Hiyei Kan* also, though her loss of men was very heavy, did not suffer to any serious extent. She too is at sea now with the Squadron. What she chiefly wanted after the battle was a new crew.

The remaining ships do not seem to have been struck at all. We speak of the ships themselves, for, of course, some shots must have found their way among the men. Certainly not one of the vessels suffered sufficiently to be obliged to temporarily leave her place in the Squadron. Out of 11 men-of-war only two were hurt so much as to need repairs that could not be executed on board, and those two seem to have been able to put to sea again within three days. (We do not, of course, reckon the *Saikyo Maru*, which is not a man-of-war and ought not to have been in the fight at all.) Yet the battle lasted 5 hours; the enemy's war-ships numbered 14 with torpedo-boats, and four of his ships were sunk. Evidently the torpedo-boats were a total failure. They did not succeed in hitting even the *Saikyo Maru* as she lay rudderless and temporarily helpless.

The names of the Japanese ships engaged have now been published. They are as follow:—

	Tons.
<i>Matsushima Kan.</i> Steel Coast-defence vessel.	4,278
<i>Itsukushima Kan.</i> Steel Coast-defence vessel.	4,278
<i>Hushidate Kan.</i> Steel Coast-defence vessel.	4,278
<i>Yoshino Kan.</i> Steel Cruiser.	4,216
<i>Takachiho Kan.</i> Steel Cruiser.	3,709
<i>Aktsushima Kan.</i> Steel Cruiser.	3,150
<i>Nautwa Kan.</i> Steel Cruiser.	3,709
<i>Chiyoda Kan.</i> Steel Cruiser.	2,439
<i>Fuso Kan.</i> Iron Armour-clad Corvette.	3,777
<i>Hiyei Kan.</i> Composite Armour-belted Corvette.	2,284
<i>Akagi Kan.</i> Steel Gun-boat.	622

These 11 vessels have an aggregate displacement of 36,740 tons. It has been alleged that Admiral Ito had the whole of the Japanese fleet under his flag in this fight. The statement is very misleading. He himself says that he had the Principal Division and the first Flying Squadron only. To show how much stronger he might have been, and certainly would have been had he anticipated meeting the redoubtable Peiyang Squadron, we may set down some of the ships which, though in Korean waters and under his command, were not with him in the battle:—

	Tons.
<i>Takao Kan.</i> Steel and Iron Cruiser.	1,778
<i>Tsukushi Kan.</i> Steel cruiser.	1,372
<i>Musashi Kan.</i> Composite Sloop.	1,502
<i>Yayeyama Kan.</i> Steel Despatch Vessel.	1,609
<i>Atago Kan.</i> Steel and Iron Gun-boat.	622
<i>Yamato Kan.</i> Composite Sloop.	1,502
<i>Maya Kan.</i> Iron Gun-boat.	622
<i>Katsuragi Kan.</i> Composite Sloop.	1,502
<i>Chokai Kan.</i> Iron Gun-boat.	622
<i>Oshima Kan.</i> Steel Gun-boat.	640

But though these vessels were absent, the Admiral was certainly in command of a powerful and well consorted Squadron. With regard to the 14 Chinese men-of-war, some of the names are not yet accurately identified. Of nine, however, we can be certain. They are:—

	Tons.
<i>Ting-yuen</i> Ironclad.	7,400
<i>Chen-yuen</i> Ironclad.	7,400
<i>Chih-yuen</i> Protected Cruiser	2,300
<i>Ching-yuen</i> Protected Cruiser	2,300
<i>King-yuen</i> Belted Cruiser	2,800
<i>Lai-yuen</i> Belted Cruiser	2,800
<i>Chao-yung</i> Protected Cruiser	1,350
<i>Yang-wei</i> Protected cruiser	1,350
<i>Feng-yuen</i> Cruiser	2,800

These 9 ships represent an aggregate tonnage of 30,500 tons. Hence we may fairly conclude that the 14 vessels engaged were superior to the 11 Japanese, without including the 6 torpedo-boats. The armament, too, of the Chinese vessels, was very powerful. The iron-clads carried 30.5-centimetre Krupp guns firing projectiles that weigh 725 lbs., and 15 cent. Krupp. The *Chih-yuen*, *Ching-yuen*, *King-yuen*, and *Lai-yuen* carried 21 cent. and 15 cent. Krupp, and the *Chao-yuen* and *Yang-wei* had 25-ton Armstrongs. The loss of four powerful cruisers, aggregating 7,800 tons, is a terrible blow to the Peiyang Squadron.

The losses on board the Japanese ships are now published in detail. They are:—

KILLED.

One Commander.
Four Lieutenants.
One Midshipman.
One Surgeon-Major.
One Surgeon.
One Chief Paymaster.
Sixty-nine Warrant Officers and Seamen.

WOUNDED.

One hundred and sixty of all ranks.

Thus the total casualties amounted to 238 of all ranks.

His Majesty the Emperor has despatched to the Army and Navy, respectively, at the seat of war, Lieut.-Colonel Nakamura Kaku and Commander Saito Minoru, in the capacity of *Imon-shi*, an expression for which we know no English equivalent, but which means "delegates to convey compliments and make inquiries."

Her Majesty the Empress has caused to be conveyed to the Emperor a message of hearty congratulation on the victory achieved by the Fleet on the 17th instant.

The *Official Gazette* publishes the following return of deaths among the troops in Korea from the 16th of July to the 5th of September:—

Major of Infantry died of sickness ... 1
Privates of Infantry died of sickness ... 2

KILLED IN FIGHTING AT SŪL.

Private of Infantry ... 1

KILLED IN THE BATTLE AT SŪNG-HWAN.

Captain of Infantry ... 1
Lieutenant of Infantry ... 1
Surgeons of Infantry ... 2
Privates of Infantry ... 28

DIED SUBSEQUENTLY OF WOUNDS.

Privates of Infantry ... 7

DIED OF SICKNESS.

Privates of Infantry ... 28

This record shows that the total number of deaths in action, or subsequently from wounds received in action, up to September 5th was 40. Every name is given, and as we do not imagine that the *Official Gazette* will be accused of lying, it becomes interesting to know what becomes of all the encounters said to have occurred between the Chinese and the column that marched from Sŭl against Pyŏng-yang, during the first half of August—encounters in every one of which the Japanese were reported to have been worsted with an aggregate loss of, at least 5,000 killed. The local English newspaper that pretends still to place faith in those exploded canards had better reflect a little, and the *North China Daily News* had better procure for itself another correspondent in Korea, since its present representative stands proved as either the most inventive or the least discriminating writer that ever had access to the columns of a newspaper.

The two most prominent figures, writes the editor of the *Kokumin* from Hiroshima, where he is staying as one of the many correspondents despatched by that paper—in the recent great battles of Pyŏng-yang and in the Yellow Sea, are Lieut.-General Viscount Nozu, Commander-in-Chief of the Japanese Army that took Pyŏng-yang, and Vice-Admiral Viscount Kabayama, Commander-in-Chief of the Japanese Navy. The Vice-Admiral's name appeared in the list of officers that formed the suite of the Emperor on his Majesty's recent journey from Tokyo to Hiroshima, and whenever the Emperor put up for the night, the Vice-Admiral was assigned for the

quarters of the Admiral. It was therefore a great surprise to learn that the Admiral really left Japan on the 3rd inst. for the head-quarters of the Japanese squadron, and that he took part in the recent battle in the Yellow Sea on board the *Saikyo Maru*. It is said that Vice-Admiral Ito, Commander of the Japanese Fleet in Korean waters, pressed him to remove to the flagship, but that he declined this, saying that the flagship should carry the officer directing the Fleet, and that the *Saikyo* was quite enough for him, being, as he was, a mere spectator. Further the *Saikyo* was one of the ships charged with the task of enticing out the enemy. Some may accuse the Admiral of rashness, but matters relating to the operations of war can not be judged by ordinary standards. The *Kokumin* says in another column that the object of the *Saikyo* in undertaking such a desperate project, was to capture either the *Ting Yuen* or the *Chen Yuen*, and that a body of picked men were carried on board.

We must confess that all this seems very apocryphal. It is not credible that the *Saikyo Maru's* people had any idea of encountering the enemy's squadron when she sailed northward from the Ta-dong river. No ordinary calculation could have suggested that on the very day of the fall of Pyöng-yang, the Chinese fleet would have been engaged conveying troops for the reinforcement of that place's garrison to a position 120 miles distant. On the other hand, it was a perfectly natural and proper manoeuvre that, immediately on the fall of Pyöng-yang and on the eve of the Japanese army's advance northward, steps should be taken to ascertain the state of affairs in the Yalu river. We do not doubt that the purpose of Admiral Ito's squadron in sailing to Takushan Bay was to reconnoitre in connection with the operations on shore, and that the encounter with the enemy's fleet was quite unexpected. The honour of the day rests with Admiral Ito, who evidently kept his ship, the *Matsumura Kan*, in the very thick of the engagement from first to last. The *Saikyo Maru* ought not to have been there at all. She could not be of any service in the fight, and had she been sunk or captured, the responsibility of imperilling her so uselessly would not have been light.

The same correspondent of the *Kokumin* gives an account of General Nozu's strategy in the attack on Pyöng-yang, an account that implies the existence of great difficulties. The General had, in the first place, no time to wait for the coöperation of the Navy in the attack. He boldly pushed on his army and carried out the preconceived plan, which was to assault the place on the day of the opening of the head-quarters at Hiroshima. Hence he adopted an exceptional method, and attacked the Chinese from all sides. Moreover, without waiting for the commissariat arrangements, he caused his troops to carry their own provisions and thus led them to the assault. Hence the manoeuvres of the Japanese army at Pyöng-yang are more or less open to the charge of irregularity, if judged by the canons of ordinary warfare, and had the enterprise failed, the situation of the Japanese army would have been exceedingly perilous. The Lieut.-General himself was fully conscious of the danger he ran. It is said that before proceeding to the assault at Pyöng-yang, he telegraphed to the proper quarter to prepare a burying place for some fifteen hundred soldiers. "Terrible suspense prevailed," said a certain military authority to the correspondent, "for had the thing gone wrong no one could foresee what disasters the Japanese army might not have been involved in."

The Japanese squadron was to enter the Ta-dong for the purpose of conveying provisions to the land forces as well to cover the opposite bank, and then to proceed upward and assist the army in the attack on the enemy. The navy, however, had to convoy the fleet of more than thirty steamers that carried General Yamagata and his troops to Korea, but as they could not fail to assist the army in the attack on Pyöng-yang, they resolved to detach one portion for convoy duty and to send another to coöperate with General Nozu. It

is said that, owing to this sudden departure from the original programme, much correspondence passed between General Yamagata and the Head-quarters, and that the anxiety felt at Head-quarters was of the keenest description.

The escape of the *Saikyo* was remarkable. The *Yiji* says that when the enemy fired two torpedoes at her, she was attempting to withdraw from the scene of the fight, but her speed being greatly reduced owing to the loss of her steering gear, of which fact due notice was not taken by the foe, the torpedoes, which were discharged on the supposition that she was steaming at her full rate, passed ahead of her and did no damage. This differs from Sub-Lieutenant Matsumura's account given elsewhere.

The *Official Gazette* publishes a telegram from Lieut.-General Nozu, Commander-in-Chief of the advanced columns in Korea, giving the following estimate of the Chinese troops that took part in the defence of Pyöng-yang:—

Shang-tsz' Force	8,000 of all ranks.
Feng Force	3,500
Feng-tien Regulars	1,500
I-tzu' Force	2,000
A-san Force	1,000
Total	16,000 of all ranks.

By the Feng and Feng-tien Forces we understand contingents from the Feng-tien Division of the Manchu armies. These are, in fact, the Moukden garrison. They are supposed to be the most efficient and best armed of all the troops in Manchuria, and their numbers have been usually put at 30,000 men, all carrying Remington repeating rifles. As to the Shang-tsz and I-tzu troops, we fail to identify them: possibly these are the names of special corps. But where, in the above detail, does the Army of Kirin figure, which was said to have been sent to the defence of Pyöng-yang? Our readers doubtless remember the statement originally circulated in China, namely, that the Emperor, indignant at the delay shown by the Viceroy Li in despatching troops to Korea, had issued independent orders to the Kirin army to march across the frontier, and further that the Kirin army was 30,000 strong, well disciplined and well armed. In addition to this powerful force, a strong contingent was said to have been sent from Taku. What had become of all these "braves"? Perhaps China is keeping her forces carefully at home to guard her Lanes and Penates. At any rate her measures for the protection of Korea have been wholly unworthy of a great Power.

Field-Marshal Count Yamagata telegraphed to Hiroshima under date 1 p.m. on the 23rd instant:—

Our loss in the attack on Pyöng-yang was:—

KILLED.	
Officers	8
Rank and File	154
Total	162
WOUNDED.	
Officers	26
Rank and File	373
Missing	4
Total	403
Grand Total	565

The enemy's dead numbered about 2,000. The number of their wounded is not quite clear, but it must have been fully double that of their killed. The prisoners are 511 Chinese and 14 Koreans. Of the Chinese prisoners 12 were wounded, and of the Korean, 2. A great number of horses were killed.

The column sent in pursuit of the enemy arrived at Yöng-yu on the 17th instant. There they found 453 wounded soldiers of the enemy who had escaped from Pyöng-yang. According to information received from a squadron leader of cavalry the main body of the fugitives from Pyöng-yang passed through Anchü on the 17th instant, and a smaller body on the 18th. They numbered about 4,000. The head-quarters will be moved to-morrow to Seh-fun.

The town of Yöng-yu, mentioned in the above telegram, lies about ten miles westward of the main road leading northward from Pyöng-yang. With regard to the statement that the head-quarters would be moved to Seh-fun, we fail to

understand it, as the only place of that name marked on the map lies to the south-east of Pyöng-yang, quite off the main road.

The Field-Marshal's statement as to the number of wounded among the prisoners does not tally with a later message sent from Pyöng-yang at 11 a.m. on the 19th instant and received in Hiroshima at 2.40 a.m. on the 24th inst. The sender was Colonel Uyeda, Chief of Staff, and the message runs:—

General Tso Po-Kwei, who was taken prisoner at the capture of Pyöng-yang, is dead. Among the 555 Chinese prisoners there are 7 officers, including a chief of brigade. A hundred and sixteen of them are wounded. Among the 15 Korean prisoners, 4 are wounded. In addition to these 56 men who, after being taken prisoners, attacked their guards, were shot in the mêlée.

The *Nippon* publishes the following telegram:—

Intelligence has been secretly conveyed from a Korean source that about 3,000 Koreans in the neighbourhood of An-dong had assembled with the object of attacking the Japanese troops. The truth of the report is not assured, but a company of soldiers will be sent there in two or three days.

An-dong is a town in the South-western province (Kyong-sang-do) of Korea. It is more than a hundred miles from Söul.

If Lieut.-General Viscount Nozu's latest estimate of the number of Chinese engaged in the defence of Pyöng-yang be correct, the attacking force and the defenders were almost equal in numbers. For the four columns that converged upon the place are said to have aggregated 16,400 of all ranks, and General Nozu now puts the Chinese at 16,000. This last figure, however, does not include the Korean auxiliaries, of whom there is said to have been a considerable force.

According to a telegram said to have been despatched from Hiroshima at 3.37 p.m. on the 23rd instant, the Japanese found in Pyöng-yang 2,710 *koku* of rice, 80 *koku* of miller, and 600 *koku* of other kinds of grain. It may therefore be inferred that no scarcity of food existed among the defenders of the place, though rumour represented them as reduced to very short allowance.

Sub-Lieutenant Matsumura having been sent by Vice-Admiral Ito to Hiroshima to report the facts of the naval engagement on the 17th instant to the Emperor, was summoned to his Majesty's presence, and gave an account which appears as follows in the *Nichi Nichi Shimbun*:—"Our squadron, when out reconnoitering, perceived 14 war-vessels of the enemy and 6 torpedo boats moored in the harbour at Takushan (off the mouth of the Yalu river). The Chinese vessels at once moved out in battle formation, and when at a distance of 4,000 metres from our ships, opened fire. We, on our side, fearing that we could not make good practice at such a distance, moved up to a distance of 3,000 metres (3,281 yards) and then opened fire. Our ships preserved their line of battle, but the enemy after a time broke his formation. The *Lai-yuen* was the first to sink. She went down stern foremost, and her bows rising, she stood for a moment half out of the water. The *Chih-yuen* and the *Chao-yung* went down next in that order. Numbers of the crew clung to the rigging and cried for help. It was a pitiful sight. As our vessels used shot only and did not employ torpedoes, it was remarkable that we sunk the *Lai-yuen* with her double bottom. It was one of the most successful things since Nelson's time. The inferior speed of the *Hiya Kan* was a great drawback. Moreover, being the last ship in the line, she received the brunt of the enemy's shells, and finally caught fire and had to fall out of the formation. The *Saikyo Maru* had her steering gear shot away, and being obliged to leave the line, had to push her way between the powerful *Ting-yuen* and *Chen-yuen*. Her distance from the ironclads at the time of passing did not exceed 70 or 80 metres, but apparently the Chinese vessels thought that her intention was to ram them as they sheered off to avoid her, and thus made a road for her escape. At the same time they discharged two fish-torpedoes

at her, but her distance was then too great for the successful use of torpedoes, and the projectiles passing beneath her, she escaped uninjured. The *Hiyei Kan*, which had been obliged to leave the line of battle, proceeded to the place from which we had sailed, and having transferred her dead and wounded to a transport, procured a surgeon, then extinguished the fire on board and returned to the scene of the battle at full speed, but was too late to take any further part in it, to the infinite regret of all on board. The *Matsushima Kan*, being the flag-ship, was in the van of the fight and consequently most exposed to the enemy's fire. Having suffered some injury, she had to leave the line of battle. Accordingly, the Commander-in-chief, Admiral Ito, and his staff changed to the *Hashidate Kan*, which thenceforth became the flag-ship. The Chinese vessels being now in full retreat, our squadron pursued, keeping on a parallel line. We were obliged to put some distance between them owing to their being provided with torpedo-boats and the night being very dark. Thus we lost sight of them, and at dawn, having reached Miao Island, we made various efforts to discover their whereabouts, but were not successful. Returning to the scene of the preceding day's fight, we found the *Yang-wei* ashore and deserted by her crew. We therefore destroyed her with a fish-torpedo. The Chinese ships *Ting-yuen*, *Klug-yuen*, and *Ping-yuen* caught fire, and great confusion was observed on board. None of them succeeded in extinguishing the fire while she remained in the line of battle. We think that an American man-of-war was a witness of the battle."

It is to be hoped that a much fuller account of the action than the above will be published by some of those present. There are a thousand details that would be of the greatest general interest. But all these official reports in Japan are provokingly laconic.

A telegram sent from Fusan at 2.15 p.m. on the 23rd instant, says that Major-General Oshima has had to go into hospital. He received a wound in the arm during the attack on Pyöng-yang, and though he made light of it at the time and refused to leave his place, he was subsequently obliged to take the surgeons' advice and submit to regular treatment. The injury is of a comparatively trifling character.

The *Yomiuri Shimbun* publishes a telegram saying that the Japanese troops have reached Ka-San, a place within 68 miles of Wiju. Ka-San is 77 miles from Pyöng-yang. It, therefore, this intelligence be correct, the Japanese column must be moving with considerable rapidity, and their arrival at Wiju on the banks of the Yalu river, that is to say, on the frontier of Manchuria, should be reported in a few days. The same telegram adds that 80 wounded Chinese have been captured en route.

Commander Sakamoto Hachirota, who was killed in the naval fight of the 17th instant while in command of the *Akagi Kan*, a gun-boat of 600 tons, was a native of Kagoshima. After passing through his course at the Naval College, he went to England to complete his studies. He served as second in command in the *Yoshino Kan* until a recent date, when he was appointed to command the *Akagi*. He was 37 years of age.

Telegraphic intelligence from Hiroshima, dated 9.20 a.m. on the 25th instant, says that the Emperor has appointed General Count Oyama, Minister of State for War, to be Commander-in-Chief of the Second Army, and has nominated Lieut.-General Count Saigo, Minister of State for the Navy, to be temporary Minister of War in conjunction with his present office. It would seem, therefore, that General Count Oyama is to proceed to the seat of war.

In appointing officers to direct the military operations in Korea, the Japanese Government does not appear to have made any special selections. The Division first sent to the peninsula was the Fifth. Its Commander-in-Chief was Lieut.-General Viscount Nozu, and its second in command, Major-General Oshimura. These officers, then, in the ordinary course, are

the direction of the troops in Korea. The same method was pursued when the first half of the Third Brigade proceeded to Gensan. With the second half, however, Field-Marshal Count Yamagata was despatched, and he thenceforth became Commander-in-Chief in Korea. The officers in command of the First, Second, and Sixth Divisions, parts of which constitute Japan's Second Army, are Lieut.-General Yamaji, Lieut.-General Sakuma, and Lieut.-General Prince Yoshihisa, and the whole will be under the Command-in-Chief of General Count Oyama.

The *Nichi Nichi Shimbun* and the *Fiji Shimpö* publish the following telegram, sent from Shanghai at 10 p.m. on the 23rd inst.:

The eight Chinese ships injured in the late engagement are undergoing repairs at Port Arthur. They lost a moiety of their crews. The Chinese Government, fearing that the Japanese Fleet will attempt to force its way into the Gulf of Pechili, has issued orders to all the ships to assemble at Wei-hai-wai. Eight thousand soldiers are waiting at Taku for transports to carry them to the mouth of the Yalu river. The *Tai-an* is to leave Shanghai to-morrow.

One part of this telegram seems doubtful. It may be, and probably is, correct so far as concerns the injured ships and the step taken by the Chinese Government to protect the Gulf of Pechili, but we can not easily credit the assertion that eight thousand soldiers are to be transported from Taku to the mouth of the Yalu river. How are they to get there? The Japanese Navy has full command of the Yellow Sea eastward of the entrance to the Gulf of Pechili. To send a flotilla of transports directly across the scene of the recent engagement to a point of which the Japanese army will probably be in possession before the transports arrive, and in the immediate neighbourhood of which Japanese men-of-war are certainly cruising, would be an operation more than hazardous. It is, of course, conceivable that the Chinese are anxious to push the scene of operations as far as possible from home, and that their programme consequently is to keep the Japanese forces engaged on the frontier of Manchuria. But surely the best way to deter any Japanese attempt against China proper is to mass powerful armies at the most vital points, instead of detaching a portion of the troops required to defend the route to the capital itself. Besides, where are the forces of Manchuria; the 180,000 men of whom a large number are supposed to be drilled in modern tactics and equipped with modern arms of precision? Are these men not available for defending the frontier of their own province, and when Manchuria itself is threatened with invasion, is it necessary to send troops for its protection over-sea from Pechili? We doubt that item of the telegram. Yet so inept and ineffective have Chinese proceedings hitherto been, that nothing ought, perhaps, to be thought impossible.

The *Fiji* publishes a telegram sent from Fusan on the 24th instant. It merely gives a brief resumé of the operations of the attacking force at Pyöng-yang. It includes, however, one detail not hitherto mentioned, namely, that a violent storm of wind and rain occurred on the afternoon of the 15th instant when the enviroining columns were closing in on the town.

The names of the officers killed and wounded in the naval engagement on the 17th instant and in the assault on Pyöng-yang are published in the *Official Gazette*, but we do not think it essential to reproduce them in these columns.

In the first encounter between Chinese and Japanese ships-of-war, the Chinese vessel *Kwang-yi* was so badly injured by the fire of the Japanese that she was run aground and deserted by her crew. The survivors of the latter did not, it appears, make their way to Pyöng-yang in company with the fugitives from A-San, but lay concealed in one of the islands adjacent to the scene of the fight. We now read in the *Nichi Nichi Shimbun*, that these men have been taken off by one of Her Britannic Majesty's ships, and sent back to China, a written engagement having first been obtained from them that they would not again take up arms against Japan during the course of the pre-

sent war. A report in the above sense, enclosing a copy of the engagement given by the Chinese, was forwarded—we still quote from the *Nichi Nichi Shimbun*—by Sir E. R. Fremantle, Commander-in-Chief on the China Station, to the Korean Government, through Mr. Gardner, H.B.M.'s Consul in Söul. This will be another surprise to the Chinese. They are said to be very much astonished at the kind treatment extended to their soldiers who have fallen into Japanese hands. They will be still more astonished at the notion of releasing prisoners on parole. Sir E. R. Fremantle, if he really took the step ascribed to him, must have considerable faith in the possibility of suddenly educating the Chinese up to a high standard of Occidental military methods. We confess, too, that his ideas seem a little too refined. The release of an officer on parole is a not an infrequent practice, but to return fugitive Chinese to their own country under promise that they will not resume service against the country that has destroyed their ship, is to push the high morals of warfare to a lofty point. Can there be any guarantee whatever that these men will keep their promise after they get back to China? We wonder what Sir E. R. Fremantle would do if he happened to find himself within reach of a few thousands of Chinese Bannermen who had fled from Pyöng-yang and were lying concealed somewhere under circumstances of hardship. Would he send them also back to China under written engagement not to serve again against Japan? If so, the engagement would not be worth a row of pins in the event of an invasion of China by the Japanese, nor could it possibly be expected that they would observe any such pledge under such circumstances. We venture to doubt the correctness of the *Nichi Nichi Shimbun's* information.

Much capital is made by our local critics out of the fact that the tonnage of the 11 Japanese men-of-war engaged in the battle on the 17th instant was stated by us to be 26,740 tons instead of 36,740. They claim that this error was an intentional attempt to deceive the public, and they call it "a mean trick," together with other epithets suitable to the graceful vocabulary of such writers. Considering that the error was explicitly corrected in our next issue, and that we there explained it to be purely typographical; considering also that the tonnage of each ship was tabulated so that the exact total could be seen at a glance, it is really too silly to simulate belief in any deliberate deception on our part. That a charge of the kind should be persistently preferred in the face of the above facts, is thoroughly characteristic of Yokohama journalism.

The question of the Pyöng-yang prisoners also has been treated by these critics *more suo*. It was confidently believed at first in Tokyo that the number of prisoners taken at the assault had been 14,500, and even when Field-Marshal Count Yamagata's telegram arrived speaking of 600, the language of his message suggested that he referred to a capture made by the pursuing column subsequent to the fall of the town. The news published in this journal merely reflected the convictions existing from time to time in the capital. Every official telegram was given in full, and when it became evident that the first intelligence was incorrect, the fact received instant acknowledgment. Throughout this campaign not a single exaggeration or falsehood has been detected in a telegram sent by responsible military or naval Japanese officers and published in the *Official Gazette*. For the rest, it is evidently unreasonable to expect that the earliest intelligence of a battle fought at a distant place will be entirely free from inaccuracies. The inevitable disposition of persons transmitting such intelligence is to distort it more or less. By and by the truth comes to be known, and so long as no deliberate attempt is made to conceal or pervert the ascertained facts, it is mere childishness to talk of trickery or deception.

We regret to learn that the news of the rescue of Chinese fugitives from a man-of-war and their return to China by order of the officer commanding on the China and Japan

station, is true. Truly the Admiral's action in this matter is difficult to understand. Had the men been on Chinese territory and had they been found in a destitute condition, their rescue and transport to a place within reach of Chinese official succour, would have been an act of mere philanthropy. But they were on Korean territory. Chinese officers and men originally forming part of the crew of a Chinese man-of-war destroyed in battle with the Japanese and being at the moment fugitives on Korean territory—what on earth had a British Admiral to do with such persons beyond carrying to them aid dictated by the ordinary canons of humanity? If it were necessary to rescue these men at all—and we should be the last to suggest any neglect of the principles of international benevolence—surely the Korean Government would have been the proper recipient of the fugitives. Where is the principle upon which Admiral Fremantle acted to lose its efficacy? At what point would the rules of neutrality be violated by the exercise of such charity? It seems to us that if to return to China fugitive Chinese sailors hiding in an island on the Korean coast would be correct, then it would be equally correct to extend the same rescue to Chinese soldiers who, flying from a town captured by the Japanese army, found themselves in straits for the necessities of life. The plain and simple course for men thus circumstanced, the course invariably pursued in Western warfare, is that they either surrender to or are taken in charge by the Government of the neutral territory to which they have fled. In this instance the curiosity of the performance is accentuated by the fact that Korea is not a neutral state, but has allied herself with Japan against China. An exactly parallel case is easily stated. Suppose that Germany and France went to war about some question connected with Denmark; suppose that they made Denmark the field of battle; suppose that a German ship, having been sunk by a French, the survivors of her crew escaped to a Danish island in the Baltic; and suppose that a British Admiral, finding them there, took them on board ship and carried them back to Germany, would not that be exceedingly benevolent neutrality? We trust that fuller details may shed some extenuating light upon this curious affair.

The Tokyo News Agency reports, on the strength of a telegram despatched from Hiroshima at 1.55 p.m. on the 26th instant, that the artillery captured by the Japanese troops at Pyöng-yang was 4 Krupp field-guns, 26 Krupp mountain-guns, and 6 Galling's. Further, the Chinese troops flying from Pyöng-yang were so hotly pressed by their pursuers that they left behind them 4 more Krupp field-guns at Andoh, a place some 60 miles north of Pyöng-yang. If this statement be correct, it is evident that the Chinese troops were well equipped with artillery and that they made a miserable defence in proportion to their resources.

The *Nichi Nichi Shimbun* withdraws its statement that General Count Oyama has been appointed to the command in chief of the Second Japanese Army. It would seem from the form of our contemporary's withdrawal that the appointment has actually been made and that its publication is the only irregularity for which an apology is now offered. Count Saigo's temporary assumption of the portfolio of War during Count Oyama's absence is also withdrawn as a public announcement but allowed to stand as a private one. That is *pro-forma* journalism with a vengeance.

Concerning the losses suffered by the Chinese we find the following paragraph in the *Nichi Nichi Shimbun*:—"The value of the four Chinese ships destroyed in the engagement on the 17th instant may be estimated as follows:—

	Yen.
Chih-yuen	3,000,000
Lai-yuen	2,500,000
Yang wei	1,500,000
Chao-yung	1,500,000
Total	8,500,000

destroyed and the one captured off the island of Phung-do on the 25th of July. These were:—

	Yen.
Kwang-yi (run ashore and abandoned)	1,500,000
Tsao-kiang (captured)	600,000
Total	2,100,000

We have further to consider the ships set on fire in the battle, namely, the *Ting-yuen*, *King-yuen*, and *Ping-yuen*. These must have been greatly injured. According to the report of Admiral Ito, the Commander-in-Chief, great confusion was observed on board of them and we understand that naval officers on the spot think that they must have been abandoned. If we supplement this list by the *Chi-yuen*, injured at Phung-do, it results that of the 10 ships supposed to constitute the back-bone of the Pei-yang Squadron, two only, the *Chen-yuen* and the *Ching-yuen* remain, and these too have suffered more or less injury."

In our opinion, the *Nichi Nichi Shimbun* over-estimates the injury thus far inflicted on the Pei-yang Squadron. There is no evidence that any of the Chinese ships which eluded the Japanese fleet on the 17th instant were abandoned subsequently. On the contrary, the only intelligence since received indicates that even the burning ships made Wei-hai-wei or Port Arthur in safety. As for the *Kwang-yi* and the *Tsao-kiang*, their loss can scarcely be said to have affected the efficiency of the Pei-yang Squadron. The 4 ships destroyed on the 17th undoubtedly weakened the Squadron greatly, but it would be a great mistake, we venture to think, were the Chinese Navy supposed to be crippled. It will still take a great deal of beating and if the Japanese regard it as a negligible quantity, they may find the error very costly.

The *Nichi Nichi* then proceeds to count the Chinese losses in men thus:—At Söng-hwain, 500 killed and wounded; drowned at the sinking of the *Kowshing*, 1,100; killed and taken prisoners at, and subsequent to, the capture of Pyöng-yang, 2,685; lost in the *Lai-yuen*, 203; lost in the *Chih-yuen*, 202; lost in the *Chao-yung*, 153; lost in the *Kwang-gi*, 130; taken with the *Tsao-kiang*, 155; otherwise killed and wounded 600; wounded at Pyöng-yang, 2,000. On the whole, her loss by land has been from 8,000 to 9,000 men, and her loss at sea fully 1,400.

It is conjectured, writes the *Fiji Shimpö*, that the fire on board the Chinese ironclad *Ting-yuen*, occurred in her bunkers. As a rule, an ironclad has so little to burn that a fire happening on board can be quickly extinguished. Even if flames break out among the coals, it is easy to get the better of them by excluding the air. But if the ship's hull is penetrated by shells from an enemy, the putting out of a fire becomes a very difficult matter. Possibly something of that kind befel the *Ting-yuen*.

We read in the vernacular press that Surgeon-Major Miyake and Chief Paymaster Ishizuka, who were killed in the naval fight on the 17th instant, had their lives insured in the Imperial Life Assurance Company for 1,000 yen each. This is the first instance in Japan of life insurance paid to the families of officers killed in battle.

It is expected, says the *Fömiuri Shimbun*, that as the subjects to be debated by the Imperial Diet in its special session next month at Hiroshima will all have reference to matters that ought to be kept concealed from the enemy—such as grants in aid of the war, augmentation of the army and navy, and so forth, the proceedings will be secret.

Admiral Ito, Commander-in-chief of the Japanese Naval forces in Korea, has replied in brief but appreciative terms to the Emperor's message congratulating the Squadron by which the victory on the 17th instant was won.

With regard to the prisoners taken at Pyöng-yang and subsequently, it is expected, says the *Nichi Nichi Shimbun*, that they will be sent to Hiroshima, and subsequently distributed among the head-quarters of the various divisions. The duty of guarding them will thus become easy.

The names of the naval officers killed in the battle on the 17th instant and the ships to which

they belonged have already been published in the vernacular press. The *Nichi Nichi Shimbun* now adds that the losses of warrant-officers and seamen on the various ships were:—*Matsushima*, 9; *Hashidate*, 1; *Itsukushima*, 13; *Hiyei*, 17; *Fuso*, 4; *Yoshino*, 10; *Akitsu*, 4; *Takachihö*, 1; and *Akagi*, 10; making 69 killed in war. The wounded aggregated 160, of whom nearly 100 were in the *Matsushima* alone.

The *Fiji Shimpö* publishes a telegram from Hiroshima, under date 12.40 p.m. on the 25th instant, showing that the *Togaku-to* are again active and that the Japanese are now the object of their attack. News having been received that same 2,000 or 3,000 of them had assembled at Andon in the province of Kyong-sang, a reconnoitering party was at once sent thither, with the result that assurance was obtained of a somewhat serious plot against the Japanese forces. Troops have been despatched to quell the insurrection. It will be remembered that among the various accusations preferred against the Japanese Government at the beginning of the war, one was that they had fomented the *Togaku-to* rebellion and that the rebels would coöperate with the Japanese forces. The falseness of that rumour is now proved.

The statement telegraphed from London that at the instance of Russia and England the Viceroy Li had agreed to an armistice pending negotiations for peace, but that Japan had refused to consent to anything of the kind, is without foundation. Reuter says nothing as to the original source of the assertion, but whether it came from St. Petersburg or from London informants, it is equally untrue. No moment could be worse chosen than the present for foreign intervention. China has suffered too much to yield willingly and not enough to bow to *force majeure*. Japan has tasted victory sufficiently to have her appetite whetted and not sufficiently to be satisfied. Great Britain will not make the mistake of risking another failure, and there are many reasons—reasons that it would be mischievous to discuss here in detail—militating against the probability of renewed coöperation between Russia and England. We do not know whether China, desiring to acquire a peace-loving reputation, is responsible for the circulation of the above rumour, but our readers may confidently regard it as quite untrustworthy.

Again the allegation is put forward that, up to the moment of the sinking of the *Kowshing*, China was perfectly willing to come to an amicable understanding with Japan. If she was, it must be admitted that her manner of giving expression to her mood was singularly unfortunate. In her earliest official communication to Japan, namely, that giving notice of the despatch of troops to Korea, she called the latter a "dependency" of the Middle Kingdom, thus at once thrusting into the forefront of discussion a contention that she perfectly well knew—or should have known—to be fatal to a good understanding. Japan could not consent to openly recognise as a Chinese dependency a country where her own right of military intervention was conventionally declared equal to that of China, and with which she had concluded a treaty on an explicitly stated basis of equality. China's next step was to refuse to coöperate at all with Japan in the reform of the Korean administration. Her next was to insist that the withdrawal of Japan's troops must precede any negotiations, which of course meant that after the troops were withdrawn negotiations intended to be interminable might be opened. Her next was to express her willingness to convey friendly suggestions to Korean officialdom, and leave that body to follow them at the cost of financial suicide or reject them at no cost at all. Her next was to send reinforcements to Korea in the teeth of Japan's warning that such a step must be regarded as a beligerent act. Then ensued the *Kowshing* affair. We do not for an instant pretend to deny that a great deal may be said on China's side. She was in truth placed in a most difficult position, and fate was never more cruelly ironical than when it condemned men like the Viceroy Li to offer armed opposition to a programme of reform which they themselves had always

striven to carry out in their own country. But after every allowance is made, all acquainted with the facts must deny the justice of attempting to claim for China a monopoly of pacific inclinations.

Detailed accounts of the fighting at Pyöng-yang will doubtless be received in time. It seems a long time, but we must possess our souls in patience. Meanwhile, the fact that the Chinese defending force was provided with forty field and mountain guns and Gatlings, shows that they were well equipped. Numerically they represented only one Division—much less, indeed, than a Japanese Division, or *corps d'armee*, on a war footing—yet they had six batteries of field and mountain guns and one battery of Gatlings. Such a force of artillery, served with reasonable efficiency, ought to have inflicted terrible loss on the assaulting columns. But the Chinese gunners were evidently an ill-trained body, or else the Chinese officers—perhaps a more reasonable hypothesis—did not know how to utilize the resources at their command. Thirty-six of the guns were abandoned at Pyöng-yang; the remaining four at An-chu. We imagine that these forty represent the whole of the defenders' artillery. The guns are all of Chinese manufacture, but they are said to be excellent weapons. It is a delightful idea to find that the myth of a "masterly retreat" is still kept up by newspapers reluctant to admit Japan's victory. A retreat that involves the loss of artillery, stores, treasure, two thousand killed and four thousand wounded or captured, must be looked at from a novel point of view in order to appear "masterly."

The strategical and tactical methods of the Chinese troops in Korea do not improve upon acquaintance. From accounts sent by military men, we learn that at Söng-hwan the Chinese pitched their tents and environed them with a parapet. In the West when a parapet is erected, the earth to build it is taken from a trench in front, this trench constituting an additional barrier to the assaulting force. But the Chinese dug no ditches at Söng-hwan. They obtained earth by levelling inequalities in the ground where the tents were to be pitched or by carrying soil from elsewhere. The height of these breastworks show that they were intended for big men. They could not have been used conveniently by Japanese soldiers. Indeed, the fine physique of the Chinese braves may be inferred from the uniforms found at A-San and now on view at the Shokön-sha, in Tokyo. Having erected the breastworks, the Chinese sat down quietly behind them. They did not apparently think of throwing out skirmishers to harass the enemy. They simply waited to be attacked. And the funniest thing is that before they opened fire they always raised a number of banners. The assaulting force could easily tell the critical moment when a shower of lead impended, for the preliminary of a host of erected banners could invariably be observed. They were armed with repeating rifles, and they seem to have made a habit of discharging all the cartridges in the magazine as fast as possible, for while their fire lasted it was a hail of bullets, and when it ceased the calm continued for a very perceptible interval. Their aim seems to have been even worse than that of the gunners in the Chinese fleet, a fact that will surprise many people, for a general impression has hitherto prevailed outside China that the Chinese troops are excellent marksmen. One thing can be clearly seen from the state of the captured rifles, namely, that the soldiers took exceedingly bad care of them. They all show rust of long standing, and bear other marks of careless treatment.

The Chinese prisoners are now en route for Osaka, Himeji, Otsu, Nagoya, and Hiroshima, where, as already stated, they will be distributed among the various Divisions whose head-quarters are at those places. Apparently some of them will have the honour of lodging in buildings attached to temples. Doubtless they will pass a very pleasant, if somewhat monotonous, winter in Japan.

It is stated by the News Agency and certain vernacular journals that the Ministry of State

for Finance has given permission to the Nippon Yusen Kaisha to charter foreign ships for the coastwise carrying trade, as the majority of the company's steamers are employed by the Government for transport purposes. The permit holds good for six months, and in addition to the Open Ports, these steamers will be at liberty to load and unload cargo at some twenty places in Hokkaido, Hokurikudo, Chugoku, and Kyushu. Prompt measures have been taken by the Nippon Yusen Kaisha to utilize this permission, so as to relieve the embarrassment experienced by would-be shippers of coastwise cargo since the outbreak of the war. Several steamers, it is alleged, have already been chartered: the *Anfer* (?) 3,185 tons; the *Afghan*, 2,202 tons; the *Arwa* (?) 2,957 tons; the *Argyle* 2,907 tons; the *Aswanley* 2,535 tons; the *Pathan*, 2,709 tons; the *Strathmore*, 3,578 tons; and the *Strathdon*, 2,643 tons. It is further expected that three or four others will soon be obtained.

According to a telegram sent from Fusan at 1 p.m. on the 25th instant, Sub-lieutenant Take-nouchi and the soldiers under his command—the number is not stated—who were despatched to make inquiry into the circumstances of the threatened revival of the *Togaku-to* insurrection, fell into the hands of the rebels. The Sub-lieutenant had his throat cut, and the fore-arms of the soldier (or soldiers) were lopped off, but happily he or they escaped ultimately to Taiho. Another telegram published by the News Agency says that although these rebels have shown such hostility to Japanese soldiers, the true objects of their enmity are not the Japanese but the corrupt and oppressive Korean officials against whom they originally rose. If that be true, it is curious that they should attack and murder Japanese whose purpose in coming to Korea is to effect the very reforms avowedly desired by the *Togaku-to*. We suspect that the News Agency's information will not hold. The *Togaku-to*, as originally reported of them, are opposed to everything foreign, and hate the Japanese as representatives-in-chief of foreign intercourse and foreign civilization.

The *Nichi Nichi Shimbun* publishes the following telegram from the Medical Staff, presumably at Chemulpo:—"Of the 133 wounded men taken into hospital after the naval fight on the 17th instant, 25 are severely wounded. Surgeon Kawamura is a little better. Sub-lieutenant Sasaoka of the *Matsushima*, Sub-lieutenant Uchizaki of the *Fuso*, and Engineer Matsuzawa of the *Itsukushima* are only slightly wounded. Of the 99 wounded warrant-officers and seamen 29 out of the 40 belonging to the *Matsushima* were suffering from burns, and of these 2 died after admission; out of 16 belonging to the *Hiyei*, one was suffering from burns; as for the 39 men from the *Akagi* and other vessels, the majority of them were struck by splinters of the enemy's shells, and one was wounded in several places. Everything has gone on so well since the wounded were taken into hospital that we do not expect to lose more than 10 in all. A few men remain on board the ships who, though injured, are not incapacitated for duty."

We presume that a list published in the *Nichi Nichi Shimbun* and based on a telegram sent from Hiroshima on the 25th instant, may be taken as a finally accurate account of the killed and wounded on the Japanese side at the assault on the Pyöng-yang. The totals are:—

KILLED.	
Officers.....	8
Rank and File	154
WOUNDED.	
Officers.....	54
Rank and File	410
Cadet Officer	1
MISSING.	
Rank and File	33
Total.....	660

Divided among the various corps that took part in the attack, the figures stand thus:—

Major-General Oshima's Brigade (that attacked along the main road).	
Officers killed	6
Officers wounded	18
Rank and File killed	110

Rank and File wounded	257
Missing.....	13

Total..... 404

Major-General Tachimi's Brigade (that attacked the northern force from Sak-myon).

Officers wounded	30
Rank and File killed	9
Rank and File wounded	45
Missing.....	1

Total..... 85

Colonel Sato's Corps (that attacked from Wou-sau).

Officers killed	2
Officers wounded	5
Rank and File killed	31
Rank and File wounded	87
Missing.....	19

Total..... 144

Lieut. General Nozu's Brigade (that attacked from the West).

Officer wounded	1
Cadet Officer wounded	1
Rank and File killed	4
Rank and File wounded	21

Total..... 27

SPECIAL SESSION OF THE DIET.

The Emperor has summoned a special session of the Diet to meet in Hiroshima on the 15th of October. The Imperial Rescript conveying this order runs as follows:—

We, persuaded that military affairs now constitute the most urgent business of the nation, have advanced Our standard and are now directly superintending the operations. It is Our desire, under the circumstances, that the important functions of the Legislature should be speedily discharged and that We should have its concurrence. We, therefore, deeming necessity exists for summoning the Imperial Diet before the ordinary date, do hereby convene a special session to be held from the 15th day of the 10th month, in Hiroshima, and do order that the session shall last for seven days.

Let all Our subjects respect this Edict.

(Imperial Sign Manual).

Dated at Hiroshima, 22nd day of the 9th month. Signatures of the Ministers of State.

This Edict will doubtless give universal satisfaction. There has not been much talk in the vernacular press about an extra session, but there certainly has been a feeling that the representatives of the nation might be consulted with advantage at this crisis of the national history. Presumably the question of supplies will alone occupy the attention of the Houses: the Budget can not be submitted in a session of only seven days. Hiroshima must be astounded by its good fortune. For the moment the little town of ninety thousand inhabitants is the metropolis of the empire. How it finds accommodation for all its visitors, and how it is to provide a place for the session of the two houses, we do not comprehend.

THE GOVERNMENT AND THE EXPORT OF COAL.

Coal merchants and proprietors of collieries in Kyushu, says the vernacular press, have met in Fukuoka and decided, with regard to the export of coal to China, that it would not be improper for them to implement such contracts as had been concluded before the outbreak of the war. They have elected a Committee and instructed it to wait upon the Minister of Agriculture and Commerce to ascertain whether they may be allowed to take that step. The Tokyo coal merchants have also held a consultation on the subject and adopted a resolution to cooperate with the movement of the Kyushu men, who are expected to arrive in Tokyo in a few days. It is important at this juncture to know what opinion the Authorities entertain on the matter. The metropolitan papers inform us that the Government are decided to forbid positively the export of coal to China, regarding that article as a contraband of war.

Thus even the sale of coal covered by contract before the war was declared will be forbidden. Coal-agents seem to think that should they fail to implement such contracts they will be liable to be sued for damages. That, however, is an erroneous idea. A state of war completely exonerates merchants from the obligation of fulfilling any agreement that would impair the rights of either belligerent. At any rate, if the Government sees public reason to forbid the export of coal to China, very grave results might ensue from any attempt to relax the prohibition in the interest of private individuals. The absence of explicit rules may have led coal-agents into error as to the attitude of the Government on the matter. Hence it is thought that the Government may issue regulations distinctly forbidding the export of coal to China. Of course the Authorities will hear what the coal-merchants have to say, and will consult their interests as far as possible, but it is confidently believed that the aim, to attain which representatives are sent to the capital by the coal-agents and mine-owners in Kyushu, will not be attained.

It seems to us (*Japan Mail*) that if Japanese coal merchants are anxious to implement contracts concluded before the outbreak of the war, they must be singularly quixotic. The price of the staple has trebled since June, and any one attempting to deliver it at the figures ruling three months ago, must encounter heavy loss. It is stated, for example, that the Mitsui Bishi Company had agreed to deliver coal at Tls. 2 a ton, and that they now find themselves confronted by a price of 6 yen a ton in the home markets, in addition to greatly increased cost of carriage. Under such circumstances we should imagine that the Mitsui Bishi Company and all merchants similarly situated must be very glad of a legitimate excuse to set aside their contracts, whereas the vernacular press would have us believe that their deputies are instructed to petition the Authorities for permission to carry out these ruinous agreements. At all events, it may be taken for granted that the Government will reply in the negative. Coal is contraband of war, and to say that contracts for the delivery of coal, made prior to a declaration of war, must be implemented despite the commencement of belligerent operations, is equivalent to say that an ironclad ordered in times of peace must be delivered when finished although the country ordering it has meanwhile gone to war. We are at a loss to understand the story ventilated by our vernacular contemporaries.

LI HUNG-CHANG'S DEGRADATION.

The following Imperial decree, dated the 17th instant, arrived by telegraph at Shanghai on the afternoon of the 18th inst.:—

"The *Wo-jen* having broken faith with Korea and forcibly occupied that country, the Throne sympathised with its tributary kingdom in her distress and so raised an army to attack the common enemy. Upon Li Hung-chang, Imperial High Commissioner of the Pei-yang, having chief control of the forces there, rested the entire *onus* of being prepared for emergencies. But, instead, he has been unable to act with speed and promptness in his military preparations, so that much time has elapsed without any important results. He has indeed failed in the trust reposed in him by us. We therefore command that his decoration of the three-eyed peacock feather be plucked off from (his hat), and that he be stripped of his Yellow Riding Jacket as a slight punishment. It is necessary then, that the said Imperial High Commissioner exert himself to the utmost and decide upon what should be done; that he direct and hasten the various armies from the various provinces to the front, in order that all may put forth their best strength to chase and root out the enemy. In this way Li Hung-chang may hope to redeem his former errors."—*N.-C. Daily News*.

During the first three months of 1894, the cremations in France averaged ten a day, an increase of 20 per cent. over the same period of last year.

THE ROKUMEIKAN.

An incorrect statement has found its way into print to the effect that, owing to injuries suffered by the Rokumeikan building in the recent earthquake, the Peers Association have decided to sell it and construct a new building, and that, in consequence, notice to quit has been given to the members of the Tokyo Club. The truth is that the Peers Association have purchased the Rokumeikan. The arrangement previously existing was that the members of the Tokyo Club enjoyed the use of a portion of the building, rent free, and that the Peers Association rented the remaining portion, employing it as a club. The Department to which the building belonged not finding it convenient to continue that arrangement, and the Peers being anxious to acquire the whole building, their application in that sense has been accepted. We understand that the Peers desire to have a building in Japanese style as well as one in foreign. Many of their entertainments, theatrical, musical, and so forth, lose much of their charm in an alien environment. Hence their project is to transport from Ueno a handsome building that formerly served as their club, and to re-erect it as an annex to the Rokumeikan. Naturally it would be mutually embarrassing did the Tokyo Club continue to occupy a part of the premises under such circumstances, and it has therefore been considered desirable that new quarters should be sought for the Club. We believe that the Imperial Hotel will be chosen. The management are willing to set aside whatever rooms may be necessary and to erect new ones if desired. The Hotel has the advantage of possessing a good tennis lawn, where, with a little care, an excellent pitch for at least two nets can be found. On the whole, we imagine that the members of the Tokyo Club will congratulate themselves on the change. It was very pleasant, in a fashion, to have rent-free quarters, but accommodation of that kind does not remain permanently agreeable where independence is desired, and in the organization of the present Club there are features that admit of much improvement from a practical point of view. We need scarcely add that no foundation whatever exists for the silly notion propounded recently by a local English journal that the notice to quit served on the members of the Tokyo Club is the first evidence of what may be expected by foreigners under Japanese jurisdiction. That is almost as ridiculous as the plaintive forecast of the same journal that because a polite Japanese was observed to take off his hat when making some inquiries of a police constable, foreigners would presently be obliged to be equally obsequious. The fact is that the purchase of the Rokumeikan building by the nobles and the consequent removal of the Tokyo Club to other premises, have been on the *sapient* for the past two years. It is our belief that the Club will benefit materially by the change, since it will thus come under the complete control of the members practically interested in its maintenance.

PSYCHE AND HEBE.

Psyche, the soul-tending goddess of the gods,
May win heartless Cupid with coquettish odds;
But Hebe's the girl that I like best,
Serving the gods with jolly good zest,
Lading their tables with ambrosial meat,
And handing round nectar delightfully sweet.
She's a blithe little maid with a pretty fair face,
Soft white hands and a figure of grace,
Big brown eyes so bewitching in behold,
That the gods all envy her glance, I'm told.
She's chaste and modest and faithfully true,
Just such an one for a mortal to woo;
But oh! she laughs when you talk about love,
And says that cooing is meant for a dove;
Then away she bounds light-hearted and free,
Culling sweet flowers, but ah! not for me!
For with her arms full from Arcadia's grove,
She hastens to Olympus to serve old Jove.

MORTALIS.

DECAPITATION OF JAPANESE IN TIENSIN.

The following paragraph is from the *Peking and Tientsin Times* of the 15th:—The Japanese clerk employed in the Ordnance Department who remained after his countrymen left and is accused of being a spy, has now been decapitated. His existence was a source of considerable embarrassment to officials who ought to have been alive to the danger of having such a person in the department at a time when the utmost vigilance should have been used to prevent information leaking out in any way.

THE WRECK OF THE "CHEAN."

The *N.-C. Daily News*, writing on the 17th inst. says:—We have previously mentioned the loss of the *Chean*, late *Wheen*, but further particulars are now to hand. It appears that the vessel came to grief at about 8.30 p.m. while an ex-quartermaster, who was made chief officer, was on watch. At the time of the accident many of her passengers were asleep down below and before they could get on deck they were drowned, while others jumped overboard and were also drowned. All the crew, except the sailors' and firemen's cooks, were saved, but over two hundred soldiers lost their lives. Six sailors arrived here on Saturday from the wreck, having tramped across country for six days till they reached Ningpo and were then brought on by the *Pekin*. They do not give a very clear account of what became of the rest of the crew, but they say the captain and others started for Wenchow. The captain and officers of the *Chean* were ex-quartermasters, and the chief engineer had never been to sea before.

The *Chean* was wrecked in the Shetung Pass near Wenchow. She was, says the *China Gazette*, a rattletrap, worm-eaten craft, utterly unfit to go to sea, and was despatched by the Chinese authorities from Chinkiang on the 3rd inst., with 1,000 Hunan soldiers, and all their arms and paraphernalia on board, for Tamsui. When she struck the rocks her bottom fell out and she began to fill at once. Over 700 soldiers and the entire crew, except four men, succeeded in reaching the shore in boats. The scene when they landed was described as something terrible. The soldiers swore that they had been betrayed by the captain and ship's officers, who made away and hid themselves in the houses of the villagers, in the neighbourhood. The "braves" succeeded in catching the quartermaster, who was steering at the time of the accident, and a military officer ordered his head to be struck off on the spot. This ruthless decree was immediately put into execution, and the man was decapitated on the beach. A boy, who had been in the service of "Captain" Haueh, the master, had reached the shore with some dollars which he had saved in the confusion, but was caught by a military officer and his arm lopped off by a sword-cut. He was left bleeding on the beach and died in a short time. It is believed in Shanghai that the master of the vessel was also murdered by the "braves."

It was his first season at the seaside, and to the critical observer there were noticed in his manner traces of nervousness. Yet he boldly wandered along the beach with the girl in the red blazer. The conversations had reached a juncture which left him no alternative. "Be mine," he urged with trembling voice. "Yes," she rejoined. He pressed his hand to his brow. "This is so sudden."

The North v. South match at the Oval ended on 4th inst. in a draw in favour of the Southern team, who, with seven wickets to fall in their second innings, only wanted 56 runs to win. At Taunton, Somerset gained a brilliant victory over Sussex by 110 runs. The matches between Lancashire and Leicestershire at Manchester, and Gloucestershire at Birmingham were left drawn. At Leyton there was a very exciting finish in the match between Essex and Hampshire, which eventually resulted in a victory for the latter by nine runs.

CONDITIONS THAT MAY ACCOMPANY STRATIFICATION.—III.

When any considerable area of the earth's crust commences to yield under the influence of those forces causing elevation or depression, it is easy to imagine that the movement once started should continue in its initial direction, but it is difficult to picture the conditions which result in a reversal of such bradyseismic changes. Notwithstanding this difficulty, geological facts are before us which admit of no other explanation than the assumption that there have been sinkings and risings of the same ground through many thousands of feet. Unconformability between two stratified series of rocks tells us that a sea bottom has been raised upwards to be contorted and weathered, depressed to receive more sediments and then reelevated. The coal fields of South Wales show us that what were once land surfaces have been depressed from 14,000 to 17,000 feet beneath sea level, under overlying rocks, and then lifted to where we see them. Although it is unsatisfactory that we are unable to give a clear explanation of the causes leading to such stupendous oscillations, the geologist is compelled to accept them as facts, and notwithstanding his belief in the antiquity of an ocean bed, may even use them as evidence to show that a Lemuria, an Antarctica, or an Atlantis once existed.

With such an unlimited bradyseismic bank on which to draw, the stratigraphical history of the earth presents but few obstacles. The only question which arises is whether it is so often necessary to avail ourselves of this unlimited credit. As a partial answer to this, we will consider the conditions under which a conformable series may have been deposited, and then the conditions which may have accompanied the formation of coal.

As illustrative of the uniformly steady motion which has taken place in the crust of the earth, conclusions may be drawn from the manner in which a series of strata have been deposited one above another in conformable positions. As an example of such conformability, we cannot do better than take the Silurian, Devonian, and Carboniferous formations which lie as a series of over-lapping fringes round an Archæan nucleus to build up a large portion of the North American continent. Le Conte expounding the views of Dana and other geologists who have worked out the evolution of this section of our globe, says that the Archæan era was closed by the *upheaval* and crumpling of the Laurentian strata, these were eroded, and *subsidence* took place down to the Silurian coast line, and the Silurian deposits were formed on the old land surface. At the end of Silurian times these Silurian sea bottoms were *raised* into land surfaces, and at the end of Devonian times, presumably by *subsidence* and *relevation*, Devonian land was added to that existing at the end of the Silurian period.

The coal measures were deposited while a continental upheaval was in progress, but at the same time there was an upward building by sedimentation, both of which actions would tend to reclaim land. Local subsidences which would tend to submerge districts were also in progress. When sedimentation outraced subsidence, materials that form coal were accumulated, but when the latter prevailed the land surfaces were submerged. It was a period of oscillation which terminated with the uplifting of the Appalachian region. From this description, the conclusion is that although there were many *extremely extensive* subsidences, on the whole the uplifting of the primitive land was in progress and the continent increased in area.

Sir Archibald Geikie, describing the same evolution, speaks of the deposition of the massive formations represented by the stratified accumulations between the earliest Palæozoic and the Jurassic having taken place during a gentle and protracted *sinking* of the axis of the continent.

The subsidence of the axis of a depression or the rising of its boundaries may perhaps convey the same meaning, but if we regard the two movements as having taken place simultaneously,

and if the land areas are of any extent, then during elevation of such land, the rate at which a coast line is exposed is accelerated by the withdrawal of waters, while during depression the actual rate of subsidence is relatively to sea-level increased.

For the present, neglecting oscillatory movements of small extent, either in the waters or in the crust, we will first consider a case of uniform motion when a primitive area, which may be denoted as A, is subsiding, and secondly when it is gradually rising.

As A is slowly depressed, a series of strata, B, accumulating round its shores, will encroach inland to cover an ancient land surface. If the movement continues, the series B and A may be covered by a series C, while similarly D may cover C, B, and A.

Although it may often occur that when we sink through D we immediately come upon A, such a series after upheaval overlaps in a direction contrary to that which is usually found and which is indicated in Fig 2.

In this case we can commence inland and walk seawards from the older series A, across the outcrop of successively newer strata until we reach D.

Although the existence of outliers, the occurrence of Grey Weathers, the Buttes of Colorado and other phenomena lead us to the conclusion that Tertiary and other strata had at one time a far greater extension than they exhibit at present, our imagination respecting the potency of subaerial denudation is somewhat taxed if we are asked to believe that a series of strata like the one chosen, ever overlapped, as shown in Fig. 1, and that such enormous overlapping has gradually disappeared before the complexity of causes which give rise to weathering.

Although there is no reason why sediments should not accumulate round a subsiding area, exceedingly thick deposits with broad outcrops do not favour such a supposition. The next case is that in which A may be supposed to be gradually rising. With the continuance of such a condition it seems quite possible that B, C and D might be deposited, and without making enormous calls upon effects due to atmospheric denudation the results shown in Fig. 2 might be reached. The only difference between this explanation and those which are similar to the one advanced by Le Conte, is that in the latter we have to imagine that from time to time during the process of general elevation this was interrupted by enormous subsidences.

It is not difficult to imagine that a continental area bulging upwards is accompanied by a corresponding subsidence of an ocean basin or of another continental area, or even that two continental areas might grow or decrease simultaneously. It would seem that the movements of considerable extent once started, although varying in their rate, should continue in the same direction, and alterations in this could only be local, as for example on the flanks of regions where there had been a sudden yielding, resulting in the elevation of mountain ranges.

It is, however, difficult to imagine a subsidence taking place until 20,000 feet of Silurian strata were formed, and still more difficult to imagine such a series, after having been raised to form a land surface, being bodily depressed to be covered by a Devonian series. Have we, for example, any evidence to show that a great series like the Silurian was ever entirely covered by a series that succeeded it, or even that the lower members of the Silurian

itself were ever entirely overlapped by the upper members of the same age?

If they were deposited on a subsiding area such coverings existed, but if they were accumulated on a sea bottom that was rising the necessity for the supposition is avoided.

We will now consider the conditions under which an alternation of land, estuarine and marine deposits, such as are exhibited in the coal measures, may have been deposited. First it may be observed that the formation of coal has taken place simultaneously in widely separated districts. Although we have coal of Jurassic, Cretaceous, and other ages, the bulk of the coal forming materials were accumulated at the close of the Palæozoic age. Another marked epoch was in early Tertiary times, and these two periods in a marked manner approximately coincide with the formation of many mountain chains. In America, for example, although the Green Mountains were uplifted at the close of Lower Silurian times, the crushing of strata to form an Himalayan-like range in the Appalachian region was not terminated until the close of the Carboniferous period. Inasmuch as these mountains, like those in many other portions of the world, are made up of a complexity of folds, much of which consists of contorted and faulted strata, it is not unlikely that the movements were spasmodic, and succeeded each other at short geological intervals. Sea beaches and terraces on mountain flanks apparently confirm this view. As these mountains rose upwards to the right and left, corresponding volumetric depressions must have been formed, and what were land surfaces would be intermittently submerged. If the view is a correct one, we may possibly discover some relationship between the number of ridges in a mountain region and the number of seams in a flanking coal field.

About this same time, in Europe, as is indicated by the Permian strata resting unconformably on the older Carboniferous, the Urals were uplifted, and here again, at least on the European side, we find the flanking coal fields.

In these cases, land surfaces were submerged by the actual sinking of the land, but if at the same time large areas like a tract to the East of the Appalachians was submerged, there would be a general rise in the oceanic envelope, and low lying coast lines might be slightly submerged by the rising of the waters. That coal of carboniferous age is practically confined between the parallels of 20° and 60° N.L. and 20° and 40° S.L. may be due either to climatic conditions or to the fact that in Carboniferous times it was only in these regions that there were land surfaces on which a Carboniferous vegetation could flourish.

Although at the close of the Jurassic, the Sierras Nevada and the Wasatch Mountains were raised, the Mesozoic period was one of general quietness. Continents were growing gradually, but at the same time it must also be noted that but little coal was formed. At the commencement of the Tertiary epoch, especially during Lower Eocene and Miocene times, enormous deposits of material to form Lignite were accumulated, and contemporaneously with this many of the larger mountain ranges were formed. It is difficult to say how far these mountains had been outlined at an earlier date, but the Alps, as we now see them, were raised in Eocene and Miocene times, and about the same period the Pyrenees, the Caucasus, the Apennines, the Carpathians, and the Himalaya were formed, while a great disturbance lifted a considerable portion of the Rockies.

Giving the two last mentioned ranges breadths of 180 and 240 miles respectively, and the remainder breadths of 60 miles, their lengths being what we see on an atlas, these elevations cover an area of about 500,000 square miles. If ranges parallel to the Pyrenees, the Dinaric Alps, the Balkans and their continuation into Turkey, ranges parallel to the Himalaya, the Andes and other mountains were uplifted about the same period, the elevation area may easily have extended over 1,000,000 square miles. The mean height of upheaval in these mountains is about 4,000 feet, which

is the present mean height of Switzerland, and if we know the ratio of land to water about this time, we are enabled to form a rough idea of the amount of general depression in oceanic waters which accompanied the uplifting of the Tertiary mountains. From what has already been said, it would seem that the required ratio was between 1.6 and 1.3. With a ratio of 1.4 the total amount of vertical fall in ocean level which took place step by step, would be about 26 feet.

This quantity, which it may be observed does not include what in all probability was a still larger quantity due to the uplifting of the area on which the mountains stand, is by no means sufficient to account for the enormous thicknesses of coal which are met with in the Tertiary series, which, like other coal, was in all probability produced upon areas which were being depressed, but yet it is a quantity which in geological speculations is hardly negligible. As ranges of mountains appeared as wrinkles on a rising area, there was a universal withdrawal of waters from all shores, and large areas of shallows, such as we may find at river mouths, would appear as land capable of supporting vegetation which might accumulate to an indefinite thickness. This in all probability received its covering of estuarine and marine strata because it was an area of actual subsidence. It might, however, have been covered by a rising of the water due to the submergence of a land area, but this is not so probable.

To explain the origin of the curious succession of strata in the coal bearing series, we have to assume that during two particular geological epochs there was a nicely adjusted balance between the rate at which an area was depressed by secular movement and the rate at which the same area was rising by sedimentation—when sedimentation prevailed then an area appeared on which the materials forming coal accumulated, while when depression prevailed these marine deposits accumulated. The chief difficulties accompanying this theory are two-fold. *How does it happen that such a balance was only marked at two particular epochs in geological history, and why did it exhibit itself simultaneously at so many points upon our globe?* In the ordinary course of events it would be expected that such conditions might be as marked at any one period as at any other.

What possibly may be a solution to the difficult question is the one which has been given. Whenever a sea bottom has been raised to become land, there has been an equal volumetric subsidence in the ocean bed, and water has been withdrawn from shore lines to occupy such depressions. During mountain formation, this action would be intermittent and general, and in the history of our globe it is certainly remarkable that when marked alteration of marine and land conditions were frequent, these particular times have roughly coincided with the uplifting of our greatest mountains, which are perhaps only the wrinkles on an extensive region of elevation.

THE FALL OF PYŨNG-YANG.

(FROM OUR OWN CORRESPONDENT.)

Sŭl, September 17th.
 "Pyŭng-yang is taken!" was the news received this morning. The ancient capital in the north was attacked on the 15th inst., and fell into the hands of the Japanese the day following. For more than a fortnight Sŭl has been anxious for some kind of news from the north. The Chinese were expected to march towards Sŭl, to be met by the Japanese either at the Im-chin river or further north on the plains of Se-heung or Whoang-chon. Rumours began to reach us last week that the Japanese army had gone not only to Pyŭng-yang, but were surrounding the city, thus cutting off aid from the north or retreat in that direction. The Korean, when he gives a "report," announces that "a man has just arrived from that place" (where the event happened). Thus according to rumour we felt that something decisive was going on, and that the Chinese troops, to use the figure employed

by a native, "would be like a rat in a big empty water jar"—hemmed in and unable to get out.

Lieut.-General Nozu is in command of the forces. His army is about 25,000 strong, which is in four divisions. General Oseko came from Won-san on the east, crossed the Ta-dong river, and got to the north of the city. Major-General Oshima, the hero of A-San, was at Chung-hwa on the main road from Sŭl and about twelve miles south of Pyŭng-yang. A force under General Tatsumi was landed at Chang-yang in Whang-hai province, crossed the main road, and the position at Sam-ŭng some fifteen miles to the right of General Oshima. General Nozu himself crossed the Ta-dong near its mouth at Chul-do and went by a circuitous route up to the rear of Pyŭng-yang. On the 12th inst. the forces under General Oshima and Tatsumi crossed the river nearer the city, the former on the south, the latter on the north, marched along the river's bank, and in conjunction with the other two divisions attacked the city on the morning of the 15th.

The details of the attack and capture are not known as yet. The Chinese General had fortified the city on the river front, and an assault from that side was evidently expected and would have proved fatal to the attacking army. Had the Chinese army tried to escape by crossing the river, the battle would have been transferred to the river and the plain east of the river. What resistance was made could not have been very great. This is the more surprising, as the Chinese took possession of the city on the 4th of August and had ample time to thoroughly entrench themselves. The Governor, Mayor, and the people rendered them all the assistance possible. The entire force was captured and is said to be 20,000, while the loss on the Japanese side is said to be 300, which is probably an underestimate. Dash, discipline, and determination again won the day against lack of discipline and conservatism.

The news of this great victory was received with much joy by the Japanese in the capital, with indifference in the upper Korean circles, not to say the Palace, and as most of the foreigners here are in sympathy with the reforms Japan proposes for Korea, the news was welcome to them, though sorely disappointing to those of Chinese sympathies. It is reported that three English officers were found with the Chinese and captured. This, however, needs confirmation. Whether there are more Chinese on their way to Korea is not definitely known to me, but one thing seems quite sure, and that is, the Chinese troops will not take up their winter quarters in the Korean capital.

The Chinese undoubtedly have the confidence of the people here, but it is a very noticeable fact that the once eager longing for the arrival of the Chinese army has given place to indifference and even hostility. The stragglers on their way from A-San to Pyŭng-yang lived off the Koreans. The people fed them, but when the tramps turned round and smashed the tables from which they ate the rice and broke to pieces the boilers in which it was boiled, the patience of the patient people gave way. On the other hand, I have yet to hear any complaint against the Japanese troops worth mentioning. A Korean came up from the country, and contrasting the difference between the two armies, said, "the Japanese pay for everything, down to the water-carrier for bringing water."

The reforms in the capital move apace with the troops in the field. The High Commission of seventeen holds sessions daily, and is doing something. The new coin is in use, made on the model of the Japanese, and because of its lightness and cleanliness, is sure to supplant the heavy and dirty copper cash used so long.

There is some talk about the Tong-haks again. If these men have any power it must be in the righteousness of their cause. Their protest against the corruption of the official classes was their strength, and, as long as they maintain this attitude, they will have the support of the people. If, however, they degenerate into a mere Opposition party to all progress they will be without strength in a very short

Korean policemen, some taken from the *yang-ban* class, are now patrolling the streets of Sŭl. True they are as yet mistaken for Japanese soldiers. They wear the top-knot, and the common people have not yet got over their surprise that the *yang-ban* is really good for something, and as these new men strut through the streets the small boy follows but does not venture to give insult; but we may expect some good work done this winter in protecting life and property.

The King naturally shows a little restlessness in being circumscribed as he is, but there seems to be no help for it. The reforms which Japan has decided upon have been inaugurated and will be carried forward whether the King likes them or not. Any change that will give protection to life and security to property will very promptly receive the endorsement of the people at large.

ENGLISH ITEMS.

The Times of August 6th says:—"The war is causing in both China and Japan the internal disturbance which might be expected from it. We have news of outrages on Japanese residents in China, and on Chinese residents in Japan; though in neither country have they proceeded to grave extremities as yet." We, in Japan, have heard nothing of outrages committed on Chinese residents in Japan. One must go to London to learn such news.

The 338 silver bars, whose shipment for Montevideo in H.M.S. *Espergle* led to so much discussion and brought so much censure on the head of Mr. J. G. Kennedy, former British *Chargé d'Affaires* in Japan and then British Representative in Chili, have formed the subject of an appeal brought in the British Supreme Court of Judicature by the Republic of Chili against the London and River Plate Bank. The Chilean Republic claimed that the silver was not applicable for purchasing a steamer—the use to which Balmaceda's agent, Vidal, applied it, being, in fact, part of a sum deposited in the mint at Santiago as guarantee for the Government's note issue; and further, that at the time when the silver was handed over to Vidal and shipped in the *Espergle*, Balmaceda had ceased to possess administrative authority. The Lord Justices of Appeal decided in favour of the Bank. We quote the interesting judgment of the Master of the Rolls:—

The Master of the Rolls said this was an action brought by the Government of the Republic of Chili against an English bank, in the nature of an action of trover, to recover possession of certain bars of silver in the hands of the defendants. At the time when the transactions to which the action related commenced the Government of Chili was the Government which was called the Balmaceda Government, Balmaceda was the President of the Republic, having been duly elected by the nation in accordance with their laws, and he was recognized as the Government of Chili by this country. Under these circumstances an insurrection broke out in Chili. Certain people desired to change the Government, not merely to displace Balmaceda personally, but to displace his Government and to replace it with another Government. Civil war thereupon began between Balmaceda on the one hand and the insurrectionary party on the other hand. Balmaceda, desiring to buy some ships for the purpose of using them as ships of war, gave certain instructions to Vidal, who was the representative of his Government at Buenos Ayres, in accordance with which Vidal entered into negotiations with an Italian shipowner for the purchase of a steamer, and also entered into negotiations with the defendants for an advance of money. Although Vidal was the Ambassador of Chili, it was clear that in this matter he was also made the agent of Balmaceda for a specific purpose. The contract made by Vidal with the defendants was to this effect—that if Balmaceda would place in the hands of the defendants a specified number of bars of silver the defendants would then on his request from time to time advance money to him to the extent of £130,000; if any advance was made, then the defendants were to have power to sell the bars of silver. The property in the silver, when it was delivered, did not pass to the defendants, but remained in Balmaceda; but if the defendants should make any advance in pursuance of the con-

tract, then they were to be entitled to sell the whole of the silver. Vidal was only an agent to make this contract and carry it out; when the contract was made, it was a contract with Balmaceda's Government. Vidal proceeded to act in accordance with his mandate, and obtained certain advances from the defendants. If Balmaceda had continued the Governor of Chili he could not then have objected to the sale of the whole of the silver by the defendants. Any action of trover which might have been brought by him must have failed. Before the silver was delivered the instruction had begun, and several battles were fought; but the delivery took place before the last battle. After that battle certain things were done by Vidal, and by the defendants at Vidal's request. The insurrectionary party were in the result victorious, and they took possession of the Government. On Balmaceda's resignation, at any rate, if not perhaps before that event, they became the *de facto* Government. The position they then occupied was that which was described by Lord Justice James in "United States of America v. M' Rae" (L.R. 8, Eq. 69). On conquering Balmaceda, they became the *de facto* Government of Chili, but only as his successors. The defeat of Balmaceda did not put an end to Vidal's agency; but his resignation, which was not a personal resignation, but the resignation of his Government, did put an end to it. Then what were the rights of the defendants? Balmaceda's Government, even after his resignation, was for a time recognized by the English Government. Any English subject, therefore, who had had dealings with Balmaceda had a right to consider him still the Governor of Chili. If Balmaceda himself had expressly told the defendants that he had resigned they would not have been bound by such information, and could not after that have proceeded to take any further steps under the contract. If Vidal, authorized by Balmaceda, had given them that information, it would have been the same thing. If the English Government had given them such information that would have been enough to justify them in refusing to go any further under the contract. But hardly anything less than that would be sufficient to take away the right of the defendants to act on the recognition of Balmaceda by the English Government. Therefore, even though it were stated in the newspapers of August 29 that Balmaceda had been beaten or had resigned, and though the defendants saw that statement that would not have bound the defendants, that if the statement had turned out to be erroneous, the damages which the defendants would have been liable to pay for failing to perform the contract would have been enormous. The defendants would not be bound to believe statements in newspapers or reports made by irresponsible persons. The decision in the case of "Drew v. Nunn" (4 Q.B.D. (661), showed that persons in the position of the defendants even though agency of the person with whom they dealt had come to an end, had a right to act as though the agency were still in existence. The question of the amount of knowledge which would be necessary to bind the defendants did not arise; for the learned Judge at the trial had found that no information of any kind as to the resignation of Balmaceda had reached the defendants on August 29. His Lordship thought that finding perfectly correct. Both as regards the claim in trover and the claim for a declaration he thought the defendants were right and that the appeal must be dismissed.

Mr. H. S. Maxim has written to *The Times* explaining that his experiments with the flying machine do not at present point to the construction of a machine capable of carrying passengers and freight. He considers that a very long time must elapse before aerial navigation can be profitably applied in that way. His immediate object is thus explained by himself:—

What I propose to do is to enable one to assail an enemy from a distance greater than the enemy will be able to strike back with the most powerful gun in existence. So I think it would be quite as safe for combatants to employ my means of assault as to employ the present means, which necessitate their approaching nearer to the enemy and having to receive its fire.

I do not know that any one has ever invented a system of warfare which is perfectly safe. It is known now to be possible to make a machine that will actually fly at a very high velocity; so nothing remains to be done except to learn how to manoeuvre it. In view of the decided advantage which a flying machine would give its possessor over an enemy, I do not think that in case of war European nations would hesitate to employ them even if one-half of the men navigating them were killed. At the present time no difficulty is ever found in getting volunteers to make a torpedo boat attack

upon a man-of-war, something which is infinitely more dangerous than navigating a flying machine would be, as the latter might be painted black and make its attack at night or in a fog, when it would be quite impossible for the enemy to strike back.

War, at best, is a dangerous game, and those entering upon it are playing with dangerous instruments, whether they are guns, dynamite, or flying machines. I do not hesitate to say that the European nation which first takes advantage of this new engine of destruction will be able to modify the map of Europe according to its own ideas. Who shall it be?

Professor T. E. Holland's second letter to *The Times* on the subject of the *Kowshing* incident, was published on August 7th and runs as follows:—

Sir,—The words of soberness and truth were spoken with reference to the sinking of the *Kowshing* in the letter from Professor Westlake which you printed on Friday last. Ignorance dies hard, or, after the appearance of that letter and of your remarks upon it, one might have expected that leading articles would be less lavishly garnished with such phrases as "act of piracy," "war without declaration," "insult to the British flag," "condign punishment of the Japanese commander." But these flowers of speech continue to blossom; and, now that the facts of the case seem to be established beyond reasonable doubt by the telegrams of this morning, I should be glad to be allowed to state shortly what I believe will be the verdict of international law upon what has occurred.

If the visiting, and eventual sinking, of the *Kowshing* occurred in time of peace, or in time of war before she had notice that war had broken out, a gross outrage has taken place. But the facts are otherwise.

In the first place, a state of war existed. It is true knowledge, and has been over and over affirmed by Courts, both English and American, that a war may legally commence with a hostile act on one side, not preceded by declaration. How frequently this occurred in practice may be seen from a glance at an historical statement prepared for the War Office by Colonel Maurice *à propos* of the objections to a Channel tunnel. Whether or no hostilities had previously occurred upon the mainland, I hold that the acts of the Japanese commander in boarding the *Kowshing* and threatening her with violence in case of disobedience to his orders were acts of war.

In the second place, the *Kowshing* had notice of the existence of a war, at any rate from the moment when she received the orders of the Japanese commander.

The *Kowshing*, therefore, before the first torpedo was fired, was, and knew that she was, a neutral ship engaged in the transport service of a belligerent. (Her flying the British flag, whether as a *rase de guerre* or otherwise, is wholly immaterial.) Her liabilities, as such ship, were twofold:—

1. Regarded as an isolated vessel, she was liable to be stopped, visited, and taken in for adjudication by a Japanese Prize Court. If, as was the fact, it was practically impossible for a Japanese prize crew to be placed on board of her, the Japanese commander was within his rights in using any amount of force necessary to compel her to obey his orders.

2. As one of a fleet of transports and men-of-war engaged in carrying reinforcements of the Chinese troops on the mainland, the *Kowshing* was clearly part of a hostile expedition, or one which might be treated as hostile, which the Japanese were entitled, by the use of all needful force, to prevent from reaching its destination.

The force employed seems not to have been in excess of what might lawfully be used, either for the arrest of an enemy's neutral transport or for halting the progress of a hostile expedition. The rescued officers also having been set at liberty in due course, I am unable to see that any violation of the rights of neutrals has occurred. No apology is due to our Government, nor have the owners of the *Kowshing*, or the relatives of any of her European officers who may have been lost, any claim for compensation. I have said nothing about the violation by the Japanese of the usage of civilized warfare (not of the Geneva Convention which has no bearing upon the question), which would be involved by their having fired upon the Chinese troops in the water; not only because the evidence upon this point is as yet insufficient, but also because the grievance, if established, would affect only the rights of the belligerents, *inter se*; not the rights of neutrals, with which alone this letter is concerned. I have also confined my observations to the legal aspects of the question, leaving to others to test the conduct of

the Japanese commander by the rules of chivalrous dealing or of humanity.

The opponents of Professors Holland and Westlake are placed in this palpable dilemma, namely, that, if their contention be admitted, then a state of war can never be inaugurated by belligerent acts, but must always commence with a declaration. In effect, the intimation conveyed to the *Kowshing* by the *Naniwa* was a declaration, and from the moment that the *Kowshing* disobeyed it she exposed herself to all the consequent risks. But apart from that, we have the plain and universally acknowledged principle that a state of war may be commenced by belligerent acts prior to the issue of any declaration. The *Kowshing* was in truth engaged in a belligerent act, since she was carrying troops whose transport Japan had declared her intention of regarding as an act of war, and whose purpose could only be hostile to Japan. If the *Naniwa* was not entitled to oppose such a proceeding, by force if necessary, until war had been declared, then it follows that war can never commence with acts of war, but must always be proclaimed before hand.

Mr. Chamberlain's speech in the House of Commons, in reply to Mr. E. Morton, was a most spirited affair. The following passage is well worth quoting:—

Any one who listened to the hon. gentleman, who talks about removing a blot from his fair fame—(laughter)—by doing justice at this late hour to Ireland, would imagine that we had done nothing during the last 15 years to redress the grievances of Ireland. I am not here to deny that Ireland had grievances, as indeed had Scotland and England, and all parts of her Majesty's dominions.—(Cheers.) This House exists, we know, to remove grievances; but for the last 15 years the greater part of our time has been spent solely in redressing the grievances of Ireland, and chiefly by the party to which the hon. member and I myself belong—the Liberal party.—(A laugh.) Now, Sir, what is the position the hon. member takes up? Does he mean to say that all this legislation—that all these successive Land Acts and other Acts passed for the benefit of Ireland have been of no effect, and that the grievances of Ireland remain exactly as they were? If that is his position, I would ask the House whether they think it worth while to go on any longer wasting time in passing Acts which produce no result, either in securing the gratitude of the Irish people or their representatives, or the satisfaction and contentment of the hon. member, or in removing that blot from his fair fame which causes him so much anxiety and trouble.—(Laughter.) I say it was all very well before the great series of legislation which began in 1870 with the Land Act of the right hon. member for Mid Lothian, and the Church Act, and which has been followed continuously by further legislation—it was all very well before that commenced to talk of the grievances of the Irish tenant, which undoubtedly at that time were greater than the grievances of the English tenant; but to say that, after all our efforts, exactly the same language is to be used, word for word and year after year, which we heard about these complaints 25 years ago, is to say that we have been engaged in an absolutely useless task, or that the hon. member has been asleep for the past 25 years while other people have been at work.—(Cheers and laughter.)

In the course of the speech, Mr. D. O'Brien interpolated a remark about the pressure that had been brought to bear upon English public opinion by the Primrose dames. Mr. Chamberlain's retort was instantaneous:—

When did the Primrose dames mutilate cattle?—(Loud cheers.) When did they drag the tenants out of their houses and place them against the walls and shoot them to death under the cowardly instigation of their advisers?—(Pointing to the Home Rule benches, amid loud cheers.) And yet these are the men who get up and say that the tenants are under the influence and terrorism of the landlords, who they denounce as being scarcely fit to live.—(Hear, hear.) Fortunately, the landlords are above these threats. It is not they who have suffered, it is the poor tenants, men of their own class, who have been shot down and brutally murdered. You dare not touch landlords, and therefore it is that we desire to give them the real veto in order to enable them to protect their new tenants.

GREAT BRITAIN AND JAPAN.

NOTHING succeeds like success. When the news first reached England that war had broken out between China and Japan, the voice of the British press was almost unanimously raised against this country. It is easy to analyse the causes of the hostile sentiment. In the first place, the public judged Japan to be the aggressor. Japan had virtually entered the arena of negotiations with arms in her hand. We, who understand something of the situation, are well aware that any other course than that adopted by Japan would have condemned her to a fiasco. Had she followed ordinary diplomatic grooves in submitting to the Middle Kingdom her proposals for drastic reforms in the Korean peninsula, the statesmen in Peking would have courteously dooned her to death by procrastination, and after three or four years of negotiation she would have found herself landed in an exit-less pigeon-hole. That prospect did not suit her. She, better, probably, than any Western Power, comprehends the strength of Chinese dilatoriness and the infinite devices for delay that the Tsung-li Yamèn has at command. On the other hand, she comprehended also that the state of affairs in Korea was a perpetual menace to the peace of the East and to the security of the Japanese Empire. Therefore she resolved to go into the lists prepared for every eventuality: prepared to cooperate amicably with China did China prove amenable; prepared to defy China did China refuse to be reasonable. It was a thoroughly practical and business-like resolve. Any less determined step would have ended in total failure. But it entailed one unpleasant consequence, namely, that in the estimation of the roughly judging public, Japan figured as the aggressor. Hence she lost caste in the opinion of the world.

Then, again, so far as concerned Englishmen, there was the special consideration that for some years past they have looked upon China as a kind of natural ally, she being equally with Great Britain interested in checking the advance of Russia in Central Asia. Of all Oriental Powers, China seemed to Englishmen the only one by whose side community of aim might sooner or later range them, and the only one strong enough to be counted a potential ally. Japan interested them in another way: on account of her art, her gentle manners, her new civilization, and her fine ambition. But Japan was a kind of fine-day acquaintance, agreeable for purposes of courteous dilettanteism; inconceivable under any stern contingencies. Therefore, when Japan seemed to force reluctant China into war and to trouble the prosperous calm of Eastern commerce, Englishmen became exasperated and said some hard things. But unless we are much mistaken, their sentiments will soon undergo a radical change. They are hard-

headed, hard-working folk, hating to be disturbed in their money-making pursuits, and abhorring wars that show a taint of aggression or ambition. But they are also ardent lovers of chivalry and thorough-paced admirers of pluck. The spectacle of a little country like Japan braving and beating the huge empire of China will recall vivid pages of their own annals, and awaken in them a sympathy that the Middle Kingdom's inert massiveness could never have roused. Yesterday the following telegram came from London:—

The Japanese victory has been received by the English press with admiration and satisfaction. *The Times* says that the efforts of Japan have received triumphant reward. Henceforth Japan must be reckoned with as a living force in the East, and Englishmen at least should be able to view without jealousy the uprising of an island people whose interests are largely their own and with whom they may before long come into close contact. *The Pall Mall Gazette* says:—England has taught Japan; now it is Japan's turn to teach England. *The Daily Telegraph* recommends the conclusion of peace; Japan to hold Formosa until the terms of peace are completely executed by China.

This kind of writing will be very welcome to the Japanese. They have long chafed under the consciousness that the mood of Europe towards them was one of good-natured superciliousness, and that very many people in the west did not even take the trouble to differentiate them from the Chinese. But they have sprung suddenly into respect and consideration. There will no longer be any mistake about their individuality, and Englishmen will comprehend that this active, courageous, and well prepared nation must henceforth be accorded the first place in all calculations of Oriental eventualities. War is an expensive and painful method of compelling the world's attention, but we doubt whether anything less drastic would have served in Japan's case.

PYŒNG-YANG AND THE CHINESE FORCES.

PYŒNG-YANG, which came into Japanese possession in 1592, when the forces of HIDEYOSHI invaded the peninsula, was also the scene of a Japanese defeat, for after a brief occupation the invaders were compelled to retire before the armies of China and Korea, the auxiliaries of the Middle Kingdom being under the command of LI JUSUNG, who has ever since been regarded as the saviour of Korea. The city is also memorable as the scene of a tragedy that contributed largely to accentuate the evil reputation in which the people of Korea were held by the outer world. It was there that the American schooner, the *General Sherman*, which had come to open trade with a place renowned for its commercial activity, was attacked and destroyed with all on board. For several years the vessel's fate remained unknown, but it was finally discovered that, after having been refused permission to trade, she waited some ten days, and then, owing to a difficulty not yet explained, her people

got into a quarrel with some Koreans; and the ship, being attacked, was obliged to drop down the river. A dense fog obscured the landmarks; she took the wrong channel; grounded near an island, and during the night was set on fire by junks and all her people perished. Mr. CARLES, describing the city, says:—

As a rule Korean towns lie nestled in a bay of hills, the business quarter on the lower ground and the officials' residences higher up. PyŒng-yang, however, extends from the banks of the Ta-dong to the crest of a low neck of hills overlooking the valley of a tributary that falls into the Ta-dong a few miles lower down. On the north side the hill falls away somewhat precipitously, and along its crest runs the city wall. To the west is a wide view down the river, and to the south and south-east lies the magnificent plain on the far bank of the river, stretching away to distant mountains. On the east are some low hills that command the town, at the foot of which flows the Ta-dong river.

Another description of the place was given two years ago by the Rev. J. S. GALE, writing in the "Korean Repository":—

The historic city of Ping-yang stands on the right bank of the Yatong river, which here flows south. The approach through an avenue of trees skirting the river banks, and the white walls of the city showing up on the hills just ahead, inclined us doubly in favour of Ping-yang. The crossing once made, we entered the east gate into perhaps the lusiest city in Korea. No amount of business, however, is of interest compared with its antiquity, its history, and the part it must have played in the centuries long ago of which no record remains. To Koreans it is all sacred ground, for this was Kitja's home, somewhere about the time when King David reigned in Jerusalem. People here speak of Ping-yang as the boat-shaped capital. The walls were outlined on this plan by its first founder, and it is still the floating city. No one is supposed to dig for water anywhere inside of the walls, as that would be cutting through the bottom and sinking the ship. For this reason all water is carried from the river, even to the most distant quarters, and the peculiar gait of the water carrier is one of the oddities of the street. The streets we found to be as usual narrow and filthy, and crowded with shops of native wares. The people, whom we had often heard to be more walklike and independent than other hermits, seemed to us in their appearance and disposition a very ordinary lot, perhaps a little less noisy and somewhat more polite than the natives of the south. Among the hills to the north we find the Buddhists. They have a perfect citadel here of temples and towers, commanding an excellent view of the river. Its beauty and strength of situation gives one an idea of the power Buddha once had in Chosen. To the south, offsetting this, is the Waysung (outside city), where the ancient palace was, and where the descendants of Kitja's generals still exist. These sons of the past look upon all rank of to-day as but the merest ghosts of nobility. Like the Jews, they feel that they are still the chosen people. So they and the Buddhists live shut off from the city by massive walls, and off from the world by centuries of time. One might think that they would enjoy each other's company, for we could scarcely choose companions more likely to be congenial than an aged priest and an old soldier. For the few days that we remained here we were followed by an innumerable company of spectators, whose outbursts of laughter as we walked along seemed to betoken something extraordinary in our personal appearance. Nevertheless we walked the streets until we made our final exit in safety through the north gateway, where a grove of trees shadows one of Kitja's graves (he is said to be buried in China and elsewhere)."

Mr. CARLES gives the number of houses in PyŒng-yang as 6,500, from which it appears that the population is about 35,000. It is, in fact, about the same size as Kai-song, the second largest town in Korea. Considering the events that occurred there on the 15th and 16th instant, we note that the Chinese troops did not attempt to hold the city for its own sake, but merely occupied it as a place of vau-

tage and importance. Consequently there was no question of a regular investment of the town on the part of the Japanese army, nor was there any question of its formal capitulation. What seems to have happened was simply that the Japanese attacked the place as soon as they came within sight of it; that the Chinese fought in whatever positions appeared best suited for purposes of resistance, and that, when victory declared for the Japanese, the Chinese soldiers saved themselves as best they could. We know that after the capture of the entrenched posts at Sōnghwan and A-San, on the 29th and 30th of July, a remnant of the defeated Chinese effected their escape disguised as Koreans. Nothing is easier for a Chinaman than to assume that disguise successfully. Under every-day circumstances his garments alone distinguish him from a Korean. Hence it may very well be that when victory declared for the Japanese, such of the Chinese soldiers as could not at once escape from the town, dispersed and hid themselves in the houses of the citizens, where doubtless they would be harboured and helped to elude pursuit. There is also another and very probable hypothesis, namely, that the Japanese have avoided taking prisoners except in the case of men attempting to fly with arms in their hands. A Chinese soldier deprived of his arms and uniform is not a valuable acquisition, and a few thousands of such persons would be exceedingly embarrassing to an army anxious to move forward rapidly and unwilling to detach any part of its force for guard duties. Rumour said at first that the Japanese generals were greatly perplexed how to deal with their prisoners, and then suddenly the thousands originally spoken of dwindled to a few hundreds. Possibly the men were put into unguarded jails with open doors. Some day, doubtless, we shall know the facts.

THE WAR LOAN.

THE subscriptions to the War Loan aggregate 77,000,000 *yen*, approximately, of which offers to the extent of 10,000,000 *yen* in round numbers are above par, the rest at the face value of the bonds. In consequence of the subscription being more than double of the required sum, some of the authorities were disposed to question whether it might not be better to raise the total amount (50,000,000 *yen*) of the loan at once. According to statements in the vernacular press, opinions were divided on this point between the Treasury and the Bank of Japan, the former holding that the amount raised now should be limited to the sum notified, namely thirty millions, and the latter maintaining that a more liberal policy should be followed, and that the total amount of the Loan should be raised at once, certain steps being, of course, taken to make things right

with the public. It appears that the Bank was obliged to yield to the arguments of the Treasury, with the result that the subscription in the present case will be limited to the originally prescribed sum. Of the total subscription of 77 million *yen*, 10 millions being above par that amount will be accepted as tendered, and the remaining 20 millions of the loan will be allotted from among the 67 million worth of proposals.

The Treasury, it seems to us, has acted wisely in this matter. Indeed, we are surprised that such advice should have been tendered by the Bank of Japan. There is, in the first place, the broad principle that the strictest faith should be kept with the public in these affairs. It might be very easy to arrange with those who sent in their names as subscribers to the thirty-million loan, but who can say whether many other persons also would not have tendered had the amount of the loan been fifty millions? It is quite conceivable that many waited for the issue of the second installment who would have been greatly disappointed, and perhaps subjected to considerable loss, had the first installment been suddenly and without due warning converted into the whole loan, thus depriving them of all opportunity of subscribing. There is also another consideration, namely, that to grasp at the money so soon as ever it became obtainable would have been a proceeding calculated to inspire doubts of the Government's credit with the people. It was not, we presume, because any apprehension existed as to the possibility of raising the whole loan at once that the system of installments was adopted. It was because the Treasury desired to avoid borrowing a larger sum than might be necessary, and because the convenience of the money market had to be consulted. To announce an issue of 30 millions only, and then to convert it into 50 after the receipt of tenders which showed the nation's readiness to lend twice as much, would have suggested the inference that had the Treasury believed in the possibility of getting the whole sum at once, it would have sought to obtain it. We believe that not 50 millions but 150 or 200 could be obtained from the nation for the prosecution of this war. That the Japanese are patriotic even to romance has always been recognised by those that know them. But it was imagined by foreign observers that the feudal system, prevailing through centuries, had weakened the national sentiment, and in part substituted for it that of fealty. The error of such a supposition is abundantly proved by the present crisis. It would be impossible to conceive a people more thoroughly united or more resolutely bent upon making every sacrifice on the altar of their country's honour. From SOVEREIGN to scavenger all are equally eager, equally determined. What is wanted is a peace party, for however fine and inspiring may be the spectacle of enthusiastic patriotism, it may easily be carried to unwise extremes.

A SCANDAL.

TRULY in the interests of sober-minded Englishmen, to whom it must be a matter of some trifling importance that they should retain a portion of the goodwill of the Japanese, a protest must be entered against the wanton insolence of the *Japan Gazette* toward the people of this country. In its issue of the 22nd instant, that journal writes editorially:—

Gradually light is breaking upon the recent naval battle. At first we were informed that four Chinese vessels had been sunk and three burnt out of a total of eleven, while none of the Japanese were injured. This was palpably inaccurate, for the Chinese guns must have done some damage if only by accident. This view of the situation convinced some of the more logical officials, and the next information received was that the *Saikyo* had her steering gear shot away. Then came several other versions equally jubilant and each contradicting the other, while as the crowning proof of the Japanese triumph the lamp at the lighthouse at Nagasaki was extinguished without warning. This morning we are in possession of Admiral Ito's official report, and we are also informed by the Government organ that the Chinese claim the victory, alleging that four Japanese ships were sunk and that the Japanese retreated. Reading between the lines of Admiral Ito's report we fear there is too much reason to believe that the Chinese account is the more truthful.

This paragraph bristles with falsehoods. The statement "at first we were informed that four Chinese vessels had been sunk and three burnt out of a total of eleven" is a double falsehood. The original news of the affair came from Shanghai, and was avowedly based on a statement published in extra issues of the local press of that Settlement, the information having, it was said, emanated from the Chinese Government. Here is the news as translated by us at the time from the columns of the *Fiji Shimpō*:—

A number of transports, carrying reinforcements for the army in Korea, had just succeeded in landing the troops without mishap, when the men-of-war convoying them were fiercely attacked by a Japanese squadron. In the engagement that ensued, four of the Chinese vessels were sunk. The names of three are given as the *Chi-yuen* (2,300 tons), the *Chi-yung* (1,300 tons), and the *Yang-wei* (1,300 tons). It is added that Admiral Ting and Major (recently appointed Vice-Admiral) von Hanneken were among the killed.

There is not a word here about ships burned. There is not a word about the number of Chinese vessels engaged. The *Japan Gazette's* allegations on these points are falsehoods.

We are next told that, according to this first news, "none of the Japanese vessels were injured." That is also a falsehood. The first news did not contain one word about the Japanese vessels or their fate.

The *Japan Gazette* then proceeds to say that in view of the "palpable inaccuracy" of alleging that the Japanese vessels had suffered no injury, since "the Chinese guns must have done some damage, if only by accident," "the more logical officials became convinced," and "the next information received was that the *Saikyo Maru* had her steering gear shot away." This amounts to an assertion, almost in so many words, first, that the Japanese officials deliberately circulated a false statement to the effect that

the ships of Japan had suffered no injury; and secondly, that, becoming convinced of the untenability of such a story, they admitted a trifling injury to the *Saikyo Maru*. These are falsehoods. The first news, as quoted above, came from a Chinese source. It was published in Tokyo on the 19th instant. The next news came on the 20th. It was published in our issue of the following morning. Here are our words:—

The engagement commenced at 12.45 p.m. and seems to have continued until dark. The *Hiyei Kan* took fire and had to draw out of the fight, nor could she again take part in the operations that day. She seems to have steamed for the Ta-dong River, and her casualties were 20 killed and 34 wounded. The *Saikyo Maru* also was severely handled. Her rudder was shot away, and while she was substituting other gear the enemy tried to torpedo her, but failed. She finally extricated herself, and steamed away, reaching port (?) at 1.45 a.m. on the 19th instant.

Thus it will be seen that the very earliest intelligence from Japanese sources admitted injury to the *Hiyei Kan*. It is further to be observed that up to this time no official Japanese telegrams had been published. During the 20th the Consul at Fusan telegraphed "our squadron is safe" (*buji*). This telegram the *Japan Gazette* translates, "our squadron was undamaged." Perhaps its own mistranslation will be alleged by it in excuse for insolently charging Japanese officials with deliberate deception. But the Consul's telegram was perfectly correct. It simply meant, "no ship of our squadron has been lost." Then came a telegram from Admiral KABAYAMA. The Admiral did not even know the result of the fight when he telegraphed. He merely said that, when his ship, the *Saikyo*, left the squadron, "two of the enemy's vessels appeared to have been disabled," and he added that "the *Hiyei Kan* had been compelled to leave the line of battle in the midst of the engagement on account of a fire." Admiral KABAYAMA was not in command during the fight. He himself had received no official report up to the time of telegraphing. It had not been possible for him to receive an official report. His message is correct in every respect. The first official report from the squadron was Admiral ITO'S. It appears in the very same issue of the *Japan Gazette* that contains the gross accusation against Japanese officials of deliberately publishing false stories. Admiral ITO describes the injuries to the *Hiyei* and to the *Matsushima*. He says also that in addition to the four Chinese vessels destroyed, two were observed to be on fire. Thus, simultaneously with accusing Japanese officials of clumsy deception, the *Japan Gazette* publishes the first report received from the only responsible officer in a position to make a report, and that report emphatically disproves every one of the *Japan Gazette*'s falsehoods.

The *Japan Gazette* next writes:—"Reading between the lines of Admiral ITO'S report, we fear that there is too much reason to believe that the Chinese

account is the more truthful." What is the Chinese account in question? This—to use the words of the *Japan Gazette* itself—"The Chinese claim the victory, alleging that four Japanese ships were sunk and that the Japanese retreated." Now, apart from the fact that the first intelligence from a Chinese source said nothing whatever of a Japanese defeat, but spoke only of four Chinese ships being sunk, we have the fact that Admiral ITO, the officer in command of the Japanese squadron, sends to his Government a report which is published by the Government in the *Official Gazette*; we have the fact that in his report he declares that, after five hours' fighting and the loss of four ships, the enemy retired and were pursued by the Japanese squadron; we have the fact that he adds:—"In this battle no ship of our squadron was sunk, though, of course, more or less damage was suffered;" and we have finally the fact that the EMPEROR of Japan issued a Rescript to the Navy, saying:—"We are sincerely gratified to learn that our fleet has gained a signal victory in the Yellow Sea." In the face of all this, the *Japan Gazette* declares its faith in a Chinese rumour that the Japanese were defeated and that four Japanese ships were sunk; the *Japan Gazette*, on the strength of its own falsehoods, charges Japanese officials with deliberate chicanery; the *Japan Gazette* accuses the Admiral in command of the Japanese fleet of officially reporting untruths to his Government, and the *Japan Gazette* gives the lie to the EMPEROR of Japan himself. The thing is a public scandal. It is enough to rouse the just ire of every patriotic Japanese and to convey a miserable impression of English fairness and truthfulness.

BICYCLING AND BAITING.

IT seems that an English cyclist, passing through Fujisawa last Sunday, was spat at by a Japanese, called *chikusho* and *akai ketoin*, had a drunken man's fist thrust in his face, and was stoned, though not hit, as he ascended a hill. There is, of course, no excuse to be offered for such outrages. They disgrace their perpetrators. As a general and almost invariable rule foreigners, provided they conduct themselves soberly, experience only courteous and kind treatment at the hands of the Japanese people. But a good record of that kind is very fragile. One or two instances of rudeness, one or two exhibitions of hostility, suffice to efface a multitude of previous urbanities. We earnestly recommend the Japanese not to lose sight of that fact. They ought to have learned by this time that there live in the settlements certain foreigners—comparatively few in number, we believe, and entirely lacking the sympathy or support of the better classes—whose pleasure it is to draw from petty indications large infer-

ences unfavourable to Japanese character, and who are impelled by some inexplicable animosity to put the worst construction upon everything done by the Japanese people. Unfortunately such glimpses of Japan as the outside world gets are too often transmitted through this disfiguring medium, and that, too, is a point that has to be remembered by the Japanese when they estimate the construction likely to be put upon their acts by the people of Europe. Nothing is easier to forfeit, nothing more difficult to recover, than a good reputation. Vernacular newspapers that have any genuine solicitude for their country's interests, should employ all the means at their command to teach their nationals that while nothing can be gained by rudeness to foreigners, everything can be lost, and that Japan has no worse enemies than the men whose uncivilized demonstrations toward aliens put effective weapons into the hands of her detractors. We do not touch here upon the higher moral aspects of the question, because men capable of appreciating such canons are incapable of violating them.

In connection with this affair, we observe that an interesting question is propounded by the victim of the Fujisawa rudeness. "Why this spirit should be shown," he writes, "towards foreigners just now when Treaty Revision is accomplished and the Japanese are getting all they ask, is one of those enigmas that admit of no satisfactory solutions?" We do not share his perplexity. On the contrary, we have no hesitation in saying that his own conduct furnishes a salient solution. It may be observed, *en passant*, that formerly, when we predicted a growth of animosity toward foreigners as the inevitable result of continued refusal to recognise Japan's national rights, our view was ridiculed, and the public was assured that the Japanese people at large cared nothing for Treaty Revision. Now, however, the very writers that then traversed our opinion, do not hesitate to confess that they look for an immediate development of pro-foreign sentiment as the result of Treaty Revision's being accomplished. A short time ago, in fact, they utterly denied that failure to obtain Treaty Revision could affect popular sentiment; now they declare that success in achieving it ought to have materially influenced the feelings of the nation. We leave them to reconcile that contradiction, and pass on to our main proposition that in their own conduct is to be found a key to the enigma of Japanese umbrage. Like begets like. How can it be reasonably supposed that when local foreign journals in Japan make no attempt to conceal their contempt and antipathy toward the people of the country, the latter will persistently cherish good will and liking for foreigners? The thing is contrary to all reason. This bicyclist who met with rudeness in Fujisawa belongs to a class of writers who

make it their daily business to paint the Japanese in dark colours, to belittle their successes in war, to disparage their resources, to throw doubts on the practical reality of their reforms, and to deny their possession of such fundamental qualities as justice, virtue, and truth. Unless the Japanese were supernaturally magnanimous or stupidly indifferent they could not fail to resent such treatment. They do resent it. Being, after all, merely human, they conclude that men whose writings are uniformly unfriendly must necessarily be ill disposed toward the object of their criticisms, and sometimes they suffer that conclusion to be translated into resentful demonstrations. It will be retorted, perhaps, that the Fujisawa roughs know nothing of the writings in the foreign local press. Possibly not. Possibly they do not even know of the existence of such censorious sheets. But they reflect a feeling existing among those that do know; a feeling educated by long years of unfriendly captiousness. People habitually abused and sneered at can not retain perennial affection for their revilers. No experience of that kind is on record, and Japan will not be the first to furnish it.

PRAYER WHEELS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Some doubt was expressed a short time ago in your columns as to the existence of prayer wheels in this country, until a correspondent pointed out that one might be seen near the temple of Kwannon at Asakusa. Those interested might like to know of others within comparatively easy reach. In front of the *Kyozo*, or storehouse of the great temple of Zenkoji at Nagano, are two excellent specimens, the gift of modern piety. They are made of stone, fixed in pedestals 7 feet high, and bear the invocation *Namu Amida Butsu* carved on the periphery.

Yours truly,

M.

Tokyo, September 20th, 1894.

THE STATUS OF WOMEN IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your weekly issue of September 8th is a letter from Miss H. Frances Parmelee ostensibly defending Miss Cox, but in reality saying some very bitter things of the Japanese people.

I would like to ask Miss Parmelee if the men of the present generation in Japan are responsible for the ideograph from which the words relating to women are derived? While all she says of the sayings of Buddhism may be true, does she not know that there are hundreds of Japanese men who are not Buddhists? Was it not the men of Japan who enacted laws by which women can now be protected from some of the very evils she enumerates, if they will only assert their rights? Are not men courteous, even brotherly, in their manner to women who are working their way into the schools and professions? It may be that a bullock and a woman are harnessed together to work, but I have travelled from one end of the Empire to the other and have not seen it. I have seen women who worked harder than they ought, or so it seemed to me, but I have seen the same in Europe and America. Truth compels me to say, however, that in my professional work I have not seen the same brutality to the wives of the lower classes in Japan that I have witnessed in other countries; a bruised body and blackened eyes are rare things in Japan, but one has only to visit the clinics of Glasgow and Edinburgh and other large centres of either Great Britain or the Continent to

know that these disfigurements are quite common, and even in America, that land of which Englishmen say the "women are spoiled by petting," they are not altogether unknown.

As for foreigners having a low opinion of Japanese women, pray what sort of men are they? Would not these same men have a low opinion of women in any place? When I remember that it is not yet fifty years since Japan emerged from mediæval times and that we in America have had the Gospel since the settlement of the country, and knowing this, see how some of my countrymen conduct themselves toward the Japanese, it is not the Japanese that make me feel degraded by any means. While I long and expect to work for the better condition and elevation of the women of Japan, and while I realize that there are many evils to be eradicated, and while I cannot but feel sorry for a condition of things that will permit a man's selling his daughter for immoral purposes, and trust it will soon be made impossible, I feel sure it will never be accomplished by setting up an antagonism by abusing the customs of the people we are working for, or by looking down on them with a supercilious air. Neither are we following the footsteps of Him we profess to serve by so doing, and we certainly will never gain the love of the women of Japan by deciding their fathers, brothers, and sons. The ties of family are just as great in Japan, as with us, and though the man who walks ahead according to the ancient custom, and lets his wife clean his shoes to keep with the new ones, will still probably remain, his wife will not thank us for abusing him if human nature still remains the same, but will stand by her husband like all women. Hoping I have not taken too much of your valuable space,

I am, sincerely yours,

MARY A. SUGENUMA.

Nagasaki, September 14th, 1894.

"JUSTICE TO JAPAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to occupy your valuable space with a few lines on the subject of the position taken up by the foreign newspapers in Yokohama, notably the *Japan Gazette*. I can scarcely believe that anyone can entertain the feelings for Japan which the Editor of that paper would have us imagine he feels. It appears to be his special object to revile this country and to heap insult upon the people and country, that can have done no harm to him except in furnishing a means of earning his bread. Is it not time for some form of endeavour to let the Japanese understand that the majority of thoughtful Englishmen have not the same warped ideas as the Editor of the *Gazette* represents, and that they are not in any way antagonistic to this country? but, rather, are anxious to see "Advancement" and "Progress" overthrow "Stagnation" and "Corruption," the emblems of China. Japan represents "Bravery" in its pluckiest form, and surely true Englishmen can only admire the Standard which has been unfurled on so many occasions by this country with success that makes Englishmen proud of their birthright.

Yours faithfully,

PRO BONO PUBLICO.

September 27th, 1894.

CRICKET.

SETTLEMENT V. BLUFF.

The Settlement batsmen had everything their own way on Saturday afternoon, knocking up on a good wicket and under a deep blue cloudless sky, the respectable total of 203, against which the Bluff had only a half-century to set. Play began punctually, the Settlement going in to bat with White and Dickinson, against the bowling of Libeaud and Kenyon. The batsmen attacked the bowling with considerable confidence, White in particular sending the leather to the boundary with great freedom. At 87 Dickinson was well caught by Dr. Stokes in the long-field, off a ball from Libeaud; his 41 including 4 fours and 2 threes. Campbell joined White, and had knocked up a couple when he was caught by Libeaud. Then Edwards went out and opened his score with a 6, lifting Philip's first ball right over the fence. After this he settled down to singles for a bit, then made a couple, another single, a boundary, one more single and a three, then lifted a ball from Philip which Dr. Wheeler held splendidly. During this time he had lost White, who was clean bowled by Philip after scoring 63, which included 11 fours. Tying took his place, and upon Edwards retiring Dodds went out. The last corner added him, and was caught by Barton. Pattman, who followed, was

was held by Libeaud after contributing 5, and then Healing joined Tying. The pair made a good stand, the telegraph registering 165 ere Tying was bowled by Morris. Soon after Healing had been bowled by Philip, the innings were declared closed, Mr. Tuska 13 and Mr. Lamb 2, being not out. Philip's seven wickets cost only 56 runs.

At half-past four o'clock the Bluff went into bat. Very heavy thunder clouds were then working across the sky, greatly spoiling the light. Fortunately no rain fell, and after a time the clouds cleared a bit, settling down in a heavy bank to the south-east. The task set before the Bluff team was soon seen to be far beyond their power, none of the batsmen caring to stand up before the bowling of W. D. S. Edwards. The crack bowler was in excellent form, some of his balls being entirely unplayable. The first few batsmen played warily and made some stand, but after Crawford was dismissed the end came quickly. The last named was the only man on his side to get into double figures. Edwards took eight wicket for 16 runs. The following are the scores:—

PEDESTRIANISM IN YOKOHAMA.

Arthur Hancock, late English 50 mile champion, gave an exhibition on the under-path of the Y.C. and A.C., on Thursday afternoon. There was a large attendance of the public, including many ladies, who displayed considerable interest in the contest, and the Yokohama Band was in attendance. The afternoon was all that could be desired for such an occasion, grey and cool with little or no breeze. Unfortunately the size of the Cricket ground did not allow of the timing of the distances by quarter miles; each of the eight competitors walking twice round the ground, a distance of 158 yards beyond the half mile. The whole distance was thus 4 miles and 1,268 yards. Mr. Dodds acted as starter, Mr. B. H. Pearson, time-keeper, Mr. H. C. Litchfield, umpire, and various members of the Club Committee as judges. Schellenberg was the first to go out to try conclusions with the professional. He had an awkward bend and swing, contrasting most forcibly with Hancock's upright and well-knit figure. The amateur made the pace round the first lap, passing the post a second to the good in 2m. 32½s. Unfortunately he broke into a run once, and again in the second lap the same thing happened, thus taking some of the interest out of his performance. He covered two laps in 5m. 15s., the last taking 2m. 40½s. H. S. Goddard succeeded and went away in very nice style. He fell behind a bit on the first of his laps, but got on almost even terms at the close of the second, having pulled up getting towards the goal. His times were 2m. 45s., and 2m. 50s. Alcock, the third man, went away with a terrific burst, and soon was several yards ahead. His knee appeared a trifle bent as he lead along the top of the ground, but this was rectified coming into the bend for home where he was caught easily. His times were 2m. 25s. and 2m. 46s. Fadel made a plucky attempt to keep up to the professional in his essay, but the task was too much for him, and he was 7 seconds to the bad at the end of the second lap. Original McNeill, who followed, was good, and at the top was on level terms. Hancock

cock, however, gained coming down the ground, and finished the lap a quarter of a second ahead. This he made into a whole second in the ensuing round. McNeill's times were very good and his form equal if not superior to that of the best of the amateurs: 1st lap, 2m. 35s., 2nd lap, 2m. 44s. Then Pollard took up the tale. In the first lap he kept on level terms, but in the second he gained 3 seconds, the time of the two laps being 5m. 12s., one second only behind Alcock's aggregate. Lay, the seventh man, then started, and within the first 200 yards had established a lead. The professional evidently had not taken this competitor's measure, for after being left five seconds to the bad at the end of the first lap, he fell yet farther behind in the second. Lay came along the top in splendid style and passed the post 11 seconds to the good. This meant a splendid start for Archer, the eighth man, and he did not abuse it. He got round the first time in 2m. 35s., and was 19 seconds to the good. The task before Hancock now looked more than he could fairly accomplish, but he stuck to his work pluckily, and succeeded in pulling down the lead by 13 seconds in the last lap, only losing the race by 6 seconds. He was loudly cheered as he entered the Pavilion, and was not at all exhausted by his hard work. Below will be found a table showing the comparison between each amateur walker and the professional:—

Mr. Schellenberg.....	2:40	5:45	Hancock	2:39	5:19
Mr. Goddard.....	2:45	5:35	Hancock	2:44	5:21
Mr. Alcock.....	2:50	5:35	Hancock	2:49	5:23
Mr. Fardel.....	2:55	5:57	Hancock	2:54	5:25
Mr. McNeill.....	3:00	5:57	Hancock	2:59	5:27
Mr. Pollard.....	3:05	5:19	Hancock	3:04	5:29
Mr. Lay.....	3:10	5:12	Hancock	3:09	5:31
Mr. Archer.....	3:15	5:17	Hancock	3:14	5:33
	3:20	5:24	Hancock	3:19	5:35
	43:30			43:16	

LETTER FROM BALTIMORE.

(FROM OUR OWN CORRESPONDENT.)

August 27th.

To-night, at twelve o'clock, the new tariff bill becomes law without the signature of Grover Cleveland, the apostle of tariff reform in this country. Though he owes his last election to this issue alone, yet he cannot endorse this measure because he considers it "perfidy and dishonour" to the Democratic platform and pledges of 1892. He will not veto it, because he bows to the wishes and judgment of his associates. He allows it to become law under that clause of the United States Constitution that declares that all bills passed by Congress shall become law on the expiration of ten days after they have reached the hands of the President, unless Congress should in the meantime adjourn. This is the first time Cleveland has taken advantage of this provision on a matter of importance, and his enemies sneeringly say he is softening in his backbone, and is no longer the bold Cleveland of the first term when he condemned the conduct of the legislative branch right and left, and sent back more vetoes than all of his predecessors put together. When we recollect the howls and threats that filled the air over his pension vetoes, when his party leaders thought him reckless, and when thousands of political doctors pronounced him hopelessly dead, it is hard to think that that fearless champion of principle is the same man who is now loudly charged with cowardice in turning away from a fight with the same politicians whom he fought single-handed and swept from his path several years ago. But the whole trouble may be only an honest difference of interpretation of party promises. The President, the Democratic members of the Lower House, and most of the Democratic members of the Upper House construed the promises to mean important additions to the free list, and a revenue *ad valorem* rate on other schedules, while a small number of the Democratic Senators, including some who have for years been high in the party councils, construed the promises to mean a gradual reduction of duties in such a manner as not to cripple and destroy industry. This little minority have had their way, and the bill passed probably satisfies no one in this broad land except themselves, though we may all come to see it was a blessing. It is not the first time in our history that compromises have been loudly denounced at first, and then as loudly praised afterwards. The most notable example was the adoption of our Constitution, which was assailed as a hotch-potch throughout the thirteen colonies, but before many years had rolled by we had degenerated into fetich worshipers of it, and shrewd European observers tell us

that we still bow down before it as the great ideal of the universe.

However this tariff act may be regarded in the future, it is certain that the gumbings of disappointment and dissatisfaction are heard from nearly every local nominative convention of the Democratic party. Resolutions of condemnation have poured forth from mass meetings and club gatherings. Scarcely one of the party press organs defends it, while the mass of them attack it as a shameful surrender of party principles. With all this dissension and mutiny in the ranks, the outlook is gloomy for the Democrats for the elections in November, when the members of the Lower House are chosen over all the land. The Democrats now have a majority of eighty in that body, and if they come back with a lead of half a dozen over all opponents, many wise prophets will be ashamed of their calling. The result of these cross purposes is a curious muddle of politics. The bulk of the Democratic voters are angry and sullen because they consider the bill recognises the Republican policy of protection, a policy they have been combatting for years. Consequently they are forced to trample on the product of their own party. The Republicans, on the other hand, frankly admit that the bill is a good one from their own standpoint of protection. Consequently their speakers have to commend it and advocate its aims, though it is the work of their lifelong enemies.

The Republicans profess to be jubilant at the prospect for victory next November. Their two most eminent leaders, outside of Ex-President Harrison, are McKinley, of world wide fame from the Act bearing his name, and Reed, ex-speaker of the Lower House of Congress. Both these gentlemen will open the campaign in Maine, in the early days of September, in the effort to re-elect Reed. Ex-President Harrison will also deliver some speeches in his State, Indiana. These are the most prominent candidates for the Republican nomination for the presidency in 1896. So this battle is not a mere dress parade by any means. It may settle the political fate of one or more of them, and the strength they develop will have great weight in determining their chances two years from now.

The Democrats are wandering sheep without a shepherd, only a very few of the wildest visionaries have even ventured to suggest a candidate. The choice must be made in less than twenty months. Some very respectable and sensible journals in such widely distant places as Boston and New Orleans have named Cleveland, but it must have been desperation at not finding another man with the elements of leadership that prompted them to hint at a step sure to call forth all the popular prejudice against third terms in this country. Unless some man soon arise, it will be a chaotic scrub race for the Democratic nomination in 1896.

But while these two old war-horses are manoeuvring for position, a dashing young steed has suddenly come into the race. The Populists have effected a regular organization, and already have five senators, and nearly a dozen representatives, and some three or four state governorships. They were laughed at as the growth of the "Hayseeds" in the "wild and woolly" west, but they have urged their doctrines, and made converts and spread their influence until they now have an appreciable following even in New York City, the metropolis of the nation. Their general aim is socialistic, as they wish to extend the government into the field of industry, and bring the railroads under government ownership. On the tariff they are *ultra* Democrats.

Silver will not draw any lines of differentiation in politics, because the American people are almost unanimous for free coinage of this metal as soon as they think the world's finance will be able to stand it. If we could get England and Germany to join in with us, a free coinage act would go through with a rush. But there are undoubted signs of weakening among the silverites. More and more people are coming to look on the question as one of finance, and not of economics or politics. They had rather leave it as a problem for industrial experts and diplomatists to solve, than to put it as a weapon in the hands of wild theorists, and excited social reformers. A very few advocates of this free silver plan have seized on the unanswerable argument, that some financial bridge must be built between the East and the West, between the *white* lands and the *yellow* lands.

There is then but one great living issue to-day in American politics, the tariff, the one issue that has been with us since since our birth. The Populists, it is true point to the grievance against railway discriminations and extortions, but they dare not push the question prominently to the front, as they know that the larger part of the people

shrink with fear from such a revolutionary increase of government functions. Their chance is in catching the sure-headed deserters from the old parties, in attracting the simple and the ignorant by the glittering bait of more money, either silver or paper. Aside from free silver, they do not care to present any practical measure to be put into operation, but will prefer to eloquently voice the discontent over the hard times, and the wide spread uneasiness at the growth of trusts and monopolies, and at the amassing of great fortunes in private hands. But for success in American politics a party must have a definite programme, capable of being formulated as a direct question, so that every voter can answer "Yes" or "No" as to whether he favours the scheme. Wrong, oppression, suffering, no matter how great, no matter how brilliantly and pathetically painted, cannot be the basis for a party unless a line of action is laid down for redress. So there appears no solid ground for believing that the Populists will win out any considerable figure in the coming election. The two old giants will monopolize public attention on their clear-cut issue of the tariff; the Democrats wanting to lower the rates, and the Republicans to raise them. If it were not for the present fit of pouts among Democrats over this new tariff act, it would be a walk over for them. Victory for the Republicans would be only temporary at any rate, for one thing is dead sure, public opinion is drifting with increasing momentum towards free trade. The Democratic party for twelve years has taken a more and more advanced stand every presidential election.

The Prohibitionists need not be regarded seriously, because they will have their usual influence on the result, that is practically none. They will of course in many districts gravely and earnestly go through their stock act of putting out a ticket that stands no ghost of a chance. They have been going through this performance for a long time, and seem to get a certain amount of innocent satisfaction from it.

The contest this year is important chiefly as clearing up the ground for the shock of the marshalled hosts two years from now. Even the most sanguine Democrats have no hopes of holding their present majority in the House of Representatives.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, September 1.

At the recent annual session of the American Bar Association at Saratoga, N.Y., a paper on "Orthodox Legal Training" was read by Prof. John H. Wigmore, of the North-western University, Evanston, Ill.

Rear-Admiral Skerrett, on his way home from Japan, is detained in Denver, Colorado, by a serious illness.

Rev. W. E. Griffis, D.D., has recently had articles in *Harper's Weekly* with reference to the Chinese and Japanese military equipments. The fact is, that the daily and weekly papers and the magazines contain numerous articles relating to the affairs of Japan, Korea and China. The September *St. Nicholas* has "Two School-Houses and a Shipwreck" by Isabel Marbury, who tells how the wreck of the barge *Cashmere* off Tanegashima in September, 1885, led to the erection of two school-houses. The *North American Review* for the same month contains a symposium on "China and Japan in Korea," by How. Augustine Heard, late U.S. Minister to Korea; Durham White Stevens, Councillor of the Japanese Legation at Washington; and Howard Martin, ex-Secretary Legation at Peking. The Sept. *Review of Reviews* contains an illustrated article on "Japan and Its Leaders," by C. Meriwether, formerly of Sendai.

Mr. Kurino, the new Japanese Minister to this country, has been formally presented to the President, with the following exchange of compliments:—

Mr. President—I have the honour to inform you that his Majesty the Emperor of Japan has appointed me as his Envoy Extraordinary and Minister Plenipotentiary to the government of the United States. In graciously honouring me with this mission, his Imperial Majesty especially commanded me to express to you his wish for your continued health and happiness and for the prosperity and well-being of the great people whose interests are confided to your wise keeping.

The promotion of the friendly relations which so happily exist between Japan and the United States has always been a matter of deep concern to his Imperial Majesty, and he has viewed with pleasure the steady growth of the importance and intimacy of the intercourse between the two nations. These sentiments of cordial friendship to the United States on the part of his Imperial Majesty have also pervaded the minds of his people, so that in assuring you, Mr. President, of my desire to do what I can to draw even closer the bonds which unite our countries, while I obey the first and most important behest of my august sovereign, I likewise express a purpose in the execution of which I shall have the earnest sympathy of my countrymen. The kind cooperation which you and the officers of your

The British ship *Caroline* left here for Amoy this morning.

BLACK.

- 1—R to Kt 3 1—Any
2—Q, or B, mates accordingly.

Correct solutions received from Omega, W.H.S., Digamma, and J.D. This problem was erroneously numbered.

PROBLEM No. 142.
By G. B. VALLS.

White to play and mate in two moves.

The Yokohama Chess Club reopens at the Oriental Hotel on Monday, 1st October, and the Tokyo Chess Club at the Tokyo Hotel on Friday, 5th October. Both Clubs have our best wishes for a successful year.

The Annual Meeting of the Tokyo Chess Club will be held on Friday, 5th October, at 5 p.m., at the Tokyo Hotel. The attention of members is specially directed to the change in the location of the Club Rooms.

We take the following from an exchange. Could not the great player be induced to "pass this way" on his journey round the world, and give us an example of simultaneous play against the members of our local Clubs?

"On his way from Canada to Germany, Lasker stayed for some little time in New York, and while there he wrote to the hon. secretary of the Melbourne Chess Club stating that he desired 'to make a journey round the world in order to break a lance with the most distinguished chess players in all countries where chess flourishes,' and that he would have pleasure in including Victoria in his trip. His programme would consist of matches with the strongest Victorian players; consultation games, simultaneous games, single and in consultation; lectures about various subjects (general principles, brilliant games, and special openings), analytical remarks about his match games with Steinitz, and blindfold stances with limited teams of the strongest Victorian players. The communication will be submitted at the next meeting of the committee of the club, and the question will then be fully and carefully discussed of the practicability in the present time of financial depression, of furthering the champion's project."

Our games this week are from the excellent column of the London Standard.

GAME No. 167.

The following game was played in the match, South Norwood v. Nightingale-lane. We are indebted for it to Mr. Dufresne, of South Norwood:—

SCOTCH GAMBIT.

- | WHITE.
Mr. Dufresne. | BLACK.
Mr. Bill. |
|-------------------------|---------------------|
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—P to Q 4 | 3—P takes P |
| 4—B to Q B 4 | 4—Kt to B 3 |
| 5—P to K 5 (a) | 5—P to Q 4 |
| 6—B to Q Kt 5 | 6—Kt to Q 2 (b) |
| 7—B takes Kt | 7—P takes B |
| 8—Q takes P | 8—B to B 4 |
| 9—Q to Q 3 (c) | 9—P to Q R 4 |
| 10—P to Q Kt 3 (d) | 10—B to R 3 |
| 11—P to B 4 | 11—B to Kt 5 ch. |
| 12—B to Q 2 (e) | 12—Kt to H 4 |
| 13—Q to R 2 | 13—Kt to K 3 (f) |
| 14—P to Q R 3 | 14—Kt to B 5 |
| 15—Q to B sq. | 15—B takes B ch. |
| 16—Q Kt takes ■ | 16—Castles (g) |
| 17—P to Kt 3 | 17—Kt to K 3 |
| 18—Q to K 2 | 18—P to B 3 (h) |
| 19—Castles | 19—Q to K 2 |
| 20—K R to K sq. | 20—Kt to K 4 |

- | | |
|-------------------|-----------------------|
| 21—Kt to Q 4 (i) | 21—B P takes P |
| 22—Q takes P | 22—Q to B 4 |
| 23—Q to K 3 (j) | 23—Kt to R 6 ch. |
| 24—R to Kt 2 | 24—R takes P ch. (k) |
| 25—K takes Kt | 25—Q takes Q |
| 26—R takes Q | 26—K takes Kt |
| 27—Kt to K 7 ch. | 27—K to B 2 |
| 28—R takes P | 28—B to B sq. ch. (l) |
| 29—Kt takes B | 29—R takes Kt |

| 45—P to R 6 | 45—R to Kt 6 ch. (p) |
| 46—K to B 2 | 46—Resigns. |

ANALYSIS.

- (a) The opening is now identical with the Two Knights' Defence, the moves being only transposed, viz. 1. P to K 4; 2. Kt to K B 3; 3. B to B 4; 4. Kt to B 3; 5. P to Q 4, ■ takes P, and we have the same position as in the text. White could also play here 5. Castles, Kt takes P; 6. R to K sq. P to Q 4; 7. B takes P; 8. Kt to B 3; 9. Q to Q sq. with an even game. The move in the text leads to interesting and spirited variations.
- (b) The usual move is 6. Kt to ■ 5; and the continuation: 7. Kt takes P; 8. P to Q 2; 9. ■ takes Kt; 10. P takes B, &c.
- (c) 9. Q to Q R 4, attacking the Q B P, or 9. Q to Q sq. would have been better. Black could then not have continued with P to Q R 4 and B to R 5, with such an embarrassing counter-attack as he actually obtained.
- (d) Weakening. 10. B to K 3; B to R 3; 11. Q to Q 5 would have been better. He could afterwards have played Kt to B 3 and Kt to K 2, so as to enable him to Castle.
- (e) He has nothing better now.
- (f) Black should have continued the attack with 13. P takes P, and whether 14. P takes P, or 14. B takes B, he could have replied 14. Kt to Q 6, ch. with a winning advantage.
- (g) Here again he should have played 16. P takes P followed by 17. Kt to Q 6, ch.
- (h) 18. P to Q 5; P to Q B 4; and B to Kt 2 would be advisable now. The Bishop would then act usefully on the diagonal, whilst the passed Q P would be a tangible advantage.
- (i) 21. Kt takes Kt, P takes Kt; 22. Q to B 3; 23. Q to B 3; 24. Q to B 3; 25. Q to B 3; 26. Q to B 3; 27. Q to B 3; 28. Q to B 3; 29. Q to B 3; 30. Q to B 3; 31. Q to B 3; 32. Q to B 3; 33. Q to B 3; 34. Q to B 3; 35. Q to B 3; 36. Q to B 3; 37. Q to B 3; 38. Q to B 3; 39. Q to B 3; 40. Q to B 3; 41. Q to B 3; 42. Q to B 3; 43. Q to B 3; 44. Q to B 3; 45. Q to B 3; 46. Q to B 3; 47. Q to B 3; 48. Q to B 3; 49. Q to B 3; 50. Q to B 3; 51. Q to B 3; 52. Q to B 3; 53. Q to B 3; 54. Q to B 3; 55. Q to B 3; 56. Q to B 3; 57. Q to B 3; 58. Q to B 3; 59. Q to B 3; 60. Q to B 3; 61. Q to B 3; 62. Q to B 3; 63. Q to B 3; 64. Q to B 3; 65. Q to B 3; 66. Q to B 3; 67. Q to B 3; 68. Q to B 3; 69. Q to B 3; 70. Q to B 3; 71. Q to B 3; 72. Q to B 3; 73. Q to B 3; 74. Q to B 3; 75. Alexandrine (18), German cruiser, Captain von Prantzen, 22nd September.—Honolulu.

Alkona (12), German cruiser, Captain Hoffmeyer, 25th September.—Honolulu.

Marie (14), German cruiser, 26th September.—Honolulu.

LATEST COMMERCIAL.

IMPORTS.

The general outlook is a trifle less gloomy. Yarn.—The sales continue as last reported, prices unchanged. Grey Shirtings.—The demand (though longed delayed) has come at last and a good current business is doing both in "spot" and near futures at quotations. Deliveries of previous contracts are also going well, yet the total stock remains heavy and there seems to be small chance of any rise in values. T-Reds have sold to a fair extent at quotations. Woollens generally dull. Mousselines, Flannels, and Blankets move to some extent, but Italian Cloth is moribund again.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—44 in, 34 yds, 30 inches	\$2.40 to 2.90
Grey Shirtings—44 in, 34 yds, 30 inches	2.60 to 3.25
T. Cloth—7 yds, 24 yds, 32 inches	1.60 to 1.90

Sheet Iron	4.45 to 4.60
Galvanized Iron sheets	9.10 to 9.30
Wire Nails, assorted	5.60 to 5.90
Pig Iron, per box	6.50 to 6.75
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

Market firm, with a fair amount of sales at quotations. Deliveries keep up, and with no fresh arrivals holders are encouraged to maintain prices.

Chester	\$1.75 to 1.77
Comet	1.74 to 1.75
Devoe	—
Russian Anchor	1.74 to 1.75
Russian Moon	1.70 to 1.72

SUGAR.

Browns.—A fair business has been done in both Manila and Formosa kinds at a reduction in price, and market closes weak. Stocks.—Formosa 71,000 piculs; Manila 17,000 piculs. White.—A moderate demand at late rates, quotations unchanged, market firm. Considerable arrivals have increased the stock to 78,000 piculs.

	PER PICUL.
Brown Takan	\$4.40 to 4.50
Brown Manila	5.10 to 5.15
Brown Daitong	3.40 to 3.45
Brown Canton	3.70 to 4.40
White Java and Penang	7.10 to 7.20
White Refined	7.60 to 9.90

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

EXPORTS.
RAW SILK.

Moderate demand with prices tending slowly in buyer's favour: although sellers are very unwilling to make concessions. Export to date 14,634 piculs, against 7,207 last year and 14,849 at same date in 1892. Stock has increased to 13,000 piculs, and daily arrivals exceed the daily sales.

THE GREATEST WONDERS OF MODERN TIME.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in on us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
 May 1st, 1890.

"MONEY,"**A JOURNAL OF BUSINESS AND FINANCE.**

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is THE JOURNAL for Investors, Speculators, and business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by an financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 6TH, 1894.

MARRIAGE.

On the 3rd inst., at the British Consulate, by Mr. James Troup, and on the 4th inst., at Union Church, by the Rev. Dr. Meacham, ALICE, younger daughter of Captain C. Young, of the Nippon Yusen Kaisha, to Mr. L. POLLARD, son of Mr. F. L. Pollard, of Forest Hill, London, S.E., and Yokohama.

SUMMARY OF NEWS.

THE Yokohama Choral Society start their winter practices on Monday next.

MARQUIS SAIONJI has been appointed Minister of Education in place of Mr. Inouye Ki.

AN Ordinance authorising the bestowal of distinguished service pensions has been promulgated.

MR. W. MANN, an old resident of Yokohama, died on the 2nd inst., at his residence on the Bluff.

THE Yokohama Chess Club commences its present season with 54 members and a balance in hand of \$118.69.

A MILITARY railway to connect Umita, Hiroshima, and Kure, a distance of eight miles, is under contemplation.

A SMALL schooner of 16 tons—40 feet long by 15 broad, and 4½ deep—having been safely navigated from Seattle to Japan and then up and down the coast on a trading voyage, has

be sold shortly by the U.S. Marshal, to satisfy the claims of the crew.

THE Tanko Railway Co. have chartered the *Davenport* and *Strathesk* to convey coals from Hokkaido for six months.

LI IS-SHOKU, the Korean who was charged with complicity in the murder of Kim-Ok-kyun, has been deported from Japan.

THE death is announced of Mr. Aikawa Masamichi, one of the leading Tokyo barristers, which took place on the 1st inst.

TWO thousand eight hundred coolies belonging to the Arimura-gumi, Tokyo, proceeded to Hiroshima on the 27th and 28th ult.

MR. GRIFFIN has been elected President of the Yokohama Chess Club, his previous position as Secretary being taken by Mr. Davison.

OWING to the inclement weather of Saturday last the sailing race and the cricket match arranged for the afternoon were both abandoned.

THE Yokohama Literary Society began its tenth season on Friday evening. It now numbers 135 members, and has a considerable balance in hand.

CONTRIBUTIONS towards the funds of the Red Cross Society of Japan have been received from many foreigners resident in Tokyo and Yokohama during the past week.

PRINCE FREDERICK WILHELM, who is serving on board one of the German ships on the Asiatic station, dined with H.I.H. the Crown Prince on the 3rd inst. at the Akasaka Palace.

THE Mayor of Yokohama has gone to Hiroshima to convey to H.I.M. the Emperor the congratulations of the town upon the recent naval and military achievements.

DR. AOYAMA's report on the plague at Hong-kong took three hours to read before the Minister of the Home Department and the members of the Central Board of Health.

THE temporary hospital at Hiroshima will be completed in a few days. It is said that a big hospital capable of sheltering not less than one thousand persons will be built at Ujima.

IN consequence of the war between Japan and China the number of *soshi* in the capital has greatly diminished, many of them having been engaged as coolies, and then sent to Korea.

JUDGE YOKOO HUI, of the Yokohama Local Court, has been transferred to the Miyazaki Local Court, his previous position being given to Judge Watanabe Kitano, of the former Court.

THE Autumnal Exhibition of Pictures is now open in Ueno Park, Tokyo, under the auspices of the Japan Fine Art Society. The Imperial Household has lent some rare paintings for exhibition.

THE American schooner *Golden Fleece*, which left San Francisco two years ago on a voyage to the South Seas, has been condemned to be sold by the U.S. Consulate-General Court to satisfy the claims of the crew.

IT is stated that only Count Ito, Minister-President, Count Saigo, Minister of the Navy, and Mr. Watanabe, Minister of Finance, will attend the special session of the Diet, the other Ministers remaining in Tokyo to transact business.

JUDGE CHITANI, whose refusal to obey the order of the Minister of Justice to remove from the Supreme Court to the local Court at Naha, has

been a burning question in legal circles and occupied the Disciplinary Courts, died recently in Tokyo.

THE *Yodogawa Maru* (400 tons), of the Osaka Mercantile Shipping Co., which left Nagasaki on the 27th ult., at 10 p.m., struck the rocks on the way to Hakata. The Bishop of Southern Japan and Mrs. Evington were on board at the time. All the passengers got on shore in safety.

THE Paris papers publish the Manifesto of the Spanish General Don Francisco de Bourbony de Castellar, in which he declares himself the successor of the Comte de Paris as head of the Legitimists. The Sultan of Morocco has declined to assent to the request of the leading European Powers for the appointment of Consuls in the principal inland cities of the Empire. The manner in which the new Sultan is settling grave problems in the foreign relations of Morocco shows that Abd-el-Aziz is an able diplomatist. There has been a great fire at Manila, the Roxas Oil Factory and adjacent buildings having been burnt. The damage is estimated at half a million, much of it being covered by insurance.

REUTER telegraphs:—The Governor of Casa Blanca (Dar-el-Baida, a fortified maritime town in Morocco) has apologised for the recent outrage. It is stated that the Imperial treasure in Moukden amounts to twelve hundred millions of dollars—the accumulation of two centuries. *The Times*, in a special article, exhaustively reviews the question of the military contribution of the Straits Settlements to Imperial defence. It says that the proposal from Singapore to increase the original contribution to £70,000 per annum seems a fair compromise, based on a calculation of the respective interests involved. The Japanese have made a coaling station of the island of Hai-yang, in the Bay of Korea. The Czar's illness has depressed the bourses. The negotiations with the Balinese are officially denied. The Dutch have captured Mataram. An immense sensation has been caused in Berlin, 180 non-commissioned officers of the army having been arrested for socialist intrigues. A litch has occurred in the betrothal of the Czarewitch.

THE improvement noted in the Import trade last week continues, and Yarns are still moving, especially fine counts and doubles. Shirts being in good demand in the interior, a healthy condition of the market is now reported here. Fancy Cottons do not show much alteration, and there is not a great demand for certain Woollens, though Pilots and Worsted Coatings are looking up and Army Cloth is at a premium. The Metal market has not changed generally, though special lines are in more request, and railway material and warlike stores are enquired for. Kerosene in stock has been increased by the arrival of a cargo of American, but holders remain firm and prices are unchanged. Not much has been done in Sugar of any kind, and stocks continue heavy. There has been a fair demand for Silk at late rates, with a tendency in favour of buyers, but concessions are hard to obtain. The trade in Waste has also been moderate, at unchanged prices. The Tea business in Yokohama during the second half of last month was dull, and quotations for the better descriptions slightly declined. Leaf arriving from the interior totalled 527,000 *kin*, while sales amounted to 363,700 *kin*. Some 446,000 *kin* remained in stock at the end of the month. The Exchange has fallen slightly in sympathy with silver, and rates are weak.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Now that less than a fortnight remains before the opening of the Diet, the vernacular press, had it not been for the war, would assuredly have been full of attacks upon the Government, controversies between political parties, abuse of statesmen in office and praise of statesmen out of office, cynical remarks about foreigners, and what not. But all that has disappeared. The Bible itself could not be more peaceful or liberal in its language. Independent as well as party journals write of the special session as though it were to be a concert presided over by the genius of harmony. The Houses are advised unanimously by papers of all colours to bury their old animosities in deference to the paramount necessity that now offers for union; to the end that the war may be prosecuted in whatever manner the Authorities think conducive to the great purpose in view. The *Yomiuri* exhorts Japanese statesmen, not excepting those in power, whom it used to denounce as incapable of dealing with public affairs of any importance, to employ all the force of their intellect to bring the war to a happy termination. "People," the Tokyo journal writes, "speak of an immense indemnity to be taken from the Celestial Kingdom. But is China in a condition to pay any large indemnity? They cry for annexation of land. But is that a wise step to take, in view of the fact that Southern China has considerable contact with Western Powers, and that, in Northern China, the inhabitants, barbarous and intractable, could scarcely be brought under foreign rule? In truth, Japanese statesmen have a difficult task before them to bring their country out of such a war, richer and greater. It is not extravagant to say that the course of events may lead to Japan's playing an important part upon the stage of the world. Her rulers ought to muster courage sufficient for that."

The *Niroku Shimpō* urges the Houses of Parliament, especially the House of Representatives, not to let their sense of duty be dazzled by the glory that the Japanese forces have won in Korea and in the Yellow Sea. A country's status does not depend more upon military strength than upon intellectual merit.

The *Hochi Shimbun* has an interesting article in which it tries to prove historically what a great disturber of the peace China has been and is, and how much she deserves to be impeached at the bar of the world and of humanity. Little reflection, it argues, is needed to see that this satanic country must be laid low. The safety and tranquillity of the human race demand its humiliation. Our contemporary gives a list of the wars China has waged in modern times both at home and abroad. The list covers 18 years since the beginning of the *Meiji* era (1868):—

- 1868.—In the north, a rebellion breaks out in Kansuh. In the south, another trouble, the insurgents taking possession of Ningpo. Then followed a trouble with England in consequence of the murder of missionaries.
- 1869.—The Mohammedans break into rebellion on the north-west border.
- 1870.—Complications with France. A riot in Tientsin, in which a number of sisters of mercy and other catholics are assassinated in a revoltingly cruel manner.
- 1871.—A struggle with Russia.
- 1872.—Internal strife raging.
- 1873.—The Mohammedans signally beaten.
- 1874.—Peace with Japan broken with reference to the Formosa affair.
- 1875.—Canton pirates plunder English merchantmen.
- 1876.—Chinese soldiers in Szechuen attack and kill a party of English officials.
- 1877.—Kashgar outlaws create disturbances on the border.
- 1878.—The Kashgar outlaws beaten with heavy loss. A rebellion breaks out in Kwangsi.
- 1879.—Rioters attack foreign missionaries and destroy their chapels.

The Chinese Authorities refuse to ratify a treaty

concluded between their Envoy and the Russian Government. The Envoy is imprisoned.

1880.—Hostilities with Russia threaten to break out. Li Hung-chang strengthened the defences of Peking.

General Gordon comes to aid the Viceroy.

1881.—Terms of peace concluded with Russia.

1882.—Interference in the domestic affairs of Korea, and carrying of the Tai Won kuu into exile.

1883.—The rebels in Formosa subdued.

1884.—A war with France about the Annam affair. Armed interference in Korean affairs. The Kim Ok-kyun emente, during which the Chinese soldiers attack the Japanese.

1885.—Peace concluded with France.

The *Hochi* does not take the trouble to tabulate the warlike undertakings of China prior and subsequent to the years given above, but says that historians can recall them at any instant.

The Duke of Wellington, the *Yomiuri* writes, visited Eton one day after his return from Waterloo, and, seeing the boys ardently engaging in various athletic sports, is said to have cried out:—"There is the origin of the victory at Waterloo." Taking that incident as a theme, the *Yomiuri* proceeds to say that the foundations of a country's strength are laid in the education given at common schools. It speaks with high admiration of the instructions to teachers issued by Mr. Inouye, the recent Minister for Education, just before his resignation, and it concludes thus:—"Is not this moment, when people's hearts beat high with joy at the news of victories won by their country's arms, a fitting time to determine, once for all, the path to be henceforth followed in Common School education?"

The *Hochi* asks what shall be done if China does not come to terms even after the fall of Peking. The reply is indicated in the title of a leading article:—"China is Easy to Govern." "It is not difficult to foresee," we are told, "that China will not consent to Japan's terms, for they must be on such a scale as to guarantee permanent peace to the East. Should she prove obdurate, as she probably will, the Japanese army had better occupy the districts evacuated by their rulers. The Chinese are the worst governed people in the world, and consequently the easiest to bring under a foreign yoke. Besides, they have no strong national pride, like that entertained by the French, the German, the English, or the Japanese. Tallyrand's saying that "Italy is a mere geographical name" may be applied to China with much greater force. The Chinese, under the mild and civilized rule of Japan, would soon learn that they fare better thus than under their old masters. That would assuredly be the case in respect of material prosperity, and an improvement in such an important matter would in itself satisfy them." As to the contingency that interference on the part of Western Powers would very probably follow any occupation of Chinese territory by Japan, the *Hochi* declares that anything of the kind should be resisted even at the point of the bayonet.

The *Yiji*, whether seriously or in jest we fail to perceive, boasts that the Japanese Army and Navy have equalled, or even surpassed, their parent institutions in the Occident, and claims that the fact has been placed beyond doubt by the recent victories on land and at sea. After this ebullition, the *Yiji* resumes its ordinarily sober tone, and congratulates the nation upon the strength it has displayed to itself and to the world. "Our foreign parents will not, perhaps, be altogether agreeably surprised by the rapid progress their offspring in the Orient have made."

The *Mainichi* joyfully claims that the lofty national spirit now shown by Japan has no parallel in the whole world, and ascribes its development to two causes; the establishment of Constitutional Government and the conscription system. The *Kaishin-to* organ gives a list of happenings which it regards as manifestations

of the spirit in question. For example, the eagerness displayed by low as well as high to send presents to the army and navy abroad; the disappearance of party spirit and clan sentiment among politicians and statesmen; the zeal shown by the men of the First and Second Reserves to join the Colours, and the remarkable success of the national loan.

The *Nippon* has an article full of sense. The gist of it is that the reforms in Korea should not be lost sight of by the Japanese Authorities, since they are the main reason for entering upon the present war. Their neglect might engender serious difficulties with western countries. To accomplish reforms in Korea at present, the *Nippon* admits, is no easy task, the Korean statesmen being effeminate and, what is worse, thoroughly jealous of each other, while, at the same time not a small portion of the Korean nation is inclined to regard China as a better protector than Japan. Under such circumstances, our contemporary thinks that no reform in Korea is of more importance than the reform of the Koreans themselves, and recommends that, for that purpose, Korean soldiers be used in the land engagements with China's troops. It does not think that they could in any way help the Japanese. It even fears that they might be worse than useless. Yet it advocates taking them with the Japanese army for two simple reasons that they might thus be converted into something like men, and that the alliance between Korea and this country against China might not remain an idle declaration on paper.

The *Shin Choya* thanks the military forces abroad for their glorious work and advises the Diet to take measures to have the tithe that is now levied upon the salaries of military and naval officers removed as soon as possible. That may seem a small matter, but it might do something to relieve the distress of not a few families left at home by lieutenants and commanders. The poverty of some of these families is graphically described.

The *Yiyu Shimbun* publishes the manifesto of the political party it represents. The gist of the document is that the Liberal Party does not unreasonably oppose the Cabinet, but aims at the real good of Japan and her people, and is therefore ready to protect such branches of industry as need protection, and to encourage navigation, emigration, and other commercial undertakings, so that the country may not fall far behind European States in wealth and strength. The manifesto does not fail to discharge an arrow or two at the Progressionists, but these shafts are not nearly as venomous as usual.

The *Kokumin* warns the nation not to forget that military strength alone does not elevate a country in the eyes of the world, and advises Japanese educationalists and teachers to instruct youths in the sense that warlike pursuits do not necessarily make them useful to their country but that there are many other professions by following which they may promote the national interests. The *Kyokuu Jiron* and other educational journals earnestly seek to instil this truth into the minds of teachers and students.

The *Nichi Nichi* applauds the part taken by Vice-Admiral Viscount Kabayama in the naval engagement off the Yalu river, and cites his frank assertion of the Sat-Cho government's merits in the Lower House, when he was Minister of State for the Navy, as ample evidence that he is him no ordinary man. But at the same time the *Nichi Nichi* protests against many Metropolitan journals forgetting to give a due meed of praise to Vice-Admiral Ito, who was in direct command of the Squadron. Viscount Kabayama's merit, great as it is, must be treated so as to shine with, not so as to eclipse, that of Admiral Ito.

EDITORIAL NOTES.

THE "JOGAKU ZASSHI" ON FOREIGN MISSIONARIES.

We are tired, says the *Jogaku Zasshi* ("Woman's Magazine"), of hearing complaints continually preferred by a certain section of the public against foreign missionaries. These critics contend that the methods of propaganda employed by such missionaries are not in harmony with the manners and observances of Japan, so that the money spent by missions is frequently only so much thrown away. Let us for a moment borrow this critical standard and ask whether the means of propaganda adopted by Japanese missionaries is adapted to the requirements of the country, and whether the funds spent by them in such work is proportionate to the success it purchases. Careful investigation of these points will show that no material difference exists between them and the so adversely criticised work of foreign missionaries. Granting that the mode of procedure adopted by the foreigners is more or less liable to the charge of being defective, with the loss that results those carping critics have nothing to do, nor is their reputation in any way affected by it; for all such loss falls solely on the foreign missionaries and the home missions supporting them. In short, the result simply amounts to this, viz., the benevolent foreigners who have come here as the representatives of their philanthropic brethren at home have unfortunately failed to meet the practical requirements of the country. But that in no way affects the original interests of the nation. On the other hand, to judge from the remarks made by censorious critics and the length to which they go, we are inclined to suspect that they hold foreign missionaries entirely responsible for the success of evangelical work in Japan. Nothing could be more narrow-minded or absurd than such an opinion. The Minister of State for Finance said last year in the Imperial Diet, when arguing against the strict enforcement of the treaties, that the profit annually derived from foreign travel in the interior amounted to more than four hundred thousand yen. The sums which foreign missionaries spend for the same purposes are even more important. There are now in Japan, as representatives of various Protestant creeds, no less than six hundred and fifty foreign missionaries, and the monthly stipend received by each of these, exclusive of rent, travelling disbursements, and sundry other items, amount to about 100 yen. More than that; the amounts paid by the schools they have organised for Japanese instructors and assistants are by no means insignificant; so that if all these items are added up it will be found no exaggeration to say that the new creeds annually expend in Japan a sum of money exceeding two million yen. Therefore, even though foreign missionaries may have failed to attain the object for the attainment of which they have come or been sent, their presence is a fruitful source of profit to the nation at large, enough to merit the gratitude of even a Minister of State. How much more thankful should the nation be when it is remembered that the propaganda of foreign missionaries has by no means proved inefficient, but only failed to come up to the ideal mission-work expected of them by the people! The *Jogaku Zasshi* then proceeds to take the fault-finders roundly to task for daring to speak in such discourteous terms of Japan's guests, who are in the country for a most benevolent purpose; it further hints that these critics are at heart perverse seekers of ease, who finding that foreign missionaries are not disposed to take their share of work are thus unconsciously led to protest against the actions of those who are really their benefactors. There are at present in Japan no less than forty thousand adherents of the new creeds; nearly twelve hundred Japanese pastors; while the total amount of collections for evangelical purposes exceeds sixty thousand yen a year. Japan therefore has quite enough to accomplish her own evangelization unaided; but here is the corps of foreign missionaries who are helping the good work. The nation should be diligent

ed with its good fortune. Our contemporary concludes by condemning adverse critics as inverting the order of principals and subordinates in this connection, and by advising the public to be at least so liberal-minded as to readily accept any aid which a foreigner may be good enough to give toward the general benefit of the country.

POLITICAL PARTIES AND THEIR RESOLUTIONS.

THE members of the Constitutional Reform Party held a general meeting on the 24th ult., when the following resolutions as to the policy to be pursued in the next session of the Imperial Diet, were made. Resolved: that the Constitutional Party shall, in order to assert the rights and dignity of the Empire and to preserve the future tranquillity of the Orient, give its support to the disbursement of War expenses to the utmost capacity of the nation; that the Party shall furthermore, irrespective of the degree of confidence enjoyed by the Cabinet for the time being, strive, in earnest co-operation with the people, to attain a wholly satisfactory conclusion of the affair; that in the Budget for the 25th fiscal year the current expenses of Government offices shall be brought down to a minimum and all new items struck off, the retrenchments thus made to go towards paying interest on the War Loan Bonds and the founding of a new War Fund.

The National Unionists also held a gathering on the 23rd instant. It was resolved that, with the great object of increasing the glory of the nation and of preserving the future tranquillity of Eastern Asia, Japan should boldly push on the war, regardless of all obstacles; that the expense necessarily resulting from such a course should be met by raising whatever sum was necessary. The Radicals are to meet in solemn deliberative conclave on the 8th prox., while the Progressionists intend holding their general meeting at Kobe just two days later.

BRITISH SOLDIERS AND THE WAR.

As a matter of precaution, says the *China Mail*, the Hongkong military authorities issued a special garrison order last Friday (September 14th), warning soldiers against any overtures that might be made to them by the Chinese Government or its officers or agents. From the wording of the proclamation it would appear that some such attempts have been made already, but no actual evidence is obtainable, and it seems likely that the words are used in a formal rather than literal sense. The notice is as follows:—"Attempts having been made to induce members of this garrison to accept engagements in the military or naval service of a foreign State at peace with Her Majesty, it is notified that any one, whether a British subject or not, so enticing any person within this Colony is liable to prosecution, and soldiers are warned that in the event of any such inducement being offered to them they should at once give the offender in charge of the civil police."

STRAY WAR ITEMS.

In his latest correspondence from Hiroshima, Mr. Tokutomi, editor of the *Kokumin Shimbun*, gives an account of Sub-Lieutenant Matsumura's personal narration, in the presence of the Emperor, of the recent naval engagement. Mr. Tokutomi's information was not at first hand but taken from the lips of a third person, and is thus far from being wholly satisfactory, as most of the important parts are left out. So soon as the Japanese Squadron caught sight of the fleet they had so long been seeking in vain, they instantly started in pursuit. The Chinese Fleet consisted of fourteen men-of-war and six torpedo-boats. The Chinese appear to have expected a brush with their foes, for everything was in readiness and the great war-ships immediately veered around and formed a line of battle. The two squadrons slowly approached each other, exchanging broadsides. In the first encounter the Chinese vessels were in orderly array, but the second attack caused much confusion among them, which increased with each succeeding on-

slaught. Five attacks succeeded each other, the Chinese being finally put to flight. The most remarkable feat was that performed by the 32-centimetre guns on the *Matsushima*, *Isukushima*, and *Hashidate*. These powerful weapons were originally shipped with the intention of penetrating the 14-inch armour of the *Ting-yuen* and *Ching-yuen*. Their practical use resulted in indubitable proof of their efficacy for the given purpose. At least three balls fired by the *Matsushima* penetrated the battery of one of the two big iron-clads. The largest guns on the enemy's side were of 31-centimetre calibre; besides this they represented an old fashioned type and were not so easily and readily handled as those on the Japanese men-of-war, whose superiority of armament must have largely contributed to their success. Most pitiable was the sight presented by the Chinese vessels after having caught fire. In each case the sailors appeared to have entirely lost their presence of mind, for, without making any attempt to extinguish the flames, they simply crowded on the decks calling loudly for help. The Emperor is said to have been very much pleased with the narrative of the Sub-Lieutenant, which was delivered in the most artless and straightforward manner as if telling the story to a friend rather than addressing his Sovereign. The Emperor frequently broke out into broad smiles during the course of the story.

The *Kokumin* further gives the substance of a letter sent by Sub-Lieutenant Shima from Sasebo to his father. The letter is dated Sept. 21st, and describes the death of the writer's eldest brother, Lieutenant Shima, who was in charge of certain sections of the gunnery, during the action on board the *Matsushima*. When after a short respite the engagement was renewed, at about half-past three, the enemy's fire more and more concentrated on the *Matsushima*, she being most conspicuous as the flagship. At last a shell struck the barbettes and exploded, instantly killing Lieutenant Shima and several others, their bodies being literally torn to pieces by fragments of the exploded shell.

Another letter from a naval officer, published in the *Niroku*, states that in the latter part of the engagement the Japanese men-of-war surrounded the *Ting-yuen* and *Chen-yuen*, firing at them from close quarters for nearly thirty minutes. The two big ironclads held their ground for quite a while, but the *Ting-yuen* finally caught fire and was obliged to be withdrawn, the *Chen-yuen* speedily following her example owing to extensive and serious injuries. Whether the fire on board the *Ting-yuen* was extinguished or not, the writer is not sure; but he states that he is certain the two ships were so severely damaged as to be incapacitated for immediate service.

A TOO-PATRIOTIC CAROUSE.

THE First Reserve men show no hesitation when called upon to re-enter the ranks. That is one of the most significant features of the re-enlisted soldiers. For whereas there usually is great repugnance to conscription and, as in Germany and elsewhere, all sorts of expedients are tried in order to be excused from service, there is nothing of the kind at present; the men submit without a murmur to sacrifices of business and the dearest family ties, their sole apparent desire being to get to Korea or wherever the army may be, so that they may have an opportunity of meeting with the foe in actual combat. Those who are set to guard the coast ports or important towns and cities, are objects of commiseration to their more fortunate fellows who start for the seat of war. And so it comes that being called upon to serve again is a signal for friendly congratulations and merry making. In a recent instance, however, which we find narrated in nearly all the metropolitan journals, one re-enlisted warrior carried the matter just a little too far. On the evening before he was to rejoin his regiment, he went to a tea-house in Shinbashi and ordered the materials for a joyous blow-out, not forgetting to request the presence of three of the best-known and prettiest

geisha in that quarter of the city. It began with *saki*. Here the patriotic reveller at once raised an objection to the fragile nature of the cups: he likened them to the Chinese navy, they were so apt to sink when placed in the bowl of fresh water. This meant sturdy goblets and deep potations. He then began to regale his *geisha*-friends with a description of the various fights by land and sea in which the Japanese had come off victorious, and all four drank repeatedly to the triumph of Japan. The conversation grew incoherent and loud-voiced. Suddenly the Dionysian proposed that the *geisha* should pretend to be Chinese; he would act the part of the Japanese Army or Navy, and so they might have a still better idea of what had actually occurred. To this the songstresses, themselves heated with wine, consented but without any idea of the treatment to which they were about to be subjected. War scenes were enacted with all-too-great vigour, the chief performer wholly forgetting the sex and frailty of his opponents. The result was that one *geisha* had her front teeth knocked out, another her head badly beaten, while the third was bruised in many places. Cups, dishes, trays, tobacco-bon, and everything else were reduced to fragments, when finally the wine proved too potent even for such ardent patriotism, and the toil-worn reveller dropped into a doze. The bill presented on the following morning was of appalling magnitude, but paid without a murmur, the maltreated singers themselves bearing no malice and being easily pacified.

THE POLITICAL AWAKENING OF LABOUR.

FROM Mr. Howell's "Traveller from Altruria" we learn that in his country the death-knell of the Accumulation (Capital) was sounded and the way was opened for the foundation of a co-operative commonwealth as soon as the working-classes began to realise their power at the polls. It would appear that in our own communities we stand at the threshold of changes similar to those that took place in Altruria several centuries ago. In England one of the principal aims of the Fabian Society is to induce the labour leaders to replace the policy of strikes (more than half of which are unsuccessful, while most of the rest are Pyrrhic victories) by a policy of agitation for socialistic legislation; and we already note the formation of a strong labour-socialist wing in the House of Commons. Now in the United States we find that the labour organizations, disheartened by the failure of the great railway strike, are awakening to the consciousness of political power, and are about to form an alliance with the Populist Party. This new alliance will not, of course, for a long time be sufficiently powerful to elect many candidates of its own choosing, but it hopes to be able to hold a balance between the Republicans and the Democrats in such a way as to wring concessions from whichever side is in power. Its more immediate political aims will probably be an increase of the income tax, the free coinage of silver (this being a measure demanded by the Populists), the socialization of railways, and the statutory limitation of the hours of labour. In New York, where the Populists and the labour party are strong, they hope to elect a labour leader to the Mayoralty in 1896.

SILK AND THE WAR.

The *American Silk Journal* again expresses fears that the war between China and Japan may lead to a scarcity of the raw material so largely produced by both countries, and in reference to the silk manufactured goods of Japan says:—"As to the manufactured import, which includes 400,000 to 500,000 pieces of goods, and upward of 1,000,000 dozen handkerchiefs per annum from Japan alone, we need not trouble ourselves; we can get along very well without that. In fact, these Orientals, as we have frequently pointed out in preceding issues of the *Journal*, have been steadily cutting the ground from beneath the feet of our own manufacturers. If they will continue to supply the raw material we will gladly do the rest without their assistance. We ought in fact, to be profoundly grateful for almost anything that

will 'give them pause.'" The *Silk Journal* need be under no apprehension about the piece-goods and handkerchiefs from Japan, as the supply will be fully equal to the demand, if the new and improved machinery that is being acquired and erected be any guide to the probable out-put for the United States. The quantity of raw silk suitable for manufacturers' purposes that has been taken off the Yokohama market and returned to the interior would seem to indicate that the Japanese manufacturers' business is on the boom, and probably at no distant date fabrics of a different kind to those exported from Japan at present may find a good market in the States.

THE "JIJI SHIMPO" ON REUTER'S TELEGRAMS

THE telegrams that Reuter's sends us here from London are always unfounded, grumbles the *Jiji*, and as the baseless reports are invariably favourable to China we have no doubt that some special relation exists between that great agency and the Chinese Government. As the latest instance tending to strengthen this suspicion we may cite the London telegram relating to the alleged mediation of several Powers in favour of an armistice, Japan therein being represented as wholly opposed to peaceful measures. It is nothing new to have Reuter telegraph us false information, but in the present instance that agency has taken a most remarkable imaginative flight in its accustomed direction. Since the declaration of war on August 1st, Japan has never been approached on the subject of mediation with a view to an armistice by any Power or Powers whatever, and so it is false to say that she has rejected any offers of the kind. The war telegrams of Reuter can only be explained on the hypothesis that they are concocted for the sole benefit of China. So says the *Jiji*, but we do not quite agree with it.

THE FIRST SNOWFALL ON MOUNT FUJI.

FROM the vernacular press we learn that the first snow fell on Mount Fuji during the night of the 21st-22nd ult., when the thermometer fell so low as 15°. This is unusually early, and presages, according to the accepted meteorological canons, a hard winter. Compared with the average of the last ten years, the date is eleven days early, while it is fully fifteen days sooner than the first snow of last year. The following table gives the date of the first snow fall on the Peerless Mountain since the year 1884:—

Year.	Month.	Day.
1884.....	October.....	6th
1885.....	September	27th
1886.....	October.....	7th
1887.....	October.....	2nd
1888.....	October.....	1st
1889.....	September	29th
1890.....	October.....	4th
1891.....	October.....	12th
1892.....	September	25th
1893.....	October.....	7th
1894.....	September	22nd
Average up to 1893: October 3rd.		

THE AINU AND THE WAR.

THE influence of the war is far-reaching, even the Ainu of the northern island having interested themselves in the welfare of the troops sent to the front to the extent of raising subscriptions. These people are mostly very poor, and, being so, the spirit that moves them to the action they are taking is all the more commendable. The members of the Ainu Christian Church at Sapporo have already handed a sum of money to a Sapporo newspaper as their contribution to the funds of the Red Cross Society of Japan, and the congregations at Piratori and other places are making efforts to follow the good example set by their friends in the Hokkaido capital.

MR. SUYEMATSU ON AFFAIRS IN KOREA.

FROM a letter of the *Nichi Nichi Shimbun's* correspondent in Hiroshima we extract the following items, said to have come from Mr. Suyematsu Kencho, Chief of the Legislative Bureau, who went to Seoul a few weeks ago on Government business. A special office has been established to deal with all administrative, civil,

and military reforms. Drafts of all kinds and all sizes are literally piled up in huge heaps, but most of them were drawn up without any particular deliberation and are mere translations of Japanese statutes. Such utter confusion prevails in this office that copies of these drafts are not infrequently sent to foreign Legations by mistake. Secrecy is, of course, out of the question. Progressive and conservative elements are already at war in the central reform office, the two parties being headed by the Tai Wön-kun and Yu Kichi-yei respectively. The Regent is inclined to preserve the old social orders within certain limits, while the younger politicians are so intent upon the introduction of radical reforms that they even advocate the principle of universal equality, under the pretext of doing away with class distinctions. The news that Marquis Saionji had started for Seoul on an important mission from the Emperor of Japan, at first caused considerable apprehension in the Korean Court, a suspicion prevailing that the mission would have as its object in the claiming, on the part of Japan, of suzerainty over Korea, in the obsolete Chinese fashion. But when the Court became convinced that it was labouring under a foolish misapprehension and that His Majesty of Japan had despatched the Marquis as a messenger only to convey the Imperial well wishes, the satisfaction of the upper circles knew no bounds. The Marquis and his suite were entertained in the best style of Korean hospitality at the residence of the Regent and in other mansions, for it is contrary to Korean Court etiquette to hold high festival within the precincts of the Court itself. The Tai Wön-kun is assuredly a great man; his manners are free from ceremonial affectation and he is so clever that one can hardly credit his belonging to the Korean Blood Royal. When meeting with the Marquis at Court, he told him that if he, the Regent, had only come a little earlier out of his retirement, the unfortunate collision between the Japanese and Korean soldiers would never have occurred. The Koreans as a nation are at present full of envy and malice. Even to a stranger one Korean will speak of another in the most slanderous terms, even though they should happen to be sitting on the same Government bench. The prospects of the present Government are therefore anything rather than reassuring. The only hope is that the Regent will be able to command the respect of all those who take part in new administrative arrangements, and thus hold private dissensions in check.

STABBING CASE AT KOBE.

AN unfortunate quarrel, says the *Chronicle*, occurred on the American ship *Dirigo* yesterday evening, which may possibly result in the death of one man. It appears that a man named Petersen, an able seaman on board the *Dirigo*, obtained some liquor yesterday from one of the bumboats alongside, and this coming to the ears of Whelan, the bo'sun, he asked Petersen to give him a drink. Petersen said there was no more left and showed the empty bottle, whereupon it is alleged that Whelan used a foul epithet and striking Petersen once was about to repeat the blow when the latter suddenly drew out a knife and stabbed his assailant in the side, the wound reaching to the lung. Petersen was immediately seized and placed in irons, and then handed over to the Water Police, who delivered him up to the Municipal Police. Dr. Graham was called to the injured man, and pronounced the wound a dangerous one, but this morning we learn that there are some signs of improvement in Whelan's condition, and with care it is thought he may pull through.

TREASURE TROVE.

SHORTLY after the battle of Pyöng-yang and the taking of that town, a detachment of Japanese soldiers patrolling the neighbourhood came into the village of Ken-sui, about three miles away from the town proper. A domiciliary visit to one of the largest houses being the cause of much flurry and confusion on the part of the inhabitants, a strict search was made, which resulted in the discovery of a quantity of *hiro-*

mono, or "treasure trove," as the Japanese papers jokingly put it. Then were fifty *koku* of rice; fifteen thousand eggs; five thousand pairs of straw-sandals (*waraji*); and two hundred bags, each containing five *so*, filled with various kinds of grain and fresh vegetables. It appeared that all this had been kept in storage for the Chinese, but it is hardly necessary to add that the plan failed to connect. Besides the eatables, several bags or rolls of cloth were found stowed away beneath the flooring of the principal room. Altogether it was a welcome discovery.

MR. OZAKI'S ADDRESS AT THE KINKI-KAN.

The speeches delivered by a number of Progressionists at the Kinki-kan, Tokyo, on the 23rd ult., were not fully reported in the vernacular press; outsiders were therefore ignorant of particulars. According to the latest account of the lecture-meeting, as published in the *Nichi Nichi Shimbun*, one of the speakers, Mr. Ozaki Yukio, preferred some grave charges against the Japanese Army and Navy. The whole tone of his speech, to judge from the *verbatim* quotations made by our contemporary, was one of discontent on account of the alleged dilatoriness of the military and naval operations. He expressed himself as out of patience with the slow movements of the troops and men-of-war. The object of the present war, he declared, was to ensure and perpetuate the tranquillity of the Orient; in order to do this it was absolutely necessary to push on to the Chinese capital, take the Chinese Sovereign captive, and then dictate terms of peace. All this should and could be done with promptitude; it should be completed before the date of the Emperor's birthday (Nov. 3rd), for otherwise the Gulf of Pechili will be closed against the entry of Japanese warships until April of next year. To fail to accomplish this and to change the seat of war to the south, to attack and occupy Formosa, for example, is a measure of which no thinking man can approve; for it would be practically tantamount to inviting the mediation of Western Powers, as the trade with those countries would be greatly interrupted in such a case. Peking should therefore be invested before the cold season sets in and all avenues of approach are frozen up. This is not only a perfectly practicable, but also a certainly possible undertaking. Of course, in fighting with an antagonist thirty times the size of Japan such a plan would be incapable of accomplishment were only the most prudent policy to be pursued. Japan's only course is to resort to desperate and perhaps risky tactics. With the Navy triumphant at Phung-do and now again at the mouth of the Yalu River, an entry into the Gulf of Pechili could readily be forced; moreover, the annihilation of the remnant of China's naval forces could as easily be encompassed, if the Japanese war-ships are fought with the desperate resolution to sink rather than fail to gain the day. Had the authorities pursued this policy from the outset, complete and overwhelming victory would have declared itself for the arms of Japan fully forty days ago, and the flag of the Rising Sun would have been floating o'er the walls of Peking by this time. The naval victory at Hai-yang is deserving of the highest praise, and yet one cannot help wondering how it happened that, as the Japanese had strength to achieve such a triumph, the same steps were not undertaken forty days ago. The fact that the Navy has lost so much valuable time is wholly due to the want of suitable exertion on the part of the Authorities, to the dilatoriness and shillyshally that are the reasons of the loss of forty days' most valuable time. It is even yet not too late to retrieve the past. The idea of a bombardment of Port Arthur or Wei-hai-wei should be definitely abandoned and the Japanese war-ships pushed on boldly into the Gulf. These two forts are separated by fifty *ri* of water, so that they are powerless to obstruct the interpassage of an enemy. Finally, the lecturer inveighed against the manner in which the route of the Japanese army had been fixed, terming the whole arrangement a "slovenly" one. Had, he declared, the march to Peking been firmly adhered to from

the outset, the battle of Pyong-yang would never have taken place; with Tientsin once in the hands of the Japanese troops the Chinese regiments in Korea would have voluntarily submitted. A movement of any other sort is open to condemnation.

As might be expected, the *Nichi Nichi Shimbun* condemns in the strongest terms this harangue of Mr. Ozaki, whom, it declares to be a nonentity considered personally, yet of more or less importance on account of his party influence, he being a prominent figure in the little army of Progressionists generalised by Count Okuma. The *Nichi Nichi* speaks of Mr. Ozaki's opinions in forcible terms, calling them scandalous and as setting at naught the august will of the Sovereign. "He is blind," declares our contemporary, "to the enormous difficulties and hardships under which our sailors and soldiers are labouring in a foreign land, for the sake of the very existence of Japan. Is not this the time in which the objects for which the war was undertaken should be pursued with the utmost earnestness, unity, and coöperation? The Progressionists, intent solely upon the extension of their political influence, do not even hesitate to sacrifice the State to their ambition."

THIBET.

MR. HEINRICH HENSHOLDT, Ph.D., has recently visited Thibet and contributes to *The Arena* for July an article from which we quote the following passage:—

It would be folly to shut our eyes to the fact that the Thibetans occupy a very low position in the scale of human advancement, especially, if judged from our Western standard of civilization. Their culture is inferior to that of most semi-barbarian races, comparing unfavourably even with that of certain Indian tribes of the American continent, such as the Pueblos, Zunis, etc. In physiognomy and general appearance they strongly resemble the inhabitants of Swedish Lapland, as well as the Eskimos of Northern Siberia, being short-sized, broad-shouldered, and possessed of the same singular Mongolian features. Indeed, the Thibetans are, perhaps, the most ill-favoured of the Turanian races. A close interbreeding during many centuries of isolation has produced a striking facial similarity, and has developed a peculiarly repulsive normal type of countenance. A broad, but very low, forehead, excessively prominent cheek-bones, small, oblique eyes, and coarse, bristly black hair are characteristics which do not materially enhance the beauty of the "human form divine," but the most singular peculiarity of the Thibetan face is the almost total absence of the bridge of the nose. Among a dozen Thibetans, chosen at random, hardly one will be found whose nasal organ is not so completely flattened or sunk in the middle as to be practically in level with the eyes. Seen in profile, such a face presents a ludicrous appearance: there is one continuous line of cheek-bone, with the tip of the nose sticking out like a solitary beacon. But a compensatory providence has added to the ears what is lacking in proboscian circumference, and it is but fair to state that the auricular appendages of the average Thibetan are of generous size.

Looked at from a strictly ethical standpoint, the Thibetans do not gain overmuch on closer acquaintance. Their personal habits are exceedingly filthy, and there is much in their general conduct that cannot be otherwise than revolting to our more refined and sensitive natures. Their morals—if we limit this term to its sexual significance—are very lax, more so, perhaps, than those of any other Asiatic race. The lasciviousness of the women is almost incredible, and all modes of debauchery are openly practised. Moreover, the comparative scarcity of females has led to the disgusting institution of polyandry, which has flourished in Thibet for centuries—five and more men frequently sharing one woman among them—and nothing impresses the traveller more painfully than the scandalous indifference, or rather contempt, in which female chastity is held among that singular people. Hospitality, for instance, requires that the host place his wife, daughter, or other female relative at the disposal of the guest, a custom which appears to be rigorously adhered to, and which, in the case of civilized travellers, is bound to lead to embarrassing situations, inasmuch as a refusal to accept the proffered cheer is interpreted as a slight.

The Thibetans furnish a striking example of the fact that a nation may be sexually depraved, and yet otherwise possessed of sterling virtues, such as frankness, hospitality, and a scrupulous honesty.

WEDDING IN YOKOHAMA.

THE marriage rites of Miss Alice Louise Young, youngest daughter of Captain C. J. H. Young, of the Nippon Yusen Kaisha, and Mr. Lessey Pollard were solemnised in Union Church, Yokohama, on Thursday afternoon. The sacred edifice was crowded by the many friends of the young couple, both of whom have taken up a considerable share of Church work within recent years, and most of the Elders and some of the Chinese communicants were also present. Banks of evergreens and flowers were arranged near and around the railings of the pastor's dais, and some *shotetsu* palms were

placed at the ends of the aisle, brightening the interior very considerably. The Rev. G. M. Meacham officiated, and Mr. J. T. Griffin presided at the organ. The bride, who entered on the arm of her father, was attired in a costume of pure white silk, with a wreath of orange blossoms and tulle veil. She was attended by two bridesmaids, her sister, Miss Young, and Miss Bourne. These young ladies wore dresses of crêpe, of a pretty mauve tint, with black hats, and each carried bouquets of choice flowers. The bridegroom's best man was Mr. Lay, of H.B.M.'s Consular Service. The ceremony was brief but impressive, and at its close the bridal party retired to the vestry to sign the register. As they reentered the church the organist played Mendelssohn's Wedding March, and amid its jubilant strains the bride and bridegroom drove away. The honeymoon will be spent at Nikko.

UNION INSURANCE SOCIETY OF CANTON, LIMITED.

The following is the report for presentation to the shareholders at the twenty-first ordinary meeting to be held at the Society's Offices on Saturday, the 6th October:—The directors have now to submit to the shareholders a report of the business of the Society for the year 1893, and for the six months ending the 30th June, 1894. 1893.—The net premium collected for the year, after deducting return and reinsurance, amounts to \$1,354,156.23. After providing for a bonus of 20 per cent. on contributions paid in May last, there remains at credit of working account a balance of \$378,511.53 as per annexed statement. From this sum the directors recommend the payment of a second bonus of 5 per cent. on contributions, making in all 25 per cent. for the year, a dividend of \$9 per share, equivalent to 36 per cent. on the paid up capital of \$25 per share, and an addition to the reserve fund of \$66,000, raising the reserve to \$970,000. The balance remaining of \$160,073.65 they propose to carry forward to meet liabilities and claims still outstanding, and thus close the account for the year 1893. 1894.—The position of the Society for the present year, as far as it can be ascertained, is as follows:—Balance of working account to the 30th June as per annexed statement, \$623,901.24; add estimate of premium to 30th September, \$420,000.00—\$1,043,901.20. Estimate of losses to pay, \$145,000.00—\$898,901.24. In accordance with clause 86 of the Articles of Association, Messrs. H. L. Dalrymple and H. Hoppins retire, but offer themselves for re-election. Messrs. J. H. Cox and R. Lyall retire, but offer themselves for re-election.

DISTURBANCES ANTICIPATED IN SOUTH AMERICA.

PERU is on unfriendly terms with its neighbours, Ecuador on the North and Chile on the South, and it seems not improbable that before long she may be involved in war with one or both of them. The revolutionists in Peru have recently been again defeated, but the Peruvians believe that the revolutionary movement is secretly supported by Ecuador, and even that the rebel force was actually being organized in Ecuador. The Government of Ecuador declares that it has no official knowledge of any armed force entering Peru from Ecuador. The Congress of the last named country has, however, just issued authorization for the purchase of arms by the Government, and from this it is inferred that war with Peru is regarded as probable. It is also significant that negotiations are pending for a treaty between Ecuador and Chile.

VICEROY LI IN THE FIELD.

"We have heard," says the *Miyako Shimbun*, "that Li Hung-chang is about to take the field in person. No news could, if true, be more gratifying to the Japanese. The Chinese our soldiers have hitherto had to deal with have proved rather insipid as to taste; it was hardly worth while chewing up such backboneless men. But all accounts agree in declaring Gran'ther Li to be something of a fighter. This then is the man we want to meet with. Victories too cheaply bought lose their delicacy of flavour; we wish to meet with troops that will not beat

"masterly retreats," but stand up and fight like men. Our only fear is that Li will keep loitering about the precincts of Peking under the pretext of guarding that vulnerable spot and thus save his life and honour—for just a little while—by not meeting his enemies manfully face to face. A battle under the personal supervision of the Viceroy would be splendid. He would be such a nice person to capture and bring over to Japan."

THE HIGHER CIVIL SERVICE EXAMINATION.

THE Civil Service examination for higher executive officials, now in course of progress in the Home Department, is attracting considerable attention from the public owing to the fact that this is the first occasion of the kind since the amending of the Examination Regulations, by which all other qualifications of candidates were made null and void and the examination became open to all. It must be remembered that the graduates of the Imperial University formerly enjoyed unusual privileges in this connection, often being appointed at once as higher executive officials without being subjected to any preliminary examination whatever. Even according to the amended Regulations the University alumni are exempted from preliminary examination, but in all other points of the real examination no difference at all is made between them and ordinary candidates for preferment. The test is therefore purely competitive and the public is, or rather was, awaiting the result with deep interest. Considerable disappointment was evinced on learning that of the forty-seven candidates not one was a University graduate, despite the fact that seventy-four have this year been graduated from the College of Law and only eleven have received appointment as probationary judges or public procurators. There are, moreover, many others who received the some diploma last year and who are now holding only clerical positions in the various Departments of State. There were thus about one hundred who, it was presumed, would compete in the Examination. This singular phenomenon is explained by the *Nippon*, our authority in this matter, in the following way:—When the Examination Regulations were about to be amended, a Professor of the Imperial University was shown the draft and his opinion on the subject asked by the authorities. He expressed himself entirely satisfied with the proposed amendment. When however he afterwards spoke of the matter to his colleagues, he was surprised to find them stubbornly opposed to the spirit of the amendment by reason of its making no difference whatever between the instruction of the University and the categories of the new Civil Service Examination. They were therefore greatly dissatisfied with the authorities whom they accused of having introduced an unnecessary change and of holding the University in contempt. But as the amendment had already become law there was no hope of getting it repealed; they resolved in consequence to make the final examination of the University course of so high and severe a nature as to render those who stood the test absolutely sure of success when subjected to the Civil Service Examination, so as to impress the authorities with the utter needlessness of subjecting them to re-examination. Aware of this decision of the Faculty, the students applied themselves to their studies with exceptional earnestness, in the hope of graduating with flying colours. In the meanwhile another objection was raised against the hated amendment. It was contended that to appoint University judges to positions as probationary judges or procurators without examination on the one hand, and then to subject them to such a test in case they aspired to executive offices on the other, was absurd; it was therefore resolved to begin agitating for a rescission of the amendment. Some dispute arose in the University faction with regard to this measure, but it was overruled, and, assisted by sympathisers outside who pledge themselves to bring their influence to bear against the amendment upon the result of the examination being made known, it was finally decided that no University graduate should go up for examination in the

Civil Service this year. The partisans who are so eager for the repeal of the amendment think it is impossible to obtain a sufficient number of properly qualified candidates for higher executive posts under the present conditions, especially as of the forty-seven outsiders who entered for the examination no less than nineteen failed in preliminaries, while it is probable that the majority of the remainder will have to retire before the final stage is reached. The malcontents contend that with the increasing demand for executive officials it will be impossible to get sufficient men from among the outsiders: an inconvenience which would at once disappear if University graduates could be appointed at once and without examination to executive offices. The *Nippon* ends with observing that the authorities will not and must not adopt a proposition so absurd.

A HISTORIC DAINTY.

THE troops on passing through Shizuoka are always presented with boxes of *natto*, one of the epicurean dainties of the place, yet strangely repugnant to the European palate, being perhaps a shade more unpleasant than the malodorous *takuan*. *Natto* is made of beans, rotten to judge by the taste, and covered with a shiny condiment too suggestive to find favour with Western gourmards. Nevertheless, it is a dish liked by many, and supposed to have remarkably strengthening qualities; as indeed it ought to make up for its other defects. History relates that when Hideyoshi's vanguard passed by the then strongly fortified castle-town of Shizuoka, a certain farmer made a present of a large quantity of this *natto* to the men, stating that the name, read backwards, was an augury for the success of the Korean-Chinese expedition. The ideographs forming the word *natto* read backward *Kara (wo) osameru*, which may mean "Put an end to China." Pleased with this auspicious gift Hideyoshi commanded that the farmer and his descendants should hold land bearing seventy-five *koku* of rice, free of taxes, in perpetuity (*shu-inchi*). Ever since this date *natto* has been a great dish with the people of Shizuoka; and it is with the same idea that they now offer it to the troops setting out to humble the pride of the Middle Kingdom.

THE REMOTEST PERIODICAL FROM CIVILIZATION.

AT Arctic City on the Koukuk river, a place well within the Arctic circle, appeared on the 1st January, 1894, a local journal which proudly boasts of being "the remotest periodical from civilization." It is called the *Yukon Press*. In its first issue it modestly stated that the "object of its publication is to promote man's religious, moral, and mental faculties, and to develop the great resources of the Yukon valley. First of all the religious and moral items and cullings will have a humble place between its covers, in hopes that they may be fed to nurture the higher aspirations of those who with ruddy health or haggard form toil 'in the fierce race for wealth.'" At present two issues a year only are contemplated. During last winter the thermometer frequently registered 72 degrees below zero in this secluded valley, while the snow lay piled up in huge banks that only melted during the warm days of July. In the stream which runs through the valley gold is to be found; gold mining and fur-collecting form the sole occupations of the scanty population.

TWO STREET-BALLADS.

FROM time to time certain kinds of ballads make their appearance in Tokyo, and everybody is singing them while they are the fashion. The tune is generally lively and catching, and the ballad is followed by a sort of dance that makes it all the more attractive. Most of these street-songs wind up with a refrain or chorus that is either untranslatable or really meaningless, not unlike the *lillibulero* of the days of the Stuarts. One ballad that was immensely popular a couple of years ago had the refrain *oppke-pe*; another, *teheretsu no pa*; a third, *dongararin*; a fourth, still fresh in the memory of the people, had the rollicking chorus of *sa sa saiko dondon*, *saiko dondon*, the word *saiko* being a corruption

of *sa'yuko*, "Come let's go," while *dondon* is an onomatopoeic term in imitation of the sound of stepping or walking hastily. Tiny volumes containing a dozen verses composed by minor and nameless poets are hawked about the streets, particularly by itinerant vendors of sweetmeats and candy: the *karintoya* and *ameya* fraternity, who always seek to collect a crowd by singing some catchy, not always strictly moral, humorous song, especially one that follows the general lines of the most popular ballad of the moment. Of course a vast number of street-songs of this kind have of late made their appearance in connection with the war. Many of these are now sold under the title of *mecha-mecha bushi*, the words *mecha-mecha* belonging to the refrain. The Chinese, from Viceroy Li down to the masterly runaways of Sōng-hwan and Pyōng yang, are therein spoken of in no very flattering terms, as might be expected. At the same time the humour of the ballads is good-natured and by no means coarse. We here reproduce two very popular stanzas:—

*Oi boreto
Kara haji kakite
Inu yori mo,
Isso shinda ga
Riko-naruran.*

The literal meaning is, "It is far better to die at once than to suffer indelible shame in one's old age," but it is impossible to render into English the punning allusions the verse contains. *Kara-haji* may mean "bottomless shame," or "indelible disgrace;" but another ideograph shows that *Kara* means also "China," and so the phrase may also be taken in the sense of "the shame of China." Again, *shinda*, "died" or "have died," is written with the first ideograph of "China" (*Shin-koku*). *Riko*, meaning "clever," is written with characters that give the first two syllables of Li Hung-chang's name. The metrical style is in this, as well as in the following, that known as *waka*, or a stanza of 5, 7, 5, 7, 7 syllables, thirty-one in all. The next song is rather more insulting in its tone:

*Chanchan wa
Atama ni shippo
Dete areba
Yagata Nihon no
Inu to naruran.*

There is no play on words in this: the meaning is direct and forcible: "As tails have already grown on the heads of the *chanchan* (Chinese), they will soon become the dogs (*i.e.* humble servants) of Japan."

CARGO FOR CHINA AND JAPAN.

THE following is a copy of a document signed by the principal exporters from Manchester to China and Japan, and handed to Mr. Alfred Holt with the request that he will bring the matter before the China Steamship Owners' Conference:—

TO THE CHINA SHIPOWNERS' CONFERENCE.

GENTLEMEN,—We think that the time has now arrived when arrangements should be made for us to ship our consignments for China and Japan direct from the Manchester Docks instead of from Birkenhead or London, and we shall therefore be glad to know whether the present Conference is prepared to supply us with steamers regularly and frequently at Manchester.

We could not in this event press for any reduction of the equivalent of the through rate of freight during the present year, but would leave the advantage of the saving (which amounts to about 4s. per ton) as compensation to the shipowners for making this new departure. In addition the shipowners would reap the benefit of the freedom from ship-dues conceded by the Ship Canal Company to ships loaded in Manchester during the next eighteen months.

This document was signed by thirty-three firms.

FORTHCOMING CONCERT.

THE concert arranged by Mr. Samuel Adelstein for Saturday, October 13th, should be heartily welcome after the long dearth of public amusements. Mr. Adelstein, who has won fame as a player upon the mandolin and lute, occupies a prominent position in the programme. He has received promises of valuable assistance from the amateurs of the community. Miss Bloxham will sing two songs; Mr. S. L. Goldman will contribute a like number. Mr. and Miss Griffin are among the instrumentalists,

who also include Dr. Munro, violin; Mr. Danneberg, viola; M. de Micheaux, flute; and Mr. Crane, 'cello. Among the instrumental numbers will be the "Intermezzo Sinfonico," one of the gems of Mascagni's "Cavalleria Rusticana," and a sextette for flute, violin, 'cello, piano, viola, and mandolin. Altogether a strong and attractive programme has been drawn up, and a good house should foregather at the Public Hall.

ANOTHER SEIZURE BY BANDITS TONKIN.

QUICKLY following the murder of M. Chaillet and the kidnapping of his wife and daughter at Moncay comes news of another outrage by bandits in Tonkin. Mr. Th. Chesnay, who is one of the proprietors of the *Avenir du Tonkin*, was also interested in a contract on the Langson Railway, and had been superintending the work. He was about to return to Hanoi, and on the 17th ult. was out with an assistant named Logion giving him directions as to the carrying on of the work during his absence, when they were surrounded by bandits, captured, and carried off. The unfortunate gentlemen are said to have been betrayed into the hands of the bandits by one of their own coolies. About the same time, and not far from the same place, a construction train was stopped, trunks of trees being placed across the line, and an attack with firearms was made, the object, it is presumed, being to detract attention from the pursuit of the portion of the band that had M. Chesnay and his assistant in charge. In this it was successful, a military party who had got on the trail of the captives and captors turning back to see what the firing was about. The train that was attacked was conveying a number of coolies. The Chinese engine driver and four Annamite coolies were killed and a number of others wounded.—*Daily Press*.

THE SEIZURE OF THE "PATHAN."

INFORMATION has been received in Shanghai, says the *Gazette* of the 27th ult., of the seizure by the Chinese of the British steamer *Pathan*, Captain Wright, in the Formosa Channel, and her detention in Kelung. The vessel left Hong-kong on the morning of the 18th ult., with a general cargo for Shanghai, after which nothing is known of her subsequent movements except that she was seized by a Chinese man-of-war, the *Nansheng* probably, on the afternoon of the following day, and taken into Kelung a prisoner. According to one account, which we give with all reserve, the man-of-war on sighting the *Pathan*, which was flying the British merchant ensign at the time, signalled her to stop or take the consequence. The signal not being obeyed, the war vessel fired a shot across the *Pathan's* bows, and no notice still being taken of this hint, the *Nansheng* fired a shot right into the merchant vessel, which then hove to. The man-of-war then steamed up alongside, took the *Pathan* prisoner, and took her into Kelung, where she has since remained. Active steps are being taken by the agents here, Messrs. Dodwell, Carlill & Co., to obtain her release. It is believed that she has only one case of machinery for Japan on board.

METALS.

MESSRS. S. W. ROYSE & Co., in their report dated August 25th, say:—There has been a marked improvement in the course of the metal markets during the whole of the current month. Prices of pig iron have advanced steadily at both Glasgow and Middlesbrough, the total advance during the month being some 1s. 3d. to 1s. 6d. per ton. A large amount of business has been transacted this week, and considerable quantities of iron have been drawn from the public stores at Middlesbrough. The tone of the market is quite strong, and it is quite expected that the improvement will be continued. There is also an improvement in the manufactured iron trade in the Midlands, and prices there have an upward tendency. Copper has improved steadily, and closes easier at an advance of about £2 per ton. Tin also has advanced strongly, and is about £5 per ton dearer, but is now easing somewhat. Spelter has only fluctuated slightly.

Lead has advanced steadily, and closes about 12s. 6d. per ton dearer during the month, with a further upward tendency.

THE NEW SECRETARY OF H.B.M.'S LEGATION.

WE learn that Mr. Gerard Augustus Lowther has been appointed Secretary of H.B.M.'s Legation in Tokyo, in succession to Mr. M. W. E. de Bunsen, who is transferred as *Chargé d'Affaires* to Bangkok. Mr. Lowther became an Attaché on January 30th, 1879, and was appointed to Madrid in November of the same year. He became a Third Secretary on June 3rd, 1881, and was transferred to Paris on June 22nd, 1881. Promoted to be Second Secretary at Constantinople on July 13th, 1884, he was appointed Superintendent of Student Interpreters at Ortakeui in March, 1886. He receives an allowance for knowledge of Turkish.

CHINA'S DEFENDERS MUTINY.

THE *China Gazette* of the 28th ult. says:—We learn upon good authority that the Chinese army along the Yaloo have mutinied and are in open conflict with their officers. Thousands have thrown down their arms and left the camps, the main reason given by them being that it is no use attempting to fight with the wretched weapons they are armed with, and even for which they have not the proper ammunition. The news has created a panic in Tientsin and Peking, where a *coup d'état* is now quite on the cards.

THE KOREAN MURDER CASE.

THE appeal raised by Public Procurator Nanokoji against the decision of the Tokyo Local Court, by which Li Itsu-shoku, a Korean, and Kawakubo Tsunekichi, a Japanese, who were arrested some time ago in connection with the murder of Kim Ok-kyun and the attempted murder of Boku Eiko, were acquitted, was thrown out by the Tokyo Court of Appeal on the 1st inst. and the judgment of the lower Court confirmed. The Procurator at once appealed to the Supreme Court.

FUNERAL OF MR. W. MANN.

THE remains of the late Mr. Wm. Mann were interred in the Cemetery on Wednesday afternoon amid many expressions of regret. The Rev. E. C. Irvine officiated, and in concluding the service paid a tribute of respect and esteem to the memory of an old resident of this community. The officers and members of the local lodge of Odd-fellows were in attendance, Mr. Mann having been upon its membership rolls.

FRANCE AND CHINA.

A SHANGHAI correspondent, whose letter reached the capital on the 4th inst., announces that the French Minister has demanded from the Chinese Government the setting apart of a certain part of Formosa as a coal depot for the French Fleet; also that French troops shall be stationed there to provide against any disorderly actions of the aborigines. The demand has been made as a compensation for the injuries lately sustained by Frenchmen at the hands of Chinese.—*Asahi Shimbun*.

THE GERMAN LEGATION.

WE are asked to state that His Excellency the German Minister has now removed to No. 15, Kami-ni-ban-cho, Koji-machi-ku, the house formerly occupied by the Austro-Hungarian Representative. Baron Gutschmid will live there pending the rebuilding of the German Legation in Nagata-cho, but the Chancery of the Legation remains in Nagata-cho as before.

DECORATIONS.

MR. NAKANO, Governor of Kanagawa, is gazetted as having received a decoration of the Second Class of the Order of the Dragon, conferred on him by the King of Annam. Colonel Inouye Hikaru, of the Infantry, has been decorated by the French Government.

DEATH OF JUDGE CHITANI.

THE *Kokkai* says that Judge Chitani, whose name will no doubt be still fresh in the recollection of our readers in connection with his

strong objection to being removed from the Supreme Court to the Naha Local Court at the instance of the Minister of Justice, died suddenly in Tokyo on the 29th ult. The funeral took place on the 1st inst.

ELECTION IN TOKYO.

THE *Kokkai* states that the election of a parliamentary representative for the Fifth District of Tokyo, which took place on the 1st instant, resulted in the return of Mr. Ban Naonosuke, who obtained 127 votes against Mr. Ota Minoru's 16.

OFFICIAL APPOINTMENTS.

H.E. COUNT SAIGO has been promoted from the rank of Vice-Admiral to that of Admiral, and Marquis Saionji is gazetted Minister of State for Education in the place of Mr. Inouye Ki.

AN EDUCATIONAL NOTIFICATION.

The Department of Education has issued, over the signature of its Minister a notification relating to the entrance examination for ordinary Middle Schools. The notification indicates considerable changes in the status and so forth of these schools. It provides that a boy qualified to enter the 1st year class of the ordinary middle school must be above 12 years of age, robust in health, and must have finished the 2nd year's course of the higher common schools, or have attained that degree of scholarship elsewhere; that candidates who have finished the 2nd year's course of the higher common school shall be exempted from undergoing the entrance examination, and so forth.

Hitherto every boy that wished to enter a high school was required to graduate from an upper common school (4 years) or to possess an equivalent degree of scholarship. Indeed in many localities, owing to the competition of candidates for entrance, even graduates of the higher common schools were obliged to study a year or two at a sort of preparatory school before entering the *Chugakko* (Middle Schools). Now, according to the new regulations, the graduates of the 2nd year course of an upper common school are to be admitted without any entrance examination, except in cases when the number of applicants exceeds the number of vacancies. In other words, students entering the ordinary high schools will be admitted henceforth at least two years earlier than hitherto, and will therefore graduate from the high schools just so much earlier. The status of the high schools will then be necessarily lowered to a certain extent, as will also that of the other higher educational institutions. These points, however, can not be definitely ascertained until the new rule has been in force for some time. It is complained frequently that in Japan young men have to spend too long a time in schools. That objection will be greatly obviated by the new amendment.

THE KAISHIN-TO POLICY.

The *Hochi Shimbun*, which, being the organ of the *Kaishin-to* must be accepted as truly representing their views, says that the resolutions framed by the leaders of the Party for submission to the general meeting now about to be held, are as follow:—

1.—Our Party will vote for whatever appropriations of money may be necessary to carry the present war to such a termination as shall serve to chastise China and to secure permanent peace for the Orient.

2.—Since it would only invite future calamities to patch up a temporary peace, our Party will resolutely resist the acceptance of any proposals for peace made before the vital objects of the war have been attained.

3.—Since it is of essential importance that the whole nation should be united, in order to achieve the vital objects of the war, our Party will for the moment desist from any criticism of the Cabinet's errors, and will apply our whole strength in the field of foreign politics. In addition to the above resolutions the meeting will be asked to pass an Address of Congratulation to the Sovereign and a special address to the Army and Navy for the victories hitherto achieved.

WAR ITEMS.

The Chinese accounts of the naval engagement on the 17th instant, while admitting that four ships were sunk or destroyed by the Japanese, give the name of one as the *King-yuen*, not the *Lai-yuen*. These are sister-ships, so exactly alike that the Japanese officers may very easily have mistaken one for the other. We note, also, that a telegram sent from Shanghai to a commercial firm in Tokyo and communicated to the *Fiji Shimpō*, substitutes the *King-yuen* for the *Lai-yuen* as one of the three ships sunk. Whichever be the fact, the loss to the Chinese navy is the same.

The story circulated in Shanghai still includes the item that "the Japanese lost four large ships," and we observe that a Yokohama English journal declares itself uncertain as to whether the Chinese statement may not be correct. Admiral Ito, in his official report, explicitly declares that no Japanese ship was lost. Surely that assertion ought to be held worthier of credence than a vague Chinese non-official statement in which no attempt is made to name so much as a single one of the ships said to have been lost by the Japanese squadron. Besides, we do not imagine that there can be even half-a-dozen foreigners in Yokohama—including, of course, the editor of the *Japan Gazette*—so utterly ignorant of the character of the Japanese nation as to suppose that the official publication of falsehoods by Admirals and Generals would be tolerated for a moment. Conceive what would be Admiral Ito's position did it turn out, despite his emphatic denial and despite his detailed account of the injuries suffered by his ships, that more than one-third of the eleven men-of-war under his command on the 17th instant had been sunk. That kind of deception is not possible in this country. It would be exposed promptly and punished signally.

The Chinese claim the victory. They allege that the Japanese ships retreated. Then where did the Chinese ships go? Why did they not retain possession of the field of battle, and carry succour to the stranded *Fang-wei*, instead of leaving her to be destroyed by the Japanese ships.

Admiral Ito's triumph would have been far more signal had he clung to the Chinese ships and poured his shells into them the following morning. It seems that the possibility of attack by the torpedo-boats during the darkness induced him to give the retreating squadron a wide berth. The explanation is intelligible. Certainly the Chinese had fought with such pluck and tenacity that, had they found their retreat likely to be cut off, they might fairly have been credited with sufficient resolution to use their torpedo-boats at all hazards as their sole hope of safety. Experts must decide how far that consideration justified Admiral Ito's caution. To us it appears a miserably ungracious task to sit comfortably at home and criticise brave men because they seem to have fallen short of our ideal standard.

The *Fiji* published a telegram from Shanghai saying that some uncertainty exists as to the condition of Admiral Ting and Major Hanneken, but that neither officer is severely wounded.

We learn, also from a *Fiji Shimpō* telegram, that the German Consul in Shanghai as well as the Hongkong and Shanghai Bank, have raised objections to placing the ships of the China Merchants Steamship Company under the German flag. Probably that means that no sufficient guarantees could be obtained as to the nature of the service on which the vessels were to be employed. If they were liable to be employed in transporting troops, Germany would, of course, refuse to let her flag be flown.

We have received a telegram from Hiroshima saving that Admiral Kabayama returned to Ujina in the *Saikyo Maru* at 3 p.m. on the 27th instant. It is apparent, therefore, that the injuries received by the *Saikyo* in the fight on the 17th instant did not disable her for active service.

The Chinese Government is said to have ordered the Southern Squadron to assemble at Wei-hai-wei. China will thus have a numerically large fleet to oppose Japan in these waters. But if the renowned Peiyang Squadron proved so incompetent to injure the Japanese

ships, what can be expected of the far inferior southern war-vessels? Besides, it is not likely that the next Japanese force encountered by the Chinese at sea will consist of only 11 vessels.

Field-Marshal Count Yamagata, according to a telegram from Hiroshima, arrived at Pyōng-yang on the 26th instant. The same message states that Major-General Tachimi, at the head of a brigade, left Pyōng-yang on the 23rd inst. for Anchu. This brigade evidently belongs to the second half of the Nagoya Division, which arrived at Gensan too late to take any part in the operations against Pyōng-yang. The enemy made a slight halt at Chyon-ju, an important town about 33 miles north of Pyōng-yang. They had been ordered to hold the place until Generals Ma, Wei, and Yuan arrived with a large body of troops, but when they found that the Japanese advanced column had already crossed the Shyon-chyon river, they resumed their retreat.

Mr. Yuan Shih-Kai, the well known Chinese Representative in Sōul, whose death by poison under orders of the Viceroy Li was recently reported so assiduously, seems to be alive and well. He was a passenger in one of the transports conveyed to Korea by the Chinese fleet that fought on the 17th instant, and he is now engaged organizing opposition to the advance of the Japanese army. Yuan is a most capable civil official, but what his military abilities may be, remains to be proved.

In addition to the spoils already reported as having been captured by the Japanese troops at Pyōng-yang, the *Kokkai* says that there were 2,000 tents, 2,000 stand of small arms, and 1,700 war horses. It values the whole at 600,000 yen.

Details of the naval engagement on the 17th ultimo are beginning to appear in the vernacular press. The account said to have been given by Lieutenant Matsuzaki to the Emperor would doubtless be very interesting, could we obtain it in connected form. But as it was verbally delivered, a great part of it probably took the shape of question and answer, so that re-casting would be necessary before publication. A brief epitome of the report is, however, given by some of the Tokyo papers. We should translate it in full for our readers' perusal were it not abbreviated to such an extent as to be difficult to comprehend. What we gather from it, as well as from some notes furnished by an officer on board the *Saikyo Maru* and published by the *Asahi Shimbun*, is that the encounter between the two fleets took place at a point (39°33' E. lat. and 123°40' E. long.) some 55 miles westward of the mouth of the Yalu river. About half-past eleven in the forenoon, the smoke of the enemy's ships was seen, and their presence was signalled a few minutes later by the leading vessel of the Japanese Squadron. The Chinese were then heading westward, from which we conclude that, having finished their convoying duties, the Peiyang Squadron and its companions were returning to Pechili Bay. The Japanese Admiral at once decided upon attacking. Among the eleven men-of-war constituting the Japanese force, eight were fast ships, their speed ranging from 23 knots (the *Yoshino Kan*) to 17.5 knots (the *Matsushima*, *Hashidate*, and *Itsukushima*). The remaining three were much slower, namely, the *Fuso* (13.2 knots), the *Hiyei* (13 knots) and the *Akagi* (12 knots). Such a squadron could evidently work best if divided into two, and the Admiral accordingly signalled to the *Hiyei* and *Akagi* to take up a position in the rear of the line and operate in conjunction. The *Fuso*, so far as her speed was concerned, should have been relegated to the same place, but being the only ship in the fleet with armour of any strength (7" on her belt and 9" on her battery), she was kept with the main division. The *Saikyo Maru*, a merchant cruiser unfitted to take part in a regular engagement, was also ordered to manoeuvre with, but after, the *Hiyei* and the *Akagi*. It may be added that the *Hiyei* and *Akagi* were the smallest of the war-vessels in the squadron, the former's displacement being 2,200 tons, and the latter's, 615. It being Admiral Ito's object to head off the Chinese ships and get between them and the entrance to Pechili Gulf, he steered a course to pass westward of them. The Chin-

ese, whose course was then about south-west, bore up to the westward, so that the two squadrons were approaching each other at an angle of about 40°. In this position the Chinese opened fire at a range of some 4,000 metres. It was then 45 minutes past noon. The Admiral's ship (*Matsushima*), which was leading the Japanese line, ran up a signal that his command should open fire when they judged the enemy to be within proper range, but it was not until a few minutes past one o'clock that the first gun was discharged on the Japanese side. It should be noted here that although the *Matsushima*, *Hashidate*, and *Akatsushima* each carry a 45-ton gun, they could not use it in the position then occupied by the squadron. The heaviest pieces immediately available on the Japanese side were the 28-ton guns of the *Naniwa* and *Takachiho*. The Chinese, however, were able to use the 37-ton guns of the ironclads. Gradually the direction of the two squadrons changed, for as the Japanese constantly sought to push the Chinese back towards the mouth of the Yalu, Admiral Ting had either to break through the enemy's line or head his ships further north. The fire on both sides now became very hot, and the Chinese, having lost two ships, fell somewhat into disorder, several of their vessels dropping astern and thus becoming engaged with the *Hiyei*, the *Akagi* and the *Saikyo*, which formed the rear of the Japanese Squadron and had now become separated by an appreciable interval from the main body of the fleet. It appears, from the story told by the *Saikyo Maru's* officer, that one of the two Chinese ironclads was among the vessels thus dropping to the rear of the line, and that the *Hiyei*, having been set on fire by the enemy's shells, steered southward out of the fight, followed by the *Akagi* and pursued by a large force of the enemy. It was then that the *Saikyo* received a shell which destroyed her steam-steering gear and compelled her to break through the enemy's line, which manoeuvre she effected at great risk. It is impossible from the published accounts, although they are accompanied by rude diagrams, to make out why this step was necessary to save the *Saikyo*. From the courses steered by the two fleets it ought always to have been possible for the *Saikyo* to head southwards out of the fight. The most probable explanation seems to be that since the loss of her steam steering gear made it difficult to effect a considerable change of course with rapidity, she deemed it her best chance to head northward, and thus get out of the zone of fire altogether. We may note, *en passant*, that the diagrams here referred to do not appear in any Japanese newspaper of importance, so far as war intelligence is concerned, and consequently by relying on them explicitly confusion only may result. The two squadrons, according to the accounts that we are collating, were by this time steering almost direct for Takushan Bay. It thus appears that the Japanese by seeking to head the Chinese back from the route to Pechili Gulf, had forced them to alter their course nearly ninety degrees, and could they have kept them on that line, the fight would have ended off the mouth of the Yalu, with the Japanese squadron intercepting the retreat of the Chinese. But owing to some unexplained reason the Chinese were able to alter their course westward. It is possible that Admiral Ito, seeing the peril of the *Hiyei*, *Akagi*, and *Saikyo*, and seeing also that a cluster of the enemy's ships had fallen to the rear, slowed down so as to bring the latter into engagement with his own ships and interrupted the pursuit of the former. However, that may be, we next find the Chinese steering nearly on their original course, though further in shore, and the Japanese steaming parallel to them at a distance of something over a mile. While the ships were in this order evening fell, and the Japanese, sheering off a little so as to avoid the danger of the enemy's torpedo-boats, steered westward, expecting to get between the retreating vessels and the Gulf of Pechili. In this, however, they failed, and at dawn, being unable to discover the Chinese vessels, Admiral Ito signalled to return to Takushan Bay.

Another account, differing considerably from the above, has been published. According to this second and later version, the Chinese formation, from the beginning of the fight until they fell into disorder, was in two ranks, whereas the Japanese preserved a single line throughout. The Japanese, however, fought in two squadrons, a Flying Squadron and a Principal Division. When the enemy was sighted steering west and south towards the Pechili Gulf, the Japanese fleet at once shaped a course to intercept him. The Chinese thereupon cleverly altered their course to the southward, thus placing themselves nearly at right angles to the Japanese line, and having greatly the advantage of position, being themselves bow on, and having the whole length of the Japanese ships exposed to their fire. The Japanese ships, steamed at full speed across the front of the Chinese. The Principal Division (*Matsushima*, *Chiyoda*, *Itsukushima*, *Hashidate*, *Fuso*, and *Hiei*) led, and the Flying Squadron (*Yoshino*, *Takachiho*, *Akitsushima*, *Naniwa*, and *Akagi*) followed. The Chinese, who seem to have manoeuvred with the object of never exposing their broadside to the enemy, now changed their course through an angle of 90° so as to get on the rear of the Japanese fleet, and at the same time changed their formation, for whereas they had hitherto been advancing in two ranks, seven ships abreast, they now, in wheeling to the right, assumed formation two deep, and followed in the wake of the enemy. Up to this point the advantage had been with the Chinese, for the Japanese, in their eagerness to intercept the enemy's route to the mouth of Pechili Gulf, had allowed themselves to be outmanoeuvred. Now, however, they adopted a clever line of tactics. The Principal Division wheeling to the right and the Flying Squadron to the left, turned back upon their tracks and caught the Chinese fleet between them. In that position the Chinese suffered terribly, three of their vessels being sunk, one so riddled that she had to fly for the beach, and three set on fire. If the reader has followed this account, he will perceive that the Chinese fleet was now steering the course taken by the Japanese at the commencement of the battle, and that the Japanese were heading in exactly the opposite direction. It was drawing up to dusk and the Chinese sheered off to the Westward, the Japanese pursuing along a parallel line. The rest of the story does not differ from previous accounts.

It will be seen that the above two reports are very different. Neither is official, and we can not pretend to judge which is the more credible. But the second story has the advantage of making it comparatively easy to understand how the Chinese, keeping the in-shore tack, managed to shape a course for their harbour of refuge.

Field-Marshal Count Yamagata, telegraphing from Pyöng-yang at 10 p.m. on the 27th ultimo, says:—

No enemy found in Kasan on the 26th. In flying from the place he left behind him 200,000 rounds of small arms ammunition, and a quantity of military weapons. The Chinese troops killed a number of persons and burned many houses in Kasan. In Chhön-jü also several houses seem to have been burned.

Chhön-jü is 60 miles by road from Wiju, on the banks of the Yalu. If the Japanese army had reached Chhön-jü by the 27th ultimo, it ought to be in Wiju very early in October. Events seem to be confirming the forecast that no serious opposition will be encountered by the Japanese on this side of the Manchurian frontier.

The spoils taken at Pyöng-yang have been increased, says a telegram published in the *Fiji Shimpö*, by 4,787,392 *kwán* of Korean cash, 32,200 *kwán* of sycee, and 5,995 *yen* worth of the Bank of Japan's convertible notes. The total money value of this new find is 12,252 *yen*. The Bank of Japan notes were found by some Japanese commissariat coolies, on the road from Pyöng-yang to Shyong-an.

The *Fiji Shimpö*, on the authority of a telegram sent from Chemulpo on the forenoon of the 28th ultimo, says that, on the 23rd ult., when the *Naniwa Kan* and the *Akitsushima Kan*

were cruising near Talien Bay, they observed a Chinese man-of-war ashore. She looked like the *Kwang-shan* (otherwise reported as the *Kwang-chi*), belonging to the Canton Squadron. On the approach of the Japanese vessels being observed, she was blown up, apparently with a charge of dynamite. It is supposed that her crew had already escaped. This intelligence purports to have been sent by Admiral Ito to Headquarters and may therefore be taken as true.

In the *Nichi Nichi Shimbun* we find a telegram sent from Hiroshima at 5.40 p.m. on the 29th ult. to the effect that in deference to the advice of Ma Chien-chung it has been decided to despatch at once from Tongku to Manchuria 8,000 of the Peking troops, 5,000 of another body not identified in the telegram, and 6,000 of the Viceroy Li's force, making 19,000 in all. The same telegram says that the Fengtien Army of Manchuria is to be pushed to the Yalu River to guard the frontier. There is said to be great alarm both in Peking and Tientsin and the Viceroy Li is in disgrace. We find this a perplexing message. The Fengtien army is supposed to number 30,000 men all armed with rifles, the picked regiments having Remingtons and the others Enfields, and the artillery, of which there are four batteries, having Krupp field-pieces. According to Lieutenant-General Nozu's report the Fengtien army has already contributed a considerable contingent to the defence of northern Korea, and if the Chinese have not already moved the main body of the army—which is said to be the cream of the Manchurian forces—to the frontier their state of unpreparedness is very much worse even than we suppose. If, however, as the telegram implies, they have not thus moved it why should not the forces from Tongku be sent to the Yalu River and the Fengtien Army left at home to guard Manchuria. But perhaps the plan is to carry the Tongku contingent by rail as far as possible and then march them across country to the Moukden. That would involve a march of at least 200 miles which is a greater distance than the Japanese have to travel to reach Moukden. It seems to be the fate of the Chinese to be too late in this war. They have underrated their adversaries.

A telegram from Shanghai despatched on the 30th ult. and published by the *Fiji Shimpö* says that the Viceroy Li is about to take the field in person and that his duties as Viceroy of Chili will be discharged during his absence by Hu Rau-sun and Wu Ta-cheng. It is difficult to reconcile this statement with another contained in the same telegram to the effect that the Viceroy and his adopted son, Lord Li, formerly Chinese Representative at the Court of Japan, have been deprived of their offices.

The same telegram contains several other items. It says that the British steamer *Pathan*, laden with railway material has been stopped by the Chinese and carried into Keelung in Formosa where she is detained. It says also that the foreign residents of Peking apprehend Chinese outrages and are anxious to have a body of Marines sent to the capital for their protection.

Captain Feng of the *Chih-yuen* is said to have been beleaguered for cowardice. We don't believe it, but if it were true it would be curious as well as horrible. The *Chih-yuen*, was the only vessel that escaped of the three that encountered a Japanese flying squadron on the 25th of July, and she escaped in a condition described by foreigners who saw her afterwards at Port Arthur as very shocking. Having undergone the necessary repairs she is said to have been present with the Chinese fleet on the 17th inst. But her Captain, thinking that he had already had his fill of fighting, made a gallery of his ship and looked on at the battle. He was naïve enough afterwards to describe what he had seen and his simplicity and garrulity would seem to have cost him his head.

The vernacular press of the 30th ultimo published yet another account of the naval battle on the 17th ult. The main facts that we learn from it are the following:—The object of the Japanese Squadron's proceeding northward, was

to intercept any troops that might be sent from China to re-inforce the army in Korea. The Third Flying Squadron, together with the *Anaki* and the *Iwaki* had been sent up the Ta-dong river to coöperate with the land forces. The First Flying Squadron (*Yoshino*, *Takachiho*, *Akitsushima*, and *Naniwa*) were in the van of the line with the *Yoshino* at their head. Then came the Principal Squadron (*Matsushima*, *Chiyoda*, *Itsukushima*, *Hashidate*, *Hiei*, and *Fuso*), and the rear was brought up by the *Akagi* and *Saikyo*. The Chinese ships, when sighted, were on their way back from the Yalu, whither they had conveyed some 10,000 troops. The Squadron consisted of the *Ting-yuen*, *Chen-yuen*, *King-yuen*, *Lai-yuen*, *Chih-yuen*, *Ching-yuen*, *Chi-yuen* (?) *Ping-yuen*, *Chao-yung*, *Yang-wei*, *Wei-yuen*, *Kwang-chia*, *Kwang-ping*, and one other, with six torpedo boats. The ships were hugging the shore as though to escape observation, and were evidently heading for Port Arthur. When first seen they were in one line, but they presently changed to two ranks in echelon. The *Yoshino* signalled their presence, and Admiral Ito ordered the fleet to prepare for action. As the squadrons drew near, the Chinese slightly altered their course and opened fire at about eight thousand metres. The Flying Squadron made no immediate response, but moving on rapidly through smoke and shells, commenced practice at 3,000 metres. The effect of the Japanese fire soon made itself apparent. The *Chao-yung* burst into flame, and the *Yang-wei* had to be run ashore. At 1 p.m. the *Saikyo* ran up a signal that the *Hiei* and *Akagi* were in danger, and the rest of the Squadron went to their assistance, but the enemy now left the *Hiei* and *Akagi* and directed their attack against the Principal Squadron. The Admiral now signalled to the *Hiei* and *Akagi* to draw out the fight, which they did, the latter assisting the former to put out a fire that had broken out on board. The *Saikyo Maru*, at this stage, had her steering gear destroyed, and the ironclads *Ting-yuen* and *Chen-yuen* pressed her so hard that her only means of escape was to steam between them. The two big ships sheered off, as she approached: they probably feared ramming. Three torpedoes were fired at her, but all were badly aimed. The enemy's fire now began to slacken, and the Japanese redoubling theirs, the *Chih-yuen* was sunk. A part of the enemy's fleet, consisting of 4 ships, steamed off towards the coast at this stage, pursued by the Flying Squadron, while the Principal Squadron held the ironclads and their consorts, which were evidently disposed to retire. Shortly afterwards the *Ting-yuen* caught fire, and the Flying Squadron, coming up with the fugitive ships, forced the *Lai-yuen* out to sea again and sank her. She lost her steering gear and was moreover in flames; and settling down by the stern, she went under amid the shrieks of her crew. It was not 5.30 p.m. The Flying Squadron had been obliged to desist from the pursuit of the other three fugitives owing to shallow water. The *Yoshino*, however, went after one of the enemy's torpedo-boats, but was almost immediately signalled to return. The first engagement lasted about one hour. During it, either the *Chao-yung* or *Yang-wei* was sunk. In the second engagement the Flying Squadron and the Principal Squadron separating, ranged themselves on both sides of the enemy, and sank either the *Chih-yuen*, or *Ching-yuen*, the *Chen-yuen* and *King-yuen* being set on fire. The third engagement began at about 3.50 p.m. and lasted until 5.37 p.m. It was conducted in two parts, the Flying Squadron pursuing a section of the Chinese navy that had fled, and the Principal Squadron fighting with the ironclads and their consorts. At every hit made a shout was raised by the firing side. Once the enemy getting within easy torpedo range of the *Hiei*, discharged a torpedo at her, and were so confident of sinking that they cheered as the torpedo left the tube. But the *Hiei*, by a turn of her helm, avoided the danger, and destroyed the torpedo with one of her quick-firing guns as it passed. The Japanese cheering the incident lustily.

Detailed accounts of the dispositions for defence and attack at Pyōng-yang are now given by the vernacular press from correspondents at the seat of war. Instead of translating literally we proceed to collate these various versions, in order to lay before our readers a succinct and intelligible narrative. It should be premised, however, that what we are about to write, being taken entirely from Japanese journals, does not rest upon our responsibility:—

The assault on Pyōng-yang was the fiercest and most vital fight in the present war. It might almost be said that the fates of China and Japan depended on the issue. The place offers by nature great facilities for defence, and moreover the enemy, after his defeat at Sōng-hwan, had exhausted all his resources to make a successful stand at the northern stronghold. His troops were of the best quality at his command. There was a contingent from the army of Feng-tien; another from the Viceroy Li's trained force; another from the Manchurian cavalry, and, finally, there was the body of fugitives from A-san, who had already given proof of pluck and endurance. These various forces were estimated by the Koreans at 40,000. Other authorities put them at 30,000, but Lieut.-General Nozu's investigations, subsequently to the fall of the place, led him to conclude that its defenders did not number more than 16,000. Certainly the Lieut.-General's figures are not above the mark. The Chinese were excellently equipped. They had Krupp field and mountain guns, and Mauser and Spenser repeating rifles. In that respect they did not suffer at all by comparison with the Japanese. Besides, the Koreans in the Pyōng-yang province were all allies of the Chinese and hostile to the Japanese. They supplied the former with everything needed and withheld everything from the latter. In short, the Japanese had to conduct a campaign in a foreign country, at a long distance from their basis of operations and surrounded by foes. The climate, too, was against them. Often a temperature of 90° in the day fell at night to 45°. Their provisions were frequently of the coarsest kind, millet and barley alone, and to crown all they had to push forward without a moment's delay. To illustrate the latter point it may be mentioned that, within two days after the arrival of the officer commanding the Fifth Brigade, the mixed column began its march to the front, and that on the very day of its return from the successful fight at Sōng-hwan, it set out on the campaign against Pyōng-yang.

Considering the movements of the troops in detail, we find the Gensan column reaching Shon-kyo on the 13th of September and setting out on the 14th for Pyōng-yang *via* Shon-an. (It would be useless to give in detail the names of the places through which the various columns passed. Several of them are not marked upon any map hitherto published. It will be sufficient to say that there were four attacking columns, namely, one from the east; one from the south-east; one from the south; and one from the north, this last being instructed to make its way round by the west of the place, and deliver its assault along the main road entering Pyōng-yang, from the north, that is to say, the rear. Of these the column advancing from the south-east was to feign assault so as to draw the enemy's forces from the points really threatened.

On the north of Pyōng-yang near the banks of the Ta-dong river, there stands a precipitous hill known as the "Peony Mount." It was here that Konishi Yukinaga, the celebrated Japanese General, sustained a disastrous defeat in the war at the close of the sixteenth century. The enemy had thrown up sheltering breastworks for their infantry on this hill and had mounted three field and as many mountain guns (Krupp) and several Gatlings behind regular parapets. These works showed a degree of military and engineering skill that was not expected from the Chinese. On the sides attacked by the columns from Sakk-nyon and Gensan (*i.e.* the south-eastern and eastern faces) there were six forts, in all of which guns were mounted. Behind these was the encampment of the general in command. The south face was not so strongly fortified, but the garrison mustered there

in great force, and Major Okayama's battalion had a hot time on the day of the assault. The Mixed Brigade under Major-General Oshima found two forts and two breastworks near the Ta-dong river, and about a mile farther on two forts on the top of an eminence had to be stormed. Altogether the dispositions for defence were wholly different from the unskilful arrangements at Sōng-hwan and A-san. It seemed as though General Yeh, who commanded at the latter places, was determined to omit nothing at Pyōng-yang that might serve to remove the shame of his previous defeats. The Chili contingent, under command of General Tso, guarded the north side of the stronghold. The forts on the left bank of the Ta-dong river were held by the Fengtien troops under Yeh and Ma, with whom were Generals Feng and Suh. The south face was garrisoned by the mounted Manchurian men, under General Wei, and the other commanding officers, Sū, Yang, and so forth, were inside the town. The names of the various chieftains were blazoned in red on white banners, which the troops carried aloft.

The Mixed Brigade under Major-General Oshima, having reached Fuan-chu, a town situated at the bend of the Ta-dong river, pushed on till they struck the high-road to Wiju on the 12th instant. The central column, marching out of Fuan-chu, diverged to the left (the west), and crossing the river, rested in a town some miles beyond its bank on the 14th instant. The Gensan column, having reached Pyōng-an on the 13th, took up a position some three miles from Pyōng-yang on the following day. Major-General Oshima's aim being to divert the enemy's attention, so that the other three columns might encounter less opposition in their real attack, commenced the fight first. In these various arrangements the left, or westerly, face of the town, seems to have been left open for the enemy's retreat.

The Sakk-nyon (south-eastern) column drew near to the enemy's fortifications at daybreak, just as the Mixed Brigade had gone into action, and the Gensan column (from the east) was opening fire from its artillery. The enemy, thus assailed on two faces and unaware that the column by which the real attack should be delivered was marching against his position from the rear—of which fact, indeed, he did not become apprised until his assailants were within 500 metres of the place—directed all his attention to the work immediately before him. Major-General Tachimi, having deployed his troops, made them lie down behind the brow of a hill and from that position open fire upon the Chinese fort No. 5. The defenders of the fort could not have inflicted any loss on their assailants under the circumstances, but the men in Forts No. 1 and No. 2 opened a fierce flank fire with their repeating rifles, though they did little damage. General Tachimi thereupon divided his force into two, and sent the Second Battalion of the 21st Regiment under Major Yamaguchi to attack the right of the enemy's position, while the First Battalion of the Twelfth Regiment under Major Tomita advanced against the main position. Major-General Tachimi now concluded that in all probability the enemy was not defending the position in great force, but was probably reserving his strength for the defence of the "Peony Mount," the key of his position. He consequently decided to storm the place at once, and in accordance with that decision ordered Captain Kokura and Lieutenant Homma to take two companies and rush No. 1 Fort. This tactic was eminently successful. The enemy offered no resistance until the assailing troops were almost at the muzzles of their rifles. Then there was a hand-to-hand struggle, but in a moment more than fifty of the Chinese fell, shot or bayoneted, and the rest fled. Thus the Japanese found themselves in possession of No. 1 Fort at 7.30 a.m. In this assault Aide-de-camp Kaisura received a bullet in his thigh and Captain Kokura and Lieutenant Homma were both severely wounded. The First Battery of Artillery of the Sakk-nyon column now placed its guns in position on a hill about 800 metres from No. 3 Fort, and poured a shower of grape into it, to assist Major Tomita's advance. The

enemy fought stoutly, but were thrown into disorder by the grape-shot, and Major Tomita's force, taking advantage of the moment, stormed the Fort and took it at 8 a.m.

The Gensan column (*i.e.* that advancing from the east) having reached Shōng-an on the 13th of September, sent out a few troops to scout. These men found themselves suddenly surrounded by from twenty to thirty Chinese soldiers, who having fired a volley that emptied one of the Japanese saddles, advanced to attack with their short swords, and would doubtless have destroyed the little group of men had not a company of infantry arrived at the critical moment and driven off the enemy. Shōng-an was one of the Chinese commissariat stations. Two officers and two soldiers were taken prisoners there. Marching thence the troops placed a battery on a hill within about 1,500 metres of Pyōng-yang, and opened fire on a fort lying on the left of the enemy's front at 5 a.m. on the 15th of September. Under cover of this fire the First Battalion of the 18th Regiment, getting into the Wi-ju road at a point about 1,000 metres from the Chinese position, advanced rapidly against the fort and stormed it. About the same time three others of the forts on this face were rushed, and the enemy evacuated two without fighting. By 9 a.m. all the forts outside the town were in the hands of the Japanese troops except those on "Peony Mount." Against that redoubtable position three bodies of men were sent, one from the front under Major Yamaguchi, and two others from the right and left rear under Major Takata and Colonel Sato. The defence, however, proved most obstinate, and the Japanese troops found themselves checked. Previously to this, two batteries of artillery had been sent to bombard the northern face of the works covering the town. These, observing the fierce fight in progress at the Peony Mount, changed the direction of their guns and poured grape into the forts on Peony Mount until their defenders retired in confusion. Colonel Sato now advanced to breach the Kemnu gate of the city at the foot of Peony Mount. Against this gate the enemy had piled quantities of earth, and it was not until three attempts had been made that an entrance was effected. The troops now essayed to push into the town, but were met by a shower of lead and many of them fell wounded or killed. They failed to effect a lodgement. By this time both sides, having been fighting fiercely since before dawn, were utterly weary, and at 2 p.m. the leaders of the Sakk-nyon and Gensan columns decided to suspend the attack and rest in the positions already won.

The Central Column, setting out from its position at midnight on the 14th September, found itself at sunrise separated by some cultivated fields from one of the enemy's forts, the garrison of which were evidently on the look out. The Japanese artillery, having taken up a position on a hill, opened fire upon this fort and the enemy replied with vigour. The 10th company of the 3rd Battalion of the 22nd Regiment, descended the hill and took a position hidden by the growing crops nearer the fort. Immediately afterwards, a body of the enemy's cavalry numbering over a hundred, emerged from one of the gates of the city and rode across the space between the fort and the position of the Japanese artillery. The latter, supposing that the object of this sortie was to cut off the company which had advanced near the fort and which, from its position, could not detect the approach of the horsemen, directed their fire against the latter, the infantry following suit. Thereupon the company that had advanced, observing the cavalry, opened fire on them at short range and killed the greater part of them, taking also 7 or 8 prisoners. The latter, on being questioned, said that owing to the death of General Tso, who commanded on the north face of the town, the troops had lost heart and the cavalry had fled. Immediately after the receipt of this information another squadron of 30 or 40 horsemen made their appearance from behind the fort, and it being now known that they were fugitives, the men in the millet opened fire on them and killed them all, with the exception

of one who galloped back to the town, and warned another party of some thirty troopers that were emerging, whereupon the whole retreated towards the Ta-dong river. But in the meanwhile the troops under Major Okuyama had routed the enemy outside the town on that side, and had set fire to their camp. The fugitive troopers accordingly turned their horses' heads back to the town. Much time had been occupied in this manner, and it was now 2 p.m. The infantry was accordingly ordered to advance, and the enemy making no resistance of consequence, the Japanese became masters of these outlying forts which they at once dismantled.

We have now followed the operations of the Gensan Column, moving from the east; of the Sak-nyon Column, moving from the south; and of the Central Column, moving from the west and north. Of these the first two were intended chiefly to keep the garrison occupied while the third delivered the real attack on the town. It remains to describe the operations of the Mixed Column which advanced from the south-east. This column also was directed to make a feigned attack, but to make it with such resolution that even if the enemy became aware of the real attack impending from the north he might still be too much occupied with the Mixed Column to detach any large body of men for the defence of the northern front. To carry out this plan the Mixed Column was the first to commence offensive operations. It opened artillery fire on the 13th and continued it on the 14th, sending out also reconnaissance parties as though seeking a favourable spot for an assault. These tactics succeeded, for although the enemy discovered the approach of the Central Column in time to send out an opposing force had his hands been free elsewhere, he dared not withdraw his troops from the points threatened so vigorously by the other columns. Dividing into three parties, the column advanced and attacked 3 forts having parapets 4 metres high. A sanguinary conflict was waged here, the enemy fighting desperately. Both sides lost heavily, a great number of officers falling among the attacking troops. The assault had lasted a considerable time before the first of the forts fell. The second and third forts, however, proved a still more difficult task. The enemy's Mauser repeating rifles used from behind the high parapets did great execution amongst the Japanese who were thrown into some disorder. At this point Major-General Oshima, who was in command of the column, is said to have behaved with great resolution. He was directing the operations from a distance of about 70 metres when, observing that the attacking troops were wavering, he advanced his position some 40 metres nearer and stood under the standard of the 11th Regiment. Lieut.-Colonel Nishijima and Staff-Captain Nagao, who up to this time had been leading the men with conspicuous bravery, urged the General to retire to a safer position, but he shouted that unless his troops conquered he would die at the foot of the standard. This action inspired the troops with new courage. They threw themselves upon the Chinese who had advanced from behind the parapet deeming that the assailants were beaten and drove them back pell-mell into the fort. The General, content with this, did not order a renewal of the assault, and as the men had been fighting doggedly for 10 hours and were utterly weary as well as short of ammunition, he drew them off at 2 p.m. The reason why the attacking column was not more successful in this case is to be found in the fact that owing to the absence of any elevated position on which the guns could be advantageously placed, the Japanese artillery had to fire at a range of about 1,500 metres and could effect nothing serious at such a distance, whereas the Chinese had Krupp guns in the forts and used them skilfully.

It will be seen from the above account so far as we have carried it, that the three columns attacking from the east, the south-east and the south all ceased operations at about the same time, namely, 2 p.m. on the 15th. Shortly afterwards, a fire broke out in the town. Its

cause is uncertain, some supposing that it resulted from the operations of attack, some that it was accidental, and some that it was the work of the Chinese themselves. At all events it spread so rapidly that the garrison became alarmed, or pretended to be alarmed, and raised white flags at various points on the walls. It is probable that this was merely a device to gain time, for when Major-General Tachini entered the outer forts in response to the white flags, the enemy would not allow him to enter the inner gate and spoke as though they counted on the Japanese retreating at daybreak. General Tachini, having informed them through Aide-de-camp Katsura that if they wished to surrender, they must send a proper delegation to his head-quarters, withdrew. Heavy rain and thunder had now set in and continued until late at night, causing pitchy darkness. Taking advantage of this, a number of the enemy effected their escape, fully ten thousand, it is estimated, getting off in that way. At dawn the various columns effected their entry with little difficulty. According to some accounts the display of white flags was made by the enemy for the purpose of inducing the Japanese to cease their attack, and did not take place after a lull in the operations of assault. As we premised, however, all the accounts from which the above is compiled emanate from newspaper correspondents, and cannot be received with entire confidence.

A tribute of admiration must be paid to the correspondent of the *Fiji Shimpō*. His account was published by that journal two days ahead of any other Tokyo newspaper, and was copied, with due acknowledgment and compliments, even by the *Nichi Nichi Shimbun*.

The "masterly retreat," by which euphemism certain Yokohama journals have sought to cover the defeats of the Chinese at Sōng-hwan and Pyōng-yang, affords much amusement to folks in Tokyo. The *Fiji Shimpō* publishes a picture showing a body of Chinese in full flight from a field on which numbers of their comrades lie dead. The sketch is headed, "masterly retreat."

The *Nichi Nichi* publishes a telegram to the effect that a section of Japanese troops, numbered 25, under the command of Sub-Lieutenant Goto, came into collision with a party of the Tong-haks, aggregating 600, at 9 a.m. on the 28th instant. The Japanese stormed the insurgents' position and carried it, the Tong-haks losing 2 killed and having many wounded, all of whom, however, they carried off. There were no casualties on the Japanese side. The camp of the Tong-haks was burned, and 63 muskets (of the fuse-igniting type), 11 lances, 4 flags, 3 horses and 30 *kwan* of Korean cash were taken. Indications of other risings are reported. This telegram purports to be from Lieut.-General Nozu to Head-quarters. The exploit of the 25 Japanese taxes our credence.

Field-Marshal Count Yamagata's reply to the Imperial Message inquiring after the well-being of the troops is published. With the usual profound expressions of respect, the Field-Marshal thanks His Majesty, and assures him that the army in Korea is in a state of thorough discipline and excellent health.

It seems to be thought that the 19,000 troops which the Chinese Government is reported to be about to send from Tong-ku (the terminus of the Tientsin railway on the Peiho) to the Yalu are really intended for the defence of Moukden, the treasure house of the Manchu Dynasty.

The various accounts of the taking of Pyōng-yang furnished to the Tokyo newspapers by their correspondents at the seat of war agree, on the whole, very remarkably. That of the *Nichi Nichi Shimbun*, however, is generally admitted to be the best so far as concerns the operations of the Mixed Column under Major-General Oshima. This was the column that suffered such heavy losses and failed to effect a lodgement under the walls of the town on the 15th instant. Major-General Oshima's instructions were to deliver his attack from the south of the city and as far as possible to hold the defenders occupied on that face so as to facilitate the assaults from the east and west by the Gensan and Central Columns, respectively. The road by which his men had to

advance crosses the Ta-dong river by a bridge of boats just under the wall of the town. On the south side of the bank the Chinese had erected four breast-works and two forts, and these had to be taken before the river was crossed. The Japanese laboured under great disadvantage in the assault, for there was no position where artillery could be placed nearer to the river than 1,500 metres, at that range grape shot was ineffective against earthworks such as sheltered the Chinese. On the other hand, a wide expanse of level ground enabled the defenders to use their artillery with deadly effect. At dawn on the 15th of September the Mixed Column commenced its attack upon the four breast-works and two forts to the south of the river and drove the enemy from them after some eight hours of hard fighting. Then followed the really arduous part of the undertaking—the passage of the river and the capture of the defensive works on the other side. There were seven breast-works and two forts, on an elevated position overlooking the bridge. Whether every one of these works commanded the bridge, we cannot discover from any of the accounts, but at any rate several of them were constructed so as to oppose its passage. General Yeh was in command at this part of the works and he had doubtless determined to justify the renewed marks of favour bestowed on him by his Sovereign despite the defeat at A-San. Certainly his dispositions appear to have been excellent, and all accounts agree that his men fought well. The Japanese succeeded in crossing the river and taking one of the works on the other side, but the success cost them terribly dear, for the parapet of the captured fort was too weak to resist the fire from the other Chinese works at close range, and numbers of men fell. It was at this stage that Major-General Oshima and his staff drew together round the Divisional standard and declared their resolve to die there rather than retreat. More than twenty Japanese officers fell in the fort or near it, and as the place had to be evacuated quickly, the bodies of these men came in the power of the Chinese, who are said to have decapitated them, cut out their livers and mutilated them horribly. The enemy had to abandon his positions of vantage on the town side of the river after the successes of the other assaulting columns, but to the Mixed Brigade belongs much of the honour of the final success, for General Oshima's men pushed their attack with such pluck and resolution that although they failed to capture the last of the extramural forts on the southern face, they nevertheless drew off a large force of the best troops in the garrison—General Yeh's—and held them engaged throughout the greater part of a day. It is indeed worthy of notice and admiration that the Japanese troops on the 15th of September remained under arms and without food for more than twelve hours consecutively, during fully nine of which they were fighting.

The *Fiji Shimpō* publishes a telegram to the effect that a great part of the Japanese Army in Korea had reached An-chu by the 28th of September, and that the advanced guard had occupied Chhon-chu and Hwi-chhōn. The head-quarters of the general commanding in chief and of the Third and Fifth Divisions were then in Pyōng-yang. No enemy had been encountered anywhere. The total distance from Pyōng-yang to Wi-ju, on the banks of the Yalu, is 215 miles, according to the *Fiji*, and the distance from Pyōng-yang to Hwi-chhōn is 132 miles. The advance guard is thus within 83 miles of Wi-ju.

According to a telegram in the *Hochi Shimbun*, sent from Hiroshima on the afternoon of the 30th September, the Chinese are assembling a strong force in the neighbourhood of Chetoo. The same message says that 2,000 Manchurian cavalry started on the 29th ultimo for Poli-tung.

His Majesty the Emperor was to set out from Hiroshima yesterday (the 2nd) at 9 a.m. and proceed to the Naval Station at Kure, where doubtless he visited the *Matsumoto Kan*.

The *Nichi Nichi* has a telegram saying that the Viceroy Li is definitely to take the field in person. His Excellency's camp will be Lu-Tai,

and Wu Ta-cheng will discharge the viceregal duties in Chili during Li's absence.

Our readers may remember that in the description, published by us on the 2nd instant, of the attack on Pyöng-yang, it was related that Major-General Tachimi's column, having stormed all the extra-mural forts on the east of the town, found great difficulty in effecting an entry through the gate of Pyöng-yang on that side. The account said that the enemy had raised a strong bank of earth against the gate and thus rendered it very strong. But the *Hochi Shimbun* tells a different story. It says that while the troops were vainly trying to force the gate, a solitary soldier mounted the wall and opened the gate from the inside, so that his comrades walked in without difficulty. The intrepid man, our contemporary adds, is to have a gold medal. It is a pretty tale but hard to swallow. The man who could scale the wall of a Chinese or Korean city, and, single-handed, open the gate to admit a storming party, must be a prodigy. We have not such men in the English army.

The *Yomiuri Shimbun's* Munchausen is beginning to find a field in the war. Under the heading, "The *Saikyo Maru's* Rat killed in Battle," he describes how a shell from one of the 30½ cent. guns of the *Ting-yuen* entered the engine room of the *Saikyo* and burst there, making such a din that hundreds of rats scampered out of their berths to see what had happened. A splinter of the shell struck one of the rats and killed it. Thus, on board the *Saikyo*, which was so long under the fire of the enemy's big ships, the only fatal casualty was that of a rat. Rather small game to bag with a 37-ton gun, says the *Yomiuri*.

Japan may certainly congratulate herself on the fact that though the Chinese are having free recourse to the aid of foreigners in the present war, the Japanese are absolutely without any assistance of the kind. A number of Europeans were on board the Chinese ships in the action on the 17th of September, and as a very large proportion of them were killed or wounded, it may be taken for granted that they worked with conspicuous zeal and valour. The ironclad *Ting-yuen* had on board a gunnery officer, Mr. Nicholls, who lost his life in the fight. Altogether there appear to have been eight Europeans in the Chinese ships.

It is not often that the source of false intelligence can be distinctly traced, but a case of some interest has just come under our notice. On the 20th of September the Kobe correspondent of the *North China Daily News* sent to that journal a telegram with reference to the naval fight on September 17th. The telegram said that "three Japanese ships were destroyed," that "the *Saikyo Maru* and *Hiyei Kan* had a very narrow escape," and that "the *Matsushima* was seriously damaged and put back for repairs." The Kobe correspondent of the *North China Daily News* is, we believe, the editor of the *Kobe Herald*. Where did the editor of the *Kobe Herald* obtain the news that three Japanese ships were destroyed in the fight? No such news emanated from any Japanese source, so far as we know. There is no uncertainty about the statement. It is simple and emphatic:—"Three Japanese ships were destroyed." What are the names of these ships? If the correspondent of the Shanghai journal knows that three ships were destroyed, he must know their names. What are they? It is significant that in all Chinese tales about the sinking or destruction of Japanese ships, no one has ventured to name even one of the lost vessels. Does the Editor of the *Kobe Herald*,—the Kobe correspondent of the *North China Daily News*—imagine that though three Japanese ships were actually destroyed, Admiral Ito has succeeded in concealing the fact from the whole Japanese nation and has persuaded the Government to publish in the *Official Gazette* an exact list of the casualties on board the ships that were not destroyed, while saying nothing whatever about the casualties on board those that were? At all events it would be interesting to learn on what authority the Kobe correspondent of the Shanghai paper based his unequivocal statement that three Japanese ships were destroyed.

Mistakes are inevitable in early reports sent hurriedly forward from the scene of war. There never yet was a war where that could be avoided. The London press, for example, has published numerous false stories about the present war. Reuter has sent to Europe incorrect news. Foreigners in China have telegraphed incorrect news. It may all have been telegraphed in perfect good faith, but it was incorrect all the same. We, for our own part, on the morning after receipt of intelligence that Pyöng-yang had fallen, told our readers that 14,500 Chinese had been taken prisoners. That was the general and confident belief in Tokyo at the time. But very soon it was learned from the reports of the Japanese generals that not more than six or seven hundred had been captured. Those reports were duly published in correction of the original error. Everything was *bona fide* and above board. There is all the difference in the world between unintentional mistakes, and obstinate persistence in mistakes after they have been proved to be mistakes.

Apropos of incorrect intelligence, a correspondent of *The Times* writes thus:—

Anyone who has had any experience of Chinese ways will not be surprised at the contradictory telegrams regarding the war in Korea. About ten years ago some of our politicals had a meeting on the Sikkim frontier with some of the officials from Tibet. In the course of conversation some reference was made to our last war with China, ending in the occupation of Peking and the destruction of the summer palace. "Yes," said the Tibetan officials, laughing, "we know you said you went there, and we read with much amusement your gazettes giving your account of it all. They were very cleverly written, and we daresay deceived your own subjects into a belief that you actually went to Peking. We often do the same thing." This cool statement fairly staggered our politicals, who were themselves competition-wallahs, but had not been educated up to this pitch of bureaucratic romancing. We need not, therefore, be surprised to hear that any general killed is resuscitated after a few days, or that sunken ironclads float again and find refuge in port, or that battles both on land and at sea are fought and won in imagination to revive and encourage each of the combatants. Romancing is a fine art in China; clever fictions are among the most valued *travaux de guerre*.

The drift of public opinion in China with regard to the contingencies of the war is indicated by the alarm into which the foreign residents of Shanghai and other settlements in China have been thrown. It is indeed a time for serious uneasiness. Should the Chinese forces continue to meet with reverses, the authority of the Government of the Middle Kingdom may at any moment cease to be effective, and in that event the foreign residents might find themselves exposed to perils of the worst description. The people in Shanghai are giving to the question timely and practical consideration.

The Viceroy Li's son-in-law, having been denounced by the Censors, has fallen under the displeasure of the Throne, and the Emperor has ordered the Viceroy to send the man away from his *yamen*. The decree containing this order is published in the *Official Gazette*. It must be a terrible humiliation to the old Viceroy. The *North China Daily News*, in a powerfully written article, speaks thus of Chang Pei-lun:—

At once a scholar and a man of rare force of character, he has exerted a profound and malign influence on his distinguished father-in-law for some years. His conduct of affairs at Foochow in 1884 ensured his disgrace and perpetual exclusion from office; these misfortunes have embittered his mind and distorted his judgment. The implacable foe of the Fukienese, he has included foreigners in general and the French in particular within the range of his fell and catholic animosity. Officially dead, this man has stood in the shadow of the Viceregal throne, the steady and unflinching opponent of every new departure, and the prime source of all the machinations which have added Li's policy of late years. In him was embodied the abomination of statesmanship, power without responsibility.

We confess that with our contemporary's most unjust description of Admiral Ting fresh in our memory, we can not receive with absolute confidence its verdict on Chang Pei-lun. But it matters little what manner of man Chang may

be. The interest of the incident centres in the indication it affords that the great Viceroy's power and influence are on the wane. At the commencement of this war we predicted that the first, if not the greatest sufferer by it, would be the Viceroy Li. We sincerely regret that our prophecy should be so soon fulfilled.

Presumably it is on the strength of Captain Tang that the public has been regaled with the story of the *Chih-yuen's* ramming and sinking a Japanese men-of-war. Captain Tang managed to escape when his ship was sunk. He reached Wei-hai-wei, or is reported to have reached it, and now we have a tale of the *Chih-yuen's* having selected one of the biggest of the Japanese ships to ram; having rammed her successfully, and then having followed her to the bottom. Captain Tang has nothing to be ashamed of in the loss of his own ship. Many a brave and skilful commander has experienced a like fate. But when it comes to be known that the ramming story is all a pure fiction, Captain Tang will have something to be ashamed of.

A telegram from Fusan, despatched on the 1st instant, says that although the Chinese troops assembled on the south side of the Yalu river are reported to number 15,000, there are not in reality more than 4,000. The fugitives from Pyöng-yang have all crossed the river, and there remain only the contingent conveyed by transports to the mouth of the Yalu just before the naval battle on the 17th ultimo.

The *Nichi Nichi Shimbun* publishes a telegram from Shanghai to the effect that Sung Ching, Governor of Lushan, has been appointed to the chief direction of military affairs, and that the Viceroy Li is much chagrined by the nomination.

The same authority says that the army of Chili now enrolled aggregates 50,000 infantry and 8,250 cavalry.

The *Kokkai* says that Vice-Admiral Viscount Kabayama, in a conversation recently held with Lient-General Nozu, was told by the latter that the Manchurian cavalry fought better than any of the Chinese troops at Pyöng-yang. These troopers, having their swords slung over their backs, their reins in their left hand and a repeating rifle in their right, would advance at full gallop, lying so flat on the horse's back that nothing of their bodies could be seen. In that position they used their rifles with effect. Only incessant and arduous training could have developed such a degree of dexterity.

Vice-Admiral Ito and Rear-Admiral Tsuboi, who commanded the Japanese fleet in the battle of the 17th of September, have replied in the usual terms to the message of congratulation addressed by the Emperor to the officers and men engaged on that day.

If a telegram published by the *Kokkai* be trustworthy, the Japanese Representative in Seoul is not entirely satisfied with the proceedings of the Korean Government. He is said to have remonstrated against the employment of foreign military instructors in spite of the fact that the organization of the Korean army had already been entrusted to the Japanese; also against the Household Department's independent interference in the administration; against struggles among the Ministers for power; and against the failure to appoint officials to various posts in the newly organized Administration.

In the *Nichi Nichi Shimbun* we find some particulars showing through what a terrible ordeal the *Matsushima* passed in the naval battle on the 17th September. When the order was given, at a few minutes past noon, to clear for action, the gunnery lieutenant mustered 62 gunners at the various batteries. An hour later only 6 remained fit for duty: the rest had all fallen, killed or wounded. The decks were in an appalling state; strewn with limbs and mutilated trunks and covered with blood. Yet the crew fought on undaunted. Presently a shell from one of the *Chen-yuen's* 37-ton guns struck the second barrette gun on the starboard side, and bursting carried death and destruction to every one and everything in the vicinity. All the forward cabins on that side were wrecked, a huge hole was made in the deck, numbers of men were

killed, among them the gunnery lieutenant, whose body seems to have been completely swept to sea, since nothing was found of him but his cap and telescope. Another shell of the same calibre set the ship on fire, and though the conflagration was soon extinguished, several men were burned, some fatally. The ship remained at her place throughout, despite this terrible handling.

DISTINGUISHED SERVICE PENSIONS.

The following Imperial Ordinance has been promulgated:—

We hereby authorize the institution of a system of Distinguished Service Pensions, and direct that the same shall be duly promulgated.

IMPERIAL DECREE No. 173.

DISTINGUISHED SERVICE PENSION REGULATIONS. (*Kinshi-Kunsho Nenkin-rei.*)

Art. I.—The persons to whom Distinguished Service Pensions are granted shall, throughout their lives, receive the pension in accordance with the rate fixed for each class.

Art. II.—The amounts of such Pensions shall be:—

First Class	900 yen per annum.
Second Class	650 yen per annum.
Third Class	400 yen per annum.
Fourth Class	210 yen per annum.
Fifth Class	140 yen per annum.
Sixth Class	90 yen per annum.
Seventh Class	65 yen per annum.

Art. III.—In the event of the death in battle of any person receiving a pension under the provisions of this Ordinance, the pension shall be paid to the surviving members of his family during one whole year after his death.

Art. IV.—By "the surviving members of his family" mentioned in the last Article, shall be understood widow, orphan, father and mother, and grand father and grand mother, as duly entered in the register of the deceased.

Art. V.—The Pensions granted under this Ordinance shall not interfere with other good service pensions or superannuated allowances.

Art. VI.—Detailed rules for the operation of this Ordinance shall be duly fixed.

LETTERS FROM HIROSHIMA.

(FROM OUR CORRESPONDENT.)

Hiroshima, September 25, 1894.

Your correspondent left Tokyo by the 4.10 p.m. train on the 23rd instant, and, under ordinary circumstances, ought to have covered the 560 miles between the capital and Hiroshima by about an hour before midnight of the following day, even allowing a couple of hours' rest at Kobe, where one has to change trains. But such was the delay caused by the mobilization of troops, that I did not reach my destination until a quarter past noon to-day, having thus spent about 45 hours on the road. I will not tax the patience of your readers by describing the incidents of my tiresome journey. But I may note one or two points that struck me on my way hither, especially as they relate to the engrossing topic of the hour.

What made the strongest impression on me was the intense and spontaneous enthusiasm for the war manifested by the people along the whole line between the capital and this town. At every station, where the trains carrying troops stop, crowds of people of all sorts and conditions were assembled, eager to cheer and encourage the men going forth to fight for the country. Arrangements were invariably made at such stations to serve tea and, in some cases, substantial refreshment, to the officers and men. The duty of entertaining the soldiers was everywhere conducted in an orderly manner by a committee representing the people of the particular district. The stations were usually decorated with lanterns and flags bearing mottoes appropriate to the occasion. "Long live the Empire!" "Long live the Army!" "Long live the Navy!" "Victory for ever!"—these were the commonest forms of such legends.

What I saw at Kobe is perhaps worthy of special notice. There, as indeed at several

other places, the business of greeting the troops is in the hands of a numerous committee appointed by the members of the local branch of the Japan Red Cross Society. As the trains carrying the men move in, a number of committee-members, bearing the badge of the Society on their arms, range themselves on the platform, where they receive the officers and men and conduct them to the grounds of the Nan-ko shrine at Minatogawa. The soldiers, as they move on, are cheered by a dense and enthusiastic crowd of people lining the whole distance, order being kept with difficulty by a body of constables assisted by gendarmes. In the grounds of the shrine are erected temporary sheds where refreshments are served to the officers and men. This place of rest is most appropriately selected. Of all spots in the whole country the Shrine of Nan-ko is, perhaps, dearest to loyal and patriotic Japanese, for it is dedicated to the type of heroism and fealty, Kusunoki Masashige, who fell not far from the place fighting for the Imperial cause. There is something very solemn and impressive in the spectacle of young officers and men devoutly kneeling before the shrine of this national hero on the eve of their departure to engage in a campaign on which are staked the honour, if not the very independence, of their country. Such a sight can not fail to move even the most apathetic.

The enthusiasm of the general public is, also, more intense in Kobe than in the other places I passed through on my journey. A naval officer, in whose company I travelled down, told me that in Kobe he was several times entreated by enthusiastic citizens to enter their houses and drink a toast to the latest naval victory. A friend of mine, a civilian, also recounted an interesting story. Whether because of his bearing or his costume, he was mistaken for a naval officer by a shop-keeper in Kobe, who, after heartily congratulating him on the victories obtained by the Japanese Navy in Korean waters, offered to reduce the price of a pair of socks by nearly one-half! The hosiery's mite, to be sure, but the spirit behind the socks was big.

Looking out from the car, I noticed in several country districts that the village shrines were decorated with numbers of flags and paper lanterns. At first I thought that they indicated an annual festival, but observing the same thing over and over again, I inquired, and was informed that these flags and lanterns were offered by the villagers at the shrines of their titular gods to pray that victory might crown their country's arms in this crucial struggle. In some places I remarked that the flags were inscribed with prayers to the same effect. If an entire nation's heart were ever enlisted in a cause, the heart of the Japanese people is assuredly given to this war.

A fatal accident occurred in the last stage of my journey. About thirty miles from Hiroshima, a poor peasant, attempting to cross the line, was driven over and horribly mutilated. Curiously enough, a similar accident is said to have happened nearly at the same spot the preceding evening. I may add that the engine drivers on the Sanyo railway do not appear to be very expert. Not infrequently they start the train so abruptly as to give an unpleasant shock to the passengers, and they sometimes drive into stations at such speed that they pass the platform and have to back the train to it.

On arrival here, one is struck with the lively aspect presented by the streets of this ordinarily quiet town. Every house is decorated with national flags and paper lanterns, and the place is full of soldiers. Concerning the town of Hiroshima, I shall write more in detail in my next letters.

I have ascertained that the report, circulating in the capital of the time at my departure, to the effect that the *Matsushima Kan* had already entered the port of Kure, was premature. The ship is still at Sasebo. The repairs, however, having been already completed, she is expected at Kure in a day or two. On her arrival there, she will probably be honoured by a visit from His Majesty the Emperor. Count Ito, whose sudden indisposition while on his way hither caused much anxiety, is doing

well. He has almost entirely recovered his strength, and is in good spirits. Beside the Minister President, and the Ministers of War and of the Navy, there are now staying here the Minister of Foreign Affairs and the Minister of Finance. Viscount Mutsu, whose health was also a subject of anxiety, has apparently recovered. The report published in some Tokyo papers that Count Oyama, Minister of War, had gone to Korea, is entirely groundless. He is still staying here, always attending the Council of War at the Imperial Headquarters.

Hiroshima, September 28th, 1894.

It was my purpose to give you in this letter a description of Hiroshima—the most important place in the Empire in connection with the present war—and I had actually written a few lines, when an event of more immediate interest led me to defer that subject to a future opportunity. The event in question was the safe arrival yesterday at Ujima of Vice-Admiral Viscount Kabayama on board the *Saikyo Maru*, of which fact I have already informed you telegraphically. Hearing of the expected return of the now famous ship and the gallant Admiral, I went down to the port of Ujima shortly after tiffin. The place was quiet, and I observed at first no indication that anything unusual was to happen. But soon carriages and *jirikisha* began to arrive fast, and in a short time the spacious bund and the hotels facing it were filled with men of all sorts and conditions, eagerly expecting the entrance of the *Saikyo*. Among these persons, I noticed their Excellencies Count Saigo, Minister of State for the Navy; Count Oyama, Minister of State for War; and Mr. Watanabe, Minister of State for Finance; Vice-Admiral Arichi, Governor Nabeshima, Mr. Okuyama, President of the Hiroshima Court of Appeal, and a crowd of other prominent officers, military and naval, as the principal citizens of Hiroshima.

At half past two, a steamer belonging to the Kure Naval Station put out with a Naval band on board, to welcome back the chief of the Naval Command Office. It was followed by another steamer carrying Count Saigo, Count Oyama, Mr. Watanabe, Vice-Admiral Arichi, and a number of other distinguished officers, military and naval. Thirty minutes later, the *Saikyo* came into view, rounding the promontory which divides the port from the Gulf of Hiroshima. It was an impressive and interesting sight as the vessel slowly steamed into port, amid the strains of the national anthem and the cheers of the people. Vice-Admiral Viscount Kabayama, accompanied by Commander Ijima, Lieutenant Suzuki, and another officer, landed at the pier, where he was enthusiastically received by hundreds of officials, civilians, barristers, politicians, and students. The Viscount wore his ordinary Naval uniform and looked thoroughly strong and active. Leaving the place immediately in a carriage specially sent for his use by the Emperor, he drove direct to the Imperial Military Headquarters at Hiroshima, where he arrived at a quarter to five and was at once received in audience by the Emperor. What passed at the audience has not yet transpired, but we can conceive the gracious welcome given by the Sovereign to his brave officer.

To-day I made an opportunity to go to Ujima and pay a visit to the *Saikyo*. One of her officers was kind enough to conduct me over the whole ship and point out the places damaged by the enemy's shot. He also explained the general features of the memorable engagement. Looked at from a distance of a few hundred metres, the ship, which is painted grey, appears as though nothing had happened to her. But on closer inspection, the kind of treatment she received from the enemy is indicated pretty clearly. The most striking mark is a large opening, about 18 inches in diameter, now closed on the inside but still plainly discernible on the outside. It was here that a shot from one of the Chinese vessels passed. The hole is just above the water line in the after part of the vessel on the starboard side. Once inside the ship, there are signs of fighting on all sides—partitions

perforated with ugly holes, planks splintered into pieces, iron posts cut asunder, steam pipes severed and distorted into fantastic shapes. Altogether, the *Saikyo* received about fifty shots. The most serious was that which cut the steam pipe connected with the rudder, thus rendering it well-nigh impossible to steer the vessel. Recourse was had to the relieving tackle, but it was with the greatest difficulty that the ship could thus be directed.

Another shell that gave those on board an ugly half minute, entered the ship from aft, passed through several saloons and finally burst by striking against an iron post. Pieces of this missile smashed oil lamps and a fire was caused, but it was quickly discovered and extinguished. I should weary your readers were I to describe all the other damage received by the ship, and indeed I am not sufficiently acquainted with nautical matters to make such a description either interesting or accurate.

Let me reproduce, as far as possible, an interesting account given me by my courteous conductor about the big fight on the 17th ult. The 12 Japanese war-ships and 1 merchant cruiser that took part in the engagement were on a cruising expedition along the coast south of the Yalu river. They proceeded in the following formation:—

○	○	○	○
Yoshino.	Naniwa.	Ahishushima.	Takachiko.
○	○		
Saikyo.	Matsumura.		
○			
Chiyoda.			
○			
Itsukushima.			
○			
Hashidate.			
○			
Hiyei.			
○			
Fuso.	Akagi.		

The four ships in the leading column constituted the First Flying Squadron. The six vessels following them in a straight line composed the Principal Squadron. The *Saikyo* and the *Akagi* did not belong to either Squadron, but were simply supernumeraries. About half-past 11 on the morning of the 17th instant, the *Akagi Kan*, which had been sent ahead on scouting duty, reported that she sighted a Chinese squadron accompanied by a number of torpedo-boats. It was at once decided to give battle to the enemy. Vice-Admiral Ito, Commander of the Fleet, signalled to the *Saikyo* and the *Akagi* to retire some distance to the left of the fleet, which order was at once obeyed. It appears, therefore, that both the *Saikyo* and the *Akagi* had not accompanied the fleet with any intention of fighting. The ten Japanese war-ships then formed themselves into battle array in a single line, and steered so as to pass in front of the enemy and intercept his line of retreat to Weihai-wei or Port Arthur. At about 12.45 p.m., the Chinese vessels began to fire, but the Japanese ships did not return the compliment until they got within striking distance of the enemy. The *Saikyo*, in conformity with an order from Vice-Admiral Ito, kept in the rear of the Japanese fleet, but after passing the enemy's vessels, she steered to the right and thus seems to have come within range of his guns. About the same time, the First Flying Squadron was commanded to come about to starboard, while the Principal Squadron went round to port, and the two thus took the enemy between them, pouring their shells in from either side. At this stage of the battle the *Saikyo's* steam steering gear was shattered by a shot, and there being thus great difficulty in directing her, she gradually fell away from the Japanese fleet and found herself surrounded by several Chinese vessels. The latter naturally concentrated their efforts to destroy a vessel flying a Vice-Admiral's pennant. The *Saikyo* succeeded in extricating herself from her circle of foes, only, however, to find herself again in a situation of imminent danger, for a torpedo-boat was seen to be fast approaching her. Three torpedoes were discharged at her. The first two were very skillfully avoided, but

the third missed her by a hair's-breadth. When it was fired, the Chinese officers and men raised a shout of triumph. But their exultation was premature, for despite the favourable position of the torpedo-boat, the address of its gunners was not quite equal to the occasion. The *Saikyo*, which, notwithstanding the severe damages she had sustained, still held resolutely on her course, was then pursued by three Chinese ships, but the latter soon gave up the chase, and the *Saikyo*, much battered but safe, reached the temporary naval basis at the mouth of the Ta-dong-river in Korea. The Japanese men-of-war preserved their battle array intact from first to last, but the Chinese were soon compelled to fight without any tactical order. The *Saikyo*, it must be remembered, never having been intended for fighting purposes, was but indifferently manned. She had only 12 officers and about 115 sailors, the majority of whom did not know how to handle arms. The ship's armament consisted of three Yamanouchi quick-firing guns and one Armstrong of small calibre. That she was nevertheless able to come safe, not sound, out of a fight like that of the 17th ultimo must be counted very remarkable. The officer who kindly supplied me with these particulars, freely admitted that the Chinese fought with a will and a skill such as had not been expected of them.

After returning to my hotel in this city, I met a Naval officer who told me an interesting story about the conduct of the officers and men on board the *Akagi* in the battle. The little gun-boat was fought most doggedly. Such was the enthusiasm and courage manifested by her officers and men, that the wounded refused to be carried below to obtain medical attendance, and when they were taken down by main force, they broke away at the first opportunity and resumed their duties on deck with their wounds only half dressed. Such instances of enthusiasm were not confined to the men of the *Akagi*, however. Even the untrained sailors of the *Saikyo*, I am told, extorted the admiration of their officers by dogged bravery and endurance. A nation that possesses such fighting material need not be afraid to speak with its enemies in the gate.

Hiroshima, September 29, 1894.

The seat of the Imperial Military Headquarters and the common rendezvous for all the troops despatched abroad in the present war, Hiroshima is also the most important city west of Osaka. It stands on a rich delta formed by the mouths of the Ota river, which empties its sparkling waters into the western portion of the Inland Sea. This alluvial plain, altogether about 30 square miles in area, is shut in on three sides—north, east, and west—by ranges of lofty mountains rising abruptly from the ground. The only side, south, which might be described as open, is practically closed by the mountainous islands with which the Gulf of Hiroshima is so thickly studded that navigation among them must be no easy task. The valley is proverbially fertile, as the name of the province on which it is situated—*Aki*, satiated—proves. According to the latest census, the population of Hiroshima is more than 90,000; while the area covered by the city is about eight square miles. The streets are clean and well-drained by the numerous ramifications of the Ota river, which thus furnishes the place with excellent media of communication.

In feudal times, this was the castle town of the Aki clan, the great House of Asano, of which the present head, Marquis Asano, was for some time His Majesty's Representative at Rome. The old castle, one of the most noted in the Empire, stands nearly at the upper corner of the delta. With the fall of the feudal régime, the castle became the property of the Imperial Government, and in its spacious grounds stand the barracks and all the necessary appendages of the Fifth Division of the Army. The immediate vicinity of the castle, especially to the north, east, and west, is occupied by the houses of the former retainers of the powerful Lord of Asano. To the south extends the commercial part of the town, dotted here and there with modern European buildings, such as the Prefectural Government, the Post and

Telegraph Office, the Courts of Law, the Hospital, and the Schools of various grades.

The river courses that run through the city are deep enough for the passage of Japanese junks of moderate capacity, and the roadstead in the bay is sufficient for junks of all sizes. But all the steam connection with other places is made through the port of Ujina, which the present war has all of sudden raised to one of the best known shipping places in the country. It is at the extreme end of a strip of sandy beach jutting out into the sea to the south-east of Hiroshima. The two places are about five miles apart, but so excellent is the condition in which the road is kept that the distance can be easily covered in a *jinrikisha* in half-an-hour's time. A dozen years ago, Ujina was a fishing village of no consequence, but the gradual development of steam navigation in the Inland Sea has converted it into a very important seaport. The harbour is deep and snug, easily giving anchorage to twenty steamers of the *Saikyo Maru's* size. The smaller craft plying between the different ports on the coasts of the Inland Sea are moored by the side of the pier, but the larger steamships drop their anchors about half a mile off. The bund, more than half a mile long, is lined by tea-houses of moderate size, which are now driving a roaring trade on account of the war with China. Men-of-war and transports are continually coming in and going out, besides a number of smaller steamers which arrive and depart at regular intervals.

As to railway communication, Hiroshima now forms the western terminus of the great trunk line running from Awomori in the north through the entire length of the main island. It is connected by rail with all the places in the main island where the Army Divisions are stationed, with the single exception of Kansawa on the coast of the Sea of Japan.

With such splendid means of communication both by sea and land, with such abundant accommodation for the quartering of troops, and at a convenient distance from Fusan, the nearest port in Korea, the Government certainly acted wisely in selecting the city of Hiroshima for the seat of the Imperial Military Headquarters and the rendezvous of the troops drafted for foreign service.

The Imperial Military Headquarters are in the old castle, the building appropriated for the purpose being a wooden one of foreign construction in two stories, formerly occupied by the commanding department of the Fifth Army Division. The rooms are few in number and small in size, and almost entirely without any attempt at ornamentation. His Majesty occupies two of the rooms in the upper storey, the rest of the apartments being appropriated for the Council of War and other official purposes. His Majesty's assiduous application to business is a most popular topic of conversation here. He rises at six and does not retire until eleven in the evening, all the while wearing military costume. It is stated by the officials connected with the Military Headquarters that His Majesty pays keen attention to all that passes in that office.

Among the numerous train of distinguished personages staying here officially may be mentioned H.I.H. Prince Arisugawa Taruhito, President of the General Staff; Count Ito, Minister President of State; Count Saigo, Minister of State for the Navy; Count Oyama Iwao, Minister of State for War; Marquis Tokudaiji, Chamberlain in Chief; Viscount Hijikata, Minister of the Household; Lieutenant-General Kawakami, Vice-President of the General Staff; Vice-Admiral Viscount Kabayama, Chief of the Naval Command Office; Mr. Ito Miyoji, Secretary General of the Cabinet, and so forth. His Excellency Mr. Watanabe, Minister of State for Finance, is also here, but he is not connected with the Military Headquarters. He will return to the capital in a few days.

The place is now full of soldiers. When they are going to leave for the seat of war is not publicly known, but it will be soon.

The temporary buildings for the Houses of the Diet are in the course of construction in a corner of the parade ground in front of the barracks. The buildings will be of the coarse-

est type, straw thatched, and covered with mere planks. The erection of these sheds, for they are no better, has led some body to believe that the Ordinary annual session which is to assemble in November will also be held here. But at present every indication points to the contrary. By that time the Imperial Military Head-quarters may be removed to some other place still nearer to the seat of war, or under certain circumstances, may even have returned to Tokyo. I do not mean to say that the ordinary session will never be held here; what I say is that, under the present circumstances, such an event is not probable. One does not know what the morrow may bring forth, however. Meanwhile, great difficulties are experienced by the friends of the members of the Diet in finding accommodation for them. The principal hotels are occupied by officials connected with the Military Head-quarters, while nearly all available private houses are used for the quartering of troops. By the time the Extraordinary session meets, these troops may have left the place, but even then it will be very difficult to furnish all the members of the Diet with appropriate accommodation. The pacific and conservative citizens of Hiroshima will be startled out of their wits by the ragged mob of *soshi*, who will pour into the place from every part of the country. The authorities may, however, be trusted for keeping these persons out of mischief.

THE SPOILS AT PYŒNG-YANG.

A correspondent asks us to explain how it was that only 2,000 stand of small arms were among the spoils at Pyŕng-yang, whereas 2,000 men were killed and some 4,000 wounded or taken prisoners. He suggests the inference that perhaps only a limited number of the Chinese carried rifles. It must be remembered, however, that the telegram in which this statement about small arms occurs was dated September 26th, that is to say, ten days after the capture of Pyŕng-yang, and that it spoke of these 2,000 stand of small arms as having been an addition to the previous spoils. We are not in a position to say what was the actual total of small arms that fell into the hands of the Japanese in and about Pyŕng-yang. But the number of wounded on the Chinese side is, at any rate, only an estimate. The Chinese appear to have carried off the majority of their wounded. From the recently published detailed accounts of the taking of Pyŕng-yang it appears that the Japanese assaulting columns, having commenced operations long before daybreak on the 15th of September, fought continuously until 2 p.m. They do not seem to have had any food throughout that long interval—fully twelve hours—and they must, of course, have been in a most exhausted condition at the end. Round the city proper the Chinese had taken advantage of all favourable situations to erect earthworks and place guns in position. These forts and batteries had to be taken in detail and the operation involved heavy loss as well as much time. It was considerably past midday when the columns attacking from the east reached the principal gate of the city. Three assaults were made on it and at the third an entry was effected. But the men appear to have become by that time completely wearied, and many of them had exhausted the supply of ammunition carried into the field. We are disposed to think, further, that a delay in the arrival of the column from the West—which, according to the plan of operations, should have assailed the city proper simultaneously with, or shortly after, the attack of the other columns on the forts—furnished an additional reason for suspending operations at 2 p.m. At all events, the Chinese having the night to themselves, took advantage of exceptional darkness caused by heavy rain, and effected their escape in great numbers. They had a good road open for their retreat, and they seem to have taken with them all those of their wounded that could be moved, as well, doubtless, as the latter's small arms. If these suppositions be correct, it is not inconceivable that

the rifles captured by the Japanese did not aggregate more than 2,000. However, the telegram to which our correspondent refers was not, we believe, official, nor does its language imply that the number, 2,000, represents the entire capture of small arms.

As to the banners erected by the Chinese soldiers at Sŕng-hwan, our correspondent is doubtless aware that all Chinese troops are distinguished by the multiplicity of banners they carry. The army of China proper, said to consist of 650,000 men, is known as the "Green Flag" force, and the Tartar armies of Manchuria, 180,000 strong, are called "Banner-men." Any one who has seen Chinese troops can not fail to have been struck by the multitude of flags fluttering over them. Every squadron leader, every captain of a company, appears to have his own ensign with his name and rank blazoned on it. These banners certainly do not facilitate the movements of the troops, but we have never heard that they impede them conspicuously.

EXPORT OF COAL TO CHINA SANCTIONED.

The Metropolitan papers inform us that the Authorities have withdrawn a private instruction issued some time ago to coal merchants, forbidding them to sell coal to the Chinese, and have relieved them from all restraint in the matter. The reasons that have induced the Authorities to make such a sudden departure from their previous policy are said to be that the Chinese are able to procure supplies of coal to any required amount from England, Tonquin, and Australia, provided they pay a little higher price than they used to pay for the Japanese mineral, and that to interdict the export of coal from Japan to China is only to subject coal merchants to loss and to close an important avenue of gain to the country, for the total value of Japanese coal annually exported to China and other places in the Orient is 20 million yen. Moreover, coal not being contraband of war, it is exceedingly difficult for the Government to enforce the interdict. All these considerations have induced the Authorities, it is believed, to decide that they will allow transactions in coal as before.

It was the coal merchants of Kyushu, says the *Mainichi*, that suffered most directly from the interdict. It at once brought about an accumulation of the staple and a considerable depreciation in price. They were thus obliged to send the commodity to the Kwanto districts and to compete for a market in places where the coal business was virtually monopolized by the Hokkaido Colliery Company. Hence the latter also suffered indirect loss. Now that the ban has been removed, it is believed that all will go well with the Kyushu and Hokkaido coal in a brief space of time.

It has been noted as strange that this reported accumulation of stocks should be contemporaneous with a rise in the price of coal, for the mineral is actually selling higher now in Tokyo, than it was before the war. Doubtless the explanation is in great part furnished by exceedingly high rates of freight ruling of late.

A PARALLEL.

It is an interesting fact, not yet noted, we believe, by the press, that when the French Squadron in the Far East steamed up the Min river eleven years ago and sunk a number of Chinese men-of-war lying anchored near Foochow, accusations of having fired upon the Chinese sailors as they drifted down the river clinging to wreckage, were loudly levelled against the French. The *Times* was so persuaded of the truth of these charges that it published an exceptionally strong leader, in which it said that "no surrender was allowed to the disabled and sinking vessels"; that "after their guns were silenced they were shelled for hours"; that "in the opinion of every spectator present there was no fight but only a massacre"; and that "to shell, sink,

and explode ships which are no longer fighting, to force their crews to jump overboard; to keep up a murderous fire on men who are wounded and drowning, and to allow these men no chance of rescue—these are not acts of honourable warfare but deeds of barbarity." In an article published by us on October 25th, 1884, we endeavoured to show that the charges thus made against the French were unfounded, and our view was fully confirmed at a subsequent date by the statements of British naval officers. But the point deserving notice at present is that the French Squadron was accused of doing the very thing supposed to have been done by the *Naniwa Kan*, namely, firing upon men swimming for their lives. The fact is that in the moment of battle incidents can not fail to occur that shock all instincts of humanity. We do not believe that the *Naniwa Kan* deliberately fired upon drowning Chinese any more than we believe that Admiral Courbet's gunners did so at the Pagoda Anchorage on the 23rd of August, 1884. We do, however, think it very possible that Chinese sailors swimming for their lives in the Min river drifted into the line of French fire, and that the *Naniwa Kan*, by continuing to fire upon the *Kowshing* after some of the mutinous soldiers had jumped into the water, may have seemed to be firing on the swimmers. With regard to some of the *Naniwa's* procedure, we have already expressed our opinions very frankly. We refer to her sin of omission in failing to rescue the Chinese soldiers after the sinking of the *Kowshing*. But with regard to the grievous sin of commission charged against her—that she fired upon men swimming for their lives—we can not too strongly deprecate the readiness shown in some quarters to credit and condemn it. The similar accusation brought against the French at Pagoda Anchorage was supported by incomparably stronger testimony, yet the public ultimately ceased to believe it.

MR. SHIBUZAWA ON THE MONEY MARKET.

The *Mainichi* publishes a long article embodying Mr. Shibuzawa's opinion on the outlook in the money market of Japan. The article is interesting in many respects, and we give an epitome of it:—Since the outbreak of the war the money market has become unusually tight, as indicated by a fall in the price of bonds and shares and a virtual absence of any new business enterprise. Many causes have produced this state of affairs. Six most prominent may be enumerated, namely, reluctance of capitalists to part with money; hesitation of bankers to make advances, lest they should not be prepared for a sudden demand on the part of depositors; want of shipping facilities in consequence of many steamers having been taken for Government service; accumulation of goods and consequent withdrawal of a large amount of capital from active circulation; diminution of purchasing power in the various localities owing to the excessive rates of freight now ruling, and an equally abnormal fall in the prices of local products; temporary paralysis of the spirit of enterprise, and retrenchment of expenses practised by the public at large since war was declared. Each of these factors has contributed more or less to bring about the present unusual conditions. Should the issue of the war become doubtful, or should it be protracted for any considerable length of time, it is needless to say that these conditions will become more serious and the economy of the country will be greatly embarrassed. Under the circumstances, it is reassuring to find that, judging from the state of affairs thus far, the tide may be considered to be already setting in the contrary direction and the former activity of the market is gradually being restored. The fact that the fate of the war has become almost discernible has revived public spirit, and we may now look confidently for some relaxation of the present tight condition of the market. The course taken with regard to the War Fund has also acted beneficially. At the beginning of the war it was not clear how the Government intended to furnish the War

Chest; and as a serious effect must be exercised upon the national economy according to the mode adopted for raising money, capitalists all held aloof and waited intently. At last a notification was issued announcing that a domestic loan of 50 million *yen* would be floated at 5 per cent. interest, of which 30 millions were to be raised between this and June of next year. By the issue of this notification any apprehension that may have been entertained by capitalists as to whether the floating of a new loan would not effect other kinds of Government bonds and shares has been removed. Moreover, it is rumoured that, in case the loan of 50 million *yen* should prove insufficient, the Government will float a foreign loan. All these considerations have enabled capitalists to arrive at the conclusion that the war will not exercise any further marked influence upon the economy of the country. Another consideration that suggests an improvement is the fact that the Nippon Yusen Kaisha has taken active steps to restore shipping facilities to the ordinary state of efficiency, and has purchased or chartered for that purpose a considerable number of foreign steamers. A very fortunate incident too, is the favourable state of the rice crop this year. Till all the critical days for the growth of the rice-plants had passed, the utmost apprehension was felt throughout the country, for the misery of famine added to that of a foreign war would reduce the country to great straits. But it is now estimated that the yield must be above the average by 10 per cent. or thereabouts. A surplus of 10 per cent. over the average yield means an increase of some 3½ million *koku*, in round numbers, and that, calculated at the rate of 8 *yen* per *koku*, amounts to some 28 million *yen*. That is, indeed, a heavenly boon to the nation. It is as if some divine medicine had been administered to a patient. The country people who have been suffering much since the war broke out, will revive considerably, and their purchasing power will be increased. A prosperous outlook for foreign commerce is another factor that tends to help the market out of its present tightness. According to the Customs returns, imports exceeded exports by some 1½ million *yen* in July last, while coming to the month of August the exports surpassed imports by about 360,000 *yen*. In August of last year the foreign trade bulked 15,630,000 and some odd *yen*, the imports exceeding the exports by 360,000 *yen* in round numbers. In August of this year the total rose to about 22 million *yen*, with exports showing an excess over imports to about the same amount. In fact, Japan's foreign commerce has developed considerably this year as compared with the preceding year. Moreover, the season is now approaching for the more active export of silk, and a still brighter prospect is therefore discernible. One thing to be regarded with more or less regret is that the export of specie exceeded the import by some 650,000 *yen*, but as a set off to that, it ought to be remembered that when exports increase as the foregoing circumstances indicate that they will, an import of specie will follow as a matter of course. The President of the First National Bank then proceeded to touch upon subjects directly connected with the financial problems of the day. A rumour is current to the effect that the Bank of Japan is going to raise its rate of interest. That cannot be believed, observed Mr. Shibuzawa, for it is only when owing to an unusual demand for money, capital is insufficient, that a Bank is justified in raising its rate. Such is not the case at present. The channels of circulation are stopped not because of any activity of business enterprise, but because of a decline of public credit. There is no necessity therefore for the central mechanism of Japanese finance to raise the rate. Another rumour is to the effect that to enable the subscribers to pay the 1st instalment of the War Loan of 30 million *yen*, the Bank will be obliged to issue convertible notes bearing 5 per cent. interest. That Mr. Shibuzawa is also disinclined to believe, seeing that the loan was so largely subscribed to. He is altogether of opinion that at least for the time being the Bank will experience no necessity to issue emergency notes.

As to the question whether a domestic or a foreign loan is to be preferred for the purposes of a War fund, Mr. Shibuzawa was inclined from the first to adopt the former, so long as no special difficulties presented themselves. Needless to say that as the Japanese Army marches more and more into the interior of China the necessity of making specie payments will increase correspondingly. But then there are in the vaults of the Bank of Japan some 78 million *yen* of specie in reserve, out of which a sum required to support the Army for several months may be disbursed without any particular inconvenience. Thus there is no need, so far as matters go at present, to borrow money from abroad. When the war was about to break out an English resident of Yokohama called upon Mr. Shibuzawa, and advised him to urge the Government to float a foreign loan, promising that he would undertake to procure the required amount at a very low rate of interest. Mr. Shibuzawa declined the offer. Should the war be prolonged for any considerable period, and should the necessity to float another loan arise, then Mr. Shibuzawa would recommend that recourse be had to the foreign money market. His chief reason is that the specie kept in reserve in the Bank of Japan should not be lessened beyond a certain point, for otherwise paper notes would fall below par and the misery of inconvertible notes would again arise. Even if the war fund be mostly spent in the interior and the use of hard money not particularly great, still to float another loan of 30 to 40 million *yen* at home would be attended with some serious results to the economy of the country. Capitalists unable to subscribe the loan unaided, would be obliged to have recourse to the Bank of Japan, which, on its part, would find the issue of interest-bearing notes unavoidable. Were that to occur, the total of the paper currency in circulation in the country would be considerably swollen, while the reverse would be the case with the specie reserve. The consequence would be that notes must fall below par. Mr. Shibuzawa is therefore of opinion that should the necessity arise to raise a second loan, it should be floated abroad, not at home.

ANOTHER ACCOUNT OF THE NAVAL BATTLE ON THE 17TH.

The Chefoo correspondent of the *China Gazette* sends to that journal the following interesting account of the battle between the Japanese and Chinese fleets on the 17th of September:—

I hasten to send you the following particulars of the great naval battle which occurred near the mouth of the Yalu River on the 17th. No doubt you have had telegraphic news of it ere this, but I have been able to ascertain indirectly, from some of the foreigners who were personally engaged in the conflict, a few details relating to it, which I think people in Shanghai have not been in a position to hear yet.

It appears that the Chinese fleet left Taku on the 15th with the avowed purpose of giving battle to the enemy,—if they could get the latter at a disadvantage. The Chinese fleet consisted of the *Ting-yuen*, *Chen-yuen* (flag-ship), *Lai-yuen*, *Ping-yuen*, *King-yuen*, *Chi-yuen*, *Chih-yuen*, *Chung-yuen*, *Chao-yung*, *Yang-wei*, *Wei-yuen*, *Kangchi*, *Kuang-ping* (one of the Southern squadron) and another ship of the Southern fleet, the name of which I have not ascertained. The fleet was strengthened by six torpedo boats. Incidental to the cruise was the conveying of five transports, the *Hsin-yu*, *Tao-nan*, *Hue-king*, *Kung-pai*, and *Chin-tung* and one of the "Ping" colliers, which were crowded with soldiers, who were to be landed at the mouth of the Yalu River. Each warship had also a considerable number of soldiers on board. Admiral Ting was in supreme command, Major von Hanneken accompanying him in the flag-ship in the capacity of adviser, and there were a considerable number of other foreigners, eight or ten it is said, most of whom were well known in Chefoo and Wei-hai-wei, distributed amongst the other ships of the squadron. Each transport also, bore its proper complement of European or American officers and engineers. The enterprise was conducted successfully, so far as the safe landing of the soldiers was concerned, this being accomplished on the night of the 16th (Sunday) and the morning of the 17th, in an inlet known as Yalu Bay. The transports then hastened

out of the Bay on their way back to China, being followed as soon as possible by the men-of-war.

The Japanese, however, appear to have been similarly engaged at a point named Elliott Island, not far from where the Chinese disembarked their troops. The Japanese soldiers having been landed, their warships, eleven, it is stated, in number, continued their voyage towards the Yalu River, and met the Chinese fleet quite accidentally, as the latter in close order, came round a small island in the direction the Chinese transports had taken a few hours before. Long shots were at once exchanged and both ships drew up in order of battle at between four or five miles from one another. The air became so thick with smoke that it was impossible to see what was going on except on one's own ship; but my informant says the Chinese made some slight attempt to close with the enemy, a manoeuvre in which they were foiled by the higher speed and superior seamanship of the Japanese, who plied their long-range guns with terrible effect. Very few of the Japanese ships could be recognised by those on board the Chinese vessels, the only ones identified being the *Matsushima*, which flew the Admiral's flag, the *Yoshino Kan*, which was recognised by the rate of speed at which she manoeuvred round the Chinese ironclads and the terrific fire of her guns, the *Naniwa Kan*, which was known by her peculiar construction, and which it is said caught fire early in the conflict; and a little sloop the *Akagi*, which was so badly knocked about that the ship my informant was on came so close to her once or twice that it was possible for him to make her out plainly. There is no doubt the Chinese fought bravely, but they were no match for the Japanese whose tactics were admirable throughout the fight. Now and again a terrific explosion was heard, and a column of smoke and flame would shoot up to a tremendous height in the air; but it was impossible to see what they signified except during the brief and infrequent lulls in the firing. The Chinese could never succeed in getting closer than a couple of miles to the Japanese, who supported their most severely handled vessels in a truly wonderful way, succeeding in drawing them out of the action one after the other. The Chinese were encouraged by the foreigners present with word and example. But mere courage was not enough. The unfortunate Chinese gunners lost their heads and fired wildly, their officers left their ships at mercy of the enemy by their clumsy seamanship while, on the other hand, almost every shot of the Japanese told. The *Ting-yuen* was set on fire, and blazed with great fury for some time. But luckily the ship's company got the flames under control, and the *Ting-yuen* was brought out of reach of the enemy's shot. On board the flag-ship the *Chen-yuen* Admiral Ting, and Major von Hanneken were wounded,—it was said von Hanneken lost a leg or an arm, and a large proportion of the *Chen-yuen's* officers and sailors were slain or hurt in the fight. Two foreigners were killed and several wounded. Their names I have not been able to ascertain as yet. Two cruisers were also set on fire, but were not so seriously injured as the big ironclad. The *Chih-yuen* went down literally riddled with shot. Her fate was shared by the *Lai-yuen* and *Chao-yung*, whilst to prevent the *Yang-wei* from sinking, her commander ran her ashore and abandoned her with all the crew, a measure for which they can hardly be blamed, for the vessel was blazing at the time. Towards six o'clock fire began to slacken, first on one ship then on another, for it was evident both sides had expended all their ammunition; and when night came down the boom of the guns was heard no more, for the contending ships drew away from one another. There is nothing I can tell you as to the subsequent movements of the Japanese; but the Chinese made the best of their way back to Wei-hai-wei, straggling into that refuge one after another on the 18th, all presenting evidences of the terrible struggle.

The total displacement of the 13 Chinese ships mentioned above was 36,350 tons and the displacement of the 11 Japanese vessels was 36,700 tons in round numbers, so in that respect there was virtual equality. As to the statement in the above letter that the manoeuvring of the Japanese squadrons was far superior to that of the Chinese, it is supported by diagrams of the battle that appear in the Tokyo press. From them we learn that the two Japanese squadrons, the Principal and the Flying, virtually steamed round and round the Chinese vessels, and that, so far as concerns naval tactics, the latter made a very poor show. Of course all these accounts, even the diagrams themselves, may not be entirely trustworthy. But in so far as they confirm one another they are especially worthy of notice.

MR. INOUE YUKICHI.

WE have received from a Japanese correspondent, who writes over the signature "G.K.W.," a letter commenting in very strong terms on the line adopted by the *Japan Gazette* with regard to the war, and criticising still more severely the conduct of Mr. INOUE YUKICHI, a graduate of the Literary Department in the Imperial University, who remains in the service of a journal apparently so hostile to his country. This is by no means the first letter of the kind that has reached us, and we desire to inform our correspondents that we must decline to publish such communications. We have already commented severely on the *Japan Gazette's* methods. They appear to us to be wantonly unfair and ungracious toward Japan, and they certainly have the effect of bringing odium upon Englishmen in this country. But as to the frequent allegation that the *Japan Gazette* has been bribed to espouse China's cause, we do not credit it for an instant. The editor, as it appears to us, has allowed himself to become the mouth-piece of a small coterie of men in Yokohama who deny that anything good can come out of Japan, and who refuse to believe that her arms have been victorious either on land or at sea. "Chinese accounts," say these persons, "ought to be as credible as Japanese, and until we have some conclusive means of judging between the two, we withhold our verdict." That is a perfectly reasonable attitude at first sight. But it seems to be forgotten that the so-called "Chinese accounts" are mere rumours, emanating from unknown sources and circulated by irresponsible agents; whereas here in Japan we have the official reports of the Generals and Admirals actually in command at the seat of war, and in two cases we have had the Rescripts of the EMPEROR himself. That these military and naval reports officially published by the Government and publicly endorsed by the SOVEREIGN, should be appraised at the same value as mere street stories carrying no official imprimatur nor having any personal responsibility, is an insult to the Japanese Army and Navy and to the Japanese EMPEROR. But the strong probability is that no such balancing of values has been made by the men whom the *Japan Gazette* represents. They have a distinct bias against Japan from the outset, because they regard her as a country seeking to deprive them of privileges greatly esteemed by Englishmen, and to assume over them a control which no Anglo-Saxon willingly bows to unless it is exercised by Anglo-Saxons. A sentiment of that kind is perfectly respectable in itself, and the Japanese should be capable of appreciating it. Moreover, they should understand without difficulty that dislike to submit to the jurisdiction of a foreign country involves

reluctance to acknowledge her prowess or competence in any form. In short, there exists among the foreigners in question a species of subjective animosity to Japan. They are not inimical to her for her own sake, and if she stood in need of help they would gladly render aid. But they chafe against the notion of passing under her jurisdiction, and the sense of a distasteful consummation constantly approaching renders them captious and discontented. The editor of the *Japan Gazette* seems to us to represent these men. He vacillates between frank impulses and journalistic exigencies. In one paragraph he speaks of the "brilliant exploits of the Japanese army." In another he casts doubt upon its successes and republishes stories disgraceful to its direction. The Japanese, however, need not give themselves any concern about the influence of his writings, nor, indeed, should we notice them did we not feel that to pass them without protest might enhance their mischievous effect upon the reputation and popularity of our countrymen in Japan. As for Mr. INOUE YUKICHI, whose connection with the *Japan Gazette* seems to have brought upon him bitter reproaches from his own countrymen, we do not see that we are called upon to express any definite opinion. Mr. INOUE disclaims responsibility for anything appearing in the columns of the *Gazette*. He asserts that he is in the position of a mere translator without any discretion whatever. If that be so, his attainments and capacities are strangely sacrificed, and we are constrained to marvel that a man of such qualifications should be content to fill such a post. If it be not so, then he certainly seems to deserve a portion of the obloquy that he has incurred.

THE USUAL RECKLESSNESS ON AN UNUSUAL SCALE.

TRULY, as an amusing phenomenon, the recklessness of the *Japan Gazette's* statements is worthy of attention. In its issue of the 2nd instant it writes:—

Among the most sensational of falsehoods which have appeared in the *Japan Mail* was one in a leading article on August 2nd to the effect that the leading capitalists of the empire had met and agreed to voluntarily contribute \$30,000,000. This was blazoned forth as an unparalleled national effort. Now the only thing unparalleled about it is its astounding impudence.

The *Gazette* further declares that it "knows the above statement to be false;" dubs it "a ridiculous assertion," and "simply fudge," and declares that "the Japanese Government must be convicted of complicity in the dissemination of such useless falsehoods." It is all most entertaining. The *Japan Gazette* evidently imagines that whatever does not come within the vista of its own very limited observation cannot have any existence. Is not that rather a dangerous hypothesis? Very dangerous it has proved in the present instance, for as it happens the

meeting of capitalists did take place in Tokyo, and they did decide to raise a war fund by voluntary subscription, and they did name 80 million *yen* as the amount they expected to obtain in that way, and our information was obtained direct from three of the persons who attended and took part in the meeting, and the project was abandoned only when the Government announced its intention of proceeding by the method of a domestic loan. Would it not be more prudent on the part of the *Gazette* to cultivate some means of obtaining a knowledge of important events going on in the capital of Japan before it accuses the Government of "complicity in the dissemination of useless falsehoods," and the *Japan Mail* of "astounding impudence?"

Another example of the *Japan Gazette's* recklessness is exhibited in the same issue. It has obtained, it says, from an officer of H.B.M.S. *Mercury* an account of what happened at Wei-hai-wei on the 10th of August. The main points in the account are, first, that the *Mercury* sighted the Japanese squadron at daylight and saluted Admiral ITO's flag about an hour and a half later, that is to say, shortly before the Japanese made their demonstration against Wei-hai-wei; and secondly, that the *Mercury* "never turned her electric light on the Japanese torpedo-boats for the simple reason that there were no torpedo-boats in the Japanese squadron." We cite these facts, not because we propose to discuss them, but altogether for the sake of the *Gazette's* accompanying comment. "Surely," it says, after recounting the alleged story of the *Mercury* officer, "surely this should dispose of the ridiculous statements made in the Japanese press and given credence to by the *gobemouche* of the *Mail*." Let us see, then, what the *gobemouche* of the *Mail* really said about the stories relating to the *Mercury*, the salute and the search light. The tale of the salute came first to Tokyo. It was to the effect that the intended secrecy of the Japanese attack on Wei-hai-wei had been frustrated by Admiral FREMANTLE's saluting the Japanese squadron when within a few miles of that place. Our comment on the story was this:—"Never was there a more ridiculous story. Yet we are told that certain folks in Tokyo, believe it and that comments very unfavourable to Admiral FREMANTLE are made! We did not imagine that any educated people in Tokyo could be so lacking in perception.—(*Japan Weekly Mail*, August 25th.) Such was the method pursued by "the *gobemouche* of the *Mail*" to show his "credence" of the saluting story. Then followed the tale about the electric light. It was published by the vernacular press of Tokyo, and after reproducing it we added this comment, and only this:—"It seems to us that the censors would have exercised a wise discretion in entirely suppressing such an incredible

story, published without any evidence in its support."—(*Japan Weekly Mail*, September 8th.) Such was the method pursued by "the *gobemouche* of the *Mail*" to show his "credence" of the search-light story. We think, on the whole, that the *Japan Gazette* has reached in this instance about as high a standard of recklessness as it can reasonably hope to attain under ordinary circumstances. But we don't know. Perhaps it has still larger reserves of temerity in store.

LYNCHING IN THE SOUTHERN STATES.

CONSIDERABLE comment has been aroused in the American Press by the result of the lecturing tour of Miss IDA WELLS in England. This young woman of colour was at one time on the staff of a newspaper in Memphis, Tennessee. Owing to some severe comments made by her on a lynching case in that city—a case alluded to in a leading article we published last year—she was herself threatened with lynching, and fled to the North. She has since then devoted herself to an agitation with the object of directing public opinion to the subject of lynching of negroes in the Southern States of the Union, and after lecturing in the United States, went with the same purpose to England. Largely as a result of her efforts, an Anti-Lynching Association, with branches in England and America, has been formed. Considerable irritation has been evinced by Americans at Englishmen venturing to interest themselves in this matter, and many of their journals have roughly advised Englishmen, as we were ourselves advised in connexion with our own article on the matter, "to mind their own business." To expose and to resist inhumanity, wherever and by whomever perpetrated, is the business of every man; and no excuse is needed in such cases for interference so far as interference is possible. But to justify the position we then took is not our present object. We wish to refer to a recent and terrible case of lynching.

In connexion with the lynching controversy a correspondence has just taken place in the columns of the *New York Herald*. Among the letters were two from Southerners. The first writer, Mr. CLARK HOWELL, said that he did not justify lynching in any case, but still he considered that there were extenuating circumstances; he pointed out that lynching was not confined to the South, said that it was not known in the South before the war, and added "nor was the crime that now occasionally calls for it." By this he meant to imply that lynching is almost exclusively confined to cases of assaults upon women. The second letter, by Mr. A. R. TUTTLE, of North Carolina, severely criticised Mr. HOWELL's apologetic tone, and thoroughly justified the

lynching of negroes. "The people," he says, "are the source of political power? The lynching of negroes for brutal assaults on white women is done by those who represent the people. Whether it is publicly admitted or not, we are of one mind about this speedy justice. No ranting in England or criticism in the North will change our course, and it is far better to have this understood than to attempt to evade our responsibility. . . . We will not hesitate to lynch when the crime committed deserves it."

The news of the lynching case that took place a day or two after these letters were published, reads almost as if it were a commentary upon them. The men killed were six in number. They were descendants or family connexions of the slaves on an estate which at the time of the war belonged to two brothers named KERR. These men were kind masters, and their slaves remained on the brothers' estates after the war, serving them as hired labourers. When the KERR brothers died, they left no immediate heirs, and the negroes settled on the land and continued to farm it undisturbed. Then some relatives of the KERRS made good their claim to the estate, but they did not take actual possession of the property, and for the time the negroes were not interfered with. At length, however, the owners had the property divided up in lots and sold to white farmers from other districts. Now the negroes regarded themselves as the natural heirs of their old masters, and considered themselves entitled to hold the land in virtue of their long tenure. They were of course evicted, and left vowing revenge. That was about two years ago. A year ago, a series of incendiary fires took place, the barns burned being those of farmers on the old KERR plantations. By the aid of a negro spy, evidence was obtained that led to the arrest of six of the former coloured occupants of the plantations. Two were convicted of arson, and sent to the penitentiary. These men confessed, implicating another of the arrested men, named HAWKINS. After many months in gaol HAWKINS was tried and convicted, but on appeal the Supreme Court reversed the verdict on the facts and remanded the case. HAWKINS was released on bail. Immediately after his return home, the incendiary fires began again, but were now no longer confined to the KERR estates; they occurred also on the farms of men that had given evidence against the accused. HAWKINS was again arrested and with him five other men. The Deputy Sheriff started after nightfall to take his prisoners in a cart to Millington. He was stopped near Millington by armed and masked men, who ordered him to hold up his hands, compelled him to dismount, and disarmed him. Bound as they were, the terrified prisoners made a frantic effort to escape, whereupon about forty rifles were at once discharged into the waggon. The half-

living remains were then thrown out of the waggon and fired at again and again. The masked men then rode away in the darkness.

We are glad to find that Mr. TUTTLE is in error in supposing that the inhabitants of the South, the white inhabitants we mean, "are of one mind about this speedy justice." On the contrary, in Memphis there has been a general demand for justice on the lynchers. Against five at of the men murdered no evidence tending to connect them with the barn-burning had been offered in a court of law, nor is it possible in this case to make the excuse for the mob that the offence with which the victims were charged was one so horrible that the people of the district were beside themselves with frenzy. A number of cold, cruel, and deliberate murders were committed on persons who are not proved to have been guilty of any offence, and who, if guilty, should have been left to the ordinary course of justice. The Governor of Tennessee has offered \$5,000 for the apprehension of the persons engaged in the lynching. The investigation of the affair is being pushed with vigour. Five men had, on the 5th Sept. been indicted by the Grand Jury, among those charged with complicity being the Deputy Sheriff and the driver of the cart containing the prisoners. These two men are believed to have been in league with the lynchers, and to have deliberately led the prisoners into the hands of the mob.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

"JUSTICE TO JAPAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to my letter appearing in your issue of the 28th inst., your printer has, in some unaccountable way, altered my meaning. The last paragraph should read "and surely true Englishmen can only admire the *Standard* which has been unfurled on so many occasions by their own country, with that success by which alone Englishmen are proud of their birthright." As inserted by you, the *Standard*, to which I metaphorically referred, would appear to apply to Japan, whereas I meant to imply that Japan is only following in England's track in prosecuting this war, and therefore deserves our moral support—and not our scourges.

Yours faithfully, PRO BONO PUBLICO.
Yokohama, 29th September, 1894.

THE WAR LOAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your leading article of the 25th inst. you stated that opinions were divided between the Treasury and the Bank of Japan as to the expediency of raising the total amount of the War Loan at once, the latter maintaining that the total amount should be raised at once, certain steps being, of course, taken to make things right with the public. And your comment on the above statement was reasonable enough; but you will confess that it was not only futile but mischievous when I declare that there is not a particle of truth in that statement. Farther, I cannot help feeling surprised at your innocence in swallowing such a wild statement of the vernacular press without a moment's enquiry. You may rest assured that the Bank of Japan has never proposed or con-

tempted to propose such trickery as you referred to. Nor will it ever propose to do anything of that kind! The Bank knows as well as yourself that the strictest faith should be kept with the public in these affairs. Honesty and credit are much too dear to be sacrificed in such a way as is now attributed to the Bank.

I should feel obliged for your inserting this letter in your valuable columns.

Yours faithfully,

K. KAWAKAMI,
Bank of Japan.

Nippon Ginko, Tokyo, Sept. 27th.

[This is a sufficiently emphatic denial. We are obliged for the correction, but we can not think that our credence of the vernacular press' assertion calls for quite so much censure!—*Ed. J.M.*]

THE WAR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your article of the 28th inst. you write as follows:—"A retreat that involves the loss of artillery, stores, treasure, two thousand killed and four thousand wounded or captured, must be looked at from a novel point of view in order to appear 'Masterly.' You also published a telegram taken from a 'Japanese paper,' dated Shimonoeki, Sept. 26th inst., 'Among other articles of war captured by the Japanese army at Pyöng-yang were two thousand tents, two thousand rifles, and seventeen hundred horses.' It is reading these items together that perplexes me. Especially so when it is remembered that it has been stated that treasure of gold, silver, and copper cash, contained in boxes to a large amount was abandoned by the Chinese at Pyöng-yang and taken by the Japanese. That six thousand of the Chinese troops, were either killed, wounded, or taken prisoners, while two thousand rifles only were taken from them gives one the impression that the equipment of the Chinese troops consisted largely of arms other than rifles or arms of precision—which may in a great measure account for the small loss of the Japanese troops engaged in the battle of Pyöng-yang. It is difficult to believe that when treasure is abandoned that a defeated and retreating force will go over the battle-field to recover the arms of the dead and wounded. The only conclusion can therefore be that of the six thousand killed, wounded, and taken prisoners, four thousand were armed with weapons other than guns. Of the battle at Söng-hwan you say, 'and the funniest thing is that before they opened fire they always raised a number of banners. The assailing force could easily tell the critical moment when a shower of lead impended, for the preliminary of a host of erected banners could invariably be observed.' Can it be possible that the Chinese Army is composed largely of banner-bearers? The results so far indicate that the Japanese are to have what may be called a 'walk-over' in this war, but the details are bewildering.

Yours truly,

X.

Yokohama, September 29th, 1894.

AN APPEAL TO JAPAN ON BEHALF OF CHINA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—At the beginning of this appeal let me say that my sympathy is through and through on the side of the country whose kind and liberal hospitality I have enjoyed for many years. Since the hostilities began I have daily prayed that the armies of Japan may be victorious and that its benignant influence may ever spread and expand over all Asia. But Japan finding the eagle of victory perching upon her banners, and her enemy helplessly prostrate at her feet, and her influence in Korea established, let us hope, lastingly, the time has come, in my opinion for the victor to accept, if not search, the means of a rapprochement and reconciliation. Public opinion, as reflected in the Press, demands the most extreme and drastic measures in order to cripple the enemy for ages. The surrender of the Chinese navy, and all her armament, of her custom houses, &c., &c., to the victor have been suggested. But the most important question in the heat of the struggle for the Japanese to ask themselves is: Will the fall of China contribute materially to the rise of Japan through a long run? I don't think it would.

In the first place, at present, in China alone is there hope of once more awakening the Asiatic races from their deep slumber and gradually bringing them to a full sense of their hazardous position. Turkey to day is gradually though slowly approaching the verge of her long-ago-day grave. Persia is utterly helpless and in a comparative state perhaps will never revive. India and other minor states are in no better condition. If, then, the fate of Poland falls upon China, and she is annihilated as a Power in Asia, and there be no barrier left

between the recklessly pushing and ever advancing European and Japan, will such a condition of things in their ultimate issue be beneficial to the Japanese race? Striking the enemy with impetuosity is one of the notable Japanese characteristics, but would it not be a fatal stroke in the case, and would not it produce injurious results in future? These are very weighty problems and considerations for the Japanese statesmen possessing prophetic insight to ponder upon.

In the second place, from pre-historic ages the Japanese have derived great benefit by their association with the Chinese. There is no side in Japanese civilization to which we turn—religion, language, literature, art, in short, every impulse which contributes to the development of higher and noble ideas and conceptions in human society—where the influence of the Chinese is not conspicuous. Take, for example, the language. One of the most wonderful phenomena since the recent Revolution is the surprising ease with which Japanese have appropriated and finally assimilated the philosophical conceptions of the West. But what was the instrument through which Japanese succeeded in making this magical transformation? Chinese language and characters. Since the introduction of Buddhism from China into Japan and copying of text books, religions, and altruisms in the Tempei era began, Chinese language and mental ideas have been working and preparing the soil for any contingency. It was through the help of the Chinese language that every important philosophical work from Plato to Spencer was put in a well-becoming Japanese garb without feeling the necessity of borrowing a simple word from any of the Aryan languages. When the thought of one nation can be conveyed to another without any fear of misapprehension of the right meaning of every word, it is an unerring gauge of the intellectual advancement of the borrowing nation. When for the first time Greek ideas were introduced through the Syrian Christians into the Semitic Orient, the races whose language for facility of description and thoroughness of expression and pliability of construction can almost rival the Aryan, were compelled to borrow word after word from the Greek. The richness and wealth of the Hebrew Arabic and Syriac of the Khaliphate era came solely from the Greek language. Yet the Japanese, as already stated, though they have brought Western philosophy into their country have not felt the need of borrowing or grafting a single hybrid word of any importance. Instead of the most used Greek *logos*, *logy*, they have *gaku*, instead of the not very euphonious *su* they have *setsu*. And so on. The language of a nation is identical with its thought, its thought is identical with all its mental and spiritual forces. Indeed if we take the Japanese language alone we can trace everything elevating in their civilization back to the Chinese. The foundation and everything durable in the culture and advancement of the Japanese is of Chinese origin. If then, the basic foundation of the whole intellectual future of the two races and their religious and social affinities are, or should be, so sympathetic on the one hand; and if, on the other, external circumstances demand, as a means for their future self-preservation and perpetuation, their close friendship and mutual assistance, would not I ask, the weakening and destruction of China be a suicidal policy for Japan to pursue?

I remain, sincerely yours,

October 3rd, 1894.

HEROISM HONOURED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Under the heading of "Heroism," you briefly recount in a recent issue, the death of a brave Japanese bugler at the battle of Söng-hwan. May I give a little further information concerning this dramatic incident? The bugler's name was Shirakami Genjiro, and he hailed from Fumamura in Bitchu province, Okayama Ken. While in the barracks at Hiroshima he was specially noted for excellence of conduct and good marksmanship, and had received two or three medals. On the field of battle he stood near Capt. Matsuzaki, whose orders he was loyally executing, when a bullet struck him in the chest. Though knowing he was seriously wounded, he continued to blow his bugle till the last particle of strength failed him and he fell dead in his tracks.

Okayama Ken regards him as her special hero. The local *Hoko-gi-kwai*, or Christian Patriotic Relief Corps, collected a few presents to send to the family of the dead hero with a letter of consolation and commendation. They asked Mr. C. Tateishi, M.P., to visit the bereaved family and carry their gifts. As he was a native of the same village, his selection was peculiarly appropriate:

in fact he himself asked for the privilege of serving as messenger.

At his request, the Headman of the village collected the people of the town one day last week at the old home of the dead soldier, and everything possible was done to make the occasion a memorable one. In his speech of acknowledgement, the bereaved father spoke like a true Japanese. Among other things, he said, "It is the lot of all men to die. My son had to die some time. Instead of falling asleep in a corner of this miserable hovel, unmourned save by a few relatives, he has fallen on the field of honour and received the encomiums of a multitude of his superiors. Hence his mother and I cannot look upon this as a mournful occasion. We rejoice that our son has been loyal to Japan, even to the point of shedding his blood in defence of her honour."

The incident of Shirakami's heroic death is cited repeatedly in these days in sermons and lectures, addresses and street-talks as something for the Ken to be proud of.

And the Ken is proud of its faithful soldier, the brave bugler of Söng-hwan.

Yours truly,

J. H. PETTEE.

Okayama, Oct. 2, 1894.

THE GERMAN ARMY RESERVE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your "Editorial Notes" of the 3rd inst.—praising the First Reserve Men for showing no hesitation when called to re-enter the ranks (which I also greatly admire)—you say:—"In Germany and elsewhere, all sorts of expedients are tried in order to be excused from service." Now, I cannot understand why you specially point out Germany? Allow me to tell you that during the last Franco-German war every German whether belonging to the First or Second Reserve or even to the Landsturm, without a moment's hesitation gladly followed the call of his Emperor and his fatherland. Thousands took up arms without being obliged to do so.

With thanks for publishing this I remain,

Yours truly,

A GERMAN.

Tokyo, October 3rd, 1894.

A SUGGESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—War talk abounds everywhere. The enthusiasm is contagious. A desire not only to sympathize with Japan and rejoice with her over every fresh victory, but actually to help the country in some practical way during this great struggle, appears to have affected nearly all foreigners resident in the land. A few here and there down deep in their hearts wish her ill-success, mainly through fear lest she become unendurable in case of complete triumph. But most of us are on Japan's side, even though we may not feel that the war was fully justifiable, and a few of its details are rather uncanny.

Now, sir, may I take the liberty of suggesting one way in which foreigners may render timely service to suffering Japan, and that too without the slightest risk of breaking the requirements of a strict neutrality. I refer to the giving of extra assistance during the continuance of the war to Orphan Asylums, Homes of Refuge, Charity Hospitals, and other similar institution.

For the time being these are largely forgotten by ordinary Japanese givers, war loans, Red Cross equipments, and medals in honour of the dead, or sympathy with the survivors, absorbing all their interest and fully taxing their resources.

Even so widely known a work as Mr. Ishii's for orphans and ex-convicts receives next to nothing in these days from Japanese sources. Had it not been for generous gifts from missionaries and other foreigners at Karuzawa, Hiei-zan, and other places this summer it is hard to see how his Asylum would have pulled through the hot season. And now it lives on small gifts from day to day, not infrequently going on short rations. Aside from daily rice, \$70 will soon be needed with which to buy material for winter clothing. Up to date, \$10 only and a few old clothes have been promised toward this fund.

Doubtless, other charitable organizations are in similar need. Cannot there be a generous response made this fall and winter by resident foreigners in Japan to sustain at least a few of the very worthiest of these established institutions? It is a doubtful time for starting new philanthropic enterprises, but the old and tried ones may well be aided over the hard times now upon them.

Yours truly,

JAMES H. PETTEE.

Okayama, October 2nd, 1894.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

An ordinary meeting of the above mentioned Society was held in the rooms of the Geographical Society of Japan, Nishikonyo-cho, Kobayashi ko, Tokyo, at 5 p.m. on Friday, 28th September.

The President, Viscount Eumoto, excused himself from taking the chair, having to leave the meeting at an early hour, and Dr. E. Divers, F.R.S., Vice-President, took his place.

Messrs. A. F. Macnab and H. J. Sharpe were unanimously elected members of the Society.

Samples of Ilford Matt printing-out paper, Eastman's "Solio Matte paper," and "Platinum Bromide" paper, by the same maker, were distributed to such members as undertook to report the result of trial papers to the next meeting of the Society.

Mr. K. Ogawa sent a set of collotypes by himself from negatives made in accordance with the methods of the "New School" of Photographers, sometimes called Naturalists. One of the teachings of this cult is that nothing in a photograph should be as sharp as a good photographic lens can make it, and certainly in the prints shown nothing was quite sharp. The pictorial effect was generally admired.

Mr. Y. Kobayashi showed a posing chair of ingenious design and excellent workmanship. The seat could be raised or lowered, and its angle could be altered. Attached to the back of the chair was a head rest which could be altered to any position that could possibly be useful.

A number of "Burton Actinometers" (H. J. Burton) were shown. These are for timing the exposure of carbon prints. Each consisted of a film on which had been printed and developed six negatives, each of a greater density than that immediately before it. In using the actinometer, it is easy to judge to which of the negatives of the actinometer the density of a negative to be printed from in carbon most nearly corresponds. Sensitized albuminized paper commonly prints in about the same time as carbon tissue. It is therefore only necessary to place a scrap of such paper under the actinometer and to expose this and the negative to be printed from in carbon together, to be able to judge the exposure necessary for the tissue.

The proceedings ended with a vote of thanks to the Chairman.

YOKOHAMA CHESS CLUB.

The Annual General Meeting of the Yokohama Chess Club was held at the Club Rooms, No. 87, Main Street, on Monday evening. There were present Messrs. J. T. Griffin, F. Schiff, W. B. Mason, J. Davison, H. L. Fardel, and E. Batavus.

Mr. GRIFFIN took the chair, and in presenting the report and accounts said that only one item in the Treasurer's accounts required an explanation. The accounts showed a decrease of about \$100 in hand over last year. This was caused through war expenses.—(Laughter.) They had fought two matches, and although they had been victorious in both, the Club had not been able to recover indemnity.—(Laughter.)—from the other country.—(Renewed laughter.) These battles had been won at a cost of \$100. There were also nine sets of chessmen added to the Club during the year. The Club had now a balance of \$118.69, which would be found, he thought, quite sufficient for any calls that might arise. Besides, it was not the purpose of the Club to go on piling up money. With these remarks he presented the annual report and accounts.

Mr. SCHIFF said he noticed that the Club only subscribed to one Chess journal now.

The CHAIRMAN—Yes, that item has been reduced. We once took in a German chess periodical, but the subscription has ceased. Through the kindness of the late President, Mr. Mowat, we need to receive *Lasker's Chess Fortnightly*, but that journal only seems to have run six months and then "petered" out.

Mr. SCHIFF proposed and Mr. FARDEL seconded the adoption of the accounts.—Carried unanimously.

SECRETARY'S REPORT.—SEASON 1893-1894. The number of members on the roll is 54, being slightly less than the previous year; and owing to several recent removals we shall require new recruits for the coming season.

The Treasurer's account, annexed hereto, shows a balance in hand of \$118.69 against \$231.25 at 30th September, 1893.

Mr. R. A. Mowat, President of the Club, left Yokohama for London at the end of March, and

Mr. Keil was appointed to the vacant post for the balance of the term. Mr. Balk, on his departure for Australia, in May, resigned his seat upon the Committee but retains his membership.

During the past season the Club Rooms at No. 88 Main Street (the annex of the Oriental Hotel), have been found satisfactory in every respect; but the Committee have been unable to arrange with Mr. Mowat for a continuance of the same accommodation for the coming year.

On the 14th October, 1893, was established the Tokyo Chess Club. Your Committee hailed the new-comer with delight; and instructed the Secretary to send a challenge for a friendly match, without delay. The challenge was accepted; and, after allowing sufficient time for the members of the new club to furnish up their armour and weapons, the battle was contested in Tokyo on 3rd February, 1894—when the Yokohama team secured victory by 11 games to 9. The return match was played in Yokohama on 30th March, with the same result:—Yokohama 11, Tokyo 9. It is to be expected that these friendly encounters will become an institution; and that Tokyo, anxious to regain its laurels, will soon give us cause to stand on the defensive.

CHAMPIONSHIP.—This contest was concluded in March, and Mr. Balk was duly acclaimed the first Champion of the Club. The Champion Cup is now returned into the President's hands, and is waiting for a fresh custodian. There will have to be a new competition all round; there being no holder for members to challenge.

HANDICAP TOURNAMENT.—This was also finished in March, Mr. Balk and Mr. Tennant coming out equal at the head of the list. By friendly agreement between the winners, the prizes were divided, without the "tie" being played off: Mr. Tennant chivalrously yielding the choice to Mr. Balk.

The best thanks of the Club are due to the President and Secretary for prizes presented, and to Mr. C. D. Mass for his acceptable gift of "Tomlinson on Chess" for the Club library.

It is necessary again to urge on the members a regular attendance on practice nights if the fighting line is to be kept up to its proper strength. Cash in the treasury is a good thing and not to be despised; but plenty of well-drilled warriors are indispensable for a successful campaign.

The remaining members of the Committee herewith tender their resignation; with best wishes for their successors and for the prosperity of the Club.

JOHN GRIFFIN,
Secretary.

Yokohama, 30th September, 1894.

TREASURER'S ACCOUNT, SEASON 1893-1894.

RECEIPTS.	
Balance from last Account	\$231.25
Subscriptions, 54 members at \$5	270.00
Entrance fees, 6 members at \$1	6.00

Match expenses (3rd February)	27.80
Match expenses (30th March)	82.00
Books for Library	4.50
Chessmen and Boards, 9 sets	24.35
Balance in hand	118.69
	\$474.00

Yokohama, 30th September, 1894.

JOHN GRIFFIN, Treasurer.
Audited, compared with Vouchers and found correct.
J. DAVISON.

The CHAIRMAN—The next business is the election of new officers. Mr. Kiel will not serve again, neither will Mr. Mason. The latter thinks, and rightly so, that the Yokohama Chess Club's officers should all be Yokohama men.

Mr. SCHIFF thought that in view of the paucity of members present that it would be as well to postpone the election of a Committee till the next chess meeting. It was very difficult for so small a meeting to decide upon what officers should be appointed for the coming year.

The CHAIRMAN—I don't think that we can do that according to our rules. We must elect our officers at this meeting.

Mr. DAVISON—I propose that Mr. Griffin be appointed President.—(Hear, hear.)

Mr. MASON—I second that.

Mr. GRIFFIN suggested that he had been pulling at the cart for a matter of four years; it was time they gave one who was no longer a griffin a little rest.

Mr. SCHIFF—We could not have a better man than Mr. Griffin for our President.—(Hear, hear.)

Mr. Griffin was eventually persuaded to accept the Presidency.

Mr. SCHIFF then proposed that Mr. Davies

be appointed Secretary. Mr. FARDEL seconded.—Carried unanimously.

Mr. DAVISON then proposed that Messrs. Tennant, Schiff, and E. Mendelson be appointed as the Committee. After a short discussion, this nomination, being seconded by Mr. MASON, was carried.

The CHAIRMAN before the meeting turned to the chess-boards said—I need not say how deep is our sorrow at the death of Mr. Ph. von Heintz, one of our best known members. All who knew him, loved him, for he was a gentleman, kind and good. I think this is only our second loss through death, and I know that we shall feel it as we meet from week to week; we shall miss his genial presence greatly from amongst us during the coming winter.—(Hear, hear.)

A vote of thanks to the Chairman concluded the formal business.

WHAT THINK YE OF CHRIST?

A SERMON PREACHED IN THE DOSHISHA THEOLOGICAL HALL, BY REV. M. L. GORDON,
SEPTEMBER 23RD, 1894.

1 Cor. 15: 17. And if Christ hath not been raised up your faith is vain.

We know from the Acts that the Resurrection of Jesus was the theme of the first Apostolic preaching. But to St. Paul, who did not have that three years of companionship and training which was the peculiar privilege of the Twelve, the resurrection had, if possible, more importance than it had to Peter and his associates. It was the one incontrovertible proof that Jesus was the Son of God. Not the Son of God in the sense that all men are His children, but the Son in a unique way; a way which made him the long-promised Messiah, the Divine Saviour of the world. The significance of the resurrection was that the eternal Son of God had for a time emptied himself, taken the form of a man, become the servant of men, and died on the cross to redeem men from sin and bring them back to the Heavenly Father's home and friendship. It was the risen Christ alone that Paul had known, and on whom he hung his hopes. It was either the risen Christ or no Christ at all, and so he wrote to his Corinthian converts: "If Christ hath not been raised up your faith is vain."

It is not my purpose this morning to bring forward proofs of the reality of the resurrection of Jesus or to discuss its nature or method. I would attempt the far humbler task of studying with you the two conceptions of the person of Jesus which were evidently in the mind of the Apostle as he penned these striking words. On the one hand stands Jesus under the power of death and decay, as other men, i.e., the naturalistic conception of His person; on the other, death is overcome, the tomb vacant, Jesus risen and exalted as the son of God, i.e., the supernaturalistic conception of his person—which of these, we ask, bears the more marks of truth? Which is the more easy to believe? Which the more fully meets the wants of men, our wants?

What then, in the first place, is the naturalistic conception of Jesus? Our purpose calls for a study of only the most favourable form of it. We having nothing to do with the views of atheists, pantheists, materialists, or agnostics. Our concern is not with those who, in theory or practice, are indifferent to the claims of religion and morality, with those who entirely reject the Bible, or hold that Jesus never lived. We have not a word to say to-day to those who look upon Buddhism or Confucianism or any other religion as the equal or superior of Christianity. We are asking simply, "What are the views of the person of Jesus who is called the Christ which are held by those who believe in the existence of one supreme and perfect God whose law, written in the hearts of all and binding upon all, was pre-eminently manifested in the life and teachings of Jesus of Nazareth; but who, nevertheless, believe that the supernatural is impossible. There are such. They claim the name of Christian, and they are often equal to or above the average of men in intelligence and morals. What do they hold concerning Jesus? They believe that Jesus really lived and laboured in Galilee and Judea more than 1800 years ago; that he was the son of Joseph and Mary; that he grew up in Nazareth, a young Jew of great beauty of character; that he had wonderful thoughts of God and men which he not only taught in an impressive way but embodied in his life, which was one of the most loving service. He thus made the fatherhood of God and the brotherhood of man more real to men than they had ever been before, a permanent legacy of the greatest value to the human race. So great was his faith in what he taught, and so faithful was he to his ideals, that he shrank not from a

martyr's death. He died a cruel and shameful death, praying for his murderers. His body was taken down from the cross and buried by Joseph of Arimathea; and the Syrian stars have ever since looked benignly down upon his grave. A beautiful picture, a noble conception truly!

Now let us turn to the picture, the conception, the belief, of the Supernaturalistic Christian. He takes the picture just presented in all its beauty. If it be true, as it undoubtedly is, that at times in the past he has come short in his portrayal of some of the human features of Jesus, that is not true to-day.

It is now fully recognized that Jesus, the Saviour, was born as a little child, and that as his body so his mind developed with his years, and that he grew in favour both with God and man. He was at times hungry, thirsty, tired. He grieved, sought, and received human companionship and sympathy. He was tempted as other men are, he shrank from suffering, and at least in the supreme hour of death, he felt the pangs of apparent desertion by God. All this, with the wonder of his teaching and the beauty of his life, the supernaturalistic Christian accepts in common with the naturalistic Christian. But beautiful as the picture is, he finds it incomplete and in adequate.

"Whence," he can not but ask, "flowed the stream of this most beautiful life, embodying as it did the purest of earth's teachings?" He holds it rational to suppose that this purest of streams came from an equally pure fountain, that it is at least congruous to believe that this unique life had a unique beginning, and that as the oldest of the Christian symbols declares, Jesus was "Conceived of the Holy Ghost and born of the Virgin Mary." This has always been the faith of the Church, although in view of inherent difficulties and the fact that two of our four Gospels make no mention of it, some Evangelical Christians make it a non-essential of Christian belief.

I have said that this doctrine is congruous with the unique life of Jesus. It is also peculiarly congruous with two other important and closely related doctrines plainly taught in the earliest and most unquestionably authentic books of the New Testament, the four great epistles of Paul, viz., the pre-existence and the incarnation of the Son of God.

I will not say that it would have been impossible for God to become incarnate in some other way, for example, to have taken complete possession of a life entirely natural and human. I would by no means deny the name Christian to all who can not accept the Virgin birth of Christ; but I do hold that the doctrine of the Miraculous Conception is the natural complement of the two doctrines of the Pre-existence and the Incarnation of the Son of God and far more in accord with the scriptures—the epistles as well as the gospels—than any other view. St. Paul speaks in his letter to the Roman Christians of the gospel of God concerning his son Jesus Christ who was born of the seed of David according to the flesh. Is there any key or combination of keys which will so easily and completely unlock the meaning of these words and the three doctrines just mentioned, viz., that Jesus was the pre-existent son of God; that for man's sake he took upon him our human nature; and that in doing so he was "conceived of the Holy Ghost and born of the Virgin Mary?" If there be no other equally serviceable key or keys, then why may we not believe that the careful historian Luke was never more careful, never more inspired, than when he recorded the words of the angel to Mary—words which probably came to him, immediately or at only one remove from Mary's own lips, "The Holy Ghost shall come upon thee and the power of the Highest overshadow thee; therefore also that holy thing which shall be born of thee shall be called the Son of God?" But if we accept these three correlated doctrines, how immensely do they add to the grandeur of our conception of Jesus! It is like the setting of a colossal statue upon an appropriate pedestal. It is as much greater than the other conception as Handel's oratorio of the "Messiah" is than one of its simple strains. When John Brown took in his arms the little negro child and kissed it, the act was a gem of beauty as expressive of a sympathy overlooking the bounds of race and colour. But if we give to that gem as a setting the long years which went before of ceaseless warfare against the demon of slavery, the prison from which he had just emerged, the gallows to which he was now going to yield up his life, does not the gem shine with a new lustre? So it is with the Evangelical Christian's view of the incomparably beautiful human life of Jesus. Beautiful in itself, it takes him completely captive as the expression of the Father's eternal purpose to bless men. He sees in it a movement of self-sacrificing love which ran through the thirty-three years of one short human life in Judea 1800 years ago, but also one which, while finding its most bright and palpable expression in the life of Jesus, began before the foundation of the world and still blesses every creature with its benign touch.

These are the two pictures. Let us now try to make the contrast more definite and clear. On one side the son of Joseph and Mary; on the other the Son of Mary but the Son of God. On the one side the Carpenter of Nazareth giving a life of loving service to men; on the other Immanuel, God bowing the heavens and coming down that he may give to men a helping hand. There a wise teacher who lived in a distant land nearly two thousand years ago; here an ever present Helper and Friend. The one, an ancient sage worthy to be ranked with, or even above, Socrates, Confucius, and Shakyamuni; the other, the only begotten Son of God coming from the bosom of the Father with a Message of love from the Father's heart to every one of his children. The one, the loftiest of examples, the other, the Lord and Master of our lives. The one, the purest of earth, dying a Martyr-death, yet of the earth, earthly, imperfect, and subject to sin; the other, the divine and sinless Saviour long prophesied and waited for, dying on the cross—the just for the unjust—to redeem men from sin, and lead them to God. A man under the power of death; the Prince of life voluntarily tasting death for others but rising victorious from the tomb having despoiled death of its sting and dominion. There, a memory; here a life giving spirit. A good man advising us to love God and man; the Christ of God giving us not merely man's thought about God but actually embodying God's thoughts about man, revealing God's whole nature to men, making it clear as nothing else could, that God is not a blind force struggling up through evolution into human consciousness—not an unvarying law, vague, unfeeling, unresponsive to human cries for help and forgiveness—as those who hold the naturalistic conception of the person of Jesus are in constant danger of regarding him—a real, personal, sympathetic Father who, out of the fullness of a heart beating in infinite love, seeks to save all who feel the pain and power of sin, to bind up the hearts broken by trouble and sorrow, and to guide every foot into the way of righteousness.

These, in rough outline, are the two pictures of the person of Christ which confront us to day. I have not sought to elaborate proofs for the one as against the other. I would simply place them before you and ask which is the grander, which the more congruous with the general trend of the scriptures; which the more in accord with the needs of human nature, especially of weak and sinful human nature; which the more likely to transform this wicked world of men into a society in which each one loves God with all his heart and his neighbour as much as, or more than, himself? There is no room for question as to what has been the faith, the moving power in the Church. It has always believed in a supernatural Christ. This is the banner which has ever led it forth to battle, this the sign by which it has conquered.

It was, as we have seen, the belief of Paul. It was also the belief of the two Augustines, the two Bernards, of John Huss, of Luther, of Wesley, and Whitfield. It has served the aim of every modern foreign missionary from William Carey on, and given them the splendid triumphs beside which the naturalistic Christians have nothing, absolutely nothing to show. The greatest religious and philanthropic movements of modern times have the same source. Here is the source of Mr. Mondy's power. Ask the recently knighted Sir George Williams, what is the corner stone of the Y.M.C.A., whose splendid record of fifty years has just challenged the admiration of the civilized world, and he will surely point you to the Divine Christ. Ask Miss Willard what has made the Woman's Christian Temperance Union, the greatest temperance movement in the World's history, and she will make the same reply. Ask Francis E. Clark what it is which inspires this great Christian Endeavour movement with its 30,000 societies and its nearly two millions of members, and his answer will be the same. It is the love of the Divine Christ which impels all. It moved the minds and hearts of the missionaries and young pastors and evangelists who made early missionary work in Japan the success that it was; and if we name over the reasons why the religion of Christ is not growing and aggressive to-day as it did in former years, shall we not find the principal one to be that some who are called leaders in the church are losing their faith in an ever-present and divine redeemer, and even ridiculing those who cling to the beliefs which gave the early Japanese churches its victories?

"But," it will be asked, "is not this view of the person of Christ attended with difficulties?" "Certainly," it may be replied. But it may be added with equal positiveness that it resolves more difficulties than it creates. It alone gives an adequate explanation of, and crown to the prophecies

of the Old Testament. It alone makes the gospels credible, not necessarily inerrant, but credible, representations of the life and work of Jesus. The Naturalistic Christian is obliged to lay violent hands on the very books from which he derives his knowledge of the Jesus he praises so highly. He must attempt the task of tearing out of the supernatural of the gospels, a task as impossible as the withdrawing from the air we breathe all the oxygen it contains.

It is the true that oxygen may be extracted from the air forcibly, but that which remains is not air. The life giving principle is gone; inert nitrogen and poisonous carbonic acid remain. So the miraculous elements may be wrenched out of the Gospels, but they are gospels no longer. On the supernaturalistic view, however, it may be with particular miracles, the miraculous element remains intact and gives no trouble, for as has been finely said, "A supernatural person does supernatural deeds naturally."

According to the supernaturalistic view of Christ's person, the prominence given to Christ's sufferings and death, has its only adequate explanation. As we know, Christ's sufferings and death occupy a place in the Gospels entirely disproportionate to the other events of his life. This is even more striking in the epistles of Paul than in the gospels. Paul determines to know nothing "save Christ and him crucified." His preaching was "the preaching of the cross."

If Christ's death were only that of a martyr, if his life were redemptive only in the sense in which the lives of all good men are redemptive, why is he not in the New Testament classed with other martyrs? and why is the one ordinance to be repeatedly and perpetually observed by his followers a commemoration not of his birth, nor of this teaching, but of His death?

The Supernaturalistic view of Christ's person alone explains how the meek and lowly Jesus could say, "I am the light of the world. Come unto me. And I, if I be lifted up from the earth, will draw all men unto myself." Fancy Socrates or Confucius making claims like these! Again, if Jesus were only a man and the resurrection therefore impossible, why did the disciples who were utterly discouraged at it suddenly begin to preach the gospel with a courage which quailed not even in the present presence of violent death? Surely there must have been something which happened in the meantime, some adequate cause for this marvellous change. Even a critic like Baur admits this. He says it was a new belief in a Resurrection, but a belief in a resurrection which never occurred. The New Testament, over and again says that it was the fact of the Resurrection which gave this belief, this unflinching zeal, this fearlessness of death. Which is the more credible? Which presents fewer difficulties? Paul wrote not more removed in years from the death of Jesus than we are from the Restoration in Japan, not so much as we are from the American civil war. The same year in which he wrote this letter he also wrote, "In stripes above measure, in prisons frequent, in deaths oft, five times I received forty stripes save one; thrice I was beaten with rods, once was I stoned, thrice I suffered shipwreck, a night and day I have been in the deep," and so forth. Is it credible that he did this for a belief that was unfounded when the events were so near and men whom he knew intimately had a personal knowledge of it all? No! It is impossible to believe that he did. Supernatural Christianity presents no difficulty greater than this. It means an entire reversal of human nature and the motives which sway it. We, therefore, accept the resurrection and the conception of Christ's person, which implies both because it rests on irrefragable historical testimony, and because of its congruity with other Christian teachings as to the love of God and the needs of man. For, if Christ were the incarnate son of God, then the resurrection were no mystery. The unnatural, the astounding thing was his death. But his death was but the temporary setting, as his resurrection was the rising, of a Sun whose eternal office is to shine, to illuminate with divine grace this world of sin—this universe which is His.

If the gospel really means all this to us, my brethren, surely we can not rest on any ordinary plane of Christian living, or be content with any common measure of Christian service.

The love of the divine Christ will move us with an imperative constraint. We can no longer live unto ourselves, but will live unto Him who for our sakes died and rose again. And thus believing and living we can do no better than take to ourselves the words with which St. Paul closes the noble chapter from which our text is selected: "Be steadfast, unmovable, always abounding in the work of the Lord, knowing that our labour is not in vain in the Lord."

U.S. CONSULATE-GENERAL, JAPAN.

(IN ADMIRALTY.)

Before N. W. McIVOR, Esq., Consul-General and Judge, sitting with H. J. WHEELER and W. MERRIMAN, Assessors.

THE QUEST OF THE "GOLDEN FLEECE."

In this case Julius Huebner, W. Legasse, alias Regasa, John Malina, Edmund Kalani, Chang Ah Wung, Ah Ping, Ah Woy, and George Williams libelled the American schooner *Golden Fleece* for the amounts of their respective wages.

Mr. Scidmore said he appeared for the libellants. His Honour asked if the defendant was represented.

Mr. Scidmore said that the master of the schooner was in Court, and had filed an answer.

W. Herbert, Marshal of the Court, sworn, deposed to seizing the schooner *Golden Fleece*, and serving a writ of arrest on her master. He had given public notice of these facts in the newspapers.

Mr. Scidmore then read the plaints of the libellants. It appears that the *Golden Fleece* belongs to the port of San Francisco, and on the 20th October, 1892, Robert Quinton was her master. He shipped a crew including the three first libellants, for a voyage to the South Sea Islands of 12 months' duration. On the 15th June, 1893, the vessel being in the port of Hongkong, Robert Quinton resigned and gave the command to W. V. Smith. The vessel then went on another voyage, having first shipped some fresh hands. The vessel finished her voyage, and on 4th July, 1893, Captain Smith shipped the four Chinese libellants. About the 10th of April, 1894, this William V. Smith left the vessel in the Pelaw Islands and appointed James B. Laurie as sailing-master, with orders to take her to the Caroline Islands. After loading cargo there, she left with the intention of making the Hawaiian Islands en route to San Francisco. But on the voyage it was found impossible, owing to lack of provisions and bad equipment, to reach Honolulu, so the ship put into Yokohama on the 2nd August. The libellants therefore asked that a process of attachment might issue and the ship be sold so that the claims of wages might be discharged, and that passages be provided to Hongkong and San Francisco respectively for the various members of the crew. The amounts claimed were: Julius Huebner, \$1,712.31; W. Legasse, alias Regasa, \$571.65; John Malina, \$586.92; Edmund Kalani, \$600.67; Chang Ah Wung, \$179.80; Ah Ping, \$193.42; Ah Woy, \$192.97; and George Williams, \$356.25. The sailing-master, James B. Laurie, answered the petition, and said that he had used all due and proper means to obtain money from the owners wherewith to pay the libellants, but that all his efforts to that end had been without success. He admitted all the claims as correct from the date he took charge of the vessel.

James B. Laurie, having obtained leave, put in a petition of intervention. He claimed that he was engaged in Hongkong as second mate at a monthly wage of \$35, gold; that on the 1st of Sept., 1893, he was appointed sailing-master in addition to his previous position at a wage of \$50, gold; and he therefore claimed from the vessel \$1,210.40, balance of his wages now unpaid.

Mr. Scidmore said that it would be seen from the petitions filed, that Laurie was the *de facto* master of the *Golden Fleece* at the present time, but the question as to his being master *de jure* was left to the Court to decide. At any rate, he had sufficient status in the premises to answer the libel and subsequently to intervene if he wished to do so.

His Honour—In other words, he has fulfilled the meaning of the statute.

Mr. Scidmore—Yes, the statute says that either the master, mate, owners, or the person in charge.

James Bennett Laurie was then sworn, and deposed—I am at present in charge of the schooner *Golden Fleece* as sailing-master. The master is Captain William Vermilion Smith. I last saw him in the Pelaw Islands. The owners are Wright, Bowne & Co., of San Francisco. When I was in the Pelaw Islands, Captain Smith found that he could not load the vessel with fish, as he was trying to do, so he gave me orders to go to the Caroline Islands to obtain coconuts, etc., and to pay the Chinamen off at Honolulu, and from there proceed to San Francisco. I got as far as Turk Island and obtained as many coconuts as possible with the "trade" I had on board. I obtained all the coconuts and provisions possible, and then asked the mate if it was possible to reach Honolulu in the state we were in. We came to the conclusion that it would be impossible to reach that place, and that the nearest port we could reach with a leading wind was Yokohama. So we proceeded there; my hands

were very poor, and we were repairing them all along the passage. Upon arrival here I wrote the owners. I had no funds here to provide provisions for the crew, so I sold some of the coconuts. I was unable to obtain money on credit here. I reported fully in a second letter to the owners the situation of the vessel, and said that unless they advised otherwise by cable the schooner must be sold. My first letter went by the Empress packet on the 7th August. We arrived here on the 2nd of August and I sent my letter by the next mail leaving for America. I have received no answer from the owners, nor from any of their agents relative to the ship. The articles now put in are the ship's articles. I have examined the accounts as set forth in the schedule attached to the libel; they are correct. [The log-book and the register of the vessel were next handed in. Attached to the latter was a letter from Captain Smith appointing Laurie (sailing-master.) The letter was delivered in the presence of the crew by Captain Smith. The wages of all on board are still running on. I have no means of paying off the crew save through the sale of the vessel.]

Mr. Wheeler asked who would be the controlling power in case of dispute between the first mate and the sailing-master?

Mr. Scidmore said that Laurie occupied an anomalous position. He was shipped as second mate, but was afterwards made sailing-master. The Captain made Laurie sailing-master.

In answer to His Honour, Laurie said that he had been in sole charge of the ship ever since he received the letter of appointment from Captain Smith. No dispute had ever arisen as to his authority. The first mate took his orders from him as sailing-master, and as sailing-master, he (witness) carried out all trading transactions.

Julius Huebner, first mate of the schooner *Golden Fleece*, sworn, deposed.—I was shipped at San Francisco, by Robert Quinton, the master. We went first to the Marshall Islands, then to the Caroline Islands, then to the Pelaw Islands, and from there to Hongkong. We arrived in Hongkong in June, 1893. Having discharged our cargo, the Admiralty Court condemned the vessel's spars. We went into the Kowloon dry dock and received thorough repairs, being overhauled, caulked, painted, and new spars put in. Just before going into dry dock, Captain Quinton left the vessel, and our supercargo, Mr. Smith, took charge. From Hongkong we went to the Pelaw Islands, and while there Laurie was appointed sailing-master. I knew that he was to be appointed sailing-master before we left Hongkong. I did not expect to remain in the vessel more than three months. After arrival in the Pelaw Islands Mr. Smith went on shore, built a house, established a family, and remained there.

Mr. Wheeler—Was he of a missionary turn of mind?

Mr. Scidmore—Well, not exactly.

Witness, continuing—When we finally left the Pelaw Islands Mr. Laurie was in charge as sailing-master. On April 10th, 1894, we received orders to go to the Caroline Islands. Laurie was put in charge by Captain Smith about fourteen days after reaching the Pelaw Islands. The authority was given in writing. I recognise the letter shown me as the letter of authority given by Captain Smith to Laurie. We took in cargo at the Caroline Islands and tried to proceed to Honolulu. The sails and ropes giving out, we found it to be an impossibility to reach the Hawaiian Islands, so we came to Yokohama. Laurie and myself consulted together as to the advisability of changing the course. The Hawaiian Islands were then 3,000 miles away. I knew the registered owners personally when I left San Francisco. They have since failed. I know that two letters were sent by Laurie to the owners at San Francisco; they were sent by the first mails after our arrival here.

To Mr. Wheeler—The ship is at present without provisions, equipment, or credit.

In answer to Mr. Wheeler, Mr. Scidmore said that the men had all been entitled to have their discharge months ago, their terms of service having expired long since.

Mr. Wheeler inquired what the value of the ship might be?

The Witness stated that when the ship left San Francisco, the officers had a power of attorney to sell her at any time for \$5,500. They had a bill-of-sale on her as it were. She was 127 tons net tonnage.

The crew were then called and each swore to the correctness of the amount of their respective claims. One man, asked if he could say who was the master of the vessel, replied in pidgin English—"No blang master this ship, second mate all same savvy." The others said that they received all orders from the second mate or sailing master.

Mr. Scidmore then asked that judgment be entered according to the terms of the petition; that the claims be made up to the date of the discharge of the crew or the sailing of the vessel; that an allowance be also made for passages to Hongkong and San Francisco, according to the ports of discharge in the articles of agreement, but that the wages should be a first claim.

His Honour asked if the sale of the vessel would satisfy the claims.

Mr. Scidmore replied that the *Golden Fleece* was a very fine ship and in good condition. The wages claimed amounted to \$5,604.30.

Judgment was then entered according to the prayers of the petition and intervening petition, and an order was issued to the Marshal authorizing the sale of the vessel.

Before N. W. McIVOR, Esq., Consul-General and Judge, sitting with Messrs. N. F. SMITH and W. STONE, Assessors.

THE WAGES OF THE "JOSEPHINE'S" CREW.

In this case, James S. Porter, John Peterson, and M. Ravensberg, libelled the American schooner *Josephine* to recover the amount of their respective wages.

Mr. Scidmore appeared for the libellants, while Mr. Geo. W. Gale, master of the vessel, answered on behalf of the defendant ship.

The petition showed that on 9th December, 1893, the schooner *Josephine*, of which Geo. W. Gale was master, and John P. Gale, of Tacoma, registered owner, was at Port Townsend, destined on a hunting and fishing voyage to the coast of Japan and such other parts of the world as the master might direct, to return to a port of discharge in the United States within twelve months, and that the libellants were duly engaged and shipped on board in accordance with the Maritime laws of the United States. The schooner duly proceeded on her voyage, and on or about the 13th September, 1894, arrived in the port of Yokohama, where she now lies. Since that date the libellants have frequently demanded of the master the sums to which they are entitled on account of wages, but he has neglected and refused to pay them. They therefore prayed that process of attachment might issue against the vessel, and that she be condemned to be sold; that the libellants be discharged and that their wages and earnings be paid from the proceeds of her sale. The amounts claimed were, J. S. Porter, \$236.65; J. Petersen, \$252.23; and M. Ravensberg, \$429.59. The master in his answer admitted the truth of all the allegations in the petition, but said that he was without means, could not obtain credit upon the vessel, nor get any money from the registered owner.

W. Herbert, Marshal of the Court, sworn, deposed to serving the summons on the defendant in the case, the master of the vessel. He also published the citation in the public press.

George W. Gale, master of the schooner *Josephine*, sworn, deposed.—In my answer I admitted the truth of all the allegations contained in the petition. When I left Tacoma I had on board a sum of \$500, for use during the voyage. From Port Townsend I went to Seattle, from thence to Port Angeles, Honolulu, the Bonin Islands, Yokohama, Hakodate and then back to Yokohama, returning here finally on the 13th September. Since I left Tacoma I have not received any money from the owner for paying the wages of the crew or for provisioning the vessel. I am the owner's son. He gave the vessel into my charge, with its apparel and equipment. I was to do my best with it, and make what I could out of the voyage. I sold part of my ammunition in Yokohama last July to get money to spend on repairs, new boats, etc. At Honolulu I had to have some repairs done, and when I arrived here I found that my provisions were useless. I shipped 48 skins home from Hakodate, and from here 29; upon these I obtained an advance. I have no means whereby I could raise money to pay the wages of the crew, or obtain provisions, and effect repairs sufficient to carry the vessel back to Tacoma. I have not tried to obtain money on the vessel, as I considered it useless. The vessel is only 16 tons burden, and is too small to borrow money upon. Her measurements are: 40 feet long, 15 feet beam; she draws 4 feet of water, and has but four feet of freeboard. I could not take the vessel back to Tacoma in its present condition. In my opinion it would not be possible to get her back to Tacoma by December 9th. I have written to the owner of the vessel but have received no reply. He has not even acknowledged receiving the skins which I shipped home.

Mr. Scidmore—Then practically he told you to go to sea and paddle your own canoe?

Witness—Yes, practically. The items of wages in the schedule attached to the petition are correct. And on understanding with the men that if they

were discharged in Yokohama I would pay their passages home. Petersen is entitled to one month's wages in addition to the amount claimed.

To His Honour—Petersen's agreement was made at the time he was shipped, in the presence of the Commissioner. The registered owner of the vessel is John P. Gale. He lives near Tacoma, and I have written to him but have received no reply. I have not cabled him; but I don't think that I have had time to get replies to my letters yet. He has given me money from time to time and has lost money on the vessel all along. He gave me the vessel for my own use. I was to take the vessel and try make something out of the voyage. Nothing was said as to the liabilities of the voyage falling on me; in fact our arrangement was very unbusiness-like. The \$500 I received from my father. Nothing was said as to this being a present, or an advance which I was to take into account when settling up for the voyage. He said nothing as to how it was to be returned or repaid.

The Court then rose for half an hour.

Upon resuming, Marlon Ravensberg, navigator of the schooner *Fosphine*, swore to the correctness of his claim. The decks of the schooner were always awash during the voyage, as the vessel drew so little water; the vessel was not in fit condition to go back to Tacoma. He had asked for his wages and been refused them.

Petersen and Porter gave similar testimony. The vessel could not proceed to Tacoma in safety with her present crew or equipment. They had only had a few dollars advance, and their wages had been refused them.

Mr. Scidmore—This case appears, your Honour, to be very like that of "the three wise men of Gotham who went to sea in a bowl." It speaks well for the sea-worthiness of this tiny craft and the pluck of the men who navigated her that she now lies in Yokohama harbour. From the description given in evidence it appears that she is only 40 feet long, with a beam of 15 feet; she is 16 tons burden, while she draws but four feet of water. Her freeboard is barely four feet, and when alongside her it is the easiest thing imaginable to step straight from the sampan on to her deck. The master in here without funds. He says he has no means of raising money by credit, nor can he get any from the registered owner. He says that it would be an impossible feat to take the vessel back to Tacoma in her present state of provisions and equipment before the 9th December. It therefore seems to me that as the vessel is of such small value that it would be to the interest of her owners that the crew be discharged as soon as possible. For the wages are still running on, while the accounts for their provisions are piling up. In the interests of the men, themselves, it would be but fair to discharge them at once, so as to enable them to find an opportunity of earning their bread. Furthermore, it appears that the master has violated a part of the shipping contract which he had with these men, though the stipulation does not appear upon the face of the articles. I refer to the terms of the 530th Section of the revised statutes, which says that seamen are entitled to one-third of their wages then due at every port of discharge on their voyage. Now though the ship's articles do not contain any express stipulation that the master of the *Fosphine* shall not pay one-third of the wages to the men at each port of discharge, still from the men's evidence it appears that he has not paid them that portion of their wages to which they are legally entitled. In fact, when they applied to him for it, he told them that he was unable to give it them—in fact, refused. That being the case, the contract between them was at an end and the men are entitled to their discharge—their immediate discharge. The master has no money and no means of raising money wherewith to pay off and of discharge the men, the owner will not provide the money, therefore the ship must find it.

His Honour said that the question as to whether the owner had had time to reply by mail to the the master's letter, though not material, might be discussed.

Mr. Scidmore thought that this could not affect the right of the libellants to claim their discharge. If the owner sent a ship to sea in sole charge of a master, the master acting as owner's agent, and then as agent the master neglected his duties, then the owner must suffer for the consequences of his agent's neglect. The defendant in the case had refused one-third of the wages due the men when they applied for it, and therefore, the ship being in a port of discharge, the crew could legally claim to be paid off and discharged. It was certainly to the advantage of the owner of the *Fosphine* that the crew should be paid off as soon as possible, for both wages and provisions were piling up.

Defendant said that the best thing would be to pay off the men at once; the ship must go.

His Honour accordingly gave judgment.

libellants; the petition would be amended in the case of Petersen, an order of survey should issue, and the ship be sold by the Marshal; the costs of the Court would have a prior lien, and then the wages of the crew.

THE CHINO-JAPANESE WAR.

Tokyo, August 17th.

An Imperial Japanese decree has been issued authorising the raising of a loan of fifty million dollars. There is still a large surplus in the Treasury, but money must eventually be required.

At the request of Admiral Sir Edmund Fremantle, the Japanese Government have given an undertaking not to renew the attack upon Weihai-wei or to bombard Chefoo without giving forty-eight hours' notice to the British commander, so that measures may be taken for protecting the lives of foreign residents.

Notice has been given to mariners that from Tuesday next the entrance to the harbours of Nagasaki, Tokyo, and Yokohama will be protected by submarine mines. Stringent rules are laid down, and navigators infringing them will do so at their own risk.

Shanghai, Friday.—The Japanese fleet of eight ships which was sighted off Chefoo on Tuesday found the Chinese fleet cruising on Wednesday morning and bore down upon them.

The Chinese Admiral did not accept the offer of battle, but steamed for the harbour of Liu Kung Tan, to the north-west of Chefoo, where he anchored.

The Japanese fleet did not attack the place, but are still cruising off that port.

The official inquiry into the sinking of the transport *Kowshing* by a Japanese warship was held to-day, and was concluded this afternoon. The finding of the Court is simply to the effect that the *Kowshing* was destroyed and sunk on the 25th of July by a Japanese warship.

The Court desires to record its opinion that Captain Galsworthy and the officers of the *Kowshing* showed great judgment and coolness under trying circumstances, and did all in their power to avert the catastrophe.

(THROUGH REUTER'S AGENCY.)

Paris, Friday.—The *Dix-neuvième Siècle* deplores the insufficiency of the French naval division in the far East, which, it says, can only make a sorry show, since Great Britain possesses off Hong-kong a squadron as fine as that which she maintains in the North Sea, and even this was reinforced three months ago by two newly-launched cruisers.

Yokohama, Friday.—The Japanese fleet is at present engaged in searching for the Chinese fleet, but has hitherto been unable to discover its whereabouts.

In the meantime the Japanese troops in Korea are blocking the entrance of the passes to the north of Korea with the object of preventing the Chinese troops from entering the country from that quarter.

THE PROPOSED CHINESE LOAN.

Berlin, Friday.—It is announced in the *Post* that at yesterday's meeting of the persons interested in the Deutsch-Asiatische Bank the question of a Chinese Loan was discussed, and a despatch from Shanghai was submitted by which the Chinese Government declared its acceptance of the terms of the Syndicate, which will accordingly undertake the new Imperial Chinese Loan. The amount will be one million pounds sterling, but further amounts will probably follow. The loan will be secured on the Chinese maritime dues. The rate of interest is still uncertain, but will probably be 5 per cent. It also remains unsettled when the loan will be placed on the German Bourses.

[With regard to the reports in circulation regarding a new Chinese Loan, Reuter's Agency learns that about a month ago the Chinese Government made inquiries of a leading Anglo-Chinese bank and of an important British commercial firm trading in China as to the terms on which a loan of ten million taels could be raised, such loan to be paid in silver. The bank immediately offered a million sterling and the commercial house as much as the Chinese Government required. Li Hung-chang declined these offers for the moment, saying that there was no haste, and that there were ample funds to go on with. Later on, however, in view of the fact that the last installments of the present seven and six per cent. gold bonds would become due at the Hongkong and Shanghai Bank in January and February, 1895, the Chinese Government desired to increase its available cash, having to provide for the needs of the war, and the question of a loan was again taken up. As soon as it became known that there was a project in the air, a syndicate of German bankers

was formed in Berlin, and their agents at Tientsin were instructed to urge Li Hung-chang to allow the syndicate to take the proposed loan firm. Numbers of other promoters followed suit both in London and Tientsin, and the Chinese Ambassador, as well as the Viceroy of Pechili, was besieged with offers of advances, amounting in the aggregate to some hundred millions. It is believed in well-informed quarters in London that a 5 per cent. gold loan of about one and a half millions sterling will be issued here early in September, to run thirty years, two-thirds at least being payable in China in silver. It is anticipated that the loan, in which some leading Berlin banks will participate, will be covered many times.]

THE JAPANESE NAVY.

A representative of Reuter's Agency had an interview yesterday with Captain John Ingles, who has just been appointed to an important Government post in England after serving for six years in the Far East as naval adviser to the Japanese Government. Asked for his opinion as a naval expert of the Japanese fleet, Captain Ingles said:—"Before giving you my views I must warn you that I am not an unbiased witness, for in discussing a war between Japan and any other nation except England you may consider me a Japanese."

THE PERSONNEL.

"The Japanese Navy is distinctly comparable with a European Navy, both as regards ships, officers, and men, and in discipline is quite European. The officers are not only hard-working, but are extremely studious in all modern naval technical knowledge, they are, nevertheless, important social personages, and for this reason have great influence over the younger officers, who back them up loyally, and the chain of discipline is thus kept unbroken. The Japanese engineers are especially good, and the way the engines are kept and worked is admirable."

ENGINES AND GUNS.

"I have seen the fast cruiser *Nanima*, which sunk the *Kowshing* the other day, worked during naval manoeuvres up to 100 revolutions, which I subsequently found was her natural draught trial speed in England. This gives a very good idea of the condition of the engines in all the Japanese ships. The Japanese are very smart with hand-worked guns of medium size, but they do not take so readily to the hydraulic-worked guns. On several occasions I was out with the Japanese during target practice, and I considered their shooting to be very good. On board ship the Japanese are not the least like ordinary Easterns. Smart, and constantly on the alert—whether in sweeping a deck or in firing big guns—they are just like Europeans. They are, too, extremely patient and cheerful. I have seen them standing by their guns all night during naval manoeuvres, and then go ashore to do a forenoon's work in heavy rain in order to attack a position."

A COMPARISON.

"It is true that the Chinese have more battleships than the Japanese, but in these days it is hard to define a battleship, and in the three coast defence ships *Hashidale*, *Makushima*, and *Itsukushima*, the Japanese have really battleships in disguise. These vessels carry nearly the most powerful gun in the world, protected by 10-inch armour. This is by far the most powerful gun in the East, and is only slightly excelled by the British 100-ton gun. The mean speed of the Japanese fleet must be a good deal higher than that of the Chinese. The former have three ships of over twenty-one knots, others of eighteen, and the three coast defence vessels mentioned of about fourteen or fifteen knots, while the fastest Chinese ships that I am aware of are the two Armstrong cruisers of 18.6 knots."

SUBSIDISED VESSELS.

"Japan goes in extensively for fortifications in the Straits of Shimonoseki and the Gulf of Tokyo, and has just paid great attention to high-angled as well as direct fire. An important feature in the Japanese sea force is the subsidising of the Japan Mail Steamship Company, so that those vessels may be used for transports or armed cruisers in case of necessity. Vice-Admiral Ito, now in command of the Japanese squadron in the Gulf of Pechili, is a capable officer and a good seaman, who has had great experience in fleet manoeuvres. In summing up my opinion of the navy, I can only say that both in her sea force and in her forts Japan has every latest appliance, each worked with extreme intelligence."

THE JAPANESE ARMY.

With regard to the Japanese army, of which he has intimate knowledge, Captain Ingles said:—"In the army of the Mikado we have an entirely new factor in the Far East, for it is the only one in those quarters which has been drilled after the most modern method. Japan's peace-footing is 100,000

men, but the army in time of war can be expanded to 200,000 troops, and is admirably equipped in every respect, both as regards transport, ambulance, and other accessories of a field force.

APPEARANCE AT MANŒUVRES.

"At recent army manœuvres, at which I was present by invitation of the Emperor, there were no less than 35,000 men in the field. The railway service was worked in connection with the troops for bringing up reserves and supplies, and the forces were moved over the country just as they would have been in time of war. I did not know what to admire most, the easy way in which the troops were moved, billeted, and fed, or the patience, combined with dash and spirit, with which the men fought sham battles. Their fire discipline was exceptionally good, the officers using the whistle in signalling the 'cease fire.' The rushes from position to position were well delivered, and the troops were very steady when called to the halt. For instance, in no case did I see stragglers looking for their companies, although such an enormous number of men were engaged. The mounted and field artillery were remarkably well served; the drivers were quite fearless over rough country, and the gunners showed great smartness at gun-drill.

"AN IDEAL SOLDIER."

"From a physical point of view," continued Captain Ingles, "the Japanese is an ideal soldier, being very strongly developed in the muscles of the legs and thighs, while the upper part of the body is comparatively light. For this reason they are excellent marchers, and never seem to tire. I consider them to be the wiriest race under the sun."

PROBABLE TACTICS.

Speaking on the progress of the war and the probable Japanese tactics, Captain Ingles remarked: "Japanese naval officers are much impressed with the advantage in a land war of superiority at sea. They have been, I know, faithful students of the American naval historian, Captain Mahan. The Mikado will probably pour his troops into Korea much more quickly than is possible with the Chinese. The Japanese will use all means in their power to prevent Chinese reinforcements coming by sea to Korea, and in carrying out this plan they are sealing up the Chinese transports on the Chinese side of the Gulf. This no doubt accounts for the presence of large numbers of Chinese ships off Wei-hai-wei.

A PROTRACTED LAND WAR.

"I do not believe that the Japanese mean seriously to attack the forts—they are too wise, and value their ships too much, to risk their vessels in such work. In approaching the great Chinese forts, the Japanese are probably only making a reconnaissance in force. Having stopped Chinese sea transport, the Japanese troops will establish themselves in a strong position on land, so as to deal with the Chinese forces as they pour into Korea from across the northern frontier, keeping their bases at Fusan, Chemulpo, and possibly Gensan, clear for supplies. Unfortunately the war must be protracted, as China, on the one hand, would greatly lose in prestige if her suzerainty over Korea were affected; and Japan, on the other hand, having committed herself to placing a large army in Korea, cannot well withdraw without considerable modifications in the internal condition of Korea having been agreed to. I believe the Japanese will clear the sea before the winter sets in, and that the campaign will for the most part be a land one."

THE "NEW FACTOR."

In conclusion, Captain Ingles said:—"The usual commonplace one hears as to the Chinese being able, by force of their immense numbers, to conquer the Mikado's forces in the end, may be true, but it is not really so easy to foresee the result of the war, because, as I have already pointed out, the modern and well-equipped Japanese army is entirely a new factor in a war among Far Eastern nations."—*Daily Graphic*.

THE STRANDING OF THE "YODO-GAWA MARU."

The following account of this accident has been furnished by a passenger to the *Kobe Chronicle*:

"We left Nagasaki at 1.30 p.m. on Thursday, having from 40 to 50 Japanese passengers on board, and three Europeans, the Bishop of Southern Japan, his wife, and myself. It was an exceedingly fine day, followed by a fine clear night, and all went well until about 11.15 p.m., when, just after I had gone below to turn in, the vessel suddenly struck, and commenced to bump, bump, bump over the rocks. I rushed to the hatchway, which I found to be already blocked by a struggling mass of human beings, awakened out of their sleep by the noise

ing of the vessel on the rocks, but at last gaining the deck I found that we were situated not very far off shore, with the steamer in such shallow water that she rolled from side to side at first as if she would capsize. It appeared some little time before she could be stopped, and meanwhile the water was rushing in below and putting out the fires. When she at last became fairly steady, efforts were made to lower away boats but the rolling of the vessel was still so great that two of them were dashed against the side and smashed. One of the three boats on board managed to get clear, however, and was manned by several of the crew, who were dispatched for assistance. They offered to take the three foreigners with them, but the surf breaking on the reef looked so threatening that we preferred to remain on board and take our chance with the others. No attempt was made to rush the boats, though many of the passengers appeared very frightened. The interval of waiting for the boat to return was spent signalling for assistance, and this was done incessantly by means of rockets and lights until all the material was exhausted. Just as the rockets were finished, what appeared to be a large vessel stopped for a while outside the reef, but not finding the signals continued, apparently thought assistance was not required and went on. At 2 a.m. the boat's crew which had been sent for assistance returned in junks, accompanied by fishermen, and about 3 a.m. we were all taken off the stranded vessel and put on shore.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 29.

In consequence of the difficulty which would attend the retaking by the Dutch of Mataran and Negrara, negotiations have been opened with the Balinese.

London, October 1.

The Czar's illness has depressed the bourses.

The negotiations with the Balinese are officially denied. The Dutch have captured Mataran.

An immense sensation has been caused in Berlin, 180 non-commissioned officers of the army having been arrested for socialist intrigues.

A hitch has occurred in the betrothal of the Czarewitch.

London, October 4.

The Japanese Government has pledged its word to the Italian Minister that no hostile operations shall take place against Shanghai.

The recent arrests in Berlin of a large number of non-commissioned officers of the army were made in consequence of insubordination and not anarchism.

The Russian Press advises the exercise by Japan of moderation in Korea, and says that any attempt to annex the country would exhaust the patience of Russia.

[FROM THE "HONGKONG DAILY PRESS."]

London, September 25.

The *Times* in a special article exhaustively reviews the question of the military contribution of the Straits Settlements to Imperial defence. It says that the proposal from Singapore to increase the original contribution to £70,000 per annum seems a fair compromise, based on a calculation of the respective interests involved.

The Japanese have made a coaling station of the island of Hai Yung Iao in the Bay of Korea.

[FROM TONKIN PAPERS.]

Paris, September 14.

The Czar has recovered from his recent illness, but is forbidden to exert himself.

Paris, September 14.

A collision has occurred at Bombay between Hindoos and Mahomedans. One death has resulted and a number of persons have been injured.

Paris, September 16.

Placards have been posted at Bombay calling upon the Hindoos to enter on a religious revolt.

[FROM THE "N.C. DAILY NEWS."]

Tientsin, September 23.

Major von Hanneken was in command of the Chinese fleet on the 17th. The eight foreign volunteers in the fleet did splendid service, in

spiriting the Chinese. Commander McGiffin and Mr. A. Hekman, of the *Chên-yuen*, were wounded. Messrs. Albrecht, of the *Ting-yuen*, and Hoffman, of the *Tsi-yuen*, engineers, alone escaped without a scratch. The wounded are all doing well, and ready to go to sea again.

The two ironclads *Ting-yuen* and *Chên-yuen* sustained the bombardment without injury to hull or battery.

London, September 24.

The Governor of Casa Blanca (Dar-el-Baida, a fortified maritime town in Morocco) has apologized for the recent outrage.

It is stated that the Imperial treasure in Moukden amounts to twelve hundred millions of dollars—the accumulation of two centuries. This is an additional inducement for the Japanese to attack Moukden.

[FROM JAPANESE PAPERS.]

Hiroshima, October 3.

H.I.H. Prince Komatsu Yorihito and Count Matsukata arrived here to-day.

Kobe, October 4.

H.I.H. Prince Arisugawa Takehito arrived here yesterday and proceeded to Hiroshima this morning.

Hiroshima, October 4.

Marquis Saionji, newly-appointed Minister of Education, left here for Tokyo to-day.

Fusan, October 4.

A report has reached here to the effect that fire broke out this morning in the coal bunks of the *Sakata Maru*, now in port at Ninsen. Much confusion prevailed for a while, but the flames were eventually got under control. No injury was done to the vessel's hull.

Shanghai, October 4.

Fearing an attack by the Japanese army, the Chinese Government lately assembled 150,000 soldiers, and sent them to protect the northern part of Peking.

Shimonoseki, October 4.

A Sôul despatch dated the 1st inst. states that with a view to overthrow the new Government about one hundred *Togaku-to* partisans, disguised as Korean soldiers, resolved to enter the grounds of the Palace on the 1st (Korean calendar). The plot, however, was discovered, and the rebels were driven out of the castle; two leaders being arrested. The residents of Sôul are panic-stricken.

Shimonoseki, October 4.

The *Mogami Maru*, a military transport, which struck the rocks off Ninsen the other day, has sunk into deep water.

Nagasaki, October 4.

The U.S. flagship *Baltimore* arrived here to-day from Ninsen.

Hiroshima, October 5.

Count Kawamura's departure for Korea has been fixed for to-morrow or the day after. The Count gave a farewell dinner to Counts Ito, Saigo and Oyama and Viscount Hijikata.

Later.

The Ambassador of the King of Korea left Ninsen to-day, and is expected to arrive here on the 8th.

The Law of Siege was proclaimed by the Emperor to-day. Hiroshima and Ujina are now prescribed districts. All matters connected with the enforcement of the new regulations are entrusted to the Acting Commander-in-Chief of the Fifth Army Division.

Kyoto, October 5.

Mr. Nakai, Governor of this City, lies in a precarious condition. Dr. Baelz visited the patient to-day, but will return to Tokyo to-morrow afternoon.

Later.

A great battle is expected to take place at Ku-yon within the next fortnight. A Japanese reconnoitering column has reached the left bank of the Am-nok River. No enemy was seen on the opposite side of the river. The Japanese army is at Chong-ju, a distance of 20 *ri* from the Am-nok.

Shimonoseki, October 5.

A Fusan telegram says that Mr. Boku Ei-ko will be introduced to the Cabinet. The message adds that Mr. Otori, Japanese Minister, will be recalled.

18—Q to R 5, with winning attack. Black's reply, R to Kt 3, is of no value; it only develops White's Queen.
(g) Premature play. The Black Queen gets now in a very inferior position. White easily defends his K P, but Black cannot defend his weakened position. K to R sq. was the proper move. It White continues with P x P, Black finally will regain that pawn, for it cannot be supported. Otherwise Black plays P to K 4, with a fairly good game.
(h) Far superior than B x P ch, followed by Q x R, since Black is prevented from bringing his queen into play.
(i) Excellent play. Black cannot capture the pawn, on account of the threatening move of B to R 6.
(k) Mr. Albin played this game excellently, and he forced the win in the shortest order; after the present move his opponent surrendered. White exchanges queen and bishop, and Black is unable to stop the pawns.

END GAME No. 12.

The following interesting ending occurred in actual play some years ago. The manipulator of the White pieces was the renowned problem composer, the late J. G. Campbell:—

BLACK—(—).

WHITE—(J. G. CAMPBELL to play).

Mr. Campbell's method of obtaining the draw is both amusing and instructive. The game proceeded as follows:—1—B to Q 2, P moves; 2—B to R 5. P Queens; 3—P to Kt 4, and whatever move Black may make White is stalemated. The position will be familiar to experts, but may be new to many of our readers, and in any case is well worthy of reproduction.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mrs. J. T. Course, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dineto, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is THE JOURNAL for Investors, Speculators, and business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by an financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPY POST FREE.

ATKINSON'S WHITE ROSE
Delicately fragrant as the flower itself. Always fresh and fragrant, its delightful odour never wears.

ATKINSON'S EAU DE COLOGNE
Absolutely superior to all other perfumes for the fineness of its aroma, its strength, and its exquisitely refreshing quality. Antiseptic, Fragrant, and the best of all perfumes.

J. & B. ATKINSON,
24, Old Bond Street, London.

CAUTION! Only genuine with this blue & yellow label & usual Trade Mark, a "White Rose," and address in full.

January 13th, 1894.

MILKMAID BRAND

CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

September 8th, 1894.

ASK FOR

LIEBIG COMPANY'S

And see that each Jar bears Baron Liebig's Signature in Blue Ink across the Label.

For Liebig

To be had of all Storekeepers and Dealers throughout India.

Cookery Books Post Free on Application to the Company.

LIEBIG'S EXTRACT OF MEAT Co., Limited, Fenchurch Avenue, London, England.

EXTRACT OF MEAT

FINEST AND CHEAPEST
MEAT-FLAVOURING
STOCK FOR SOUPS.
MADE DISHES AND SAUCES.

Invaluable for India as an Efficient Tonic in all cases of Weakness. Keeps good in the hottest climates, and for any length of time.

Cookery Books on Application to me of this Paper.

June 14th, 1892.

DINNEFORDS

The Universal Remedy for Acidity of the Stomach, Headache, Heartburn, Indigestion, Sour Eructations, Bilious Affections.

MAGNESIA

Sold Throughout the World.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 13TH, 1894.

BIRTH.

On the 11th inst., at Kobe, the wife of MAX SÜTH, Esq., of a daughter.

MARRIAGE.

On the 9th inst., at Christ Church, Yokohama, by the Rev. E. Champneys Irvine, M.A., Incumbent, WILLIAM KIRKLAND WILSON, eldest son of Frank Hebben Wilson, of Blundellands, near Liverpool, England, to CATHERINE VERONICA COX, youngest daughter of the late Henry Thomas Cox, of Liverpool. —No cards.

SUMMARY OF NEWS.

MARQUIS MAYEDA has contributed yen 100,000 towards the war fund.

THE 11 division yacht *Daisy* holds the "Jessie Cup" for the present year.

GOVERNOR NAKAI of Kyoto died on the 10th inst., after a short illness.

RUMOURS are current that Mr. Otori, Minister to Korea, will be recalled.

MR. IWASAKI YANOSUKE proposes to erect a fine art gallery at Marunouchi, Tokyo.

OVER eight hundred Japanese emigrants left Kobe on the 5th inst. for Hawaii.

Two fires broke out in some rooms of the premises occupied by Messrs. Carl Roth & Co. in the

day evening. After fighting the flames for an hour, the firemen succeeded in putting out the conflagration.

HARMSTON'S Circus is achieving great success in Tokyo with a realistic battle-piece.

THE special Korean ambassador to Japan is Prince Wi-hwa. He leaves Seoul on the 13th.

KOBE fared very badly in the interport match with Shanghai, being defeated by an innings and 149 runs.

KAWAKAMI OTOJIRO, the *soshi* actor is now playing a melodrama of the War at the Minato Theatre, Yokohama.

THE total amount of public subscriptions received at the Naval Department up to the 10th inst. reached yen 327,766.

THE new telegraph wire between Hiroshima and Tokyo has been completed, and the line put in operation from the 5th inst.

THE "Shorts" beat the "Longs", badly at Cricket on Saturday, obtaining 253 runs for six wickets, against their opponents' 59.

FURTHER subscriptions by foreigners to the funds of the Red Cross Society and the Army and Navy comforts' scheme, are announced.

AN eleven of Yokohama met a team of All-comers on Wednesday. The All-comers made 137, and the Eleven 123 for nine wickets.

THE Yokohama Chihō Saibansho holds that the Japanese Statute of Limitations is applicable to Chinese who apply to the Courts of this country.

IN the A division race on Saturday for the "Maid Marion Cup," presented by Captain James Martin, the yacht *Maid Marion* won easily.

SEVERAL changes have taken place in the Korean Cabinet of late, and the pro-Japanese officials have all been summoned to resume their duties.

THE weather during the past week has been fine but blustery, causing the postponement from day to day of the preliminary heats in the Autumn Regatta.

KARITA-DAKE has burst into action. The nearest post-town is Sendai, and some police of that town have been sent to inspect the scene of the outbreak.

A very severe earthquake was experienced in Yokohama, Tokyo, and district on Sunday night. The vibrations lasted for over eight minutes, but little damage was done.

DR DUNCAN, formerly a surgeon on the Canadian Pacific steamship line, applied for permission to join the Japanese medical field staff, but his application could not be entertained.

ADMIRAL Viscount Saigo, Minister of the Navy, is temporarily holding the portfolio of War, Count Oyama having been appointed Commander-in-Chief of the Second Army in Korea.

TWELVE residents of Koza District, Kanagawa Prefecture, who ate mushrooms, developed symptoms of poisoning. Five had died up to the 3rd inst., and three were making slow progress towards recovery; the rest are, in a very dangerous condition.

SILVER Wedding medals were bestowed on 1,207 persons, including 21 members of the Imperial family, 38 officials of *Shinnin* rank, 624 high officials, 5 attendants in the *Yakonomo*, 42 attendants in the *Kinketomo*, 256 noblemen, 1,004

ers of official rank, 100 holders of decorations 64 foreign residents, and 21 foreign employes.

THE members of the Tokyo Chamber of Commerce resolved at their general meeting held on the 5th inst. to dispatch their President, Mr. Shibusawa Eiichi, to Hiroshima to convey their congratulation to H.I.M. the Emperor.

THE Yokohama Town Assembly has decided to spend yen 20,399.868 upon the Yokohama Elementary School, yen 14,150.566 upon buildings for the Yokohama Commercial School, and yen 3,174.562 for rooms for a Kindergarten.

THE Rice Exchanges throughout the Empire having speculated a little too freely in "futures," in consequence of the war, the Authorities have dispatched a warning to the brokers upon the matter. It is said some stringent measures will be adopted if the Exchanges force quotations above a reasonable limit.

REUTER telegraphs:—H.R.H. the Duke of Cambridge has been busily engaged at the War Office on account of telegrams passing with the East, which are believed to have reference to an increase of the garrison at Hongkong. It is reported that the Chinese troops have evacuated Korea, and are now massed at Chiu-lien-ch'eng, thirty miles to the west of the Yalu River, to oppose the advance of the Japanese in Manchuria. Many Chinese are said to have deserted lately on account of their arms and ammunition being bad. The married officials of the Customs at Peking are leaving, owing to the animosity of the natives to foreigners. Her Majesty's ships *Æolus*, *Pigeon*, and *Redbreast*, have been ordered to the China Station. Three Russian war-vessels have left for the Pacific and two Russian iron-clads are to leave shortly. The French Government has ordered to China three cruisers and a gunboat. It is believed that the Powers have agreed to bring pressure to bear upon Japan in reference to the integrity of Korea, and to oppose any attempt on the part of that country to exercise the rights accruing after conquest. Earl Grey is dead. The Cesarewitch has been won by Childwick.

THE Import trade is not quite so brisk as last reported. Yarns are quieter, though there is no change in quotations. Shirtings of the heavy kind are in good demand and maintain their value, but light-weights are offered at lower figures without inducing sales. Fancies are generally dull, the principal exception being Turkey Reds, which continue to be taken at late rates. Woollens are very quiet. Certain Cloths have been taken in retail parcels, and there is an enquiry for Blankets, though buyers are standing off for a reduction. The Metal trade is small, but deliveries continue to be good. There has been a fair business in Kerosene, prices are well maintained, and the stock is decreasing. There has been a good deal of Sugar sold, especially of Brown sorts, and for Formosa less money has been taken, while Manilas are unaltered. Prices for Whites are well maintained, but large lots of "damaged" have filled up buyers for the time. A good business has been done in Raw Silk, holders having pegged a hole or two in prices for the better sorts, but the stock is still large. Owners of Waste Silk have been current for all kinds—a large trade has been the result—and great quantities of Pierced Cocoons have been moved off. A very quiet week has passed in Tea, and if prices are easier there is no quotable change, and the stock is small. Exchange advanced at the commencement of the week, but declined again in the latter part.

URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Imperial Rescript No. 174 placing Hiroshima and Ujina under the law of siege, is commented upon by the vernacular press. Some papers devote long leaders to it. They approve the measure as prudent and necessary, and urge the local authorities to conform with the letter and spirit of the law. As for the provisions relating to letters, telegrams, domiciles, and so forth, the general hope and expectation are that they will not be harshly applied.

The question whether a loan for war purposes should be raised at home or abroad, is discussed by many papers. The Progressionist organs all advocate recourse to the foreign market. They see no danger in becoming the debtor of a western country, for, in their opinion, Japan is neither so poor nor so unenlightened that she need shrink from such transactions. The *Jiyu Shimbun* also favours a foreign loan for two reasons, first, because it might be obtained at a very low rate of interest, and secondly because it would "grease" the financial mechanism of the country, which is already in great need of a lubricator. Most of the other Metropolitan papers oppose a foreign loan upon the ground that it would be derogatory to the country's honour to seek financial aid abroad before the war has been terminated, and not necessary either, for, however great the war expenses may grow in the future, she is, they declare, wealthy enough to meet them. The *Nichi Nichi*, let us add, is surprised at the idea of a foreign loan being mooted so early in the day.

The *Kokumin* heads one of its articles, "Japan from an Economic Point of View," and referring to the fact that 5,000 *yen* in Japanese paper currency was found in a tent left by the Chinese at Pyŏng-yang, says that this circumstance, together with the fact that some 5,000,000 *yen* of Japanese notes have been exported to China, show Japan to be a great country in matters of political economy. Our modest contemporary asks, "Has paper currency any value apart from the credit of the source issuing it?"

The *Yomiuri* renews its hackneyed attack upon the Japanese nobles for their backwardness in presenting contributions to the war fund. We are not informed what evidences of this backwardness are forthcoming, and certainly in the absence of definite proof no one will admit the justice of such a charge. According to some journals, the peers themselves are only too glad to be the objects of popular attack as regards their contributions towards the war fund, for, the more frequent and the more pointed these attacks, the greater the amount which their stewards will be induced to devote to the purpose.

The *Niroku*, the *Nippon*, and several other Tokyo papers allude to the French and the British policy in Eastern Asia, and fear there may occur a war between these two Western Powers, eclipsing that between China and Japan. They are also afraid that European Powers will propose to arbitrate before Japan has humiliated China sufficiently to ensure the peace of Eastern Asia for generations to come. Seeing things in that light, they urge the Japanese Government to take measures such as shall make China come to terms at the earliest possible date. Japan, writes the *Asahi*, could not gain much and might lose a great deal, were she to accept the intervention very likely to be suggested by European Powers before Peking is in possession of a Japanese army.

The reforms in Korea have received a considerable amount of newspaper attention during the week. The *Jiji* describes how the people of the Peninsula differ from those of this country, and laughs at the idea of reforming Korea and her institutions after a Japanese pattern. It is

opinion only one method of reform can be expected to succeed among the Koreans, who lack almost every qualification for progress and civilization. That single method is education, which, though slow, works surely. The *Kokumin* thinks that the eminent Japanese who is so much spoken of as likely to be employed by the Korean Court, cannot hope to accomplish anything very remarkable if his powers be no more than his official title indicates. Rather than send such an advisor, great only in name, Japan had better lend the Korean Government young statesmen full of vigour and energy, not as irresponsible councillors, but as active functionaries.

The *Jiyu* writes in nearly the same strain. It advises the Japanese Government to send men ambitious of political fame and power, not in office now, who have sufficient knowledge and intrepidity to overcome the various difficulties that they would encounter in giving effect to their intentions. The *Yomiuri* speaks of Japanese Buddhist priests in terms of high admiration and advises them to send a party of missionaries to reform the Koreans spiritually. "Buddhist priests should exercise spiritual control of Eastern Asia at least, if not of the whole world." For that purpose nothing, we are told, would be more effective than to send missionaries to Korea even before the present war ceases. The same journal adds that it is idle for Japanese Buddhists to dissipate their energies fighting Christian missionaries and to quarrelling among themselves at home.

The *Jiji* warns Japanese merchants and artisans that, small as the influence of the war upon their business may hitherto have been, they have yet to face a painful future, and advises them, in its usual sober and composed style, to employ every possible precaution with the view of grappling with the various difficulties and dangers that threaten them and preparing to develop increased activity after the war.

The *Mainichi Shimbun* speaks of the Royal Ambassador from the Korean Court, who is soon to come to this country, as no ordinary Envoy, and urges that he be welcomed as a national guest. He will visit Tokyo after having had audience of the Emperor at Hiroshima, and on his arrival in the Capital and during his stay there, the Tokyo citizens should show toward him all the respect due to his rank and mission.

The *Jiyu* warns the Authorities to guard most carefully against anything that might tend to unduly increase the influence and power of military men after the war. Distinguished merit and good service must be rewarded, but care should be taken not to place military achievements on too high a pinnacle.

EDITORIAL NOTES.

ENGLAND'S ATTITUDE WITH RESPECT TO THE WAR.

A VERY strong protest is made by the *Jiji Shimpō* against an article appearing in a recent issue of the *Pall Mall Budget*, wherein the theory is advanced that, considered from the standpoint of selfish interest, England is compelled to hope that China will be successful in the present war with Japan. Our contemporary is strongly opposed to any such opinion. Viewed from the point of size and numerical strength of population, China is unquestionably ten times larger than Japan, but, urges the *Jiji*, there is no preponderant difference between the Empires at all with regard to their respective foreign trade. The truth is that only a small portion of the Middle Kingdom is accessible to commerce, fully nine-tenths being still practically secluded from any connection with the rest of the world. To let things go on in this manner would mean to leave untouched the larger part of China's natural wealth, a step which could only be regarded with regret by

the rest of the world. Japan has undertaken the present war with the intent of forcibly putting an end to such seclusion; to chastise the perverse and bigotted ignorance of the country; and to illuminate its darkness with the lamp of civilization. The object of the war is thus to secure a permanent benefit for Japan and England. The *Pall Mall Budget's* assertion that the victory of China is preferable to that of Japan simply amounts to stating that England is content to enjoy only one-tenth of the whole profit which she would reap if success declared itself for Japan. The *Pall Mall's* remarks are probably also actuated by the idea that China, if victorious, would serve as an excellent buffer against the aggressive designs of Russia on India; but for this purpose, declares the *Jiji*, China is of no value whatever as matters stand at present. China's movements in the war hitherto have already proved, and that beyond the possibility of doubt, that she is practically incapable of affording any degree of protection to a neighbouring country. The Middle Kingdom is in truth nothing but an easy prey, astray in the Orient and waiting to be seized by some one of the stronger Powers. Before the outbreak of the present war the untrustworthiness of China as an ally was thoroughly recognised by the Government and people: the talk of an Anglo-Chinese alliance is a thing of the past. Such utterances as those of the *Pall Mall Budget* can not therefore be regarded as reflecting the general tendency of public opinion in England, and there is no doubt that before long the *Jiji's* London contemporary will discover its error and introduce a vital alteration in its views.

CONTRIBUTIONS MADE BY THE TITLED AND MONIED CLASSES.

ONE of the most significant proofs of the joy with which the Japanese people received the welcome intelligence of victories both by land and sea, is found in the fact that there was at once a great increase in the number of persons applying for permission to contribute towards the War Fund. The titled and monied classes were, we are told, not slow to follow the example thus set. First on the list is the family of Prince Shimazu, always foremost in loyal and patriotic enterprises. The Princes Shimazu—for there are two—arrived in Tokyo a few weeks ago, having come at once from Kagoshima so soon as the news reached them of the outbreak of war between this country and China. They waited upon the Emperor in order to pay their respects and started again for home after having stayed in the capital a few days. But before leaving the city they told their house-stewards or controllers that they desired to meet with and entertain the military and naval officers coming from Satsuma; and as this was impossible on account of so many having already departed on their gallant mission, they wished to manifest their appreciation of the officers' zeal in the discharge of their duty by entrusting the sum of ten thousand *yen* to Counts Saigo and Oyama to be distributed as these two statesmen thought fit. The stewards did as they were ordered, and the donation is reported to have been suitably distributed under the auspices of a special committee. A similar generous and patriotic spirit has been shown by Marquis Tokugawa (Mito). His first contribution was one of ten thousand *yen* to the War Fund, which was supplemented by a second of five thousand *yen*, to be distributed among the families of the officers belonging to the Mito clan. Mr. Iwasaki's donation partakes of an unusual form, according to the information of the *Mainichi Shimbun*. Materials for the construction of a huge shed, which the soldiers are to use as their winter-quarters, are supplied. The general plan of the structure has already been completed, and it is to be of such a nature that it can be pulled down and re-erected without injury. The whole, including the cost of transportation to Chemulpo—supposed to be the destination—is said to represent an outlay of 35,000 *yen*.

We find elsewhere an itemised statement of Mr. Iwasaki's gift. It includes 15,000 logs;

8,400 pillars or columns of wood; 15,000 bundles of shingles; 92,000 *ken* of beams; 12,000 planks for flooring; 75,000 pieces for walling; 3,600 shutters; 2,700 half-wood sliding screens; 30,000 *ken* of short wooden supports for flooring and foundations; and 3,600 panels and sashes. All these when set up will make a building capable of housing with ease at least thirty thousand soldiers.

A SOLICITOUS CORRESPONDENT.

Now that both the Army and Navy have accomplished such equally great exploits in their respective provinces, with still greater duties awaiting their successful performance, a correspondent of the *Nichi Nichi Shimbun* is solicitously moved to call the attention of naval and military officers to something he desires to say. Many causes were at work, he writes, that combined to frustrate the ultimate aim of Hideyoshi's Korean expedition, among which the unfriendly existing between the two generals, Kato Kiyomasa and Konishi Yukinaga, who were in command of different army corps, was one of the most conspicuous. The spirit of rivalry was not confined to the army; it raged with equal bitterness in the navy of that day. Two of the leading naval commanders, Wakizaka and Kato Yoshiaki, were frequently at variance with regard to the operations of the fleet, so that the victory achieved by the latter at Toto was simply accidental. It is of course out of the question to compare the Japanese Admirals and Generals of to-day with those of Hideyoshi's age, for despite their unquestioned valour and chivalrous exploits they were as children when viewed from the standpoint of this century's highly developed tactics. Still the lesson taught by the expedition of the *Taiho* should be kept in mind by the leaders of the present day. Working separately and mutually independent, the sailors may complain of their comrades on land as monopolizing all the merit, and *vice versa*. Such a sentiment, should it arise, is very slightly different from actual resentment, and such an occurrence would result in a want of harmonious co-operation on the part of the land and sea forces: a consummation greatly to be dreaded. But General Nozu and Admiral Ito are both officers of high repute, and so the *Nichi Nichi's* correspondent trusts that any contingency of the kind is likely to be avoided.

THE "HIYEI" AND "AKAGI."

The men-of-war *Hiyei* and *Akagi* arrived here on Thursday last, says the *Nagasaki Express* of the 3rd inst., for the purpose, it was reported, of undergoing repairs. The former, however, left yesterday, probably bound to Kure, and the latter is now in dock. Previous to the *Akagi* going in dock, the *Atago* was taken in and for some time the latter was mistaken for the former. The *Atago* did not take part in the fight, but had sustained slight injury to her bow in a collision. Judging by the outward appearance of the *Hiyei* and *Akagi*, who are said to have borne the brunt of the fight, in company with the *Matsushima*, much cannot be said in favour of Chinese marksmanship, if that is the best their gunners can do in a comparatively close-range engagement lasting about five hours. The *Hiyei* has a large round shot-hole in her stern, three smaller splintered holes amidship on the port side, and one on the starboard side. The *Akagi* has lost her main-mast, the falling of which is said to have caused the death of her commander, her funnel is badly riddled, and there are several shot-holes abreast of the main-mast on the starboard side. Considerable damage may have been caused in the interior of the ships, and also on the decks, which was not visible to an outside observer. On Saturday night a very unfortunate and fatal accident occurred alongside the *Hiyei*, whilst a steam launch was being hoisted up, resulting, it is said, in the loss of three lives.

CHINESE PRISONERS IN EHIME.

Much amusement is being caused by the naive replies and outspoken demeanour of the Chinese

prisoners of war now in Ehime Prefecture (Matsuyama). They express themselves as more than delighted with the manner of their entertainment and the quality of the rations served them. They are not, they declare, regular soldiers but mere mercenaries, having entered the Chinese army for the pay promised them and which, according to their contract, still runs on even when they are in captivity. This point they have frequently emphasized, and constantly beg their guards to request the Japanese Government to see that China pays them regularly: they want all their back-pay, their salaries being, they allege, considerably in arrear. The Japanese soldiers guarding them are said to be astonished at the spirit shown by these men. They have not the faintest conception of patriotism, their whole soul being wrapped up in planning for a payment of what, rightly or wrongly, they claim as their dues. None of them expresses any particular desire to hurry back to China, and they seem to have got all the fighting they want. The men are in good health and spirits, always excepting the mental worry attendant upon that question of back-pay.

A FEMALE SPY.

A rumour comes from Hiroshima relative to the capture of a supposed female spy, who gives her name as Otoro. She is said to be a concubine of Viceroy Li and to have been despatched to Japan for detective purposes alone. Although perfectly familiar with the Japanese language, it is reported that she speaks with a peculiar accent, so that she is believed in some quarters to be of Chinese birth. Quite a number of metropolitan journals publish these rumours, but we are inclined to discredit the whole report. It is simply incredible that a Japanese woman of such a nature could be found, nor is it possible that Li Hung-chang should attempt to obtain information in this manner. The story seems to be one of the many canards that are now winging their way through the credulous columns of the Tokyo press.

PROCLAMATION TO THE OFFICERS OF THE ARMY. The following is a translation of the text of the proclamation made by Field-Marshal Count Yamagata to the officers of the Army:—

I hereby do make proclamation to the honourable officers of the Imperial troops. It is indeed an event hitherto unknown that the tranquillity of the whole Orient should be disturbed and the two great Empires of Eastern Asia be compelled to meet each other in actual warfare. Japan is justified in equipping her armed forces, and the blame of the whole affair rests on China's shoulders. And yet, should our Army fail to achieve the original object for the attainment of which the present war has been undertaken, and even fail to win a complete triumph, then would that glory which has for twenty-five centuries been the possession of our Empire, disappear; not only should we then invite the contempt of the whole world, but a calamity of untold magnitude would befall our country for centuries to come. It is to provide against emergencies such as that which this our country has now to meet that men are trained to be warriors in ordinary times of peace. All these are points with which you are familiar; yet seeing that I, in obedience to the august command of H.I.M. the Emperor, am now here as Commander-in-Chief, I am constrained to make a few remarks. You are possessed of loyal hearts and steadfast minds, in so high a degree that I am struck with admiration. Since you came here months have passed away in the case of some, while even the latest comers have already spent weeks in the Peninsula; and this in a strange land whose climate and conditions of living are different from our own, where the roads are rough, the dwellings small and filthy—and even this inadequate shelter is often denied so that you are compelled to encamp in the open air—and, finally, in addition to all this, the supply of everything is deficient. Yet you endure all these hardships with patient forbearance and are eager to push boldly forward so soon as the word is given and to capture (this desire is, I am confident, ever present in your hearts) the capital of our foes. I feel assured that the chief sentiment of the loyal hearts and faithful minds of Japan's officers and soldiers is to be in action, so as to display the innate valour and bravery of the Empire. Our fighting men are disciplined and full of courage. On the

they have already wiped out their foes in the battle of Sōng-liwan, and on sea they have destroyed or captured the enemy's war-ships. These are the results achieved at the outset of the war and augur well for our future success. The land of our foe is vast and the population innumerable, so the task lying before the warriors of Japan is a serious and an important one. It is vitally necessary that because we have been victorious in one or two engagements we should not scorn or underrate our enemies. My valiant officers! it is not a most important duty to arouse the spirit of those placed under your command so that they shall consider death on the field the truest glory and retreat disgrace; so that, they being inspired with unflinching courage, we shall speedily be enabled to dictate terms of peace and thus relieve the august mind of the Emperor from its deep anxieties? One word more in conclusion. It ought to be remembered that what we regard as our foe is simply the army of China, not the people of that Empire; so long as they refrain from obstructing the advance of our army we need not look upon them as our enemies. At the same time it is of the utmost importance for us to be on our guard, so that we may not have to suffer from their deceptive artifices. Moreover, the Chinese have, from ancient times, ever been endowed with the cruellest and most merciless dispositions; therefore if during a battle a warrior by any chance falls into their hands, he is sure to suffer the most pitiless treatment by them, to which death is far more preferable; in the end even he will be put to death with savage ferocity. It follows that in whatsoever circumstances a soldier should avoid being taken alive, and should rather in such a case die gallantly, manifesting by such a death the warrior Spirit of Japan and perfecting the fame of our heroic ancestry. Devoid of ability as I am, I have been charged with a weighty task in this strange land; and these are the sentiments I would communicate to you now that I am about to undertake my duty side by side with you.

(Signed)

Field-Marshal Count YAMAGATA ARITOMO,
Commander-in-Chief of the First Army.
Sōul, September, 27th year of Meiji.

TO SUPPRESS BRIBERY.

In the United States, in order to suppress bribery at elections, an amendment to the constitution is proposed. It is aimed at more subtle violations of the purity of election than the mere buying of votes at so many dollars a head. By the proposed amendment the use of money to secure the nomination of any candidate is prohibited, except as expressly allowed by law; and further it is made unlawful for any corporation to contribute money in aid of any political party or organization or for or in aid of any candidate for political office. This last provision, if it can be enforced, will be an effective blow at the political influence of trusts and syndicates. To assist the working of the amendment it is provided person that no shall be excused from testifying as a witness on the ground that his testimony may tend to incriminate himself, but such testimony shall not be used against him in any criminal proceeding except an action for perjury. That is to say, a person suspected of bribery may be asked under oath whether or not he has unlawfully given money to influence an election, and he will be subject to penalty for contempt of court should he refuse to answer.

A GRAVE CHARGE BROUGHT AGAINST THE METROPOLITAN PRESS.

A SERIOUS charge is preferred by the *Fiji Shimpō* against its metropolitan colleagues, they being accused of rank plagiarism and the fabrication of news. There are five or six foreign newspapers issued in Yokohama, observes our contemporary, yet the only paper that subscribes to Reuters is the *Japan Mail*. All the others are content to transcribe whatever intelligence the *Mail* gets from Reuters, but they always acknowledge the source of their information. Yet these Yokohama sheets are published for a few thousand foreign residents and an inconspicuous number of native subscribers; they are not therefore to be regarded as newspapers of any particular importance; nevertheless they observe in this punctilious manner the rules of courtesy binding upon the newspaper world. Such is far from being the case with the self-styled *Metropolitan* press of

Tokyo. Telegrams or news obtained by our paper at considerable expense and with much labour are freely purloined, not only without acknowledging the source of inspiration but even pretending that it is an express or news specially obtained from "our own correspondent." Plagiarism and deception is the order of the day with the Tokyo press at present. It follows that unless the public enforce some means to check these detestable practices, by showing for instance that they hold in contempt any paper that resorts to such methods in order to fill up its columns, the newspapers of Japan will sink to a deplorably low level. Their second method of procuring what they call the latest intelligence from their "special correspondents" is about on a par with their plagiaristic feats; for when they are unable to appropriate other people's property and give their columns an impressive appearance with stolen news, their imagination begins to run riot and they set to work upon invention. The latest and most noteworthy instance of this kind of journalistic manufacture is the reply which Admiral Ito, in command of the Japanese Fleet, is said to have made in response to the Imperial Rescript issued in connection with the naval victory at Hai-yang. The imaginary reply given by the offending newspapers was couched in the following terms:—"I, Sukeyuki, who hold a great trust, am always filled with profound anxiety concerning my ability to discharge the task devolving upon me. That in the latest engagement in the Yellow Sea the Squadrons placed under my command were able to crush our foes, was entirely attributable to the august influence of His Imperial Majesty, as well as to the bravery of my subordinates and sailors who are eager to obey the Imperial commands. Now I have received this most generous Rescript. I regard this as the most glorious event in my life. I, my subordinates, and the sailors of the Fleet are profoundly grateful for the Imperial benevolence, which we have sworn to requite with our lives." This was the supposititious reply of the Admiral, said to have reached Hiroshima at 11 p.m. of the 21st ultimo, according to the precise statement of these most unconscionable journalists. But what is the real fact? What actually did happen is that Admiral Ito's reply did not reach Hiroshima until 10.30 a.m. on the 24th, or just about three days later than it ought to have arrived according to the calculations of the metropolitan newsmongers. This real reply was wired to us by our Hiroshima correspondent at 1.10 a.m. on the 25th. The words of the true document ran thus:—"On the intelligence of the victory achieved by the combined Squadrons in the Yellow Sea reaching Head-quarters, His Imperial Majesty graciously issued a most indulgent Rescript, for which reason I, Sukeyuki, am overwhelmed with grateful awe. I herewith most respectfully congratulate His Imperial Majesty on the Imperial well-being, and most humbly submit this reply." It is a thousand pities, sarcastically observes the *Fiji*, that the genuine reply was so entirely different from that manufactured by the clever scribes of Tokyo; but what is most calculated to amuse outsiders is the remarkable similarity between the forged document and the reply which Lieut.-General Viscount Nozu submitted to the Emperor in like manner. Very superficial comparison will suffice to show that the false acknowledgment of the Admiral was manufactured out of material supplied by the earlier reply of the Lieut.-General, with only slight alterations here and there. The Tokyo journals have become sufficiently notorious for their publication of baseless intelligence; it is too much that they should be so mendacious as to fabricate a reply to an Imperial Rescript. What will be the end of all this, we wonder.

We (*Japan Mail*) can assure our contemporary that it does far too much honour in ascribing so high a degree of journalistic punctilio to the foreign newspapers published in Yokohama. Our own columns have again and again been rifled of their store and their contents, dressed in somewhat changed language, made to reappear as the bona fide intelligence

gences or invention of others. By way of illustration we may quote the following:—

Japan Mail, OCTOBER 6TH.
LATEST TELEGRAMS.

[REUTER'S "SPECIAL" TO "JAPAN MAIL."]

London, October 4.
The Japanese Government has pledged its word to the Italian Minister that no hostile operations shall take place against Shanghai.

The recent arrests in Berlin of a large number of non-commissioned officers of the army were made in consequence of insubordination and not anarchism.

The Russian Press advises the exercise by Japan of moderation in Korea, and says that any attempt to annex the country would exhaust the patience of Russia.

Japan Gazette, OCTOBER 6TH.
LATEST TELEGRAMS.

SHANGHAI SAFE.

London, October 4th.
The Japanese Government has pledged its word to the Italian Minister that no hostile operations shall take place against Shanghai.

THE BERLIN ARRESTS.
The recent arrests in Berlin of a large number of non-commissioned officers of the army were made in consequence of insubordination and not anarchism.

A RUSSIAN WARNING.
The Russian Press advises the exercise by Japan of moderation in Korea, and says that any attempt to annex the country would exhaust the patience of Russia.

Here are three important telegrams, our property, for which we have paid, copied from our columns without the smallest acknowledgment. But apart from this question it is quite evident that the Japanese reading public do not place implicit confidence in the reports circulated by the metropolitan press. How often do we meet with persons who eagerly ask questions concerning this or that item of intelligence, adding "We see only the Japanese papers and therefore cannot be sure that what we read is absolutely true. What do the Yokohama papers say?" Unfortunately a perusal of the majority of the Yokohama press would leave them no wiser than they were before. The *Japan Gazette* alone is a monument of conflicting news: now it is the Chinese that have won, then the Japanese that have achieved "a brilliant victory" on the same spot; again we hear that at the very least four Japanese men-of-war have sunk beneath the waves, and live to learn later on that the destroyed vessels were probably of Chinese nationality after all. If the *Fiji Shimpō* finds it mendacious and disrespectful to fabricate a reply to an Imperial Rescript, what must it think of that Yokohama journal, bound by every law of courtesy to respect the authorities of the land in which it is published, which bluntly gives the lie to such a Rescript?

PNEUMATIC DYNAMITE GUNS.

The three pneumatic dynamite guns on Sandy Hook, contracted for by the U.S. Government, and built by the Pneumatic Gun and Torpedo Construction Company, were recently tested in the presence of official experts, and were found to be in every way better than the specifications demanded. One of these guns has a seven-inch calibre, the two others are fifty-two ton guns with a fifteen-inch calibre. The compressed air by which the projectile is discharged is stored in large reservoirs, so arranged that the pressure in the reservoir communicating directly with the gun can be maintained at a constant level. Any required degree of pressure can be obtained, that used in the larger gun to discharge a projectile of maximum weight at the longest range possessed by the gun being 1,000 pounds to the square inch. The largest projectile is eleven feet in length, and contains 500 pounds of explosive. The point is made of bronze and the body of steel three-sixteenths of an inch in thickness. The fuse, which can be made either to explode the projectile immediately after it strikes or at the expiration of a required number of seconds, is placed in the point of the projectile immediately before loading. In order to secure certainty of discharge, all the parts of this fuse are made in duplicate; and for greater safety, the hammers of the fuse are locked as long as the projectile remains unfired, and are unlocked by an automatic contrivance shortly after it is clear of the gun. The projectile weighs 1,120 pounds, and its range is 2,600 yards. The gun is moved by electricity, and can be aimed and discharged without effort by a single man. To load the gun with the largest projectile requires six men, but it is hoped before long to perfect electrical apparatus that will enable the loading also to be done by the gunner. The gun not being rifled, the projectile has an instrument on its tail resembling a

screw propeller, which serves to steady it in its flight. An interesting feature of the gun is that the range can be altered without changing the elevation, by increasing or diminishing the air pressure in the discharging reservoir. The guns can also fire smaller projectiles, each containing 200 pounds of dynamite explosive. These have a lower calibre, but are made to fill the barrel by being enclosed in a light case consisting of separate sections, which drop off shortly after the projectile leaves the mouth of the gun. We have not been able, from the accounts we have seen, clearly to understand the mechanism by which this is effected. These projectiles carrying two hundred pounds of explosive have a range of 4,000 yards. A projectile of still smaller calibre, carrying 100 pounds of explosive, has a range of 5,200 yards.

When tested, these guns more than answered expectations, both as to accuracy and as to rapidity of fire. Most of the projectiles used in the tests were "dummies," but a few genuine explosive shells were fired. Five consecutive shells fell in a straight line within a space 39½ yards long at a distance of 2,000 yards from the gun. The results of the tests made of the quickness of firing were as follows: five shots each weighing 445 pounds were discharged in 8 minutes 45 seconds; ten shots each weighing 556 pounds were fired in 14 minutes 40 seconds; ten shots each weighing 1,140 pounds were fired in 15 minutes 36 seconds. The twenty-five shots were discharged in one-half the time allowed in the contract specifications. Several shells containing 200 pounds of explosive and one containing 500 pounds of explosive were also discharged. The last was thrown 2,400 yards. The fuse was set to cause the explosion two seconds after striking the water, during which time it was calculated that the projectile would sink about eighteen feet. The projectile was seen to strike the water (owing to the absence of smoke and the comparatively low velocity of the projectile—about 600 feet per second—its flight through the air can be clearly followed), and a second or two afterwards an enormous column of water was thrown into the air. Estimates of the size and height of this column are not likely to be accurate, but it is said to have been an acre in extent, and to have risen to a height of nearly three hundred feet. The roar of the explosion was heard, and the shock distinctly felt, by the watchers at Sandy Hook a mile and a half away. It is believed by the designers of the gun that this shell would sink any vessel within a radius of a hundred yards from the point of explosion. That it would utterly and instantaneously destroy any vessel that it actually struck, cannot be questioned for a moment.

As to the practical value of the guns, however, considerable differences of opinion exist among experts. Naval men deny that the firing of dynamite shells with powder from rifled guns is so dangerous as to be impracticable; they declare that the low range of the pneumatic dynamite guns would render them valueless as coast defences; while the low velocity of the projectile would render it perfectly possible for a swift torpedo boat to dodge it. The long-barrelled pneumatic gun would be, they say, an excellent target, and a war-ship, itself securely out of range of the dynamite projectiles, could easily knock the gun to pieces with its own six pounders. It would not be difficult, think the naval men, to build rifled guns, fired with powder, that would safely discharge explosive projectiles to a distance of six miles, with a velocity of 1,800 feet per second and a comparatively low trajectory, and therefore with greater accuracy than that possible in the case of the dynamite pneumatic gun. To this the experts that take the opposite view—army men, chiefly—reply, that the dynamite guns suggested by the other side exist in the imagination only, whereas the pneumatic dynamite gun is an accomplished fact; that the three mile range of the projectiles containing 100 pounds of explosive discharged by the pneumatic gun is

sufficiently great to render the gun invaluable for coast defence; and that the high trajectory of the pneumatic gun is an advantage, for the gun can be placed in a deep pit or behind a hill, out of sight and out of reach of the enemy's guns on shipboard, and can be fired thence with as great accuracy as if it were within plain view of the enemy.

CONTRAST BETWEEN THE JAPANESE AND CHINESE AT PYŒNG-YANG.

We have always known, complacently remarks the *Yiji Shimpō*, that the soldiers of Japan were strong while those of China were weak, but we did not fully appreciate the world-wide difference between them until after receiving the reports of the latest battle at Pyŕng-yang. We find that every advantage was on the side of China, while the Japanese troops had to contend against disadvantages of all kinds. In the first place the Chinese occupied a strong position, waited quietly the approach of their enemies from a fatiguing distance, had the active assistance of the Koreans in the surrounding district, and possessed excellent repeating rifles. On the other hand everything was against the Japanese. Before reaching the battle-field they had had to journey a long way through a hostile country, without any natural advantages, and they were not armed with magazine rifles. Had the Chinese therefore been of equal prowess or had the difference between the competing armies not been so very great, it would have been a very easy matter for the Chinese to hold their ground. Despite all this, to the astonishment of the whole world, the Japanese signally and utterly defeated their foes at Pyŕng-yang. The reason is simply this: the Japanese were imbued with the spirit of daring, the spirit that would win or die; and this spirit more than compensated for all the obstacles they had to encounter. In a word, in the case of Japanese soldiers and sailors defeat and life are irreconcilable terms; the sole alternatives are victory or death. With the Chinese troops the case is entirely different. Defeat and life are, with them, opposable ideas, and life often carries defeat away with it on its back. The Chinese risk their lives not for the sake of obtaining the victory but in order to effect a safe escape. In other words the Japanese fight to the death and the Chinese fly to the death, and this is sufficient to show how tremendous is the difference between them.

With regard to the battle of Pyŕng-yang, the *Yiji* was certainly equal to the occasion, for it printed the report three days earlier than any of its contemporaries, not even excepting the *Nichi Nichi Shimbun*. We have already drawn attention to this fact and the encomiums which were that paper's meed in consequence. The celerity with which the news was despatched to Tokyo was owing to the skilful arrangements made and the zeal always shown to put the *Yiji* ahead of its colleagues. Three correspondents were sent to accompany the attacking army, with instructions that so soon as Pyŕng-yang fell one of them should at once start for Chemulpo, taking with him the report of everything that had occurred up to the moment of his leaving the battle-field; while the other two were to remain on the spot and write up late occurrences. This arrangement was strictly adhered to. So soon as Pyŕng-yang had been taken, the fleetest-footed of the three instantly set out for Chemulpo, writing on the sketches taken and filling up the particulars from memory. The report thus reached the *Yiji Shimpō* Office on the 25th ult., while no other paper received particulars until the 1st inst. The appearance of the full account in the *Yiji* caused considerable sensation in journalistic circles. At first doubt was even entertained as to the authenticity of the report, for inquiry at the War Department elicited the fact that no particulars of the kind had been received even there. Still the public confidence enjoyed by the *Yiji* overruled whatever suspicion existed, and nearly all the papers began to produce the precious news, some being so base as to pretend that the report had come from their own special war correspondents. The inherent worth of the *Yiji* has

never been so manifest as since the commencement of the war. Besides being marvellously prompt in its reports, it exercises the utmost precaution in sifting truth from fiction; so prudent is our contemporary in fact that although even a paper of such high standing as the *Nichi Nichi Shimbun* occasionally gives room to statements that are considered obnoxious or untrustworthy by the Press Censors and are therefore struck out, the spaces appearing blank on the following day, we have yet to meet with an instance of the kind in the columns of the *Yiji Shimpō*.

RECRUITING IN SHANGHAI.

THE Shanghai correspondent of the *Miyako Shimbun* has a good deal to say of interest concerning the methods adopted by the Chinese Government in enlisting men for service in the field. Recruiting sergeants are, he writes, frequently seen in the thoroughfares not only of Shanghai but of most of the larger towns and cities on the northern bank of the Yang-tzes Kiang. The inducement of pay is small: ordinary recruits have only three taels a month promised them, which is at the rate of about 16½ *sen* a day. The food given to the newly-enlisted men is of the coarsest description after the first week or so, and very little even of that. The consequence is that only those belonging to the lowest and poorest classes of society evince a willingness to be made targets for the Japanese riflemen; beggars, pariahs, houseless vagabonds, and criminals out of luck. A large proportion of the men generally manage to make their escape after about ten days' service, their absence being connived at by their fellows, though re-capture is supposed to mean decapitation. The Yalu mutineers were probably mainly composed of such out-at-elbows conscripts, says another writer, though this statement is opposed to what we read elsewhere. At all events, it is evident that recruiting is being actively carried on, and that the men selected belong, almost without exception, to a class of people without stamina, courage, or the faintest love of country. With material of this nature it can not be hoped to achieve any great result. One million, no, two or three millions of such soldiers would not have the actual value of one well-drilled, well-equipped, well-officered regiment; and so far the Japanese troops seem to have met with only one body of men of this description, the brave troop which stood its ground to the last man at Sŏng-hwan.

COUNT GOTO ON KOREAN REFORMS.

THE desire of Count Goto to intermeddle with Korean affairs, especially those relating to reform, is widely known and has been subject of considerable comment. In this connection a *résumé* of a recent conversation held by the Count with a political schemer of note, as reported in the *Mainichi Shimbun*, is of interest. The politician visited Count Goto in his home at Takanawa, and having directed the talk to the subject in question gave it as his opinion that there were four great schemes to be undertaken in order to effect a radical reform in the Peninsular Kingdom. In the attainment of all reformatory projects, observed the speaker, Korea has principally to rely on the support and influence of Japan; for Boku Yei-ko is not clever enough to do all sign-handed besides being somewhat out of touch with the times, while the Tai Wŏn-kun is aged and not thoroughly trustworthy. The first of the four great schemes relates to the re-organization of the army, and essential advance in this direction can be made in three ways: (1) by enlisting fresh recruits and causing these to accompany the Japanese army now in the field; (2) by establishing garrisons in various parts of the country in order to prevent renewed internal disorder; (3) by strengthening the posts on the frontier. This second important project refers to a thorough reform of the country's finances, which includes the opening up of numerous resources not hitherto utilized; and a radical change in the system of taxation, by which the exhausted central treasury may be replenished

and the burden of the people greatly lightened. In the successful accomplishment of all this a Japanese of experience and approved ability should be appointed as adviser to each local office. The third scheme effects an increase in the number of open ports, by which the development of the nation's industries might be assured. Finally, the fourth and last plan is to facilitate communication by constructing railways. Sŏul should be the centre, with lines running to Fusan, Chemulpho, Gen-san, and Wi-ju. These are the principal points of the programme of reform; there are, however, a number of minor matters that have to be taken into consideration when once the process of reform is inaugurated. For instance, it would be of prime importance to induce the Regent, who desires to effect reforms on the lines laid down by China, as well as Kin Ko-shu, a most influential person and now the resident of the new Korean Cabinet, to visit Japan and impress upon them the excellence of this country's civilization. In like manner, the Korean Embassy, about to come to Japan for the purpose of conveying the royal expressions of gratitude, should be shown every courtesy and made to understand the power and beauty underlying the civilized progress of this nation. To all this points Count Goto nodded his emphatic assent, and the conversation is said to have thereafter been carried on for some time on the same theme. Count Goto intends starting for Hiroshima in a few days, and the object of this trip is said to be that of paying his respects to the Emperor and of negotiating with some people in the city with regard to his Korean reformatory schemes.

PATRIE PAR TOUT.

INTERESTING, as indicative of what lengths human imagination can go, and remarkable for their flamboyant patriotism, are the coloured wood-cuts now for sale at the *enishi-ya*, or newsvendors and picture-dealers' shops. More than one hundred and fifty different sheets are exhibited, representing the various engagements in which the Japanese have thus far been victorious, and necessarily depicting the Chinese soldiery in a great variety of humiliating attitudes. One very popular wood-cut of the coarser kind shows a Japanese trooper, joy beaming in every feature, in the act of transfixing three Chinese at the same time with one thrust of his sword-bayonet; besides this heroic exploit he has suspended from the gun carried horizontally across his right shoulder no less than six Chinese heads, tied, like so many cabbage, three to each end. Another engraving depicts an officer on horseback in the act of trampling down a horde of Chinese braves, two of whom he is decapitating with one trenchant sweep of his cavalry sabre. The sinking of the *Kowshing* is another favourite theme, while the daring feat of the *Saikyo Maru* in sailing between her two giant adversaries is capably drawn. To make the difference all the more conspicuous, the *Saikyo Maru* is drawn at about half the size of an ordinary steam-launch, while the *Ting-yuen* and *Chen-yuen*, represented with gaping holes in their bulwarks, are veritable leviathans of the deep. The sinking of the *Lat-yuen* and the burning of the *Yang-wei* are really not discreditable specimens of graphic skill, although one could wish the artist had not represented the Chinese crews flying, with outstretched arms and legs, through various strata of air. The final assault on "Peony Mount" is quite well sketched, and looks as if it might have been taken down from the description of an eye-witness. The Japanese guard and their skirmish with the Koreans at the Palace Gate is a lively scene, but Minister Otori is distinctly labelled therein. No human being could sit still and watch such a scene with so vacuous and inane an expression of countenance. Some of the best of these pictures—that is, best from the standpoint of the far from hypercritical Japanese public—are really spirited sketches, yet wildly impossible so far as cold facts are concerned. The favourites among these are printed in colours, blue, red or black, on cotton handkerchiefs, selling for 7 *sen* a pair. The colours

are warranted to run, so that handkerchiefs, of this description are essentially more ornamental than useful.

Ardent patriotism has furthermore invaded the realm of feminine head-gear. *Kansashi*, or hairpins, made of paper or cloth and formed into a thousand fanciful shapes, have always been popular with the middle and lower classes, especially among young women of seventeen or eighteen summers. These hairpins are invariably indicative of the rage of the moment, whether it be some successful play or a simple ballad. They are really pretty things and ridiculously cheap, two or three *sen* being quite sufficient to purchase a most artistically fashioned pin. Among the most recent and popular forms one may note a tiny cavalry sabre, to which a small red or black helmet is attached; another in particular giving a lively view of a combat between a Japanese soldier and a Chinaman, the latter being represented as exceedingly small and on the point of being brained by the uplifted musket of his opponent; a bunch of musical instruments; drum, fife, and bugle, the whole surmounted by the national flag; a miniature man-of-war sailing on a most turbulent sea, the waves being portrayed by deftly curled and twisted bits of wire; and a group of flags, Chinese, surmounted by the Imperial Standard. All of these are really very creditably made and sell literally by tens of thousands.

The toymakers revel in depicting war-scenes. One little mechanical contrivance represents a Japanese soldier in the act of cutting off a fleeing Chinaman's queue. By pulling a string the Chinese starts to run, while his relentless adversary gives a savage cut at the doomed pig-tail. Another rather more elaborate toy represents a miniature battle. By turning a crank the Chinese soldiers revolve in a helpless way two or three times and then fall flat on their backs, while the Japanese ride proudly over them. A sort of ten pins or bagatelle has been invented in which the pins are Chinamen and the ball is fired from a spring concealed in a small cannon. But the description of such patriotic playthings would be endless. We may note finally that the same spirit is evidenced in the wares of the confectioners. Quaint and laughable battle-scenes made in adhesive and sugar-coated rice, or sugar-paste, are everywhere for sale. The most popular honey-cakes (*manju*) are those which bear the impress of the Japanese flag; while the *ameya*, or sellers of sweet wheat-gluten, delight in modelling slant-eyed, bequeathed Chinamen, invariably depicted in full masterly retreat.

THE SALVADOREAN REFUGEES IN SAN FRANCISCO. READERS of Max Adeler's "Random Shots" will remember his amusing story of a revolution in one of the Central American republics, in which the rival armies, of about hundred men each, demonstrated against one another for a whole day without any one being wounded (much in the chagrin of a lady doctor attending one of the armies, who threatened to break off her engagement with the general of her side unless he could provide her with material for a few amputations). Finally, if we remember rightly, the rebel party was ignominiously expelled from the State House by a douche from the town fire engine which was fortunately in the hands of the government army. This was a burlesque of affairs that are in truth frequent in these unstable republics,—affairs to which the rest of the world usually pays but little attention. The recent disturbances in Salvador have, however, led to the raising of an important international question, now being tried at the United States District Court in San Francisco, and we may, therefore, shortly explain the cause of the action.

The case concerns General Ezeta and four other officers of the Salvadorean army. They were brought from Salvador in the United States ship *Bennington*, and on arrival were arrested on warrants charging them with murder, arson,

and robbery, the Salvadorean Government having made a demand for their extradition on these counts. Until recently General Ezeta was Vice-President of Salvador, his brother being President. A rebellion occurred, the troops of the Government were defeated, and the Ezetas and their allies took refuge on board an American war-ship. While General Ezeta and his men were retreating to the coast, they put to death certain men charged with conspiring against the life of the General; they destroyed certain property by fire; and they raised money by requisitions from the financial agents of the government. The defendants claim that these actions were done by them in due form as accredited officers of the government; but their enemies, now in power, charge them with robbery, arson, and murder; General Ezeta and his companions are not, they say, political refugees, but fugitives from justice; and they demand that the accused should be returned to Salvador to be tried by the courts of the republic.

When the case opened, the defendant's counsel questioned the jurisdiction of the court. He declared that the defendants had sought and obtained a temporary asylum on the United States ship *Bennington*, with an implied promise that they would be permitted to leave on the arrival of a passenger steamer. This they had not been permitted to do, notwithstanding such promise, and against their wishes they had been brought to San Francisco. The Judge said that he would permit the hearing to go on in order to determine from the evidence whether an error was committed in bringing the parties into court. All the evidence had been taken when the mail left, and the court had adjourned for two or three days, before hearing the arguments of counsel. One of the defendants was discharged during the trial, no evidence to connect him with the alleged crimes being forthcoming. This revolution was not a bloodless affair like that described by Max Adeler. The loss of life to the Government troops was about 400; and abominable barbarities appear to have been committed during the progress of the war.

THE SEISMOLOGICAL SOCIETY.

We take the following from a home journal:—

The third volume of the *Seismological Journal of Japan*, corresponding to the *Transactions of the Seismological Society*, has reached us. Prof. John Milne, F.R.S., contributes to it a paper on "Seismic, Magnetic, and Electric Phenomena," in which he discusses the evidence as to the connection between those phenomena. Observations are adduced which seem to show that there may be a connection between earthquakes and magnetic and electric manifestations. But, concludes Prof. Milne, though "a variety of experiments and investigations have been made to test whether earthquakes were preceded, accompanied, or followed by magnetic or electric phenomena, the results obtained do not guarantee the existence of such connections. It does not seem likely that earthquakes can result from electric discharges, and it has not yet been proved that they give rise to electric phenomena. When they have resulted in the displacement of large masses of rocky strata, as happened in 1891 in Central Japan, slight local changes in magnetic curves have resulted, but beyond this and effects due to the mechanical shaking of earth-plates, our certain knowledge is exceedingly small."

RATS AND CATS.

Rats and Cats appear to have capacities with which they are not generally credited:—

The *Pittsburg Dispatch* says that in the cold-storage warehouses in that city there were no rats or mice. The temperature in the cold rooms was too low. The keepers soon found, however, that the rat is an animal of remarkable adaptability. After some of these houses had been in operation for a few months, the attendants found that rats were at work in the rooms where the temperature was constantly kept below the freezing point. They were found to be clothed in wonderfully long and thick fur, even their tapering, snake-like tails being covered by a thick growth of hair. Rats whose coats have adapted themselves to the conditions under which they live have domesticated themselves in all the storage warehouses in Pittsburg. The prevalence of rats in these places led to the introduction of cats. Now, it is well known, that pussy is a lover of warmth and comfort. Cats, too, have a great adaptability to conditions. When cats were turned loose in the cold rooms, they pined and died because of the excessive cold. One cat was finally introduced into the rooms of the Pennsylvania Storage Company which was able to withstand the low temperature. She was a cat of unusually thick fur, and she thrived and grew fat in quarters where the temperature was below 30 deg. By careful nursing, a litter of seven kittens was developed in this warehouse into

sturdy, thick-furred cats that love an Icelandic climate. They have been distributed among the other cold-storage houses of Pittsburg, and have created a peculiar breed of cats, adapted to the conditions under which they must exist to find their prey. These cats are short-tailed, chubby pussies, with hair as thick and full of under-fur as the wild cats of the Canadian woods. One of the remarkable things about them is the development of their "feelers." These long, stiff hairs that protrude from a cat's nose and eyebrows are, in the ordinary domestic feline, about three inches long. In the cats cultivated in the cold warehouses the "feelers" grow to a length of five and six inches. This is probably because the light is dim in these places, and all movements must be the result of the feeling sense. The storage people say that if one of these furry cats is taken into the open air, particularly during hot spell, it will die in a few hours. It cannot endure a high temperature, and an introduction to a stove would send it into a fit.

THE ATTACK ON A TRAIN IN TONKIN.

THE *Hongkong Daily Press* translates, from the *Avenir du Tonkin*, the following paragraph with reference to the attack made by pirates on a train on the Phalangthuong and Langson Railway on the 17th September, the day when Messrs. Chesnay and Logiou, who were in the same neighbourhood but not in the train, were seized:—

An unusual circumstance was that the train was not provided with an escort. There were eight Europeans in the train, M. Roze, jr., and M. Derisayaud, a conductor of the public works, a commissar at officer, and the guard of the train, together with a corporal and two privates of the Marine Infantry, the last three invalids and all very sick, one of them dying soon after his return to Baclé. The five first named occupied a saloon carriage. On arriving at a point far from the place where M. Chesnay and M. Logiou were seized, the engine came in contact with a barrier on the line composed of trunks of trees and baskets filled with stones and earth, etc. The collision did not derail the train, which crashed into the obstacle, and the engine driver immediately shut off the steam. The guard, not understanding the reason of the stoppage, cried out "Go ahead, go ahead." The engine driver, however, had got off the engine to clear the line and at that moment the pirates swarmed up on both sides of the line and commenced a fusillade. The engine driver was killed, receiving several bullets in his back. At the same time the Annamite passengers, of whom there were a large number returning from market, left the train to try and save themselves. The stoker, a Chinaman, not losing his head, had the presence of mind to reverse and back at full speed, which manoeuvre was successful, the train getting clear and returning to Baclé. When the Annamite passengers saw that the train was moving backwards, they tried to scramble on board again, crowding the footboards, and it was then that the pirates' fire did the most execution. The Europeans lay on their stomachs in the carriage, and although the bullets flew over them happily none of them were hit. As to the natives, there were six killed and about fourteen wounded. During the confusion twenty women were seized, some of whom, however, escaped later. It is uncertain whether the attack was intended as a diversion to the seizure of M. Chesnay or was an independent operation, but the latter is considered improbable.

A SQUARE MEAL FOR ALL.

COMMANDER ODA, of the *Katsuragi Kan*, rejoices, according to the vernacular press, in the possession of a spouse as brave and patriotic as himself. Some weeks ago a home-letter reached him in which the question was put as to what kind of dainty he should like to have sent him, Madame Oda being exceedingly anxious to send him a substantial hamper. To this the Commander replied that he did not desire to have anything in which every one on board his vessel could not share, and the crew numbered two hundred and sixty in all. That was a sufficient hint. Madame Oda at once purchased five *kwamme* of dried bonito (*Katsubushi*), supposed to be a most invigorating description of food. These were then grated and boiled and finally made into two hundred and sixty huge dumplings (*dempu*), each being a plentiful meal for one man. The dumplings were then packed in air-tight tins and sent to their destination, where they were received with great satisfaction. We do not like to doubt this story, yet the sly hint that such food was emblematic

of Japan's victory over China (*Katsu* = "to conquer," and *bushi* = "a warrior"), makes the narrative a little dubious and hard of belief.

ROOKERS OF ROOKS.

It has been contended that Japanese swindlers have never quite equalled their European confrères in the refinement of sharp practices. A recent instance, however, shows that rooks on this side of the water are no less keen and adept than they are even in the most civilised lands. The instance we refer to belongs to the higher class of swindling, the post-graduate course, the fundamental scheme being not to defraud honest people but to hoodwink those who are confessedly addicted to evil ways. The game is admirable for its simplicity and directness, and is worked in the following manner:—A genuine one or five *yen* note is placed in a bowl of that turbid, milky-looking water which is the residuum after repeated washings of rice. At the proper moment the wet note is taken out and deftly split in two, the obverse being easily removable from the reverse. When the obverse is sufficiently dried and has obtained its pristine gloss, the rooker of rooks carries it to some less-experienced colleague and tells him that it has been struck off from a copper plate, which he has brought with him and produces; the note being exactly similar to a genuine one, he, the pigeon, must at once see that there will be no difficulty in putting it into circulation. The plate, then observes the wary man, is his own bantling and a treasure he cannot part with; but, as a special favour he will strike off a number of notes if the pigeon really wants them. When it is quite evident that the bird is on the limed twig, the knave becoming very confidential, finally leaves with the promise that, in a few days, he will bring a number of notes, sufficient to keep his prey in luxury for several months. A day or too later he calls again and tells his victim that he needs the absurdly small sum of fifty or one hundred *yen* for contingent expenses. This he has rarely any difficulty in obtaining, and so swindles those less wide-awake than himself out of this by no means despicable amount. The consciousness of having been duped is about all the victims have to console them, for to carry the facts to the notice of the authorities would be to implicate themselves and bring their own persons within the clutches of the law. Sharpers of this kind have been doing quite a profitable business of late, their personal impunity in the matter being one of its most attractive features. Quite recently, however, the police got wind of the new trade and soon succeeded in bagging three of the chief rooks, one Okuyama Itaro (37), a resident of Nihonbashi District, Tokyo; another named Kono Chinkichi (31), who dwelt in Kanda; and a third whose patronymic is not given. Close questioning caused them to make a full confession, they going so far as to give even the names and addresses of their dupes. Okuyama, the chief offender, is an old jail-bird, it appears, having frequently been imprisoned upon charges of gambling and swindling. When arrested, three copper plates used in forging notes were found in his house.

DEATH OF A DISTINGUISHED CHINAMAN.

We regret to announce, says the *N.C. Daily News*, the death at Kelung on the 15th ult. of General Wang Chih-seng, who was Commander-in-Chief at the Pescadore when the *Bokhara* was wrecked, and showed such hearty kindness to the survivors. General Wang was sent by Governor Shao, when the present war broke out, to take command at Kelung, and was there attacked by an epidemic disease that has been recently ravaging the district.

THE "PATHAN."

THE United States Consul-General in Shanghai and the acting Minister at Peking lost no time in dealing with the *Pathan* case. Mr. Jernigan wired to Mr. Denby on Friday, Sept. 28th, that the British steamer *Pathan* with cargo on board belonging to United States' neutrals had been seized. Mr. Denby, etc.

very promptly, for Mr. Jernigan received a telegram early the next afternoon stating that the Tsung-li Yamén had authorised the release of the *Pathan* at once on her giving a bond to proceed to Shanghai. The British authorities were also active in the matter. Through the courtesy of the *Pathan's* agents in Yokohama we learn that the vessel arrived in Shanghai on the 7th inst. The *China Gazette* hints that it was the steamer *Asloun* which the Chinese Authorities really wished to capture. She, however, got safely to Nagasaki, and the *Pathan* was taken in her stead by mistake.

THE NEW VICE-PRESIDENT OF THE HOUSE OF PEERS.

MARQUIS SAIONJI having been appointed Minister of State for Education, the post hitherto held by him, namely, that of Vice-President of the House of Peers, has been given to Marquis Kuroda Nagashige.

THE LATE MR. NAKAI HIROSHI.

According to a telegram already published in these columns, Mr. Nakai Hiroshi, Governor of Kyoto, died at 3 a.m. on the 10th inst. The immediate cause of death was brain-trouble. Mr. Nakai was born in 1838 in Kagoshima, being the eldest son of a *shōshu* named Yokoyama, who was a retainer of the *daimyo* of Kagoshima. Distinguished even from childhood for his natural abilities, he entered at an early age a school established by the lord of the clan, and was soon marked for his exceptional industry. He left this school just at the time when the maladministration of the Tokugawa Regency and the arrival of foreign ships-of-war had caused unusual agitation throughout the Empire. Travelling northwards he secretly reached Yedo and began to minutely observe the conditions of that place. But the news of what he was doing soon reached the ears of his lord, who had him arrested in Yedo and sent back to Kagoshima. The young man was then only eighteen years of age. Despite this abrupt recall his patriotic solicitude was too great to permit him to live a life of idle ease; so, one night, he once again fled his native place and came up to Kyoto. Finding that he was here being actively searched for by the retainers of his feudal lord, he sought refuge in Tosa, where he asked for the protection of Goto Shojiro, now Count Goto. The nobleman soon learned to appreciate the abilities of the friendless youth, and with the aid of the late Sakamoto Ryuma and several others made it possible for him to go to England and study. It was at this time that he changed his name to Nakai Kozo. He remained for a few years in London, and on his return to Japan was invited by the late lord of Uwajima to become his retainer. In this capacity he was ordered to proceed to Kyoto, where he entered upon familiar intercourse with several distinguished statesmen belonging to the most powerful clans; particularly with the late Kirino Toshiaki, who was staying in the then capital as the representative of the Satsuma Clan.

Just before the Restoration, when the Court of Kyoto was gradually re-assuming the power that was its due, the young Nakai was appointed to act as the official dealing with foreign matters in the Kyoto Court. In this capacity, and as the subordinate of Count Higashikuge, he met the Ministers of England, France, and the other Powers represented in Osaka. In 1867, when the late Sir Harry Parkes was, for the first time, proceeding to pay his respects to the Sovereign, he and his retinue were attacked by a body of anti-foreign *ronin*. Mr. Nakai and Count Goto, who were in the train as escorts, repulsed the fanatical assassins and were so fortunate as to save the Minister. In return for this gallant service the Queen of England sent, through Sir Harry Parkes, a splendid sword to each of his defenders. Shortly after this event Mr. Nakai was appointed *kanji* of Kanagawa, and thereafter of Tokyo, in which capacity he

was chiefly engaged in replenishing the treasury of the Court of Kyoto. His path was beset with difficulties. The citizens of Yedo failed to understand or appreciate the meaning of the great undertaking intended by the Court; moreover they still hankered after the Regency of the Tokugawa line. In spite of all these difficulties he at last succeeded in persuading several wealthy citizens to make contributions, obtaining in this way a sum of about half a million *yen*. It was chiefly due to this fund that the Imperialist army was enabled to undertake expeditions against the followers of the Shogunate at O-u and Hakodate. In the third year of *Meiji*, when the new administration issued the Census Law, which required all those who were not duly registered in their respective clans (*han*) to leave Tokyo and return to their native places, Mr. Nakai, who was not, it seems, duly registered as a retainer of the Uwajima *han*, was obliged to go back to Kagoshima. He led a somewhat retired life there for about a year, yet all the while secretly keeping up familiar relations with Kirino, the late Lieut.-General Nozu (elder brother of the present Viscount Lieut.-General Nozu), and Viscount Takashima, an ex-Minister of War. When the elder Saigo was about setting out for Tokyo, with four battalions of Satsuma soldiery, in order to abolish the feudal system and inaugurate the local method, Mr. Nakai was grudgingly permitted to accompany Saigo, in the capacity of a petty accountant. This post he owed to the intervention of his life-long friend Kirino. In July of the same year, *i.e.* the fourth year of *Meiji*, he was appointed first clerk of the War Department. Speedy promotion to higher posts followed, and he was finally, about two years later (1873), ordered to proceed to America on official business. He returned to Japan in the fall of the same year. In 1874 he received the appointment of Secretary to the Japanese Legation in London, where he stayed for the next three years. Upon his return he was made Secretary of the Department of Public Works. Ten years later he was selected as Governor of Shiga Prefecture, where for seven years he worked with untiring zeal in encouraging the commerce, industries, and education of the Prefecture, conferring most substantial benefits on the people. His removal to the Senate in 1890 was therefore greatly regretted by the inhabitants of Shiga.

Upon the abolition of the Senate he was nominated by the Emperor to a seat in the House of Lords. Since then he had lived in Kyoto, whither he had gone with the intention of passing his remaining years in ease. This was, however, not allowed him, for when the governorship of that city became vacant he was so urgently pressed by both the citizens of Kyoto and his friends in the Cabinet that he was once again obliged to enter public life and accept the proffered post. He applied himself to the duties of his new office with all his wonted energy, taking special interest in all affairs relating to the exhibition to be held next year in that city. His sudden death in the midst of all this work is universally mourned. Mr. Nakai's was a man of frank and outspoken disposition, and so unceremonious in his ways that he treated both high and low in the same brusque fashion. His somewhat vaunting talk and love of exaggeration were often laughingly commented on in high circles, but when he conversed in this manner with those occupying the highest seats in the Government it was generally noticed that his words were suggestive and conveyed a multitude of useful hints. Mr. Nakai was not only well versed in Japanese and European literature, but also a great student of Chinese classical and poetic lore. Several of his Chinese poems are familiar to *litterati* the Empire over. With nearly all the noted statesmen of the age he was on familiar terms, but particularly with Counts Ito and Inouye. The late Governor leaves one son and one daughter; the former is a graduate of an institute in America, and is now an expert in a technological establishment; while the latter is the wife of Mr. Hara, Chief of the Commercial Bureau in the Foreign Department. The elder Mr. Nakai, father of the deceased, still survives.

WAR NEWS.

There is a complete lull in the receipt of beligerent news. Only a few items of minor importance are to hand.

The *Nichi Nichi* publishes a telegram from Shanghai to the effect that the Chinese Government, fearing a Japanese attack upon Peking, has called together an army of 150,000 men for the defence of that city. It is supposed that there are always 100,000 of the Banner Army in the capital, so the figure now mentioned is nothing extraordinary.

In the same journal we find a telegram from Chemulposaying that the steamer *Sakata Maru*, now lying in that port, caught fire on the morning of the 4th instant, and was for a time in great danger. Happily the flames were extinguished before the ship had suffered any serious harm.

Captain Yamada, of the Infantry, who has just returned from Pyöng-yang, was received in audience by the Empress Dowager on the morning of the 4th instant, and by the Empress in the afternoon. He gave a full account of the warlike operations to the Imperial ladies.

The Emperor has ordered that a military band shall play from time to time at the military hospital in Kagoshima.

The *Nichi Nichi Shimbun* says that the Chinese Government is making great endeavours to procure the services of foreigners on board the men-of-war. Our contemporary adds that applications to take service in Japanese ships have been received at Japanese Consulates from foreigners.

Gradually the allegation that Japan lost four vessels in the naval engagement on the 17th of September is forfeiting all hold on public faith. One of the firmest believers in the story originally was the *Japan Gazette*, and now that journal wants to know how the *North-China Daily News* will "climb down" from the same pedestal of credulity. It is only three days since the *Japan Gazette*, in a foot note to a correspondent's letter, plainly implied its belief that the *Naniwa Kan* is lost. It has not, so far as we know, "climbed down" from that suggestion yet. On the contrary, it repeats it in its last issue. If so much "climbing down" remains to be done, we recommend that the two journals should help each other, lest the descent prove too shocking for both.

The fabricators of canards now suggest that as Major von Hanneken was on board the iron-clad *Chen-yuen* during the fight on the 17th of September, and as he had a special grudge against the *Naniwa Kan*, he doubtless trained his guns so as to do her fatal injury. They have not the courage to say outright that they believe the *Naniwa* to have been sunk, but they write so that no other inference is possible. "von Hanneken," we are told, "is an artilleryist, with tremendous nerve, and a high reputation. Is it possible that he should desire to wipe off old scores with the *Naniwa* and yet train his guns so badly that a not single tar was hurt, nor a bit of paint scratched?" We pass over the fact that an officer of Major von Hanneken's rank—a Vice-Admiral, or Major-General, we believe, in the Chinese service—was not at all likely to be engaged laying guns during the fight on the 17th Sept. Even granting, however, that there were twenty Hannekens on board the *Chen-yuen*, and that they all sought to "wipe off old scores with the *Naniwa*," do the sensation-mongers really imagine that in the Japan of to-day a naval or military commanding officer could venture to report to his Government that in a certain fight he had lost no ship, though in reality he had lost one of the finest vessels in the Japanese Navy, a steel cruiser of over three thousand tons? Nothing, could more forcibly illustrate these persons' extreme ignorance of Japan and the Japanese as they are at present.

We imagine that the public have learned by this time to estimate pretty accurately the value of war news coming from such sources as the *Japan Gazette* and its correspondents. It is true that the *Japan Gazette* begins to learn the importance of a little caution, but its record stands and can not be effaced. It was the *Japan Gazette* that wrote, on August 7th:—

"The *Yoshino Kan* was the fastest cruiser afloat and the finest of her class—she is now a cripple in Kure." It was the *Japan Gazette* that told how, in the beginning of August, the Japanese fleet was blockaded by the Chinese in Chemulpo, and how vessel after vessel had been injured in trying to run the blockade. It was the *Japan Gazette* that wrote, on August 4th:—"The *Yamashiro Maru* has undoubtedly been taken." All these assertions were absolutely false, as have been many others published in the same columns with more or less assurance.

Commander Mukoyama of the *Matsushima Kan* is reported by the *Fiji Shimpö* as speaking in the highest terms of a certain warrant-officer and a fourth class marine serving on board that ship in the engagement on the 17th of September. These two men were in charge of the principal powder magazine during the fight, and the coolness and intrepidity displayed by them when the ship was on fire are said to have been very remarkable. Another marine, who had received ten wounds and whose face was a mass of scars from the conflagration, was on the verge of death as Commander Mukoyama happened to pass. "Has not the *Ting-yuen* sunk yet?" asked the dying man. "Do not be concerned," the officer answered. "The *Ting-yuen* is incapacitated for further action and we are about to attack the *Chen-yuen* now." Thereupon the man smiled, and gasping out, "Be avenged on her," breathed his last. That is the spirit that wins battles.

Vice-Admiral Count Kawamura has probably started ere this for Korea. He was entertained by the Ministers of State now in Hiroshima at a farewell banquet on the 3rd instant. Count Kawamura is a most distinguished officer. His services during the wars of the Restoration and the Satsuma Rebellion showed him to be possessed of high military capacities. We are glad for Japan's sake that means of employing him once more in the field have been found.

The two Chinese iron-clads seem to have been objects of general solicitude to the Japanese officers and men in the battle on the 17th of September. It is related of a certain Hashiguchi Tojiro, who served in the *Akagi Kan*, that his last words—like those of the marine alluded to above—were, "has the *Ting-yuen* sunk yet?" and that on being informed that she was badly injured, he died crying "Finish her off."

There appears to be some uncertainty about the point to which the Japanese army in Korea has made its way. The *Nichi Nichi Shimbun* says that, some five or six days ago, it received intelligence to the effect that the Chinese forces in the neighbourhood of Wiju had retreated across the Yalu river on learning of the fall of Pyöng-yang, and that no vestige of the enemy remained in Korea. But information now furnished from a trustworthy quarter is to the effect that a body of the enemy's troops has crossed again to the left bank of the Yalu, and is there making preparations to oppose the Japanese advance. News purporting to be still later is published by the *Kokkai*. It is that the van of the Fourth Division crossed the Yalu at a point some distance above Wiju and took up a position within Manchuria, unoccupied by the enemy; that other bodies of troops followed, and that the whole Division is now in Manchuria. We give this solely on the authority of the *Kokkai*. The same journal says that the Chinese forces in Wiju have been divided into two bodies, of which one has been posted at a place, the name of which is denoted by asterisks, and the other lies concealed in the miller farther down the river. Our contemporary adds that a battle may take place at any moment, and also that a naval engagement in the Gulf of Pechili is imminent.

The *Nichi Nichi* publishes a telegram from Hiroshima saying that Lieut.-General Torio is to proceed to Korea on the 8th instant on public service.

The *Kokkai* gives a telegram from Kobe, dated 4.40 p.m. on the 6th instant, to the effect that great changes are apparently impending in the Chinese Government, and that the Foreign Representatives are uneasy.

In the same journal we find a telegram sent

from Söul on the 1st instant, which says that a party of the Tong-haks, numbering over a hundred, formed a plot to overthrow the new Government. Disguising themselves as Korean soldiers, they effected an entry into the palace, but their conspiracy was detected, and they were driven out, two of their ring-leaders being arrested.

It is reported that the foreign residents of Peking are virtually imprisoned in that city. They fear to meet with violence at the hands of the numerous troops quartered in the vicinity of the capital, should they leave the shelter of its walls. That is a most unpleasant state of affairs.

The Emperor has proclaimed that Hiroshima and Ujina shall be placed under martial law from the 5th instant. The meaning of this is that the officer commanding the troops in the proclaimed district becomes endowed with various exceptional powers with respect to matters relating to the conduct of the war.

Talien Bay, says the *Kokkai*, has been strongly fortified to prevent the landing of troops or the anchoring of hostile ships. There are six forts; torpedoes have been laid, and electric search lights are fitted. The forts are armed with 24 guns, viz., four 23-c.m., two 21-c.m., and two 15-c.m. Creusot guns, and six 21-c.m. and ten 15-c.m. Krupp guns.

It is stated that eight of the Chinese ships which escaped from the battle on September 17th are so much injured as to require extensive repairs.

Fukuhara and Kusuchi, the two Japanese now in the hands of the Chinese authorities in Shanghai, are reported to be in good health. The American Consul-General is sparing no pains to secure good treatment for them.

Report says that the Empress has finally decided to proceed to Hiroshima, and that she will start from Tokyo in a few days.

Vice-Admiral Count Kawamura and Lieut.-General Viscount Torio left for Korea on the 8th instant. They go as delegates from the Emperor.

The *Fiji Shimpö* says that four more guns have been captured at Pyöng-yang, bringing the total taken there to 38. They consist of Krupp field and mountain pieces, Gatlings, and Nordenfeldts.

Intelligence was yesterday published in Tokyo that a body of Japanese troops had landed at Chefoo on the 6th instant. The news was said to have come direct to Nagasaki on the 7th, an obvious impossibility. We see no reason at present to credit any such operation.

The *Nichi Nichi Shimbun* emphatically denies that the Government has any intention of raising a foreign loan. It says that the funds available for the prosecution of the war were by no means exhausted when the recent public loan of 30 million yen was issued, and that the Diet will doubtless give authority for further issues to a large extent. Unless the war continue for several years Japan will not be under any necessity to have recourse to the foreign money market.

The *Fiji Shimpö*, writing on the same subject, says that the reserves still available to the Government aggregate over ten million yen, to which if we add the sum just raised, we have a total of 40 millions.

The *Fiji Shimpö* says that since Sept. 17th nothing has been heard of Captain Tang of the *Chih-yuen*, Captain Lin of the *King-yuen*, Captain Li of the *Yang-wei*, and Captain Wang of the *Chao-yung*. It is believed in China that they are dead. Our contemporary seems to place no reliance on the story that Captain Tang of the *Chih-yuen* escaped to Wei-hai-wei after the sinking of his ship.

The *Fiji Shimpö* believes that two of the Chinese torpedo-boats were sunk in the fight on the 17th ultimo. The Japanese naval officers reported that they had fired several times at the enemy's torpedo-boats, and that they must have hit them, but they were unable to determine whether their shots had any fatal effect. According to the *Fiji*, however, the Chinese themselves say that two torpedo-boats are missing, and the natural inference is that they were lost on the 17th August. Against this we may set the following passage from an account

said to have been compiled for the *North-China Daily News* from the verbal statements of the foreign survivors, and from other data:—

The torpedo boats found some difficulty in joining the fray; the loss of the halyards, and in some cases of colours made it difficult to distinguish friend from foe; but the young officers in charge did well and acted fully up to their instructions to keep well under the lee of a big ship during fire and then dart out under a bank of smoke. Unfortunately for them their little vessels had been scouting for three weeks and had been overworked; the result was lamentable; when they opened out, their possible 20 knots sank to something between 14 and 15; the smoke rose rapidly, and long before the Schwartzkopf range was reached, they were seen and fired at. Oddly enough they were not hit once by anything worthy of notice, but on the other hand they effected nothing.

According to the *Hochi Shimbun*, the Japanese naval authorities have been able to ascertain, by means of scouting vessels, that all the Chinese ships remaining after the recent action, with three exceptions, are now in Port Arthur, undergoing repairs. The exceptions are the *Ting-yuen*, *Chen-yuen*, and *Ching-yuen*, whose whereabouts has not been ascertained.

Two somewhat different accounts are published with reference to the Chinese preparations for defending the passage of the Yalu river. One, appearing in the *Nippon*, is based on a telegram sent from Hiroshima on the 8th instant. It says that the Chinese troops have erected six forts on the southern bank of the river, and about fourteen on the northern, but the latter number is uncertain. They have more 80 guns in position, and the force assembled to dispute the passage of the Japanese army into Manchuria is about 70,000. All the troops that escaped from Pyöng-yang are on the northern bank. Their outposts are about 7 miles from Wiju. Yuan Shi-Kai is also on that side of the river. Such is the *Nippon's* account. But the *Nichi Nichi Shimbun* gives a telegram sent from Hiroshima at 9.35 p.m. on the 9th instant, which says that the van of the Japanese army has reached Rinchin, a place in the neighbourhood of Wiju; that the Chinese forces are assembled, to the number of about 9,000, on the northern bank of the Yalu; that they have built eight forts there and are building others. Whichever version be correct, it is plain that the Japanese army will not be suffered to cross the frontier into Manchuria without a struggle.

In the *Nippon* we find a paragraph alleging that news has been received of an encounter between the *Maya Kan* and four Chinese ships. The Japanese vessel was on a reconnoitering expedition in the Yellow Sea when she fell in with four ships of the enemy. A fierce fight ensued, with the result that the *Maya Kan* sunk one of her opponents and escaped herself, in a more or less injured condition, to a port the name of which is supposed. The *Maya Kan* is a gun-boat of 615 tons carrying four 15-c.m. Krupp guns. It seems strange that a vessel of her size should have been able to engage four Chinese ships. Further details must be awaited before credence is given to this report.

The *Kokkai* says that a suspicious looking Englishman has arrived at Kobe by the *Tokiwa Maru*, and that he is being shadowed by the Kobe police.

The *Nichi Nichi Shimbun* estimates the total casualties on the Chinese side in the naval fight on the 17th ultimo at 1,000 killed, or drowned, and from 300 to 400 wounded. Our contemporary does not give any authority for this estimate. It seems to us to be exaggerated.

Admiral Count Saigo has been nominated Acting Minister of State for War, in the absence of Count Oyama, who takes command of the second Japanese Army.

Prince Komatsu, Jun. (Yorihito) is appointed to one of the ships, and will go to sea with the fleet.

The *Shanghai Mercury* says that the Chinese are removing the treasure from the vaults at Moukden.

The same journal has the following:—

By advices from Peking it is learned that the Anti-Foreign feeling there is greatly increasing.

This has reached such a pitch that the Imperial Authorities have great difficulty in repressing outbreaks.

It is also much feared by many able Chinese in Peking that, in the event of the Japanese making a move on Peking, it will most certainly fall into their hands, as the dissatisfaction with the existing régime is so great that none of the soldiery can be depended upon.

The vernacular press reports that on the 8th instant the advance guard of the Japanese army entered Wiju, driving out 2,000 Chinese by whom the place was occupied in appearance. What the Chinese were doing there is not clear. If they had wished to fight, an excellent opportunity offered, since the Japanese consisted of only a company of infantry and a squadron of cavalry. However, it is not the acknowledged *métier* of outposts to fight stubbornly.

A telegram from China, published by the *Tiji Shimpō*, says that the Japanese ship *Tenryo Maru*, which has been for some time detained by the Chinese Authorities in Tientsin, has been released, and was to leave on the 12th instant for Nagasaki.

In the *Kokumun* we find a telegram sent from Hiroshima at 10 p.m. on the 10th instant. It says that a feeling of great uneasiness exists at Tientsin, and that five foreign men-of-war have arrived at Taku to protect the lives and properties of the European and American community. The populace of Tientsin is made up of motley and unruly elements. No place in China possesses more inflammable material.

The *Naigai Shogyō Shimpō* asserts that the Chinese soldiers stationed in Chiu-lien-cheng—a Chinese town on the north bank of the Yalu river—are untrained natives, and that their weapons are old-fashioned rope-fuze muskets. They are not expected to make any stand against the Japanese. But we find some difficulty in crediting that.

It is stated, we read in a vernacular paper, that the fugitive troops from Pyöng-yang have placed a number of mines on the banks of the Yalu river. But at every position the defence of which has been undertaken by the Chinese in Korea, there has been much talk of mines, and up to the present we are not aware that any mine has exploded.

Our readers may remember that after the fall of Pyöng-yang a story was published of a soldier who had climbed over the wall of the city and opened the gate to admit his comrades. We greatly questioned the truth of the tale, but the *Kokkai* now publishes a telegram from Fukui, saying that the incident certainly occurred, and that the intrepid soldier was Fujita Kanekichi, a native of that place.

It is alleged that Count Inouye has finally decided to proceed to Korea in order to organize the administration and give the benefit of his long experience and well proved sagacity. His Excellency is to travel by the *Yoshino*. If any one can introduce order into the affairs of the peninsula, it is Count Inouye.

The *Hochi* says that, according to its telegraphic intelligence, Söul is in a very unquiet state. The Tai Wön-kun is plotting to place his grandson Li upon the throne, and the progressionist party has applied for the aid of Japanese troops.

The Tong-haks are still active in Korea. They have been quelled in An-don, Pyöng-gon and their vicinity, but all Jun-gai, Tan-yon, and elsewhere, they are still in rebellion owing to the incitement of Chinese soldiers disguised as Koreans. Twelve of these have been arrested and carried to Chemulpo.

Her Majesty the Empress, the Court Ladies, and many of the wives and daughters of the noble and official classes, devote a great deal of their time at present to making lint for use at the military hospitals. It may well be supposed that this proceeding appeals powerfully to the loyal Japanese.

LETTERS FROM HIROSHIMA.

(FROM OUR CORRESPONDENT.)

Hiroshima, October 3, 1894.

The Emperor yesterday paid a visit to the war ships *Matsushima*, *Hiyei*, and *Saikyo* lying in the Naval port of Kure. The *Saikyo*, which as I stated in a former letter, arrived at Ujina on the 27th ultimo, with Viscount Kabayama on board, went round to Kure on the afternoon of the 1st instant. The *Matsushima*, which had received some temporary repairs at Sasebo, entered Kure on the morning of the 28th ultimo. The *Hiyei* which came in only yesterday morning, a few hours before His Majesty's arrival, had not been included in the original programme of Imperial visits. The Emperor left Headquarters at 9 a.m., Marquis Tokudaiji, Grand Chamberlain, sitting in the same carriage with His Majesty. The Imperial vehicle was followed by an ordinary Palace carriage containing Viscount Hijikata, Minister of the Household, and Dr. Ikeda, Physician in Ordinary to His Majesty. In another carriage of the same class sat Mr. Matano, Head of the Internal Section of the Household Department, and Mr. Saito, Special Secretary to the Minister of the Household. Besides the usual escort of Imperial Guards, the *suite* included several distinguished officers, both civil and military, on horseback, among them being Major-General Kurosawa, Governor Nabeshima, and a few Chamberlains. At Ujina, which was reached in about half-an-hour, the Imperial *suite* was augmented by a large number of eminent personages, who had been waiting there for some time, the principal among them being H.I.H. Prince Arisugawa Taruhito, their Excellencies Count Ito, Minister President; Admiral Count Saigo, Minister of the Navy; General Count Oyama, Minister of War; Lieutenant-General Kawakami, Vice-President of the General Staff, and so forth. After taking a rest of a few minutes in the upper storey of the branch office of the Osaka Merchants Steam Navigation Company, the Emperor and *suite* left for Kure by a steamboat which had been sent round for the purpose.

Both at Hiroshima and Ujina, and, indeed, along the whole route between the two places, a dense crowd of people of all sorts and conditions lined the way eager to pay homage to their august sovereign. Many of them must have travelled a long distance from their homes. The cities of Hiroshima and Ujina were profusely decorated with national flags and paper lanterns.

Kure is about 5½ miles to the south-east of Ujina. When the Imperial vessel, escorted by two torpedo-boats, rounded the promontory beyond which lies Kure, salutes began to be fired by the war-ships in the port, namely, the *Matsushima*, the *Hiyei*, the *Saikyo*, the *Oshima*, and the *Fujiyama*. These ships and four other transports that were then in port were plentifully dressed with flags. It was a little past 11 when the Imperial party landed at the Naval pier. The spacious grounds separating the pier and the *Chinju-fu* (Naval Station Office) were lined on both sides by officers attached to the Station, the principal inhabitants of the place, and a party of troops stationed in the vicinity since the outbreak of the war. At the *Chinju-fu*, which stands on an elevated spot commanding a fine view of the port, the Emperor gave audience to the higher Naval officers. After partaking of a repast, the Imperial party went on board the *Saikyo Maru*. As I have already described her condition in a previous letter, it is scarcely necessary to go over the ship in detail again. I may, however, refer to a fact which I learned for the first time on the present occasion. It is that Mr. Ogawa, 2nd Engineer, who is a devoted amateur photographer, had the courage and presence of mind to take a series of photographs of the fighting. I was not able to see the pictures, but they must prove exceedingly valuable and interesting.

The next ship visited was the *Matsushima Kan*, the flagship of the little fleet which fought so gallantly in the recent naval engagement. As we approached her, we observed a large rectangular hole on the port side in the forward part,

a little above the main deck. On the upper deck on the starboard side, a 12 centimetre gun was missing. A shell from one of the enemy's ships struck against its carriage and threw the gun into the sea. Going down to the main deck, we came to the hole which we had observed from a distance. The opening is perhaps 15 feet by 8. A 20 centimetre gun was lying bent and distorted, the carriage having been thrown to a distance of at least 20 feet forward. It was here that the greatest number of deaths took place. The guns being of a quick firing type, there were a large number of shells in the vicinity. These burst with a terrible explosion on being struck by a shot from the enemy's ship. Fifty officers and men out of 63 stationed in this part of the vessel met with instant and horrible deaths, while 11 of those remaining were severely wounded. The deck at the same time took fire, and the flames spread with such force that the upper deck was burnt through. Such was, however, the energy displayed by the crew in grappling with the conflagration, that it was extinguished in about 15 minutes. It was very fortunate that the fire did not extend to the magazine in close proximity—a result principally due to the heroism of two recruits who joined the service only last December. One of them stripped himself of his clothes and with them he kept the flames away; while the other busied himself in removing all inflammable material. They were repeatedly told to get out of the place, as they were in serious danger of suffocation; but they did not heed the admonition, declaring that they wished to die where they were. It may here be stated that all the other recruits behaved exceedingly well. When the order to prepare for action was given, many of them hurried down into their quarters. The officers feared that they were about to show the white feather, but they quickly appeared again in their best uniforms, thus showing that they were determined to conquer or perish, it being a tradition with the Japanese *samurai* that he should be clothed in his finest suit at the moment of death. I was also informed that the band displayed unexpected courage. They volunteered to fill up the vacancies occasioned among the marines by the terrible explosion above alluded to, and discharged their duties with a will and bravery which excited the admiration of all. It was very pleasant to hear the officers recount with pride and satisfaction the plucky conduct of the men under them.

The *Hiyei* was visited last. The most serious damage sustained by this vessel was the blowing up of the officers' quarters by the explosion of a shell from either the *Ting-yuen* or the *Chen-yuen*: thirteen deaths took place from this cause. All the partitions between the different rooms were shattered and torn off. It was here that a fire was caused, the subduing of which gave the greatest trouble to the officers and crew. On this vessel, too, the officers were never tired of recounting the heroic conduct of their men.

It was about 3.50 p.m. that the Imperial party left the *Hiyei* and began the return voyage. Salutes were fired and cheers heartily given as on the occasion of His Majesty's arrival in the morning. At 5.30 the Emperor reached Headquarters. Fortunately the weather was fine and calm, but glaring, as is often the case here.

Hiroshima, October 4, 1894.

Having heard of the arrival at the military hospital here last evening of a large number of officers and men wounded in the battle of Phŷng-yang, I made an opportunity to pay them a visit this afternoon. The hospital buildings are located in a spacious and well-drained enclosure in the western corner of the Castle grounds, opposite to the barracks of the commissariat troops. On my way thither, I observed a party of commissariat troops and a body of military coolies at drill. The former were evidently reserves called out for garrison service, while the latter are to be sent to the field of battle with the next batch of troops. The drilling of the coolies consisted in accustoming them to draw carts and perform other manual labour in a methodical manner in obedience to the orders of the

superintendents. They were dressed in blue cotton cloth after the fashion commonly affected by the labouring class in this country, and wore the large bamboo hats generally used by *jinrikishi* men. The hospital wards are of one storey and constructed of wood. They are clean and airy. A number of them are arranged at regular intervals in two parallel rows with a garden between. In front, these rows of wards are connected by a two-storeyed building, also of wood, appropriated for offices. At the rear, there are buildings for experiments, for surgical operations, and for disinfecting purposes. Besides these permanent edifices, there are several wards of a rougher type temporarily erected to meet the needs of the present war.

When I arrived there, the naval band was playing in the inner garden, by special command of His Majesty the Emperor, whose minute and gracious attention to their wants has called forth the grateful tears of the wounded and the sick. Immediately on his arrival here, the Emperor wished to visit the hospital. There being, however, at the time many cases of dysentery of an acute type, the physicians thought it prudent to dissuade His Majesty from carrying out his benevolent desire. Reluctantly yielding to their entreaties, the Emperor postponed the intended visit, but sent a delegate to the hospital with presents and messages of consolation to the patients. While the band played, the turfed knolls in the garden were covered with convalescent patients in the hospital regulation clothes, namely, cotton garments of light bluish colour, some smoking cigars, others cheerfully chatting together, while yet others were sitting on the grassy plains.

Dr. Koyama, the chief of a band of ten efficient physicians, with 60 well trained nurses under them, despatched by the Red Cross Society in Tokyo to render assistance to the military doctors here, kindly took me through the different wards, explaining the nature of the disease or wounds each patient was suffering from. The wounded officers and men who arrived here last night from Phŷng-yang number 110 in all. Their injuries, though by no means slight, are not very serious, those severely wounded and unfit for transportation being treated in the temporary hospitals in Korea. The wounds I saw on the persons just arrived were mostly in the limbs, and there was nothing particularly worthy of notice about them. These officers and men, it may be noticed, were in the column under Major-General Oshima, the division that fared worst from the enemy's fire.

In one of the wards for ordinary soldiers, I saw a wounded Chinese who was captured while on his way to Phŷng-yang after the defeat at A-san. He is an innocent-looking lad of two or three and twenty, always smiling in a vacant manner. He does not know a word of either Japanese or English, while neither my kind conductor nor myself was in a better plight in respect to Chinese. So conversation with the prisoner was out of the question. In response to a sign, he readily showed me his wound which was on his right toe. No restraints are put upon him and every attention proper to a captive of his condition is paid him by the doctors and attendants. Altogether he looks supremely contented with the treatment accorded him. Dr. Koyama, however, tells me that he still refuses to use any internal medicine, his prejudice against foreign drugs being a sort of second nature with him. He is in the regular Japanese hospital clothes referred to above, and wears his pigtail tied round his cleanly shaved head.

This hospital now contains 234 patients in all, of whom those suffering from wounds received in battle are the 110 officers and men who arrived last evening and the Chinese captive above alluded to. The rest are suffering from various internal disorders contracted in Korea. The commonest disease is dysentery, and *Kakke* comes next. There are also a few cases of lung disease.

Besides the building I have thus far described, there are three branch establishments connected with it. One is at the *Haku-ai-sha* hospital, a private institution connected with an Episcopal church here, but temporarily rented by

the Government. Here I found Major Hashimoto and a number of men wounded at the battle of Sŏng-hwan on the 29th of July. They have nearly recovered. I noticed they were eagerly perusing the "Records of War between Japan and China" (*Ni Shin Kōsen Roku*), that very convenient and interesting compilation published by the enterprising Hakubunkan in Tokyo. The total number of patients at this establishment was 82.

The second branch hospital is in an eastern corner of the Castle grounds. The buildings are of a temporary nature, the windows fitted with paper frames, and the roof thatched with straw. Here there were 402 patients suffering from various internal diseases, the most prevailing complaint, as usual, being dysentery.

The last temporary hospital is in a Buddhist temple, Butsugo-ji, on the banks of the river opposite to the principal building described at the outset of the present letter. The number of patients under treatment was 117. The patients in all the above mentioned establishments aggregate 834, of whom 130 represent those wounded in battle.

The existing arrangements being insufficient to meet the increasing demands of the war, temporary wards are in course of construction in a part of the parade ground. They are nearly finished. They are in two parallel rows and are 25 in number. In construction they are similar to the temporary buildings of the second branch hospital above alluded to. These wards will admit 1,000 patients. As the needs increase, similar buildings will be erected in a suburb of the city, with accommodation for an equal number of patients.

To my enquiry, why not treat all the patients at some convenient place in Korea, Dr. Koyama replied that such a course was undesirable on account of expense. While it costs only 25 *sen* per diem to give medicine and food to an ordinary patient here, the outlay would be fully ten times as much were he treated in Korea.

On my return I passed through that part of the parade ground where the temporary buildings for the Houses of the Diet are in course of erection. The work has made rapid progress, and the outer framework is already nearly finished. In a previous letter I stated that these buildings are to be thatched with straw, but the plan has since been slightly improved, and the roof is to be covered with shingles. The official staff of both Houses are now arriving.

The members of the Diet are also arriving. Several private houses have been engaged by the various political parties for offices and lodging purposes. Many of the members of the Lower House intend, I am told, to hire houses at Onomichi, nearly 60 miles away on the Sanyo Railway. On the other hand, some of the Peers contemplate establishing their quarters at the beautiful town of Miyajima, on the island of that name. Small steamers are regularly plying between there and Ujina, the sea voyage taking about an hour and a half. Both these places are too far off. The members of the Diet will find it very much more convenient to hire rooms in the temples and the houses of the better farmers in the suburbs of the city.

Hiroshima, October 7, 1894.

In my last letter I made reference to the Chinese captive in the hospital here. I forgot to mention his name, which is Wang Toh-shang. His wounds have so far healed under the treatment of the Japanese physicians that he is now permitted to walk about with a stick.

H.I.H. Prince Komatsu (Junior) and Count Kawamura left Ujina yesterday for Korea on board the transport *Nagato Maru*. His Imperial Highness is a Lieutenant in the Navy, and has just been re-called from Europe where he was travelling *incognito*. He is going to resume his post on board the *Naniwa Kan*. As to Count Kawamura, it is not known for what purpose he goes to Korea. From the fact that he is a retired Vice-Admiral, some people infer that he will take command of a squadron in Korean waters, but such a conclusion, so far as I know, is entirely unwarranted.

There being now a large number of transports in the port of Ujina, their officers and crew frequently pay a visit to this city. Among these I observe not a few foreigners. I hear that at first there was some prejudice on the part of the Naval authorities against the retention of foreign officers on the transports, but that such prejudice has since been entirely swept away by the irresistible force of personal and practical experience. Their unflinching diligence and conscientious devotion to duty justly extort the admiration of all who have come in contact with them. Among them the most popular with the Japanese are Captain Conner of the *Nagato Maru* and Captain Haswell of the *Yokohama Maru*.

It is a well known fact that, rightly or wrongly, there is a great deal of umbrage among the Japanese against the alleged partiality of the British fleet in the East toward the Chinese. From the translations that appeared in your columns at the time, your readers doubtless remember that the feeling of indignation recently found copious expression, though in a veiled form, through the vernacular press. It is not for me to judge whether or not the irritation of the Japanese was well founded; I only say that such irritation has existed. I am, however, happy to be able to inform you that among the better informed circles here a different state of feeling is beginning to prevail. As to the Government in London, nobody in Japan has ever doubted its friendship toward this country. But even with reference to Admiral Fremantle and the rest of the British officers on the China station, the impression now prevails that they are thoroughly impartial between the two belligerent countries, and that the best of sentiments exist between the British fleet and the Japanese Navy. Whether this happy change of feeling is to be attributed to a better understanding of the situation on the part of the Japanese, or whether it has been caused by a change of attitude on the part of the British Naval officers in the East, I do not pretend to decide.

The advocates of the so-called strong foreign policy will hold a grand meeting at Onomichi on the 12th instant. Among the originators of the project, I notice the names of such persons as Messrs. Kusumoto Masataka, Furusho Kamon, Shimada Saburo, Shiga Shigetaka, and so forth. Why do they intend to hold the meeting at such a small and inconvenient place as Onomichi and not at Hiroshima? They can attract far more attention by meeting at the latter place. Perhaps they fear that, this town as well as the port of Ujina having been placed under martial law, their meeting might be interfered with. If they contemplate any anti-Government demonstration of a mischievous nature, they would do well to defer the proposed meeting altogether, for in that case their proceedings may necessitate official interference even at the town of Onomichi. It is, however, inconceivable that anything of the kind is contemplated by these politicians in the face of the manifesto which they recently issued promising hearty cooperation with the Government for the prosecution of the present war.

As I write these lines, an immense and loudly appreciative crowd is collected in front of my hotel listening to the singing by a party of itinerant musicians of a popular song describing the principal incidents of the present war, with piquant allusions to the discomfiture of the Resident Yuan, to the disappointment of the Viceroy Li, and to the certainty of victory for Japan. The song was composed by Sorori Shinzayemon, a famous story-teller of Osaka.

To-day being the 9th day of the 9th month according to the old calendar is observed as a *sekku* holiday by the conservative inhabitants of this city, and the streets are even more lively than on ordinary days. Tiffin was served on a special set of *sen* and plates which are used only on festive occasions. After a long residence in the iconoclastic capital, it is soothing and pleasant to be reminded of these time-honoured customs.

SUNDAY NIGHT'S EARTHQUAKE.

Ever since the Great Earthquake of June 20th of this year, people have been half-expecting, half-fearing, the recurrence of a similar shock. Astrologers and diviners indeed predicted that another severe earthquake would take place in the autumn, the consequences of which would be still more disastrous than those of the last. The earthquake of Sunday evening was therefore not unexpected, at all events by superstitious folk; yet the fears of even the most timid were fortunately not verified, for the shock, although of an exceptionally severe nature, was not so great as that of four months ago and very little damage was done. At about twenty-five minutes past eight in the evening the advent of the dreaded force was heralded by a prolonged subterranean roar of an unusually loud and terrifying nature. It is remarkable that this sound was heard more distinctly in those parts of Tokyo where the nature of the ground is hilly or very firm, whereas in the less solid alluvial districts of Fukugawa, Honjo, and Shinagawa the noise was not so clearly perceptible. Before the thunderous roll was over the earth began to shake with quick vertical jerks, lasting about twelve seconds in all; and this was followed by a long wavy motion travelling clearly from West to East and lasting for nearly two minutes. Many seconds had not elapsed before nine-tenths of the people of Tokyo were in the streets; in the case of a number of *yose* or music-halls, where the entertainment was in full swing, this sudden rush for the open led to a jam at the exit and the injuring of several people, fortunately none seriously. The panic was particularly keen at the *yose* on Kudan Hill and at the well-known "Kana-zawa-ya," not far from Kyobashi. Several women in the latter house are said to have received slight wounds. Many miraculous escapes are recorded from Harmsen's Circus at the Eko-in, some foolhardy or panic-stricken people attempting to spring down from the top-most row of seats. We have not heard from any members of the Company, the above being the talk of the streets in the vicinity of Ryogoku Bridge. In Kojimachi District a number of lamps were overturned and quantities of crockery or other fragile ware destroyed, but fortunately without causing the outbreak of a fire. The huge lantern or light-tower on the top of Kudan was seen to wave distinctly from side to side, the direction being from south-west to north-east; the lamp was extinguished and great anxiety prevailed for a time, as it was supposed that the tower must infallibly come to the ground. Still more alarming was the motion visible in the great Ryo-un-kaku at Asakusa, which has been undergoing repairs for several months on account of injuries received by the shock of June 20th; the people in the neighbourhood ran out of their houses and kept on running till they had put a safe distance between them and the object of their fears. Nothing happened, however, yet the greater part of the local residents preferred to take lodgings elsewhere for the night, it being impossible in the darkness to ascertain whether the tower had received any fresh injury or not. Still the shock was by no means so strongly felt in Asakusa District as elsewhere; the portions of the city which appeared to have experienced the greatest shaking were Nihombashi, Honjo, Ichigaya, and certain parts of Kojimachi: contrary to the usual rule, according to which these districts are generally least effected. In Nihombashi the largest amount of damage was done to articles of a brittle or fragile kind, especially in the lamp stores and hardware shops. The thoroughfare here was humming with an eager crowd of people until after long after midnight.

Of course it was impossible to ascertain the exact amount of damage done, owing not only to the darkness of the night but also to the absence of any particular reports at the various District Police Stations. Our reporter visited a large number of police boxes, or *Koban*, in several parts of the city and thus obtained his information. The general impression was that the capital had had a most fortunate escape.

Several chimneys were nevertheless known to have been overthrown, happily without injury to the inmates of the houses. Remarkable is also the fact that a number of dwellings in the less solid parts of the city were reported to have sagged or sunk down sideways, the sinkage being in the general direction of north-east. This happened, it is said, to several godowns and other heavily built structures in Fukagawa and Takanawa. The new Law Courts on the Hibiya Parade Ground also received a severe shaking, part of the scaffolding coming to the ground and some of the ornamental brick-work being loosened. A distinct and sudden rise was noted in the water of several of the canals, particularly in the heart of the city. Boatmen reported that the waves rose and sunk five or six times in succession, the rise being rapid and the sinking gradual. This phenomenon was not noticed along the Sumida River, although its turbid waters were greatly disturbed for some minutes after the tremors had finally subsided. No report of injury done to foreign buildings in Tsukiji had reached the Kyobashi Police Station up to midnight, and the constables on that beat had sent in word that all was safe.

It is noteworthy that the approach of some terrestrial disturbance seems to have been known to certain of the domestic animals some time before the earthquake actually occurred. The horses of the squadron of cavalry stationed temporarily in a mat-shed not far from the French Legation appeared quite restless for more than half an hour before the shock, whinnying and pawing the ground in a very disturbed state. The same thing was noticed at two dairies not far from Suido-bashi, the cows snuffing the air, lowing, and refusing to lie in quiet.

It used to be believed by credulous people that earthquakes were caused by the convulsive movement of a huge catfish (*namazu*) lying beneath the Japanese Archipelago. This superstition was hilariously referred to by a party of roysterers in Shimbashi, who were laboriously wending their way homewards after a plentiful dinner with vinous accompaniments. "No!" exclaimed one of the convives, "it wasn't that old catfish. It was China, in her last throes. She is bound to give one more kick, anyway. But no harm's done by anything those *tompinkan* are capable of doing."

In Yokohama, as in Tokyo, the great shock was preceded by an unusually loud subterranean roar, which continued for some seconds after the earth-tremors had begun. The vibrations lasted for fully five minutes, and were of an undulatory order. Very little damage beyond the stopping of clocks and the overturning of ornaments seems to have been done on the Bluff. In the Settlement a large block of cement fell from a house opposite Mr. Durand's Livery Stables and broke into a thousand fragments. At No. 70, Messrs. Carl Rohde, two fires broke out, one in a bedroom upstairs, and the other in the sample room on the lower floor. Superintendent Morgan and his men quickly attended and within a few minutes had destroyed all chances of the fire spreading. The house is slightly damaged from the water. These fires, however, are said to have no connection with the earthquake. A curious thing was noticed by persons who rushed from houses on the Bluff over-looking the town. Within the twinkling of an eye, the streets were swarming with people, most of whom carried *chochin* and lamps in their hands, and all uttering short exclamations of surprise or fear. As the combined cries floated up towards the Bluff, the sound resembled that of waves breaking upon a pebbly shore; while the myriad lights darting about in all directions and with no set purpose resembled the phosphorescent gleams of curling breakers.

Coloured Waiter (to old gentleman who leaves the table without tipping):—"I'se much obliged to you sah." Old Gentleman (angrily):—"What are you thanking me for? I haven't given you anything." Coloured Waiter:—"Dat's de reason, boss. I bet No. 7 dat yo' wouldn't tip, an' I wins de bet."

THE NAVAL FIGHT.

The following reports have been published officially:—

ACCOUNT OF THE NAVAL ENGAGEMENT OFF TAKU-SHAN, EXTRACTED FROM THE REPORT OF THE COMMANDER OF THE FLEET.

On the 16th ult., I left the temporary anchorage, and placing the *Yoshino*, *Naniwa*, *Takachiho*, and *Akitsushima* in the van, I followed with the *Matsushima*, *Hashidate*, *Isukushima*, *Fuso*, *Chiyoda*, *Hiyei*, *Saikyo*, and *Akagi* in the direction of Hai-yung. At 6.30 a.m. on the 17th ult., I arrived at the anchorage ground off that island and proceeded to inspect the harbour. No sign of the enemy having been seen, the squadrons then started toward Ta-lu island off Takushan. At about 11.30 a.m. smoke was sighted in the east-north-east. It was apparently emitted by several steam vessels, and the presence of the enemy's squadron was presumed, to the great joy of all on board our ships. At 5 minutes past 12 the signal was run up to prepare for action, and each of our men-of-war was directed to take the station assigned to it. The enthusiasm of the crews on board every one of our vessels was very great. The *Saikyo* and *Akagi* were ordered to remove from the port side of the Principal Division to its starboard. At this time two of the enemy's men-of-war were sighted on the port bow. At first the Flying Squadron, which was in our van, advanced as though about to attack the centre of the enemy's line, but presently the course was gradually changed so as to come into action with the vessels on his right wing, the Principal Squadron performing a similar manoeuvre. The enemy's formation was then in line, but his vessels were not dressed accurately, some being more or less out of rank. The *Ting-yuen* and *Chen-yuen* were in the centre; the *Lai-yuen*, and a ship which we took to be the *King-yuen*, flanked the two iron-clads; then came, in order, the *Ching-yuen* and apparently the *Chih-yuen*, and soon, ten ships in all. At 12.50 p.m., the enemy, being about five or six thousand metres distant, opened fire upon our van, but the latter did not reply until they had approached to within about three thousand metres when they passed round his right flank. Meanwhile the ships forming the enemy's centre steered directly toward our Principal Squadron. His two wings were already in great disorder, the ships steering in different directions, as though they desired to engage our vessels separately. They fired incessantly as they drew near. Our Principal Squadron kept its original formation from first to last. It steamed always in single file, the ships discharging their guns with deadly effect. Gradually, however, the *Hiyei* and the *Fuso*, which brought up the rear, came within shorter and shorter range of the enemy, and the Captain of *Hiyei*, seeing that by holding his course he could not clear the enemy's line, executed a bold manoeuvre. He steered his ship direct for the interval between the iron-clads *Ting-yuen* and *Chen-yuen*, passed through, and after receiving and returning the fire of several others of the enemy, extricated his vessel and re-joined the Principal Squadron. It was a gallant act. The Principal Squadron having passed across the enemy's front, changed its course so as to circle round his right wing and pass down his rear. This manoeuvre threw him into considerable disorder. Meanwhile several men-of-war and torpedo-boats of the enemy were sighted coming from the direction of the shore to re-inforce him. According to reports subsequently received the number of torpedo-boats that then joined the enemy was six, and that of the ships-of-war four. Meanwhile the Flying Squadron having passed round the enemy's right wing, would have led down his rear had they not perceived that the *Hiyei* and *Akagi* were in a critical situation. In order to carry succour to these two ships, they changed their course, and steaming at their highest speed, pushed between the *Akagi* and her assailants, pouring their starboard broadsides into the latter as they passed. Thus the enemy was placed between the fires of the Flying and Principal Squadrons. Before that, the

Yang-wei enveloped in flames, was sighted flying in the direction of Ta-lu island, and soon afterwards the *Ting-yuen* steaming past the front of the Principal Squadron, attempted to attack from the starboard. But she received such a storm of projectiles that her crew seemed to fall into a state of the greatest confusion, and presently she took fire. This was at half-past 2 p.m. The *Kwang-ping* also was seen to fly shorewards, passing by the *Ting-yuen*. The *Chao-yung* took fire soon after the commencement of the action, and her conflagration was raging furiously by this time. The *Lai-yuen* is believed to have caught fire at about the same period. As stated above, the Principal Squadron and the Flying Squadron cannonaded the *Ting-yuen*, *Chen-yuen*, and their consorts from both sides. The *Ting-yuen* broke into flames forward. Immediately after this the Flying Squadron gave chase to some of the enemy's vessels that were attempting to escape, and finally sank the *Lai-yuen*, the Principal Squadron meanwhile engaging the two iron-clads. When, however, the *Matsushima* was within short range of the *Ting-yuen*, her barbettes was hit by a 304-c.m. shell, which not only injured the barbettes seriously, but also caused great damage to the surrounding parts, and started a conflagration. That happened at 3.26 p.m. A few minutes later either the *Chih-yuen* or the *Chin-yuen* sank. Meanwhile, the *Ting-yuen* and *Chen-yuen* were joined by their consorts, whereas the Principal Squadron had become considerably separated from the Flying Squadron. Moreover, there remained only a short interval of daylight. The attack was, therefore, momentarily suspended and the Flying Squadron was recalled. It was now 5.30 p.m., and when the Squadrons had re-united, the enemy were seen to be directing their course southward, apparently with the intention of escaping to Wei-hai-wei. To continue the engagement after sun-set seemed inadvisable, and moreover as the enemy had torpedo boats and we were thus placed at a great disadvantage for fighting in the dark, it was decided to try to intercept the retreat of the Chinese next morning off Wei-hai-wei. (At this time the whereabouts of the *Saikyo* and *Hiyei* was uncertain. Nothing was known of them except that they had been observed by some of the ships steering southward.) We therefore shaped a course supposed to be parallel to that of the enemy, and steamed forward until dawn. But failing to sight any of the enemy's ships, we turned back to the spot where the battle had been fought on the preceding day, and the *Akagi* was ordered to proceed to the temporary anchorage. Smoke was now observed far ahead in the neighbourhood of the scene of the action, but before the ship from which it came could be sighted, she effected her escape. The *Chiyoda* was then ordered to torpedo the *Yang-wei*, which had been beached while on fire, and the squadrons reached their temporary anchorage early on the morning of the 19th ult. The *Saikyo* and *Akagi* were already there in safety, while the *Hiyei* was reported to have come there and then put out to sea again, heading for the scene of the fight and hoping to rejoin the Squadron.

The above is a brief account of the battle in which the Principal Squadron and the Flying Squadron took part. In the course of the fight the *Saikyo* and the *Akagi* having been separated from the Main Squadron, found themselves in a most hazardous situation. At one time the *Saikyo* was attacked by two of the enemy's men-of-war and two torpedo boats, and a torpedo was discharged at her from a distance of not more than 50 metres. Fortunately it passed under her bottom and she thus narrowly escaped being sunk. She received many shots in her hull, funnel, engines, and so forth, but managed to reach the anchorage. The *Akagi* was in a similarly perilous situation. Becoming entangled among the enemy, she suffered greatly. Her losses were 10 killed, including the Captain, and 20 wounded. Her main mast was shot away, and she was in imminent peril of being sunk. Owing, however, to the able management of her First Division Chief

and her principal navigating officer, who stood to their posts although wounded, she succeeded in withdrawing for a while from the scene of battle, and was able to rejoin her consorts three or four hours later. The *Hiyei* had a torpedo discharged at her twice while she was among the enemy's ships, as described above, but fortunately the missiles failed to take effect. Still she suffered severely from the shells of the enemy. A shell that struck the officers' cabins killed two surgeons, a pay-master, several nurses, and many others, besides causing fire to break out. Finding it impossible to coöperate in the manoeuvres of the Squadrons, the *Hiyei* headed for the anchorage, but started again, immediately after she had removed her wounded to a transport, and in company with the *Kaimon*, made for the scene of the battle, whence the two vessels returned on the 20th ultimo.

The result of the battle was that the *King-yuen*, *Chih-yuen* or *Ching-yuen*, *Yang-wei*, and *Chao-yung* were either destroyed or sunk, while the *Ting-yuen*, *Lai-yuen*, and *Ping-yuen*, suffered severely from fire. The rest of the enemy's vessels must have sustained serious damage. One thing to be specially noted is that even the seamen, firemen, and others,—of course it is unnecessary to speak of the officers and warrant-officers—discharged their duties with evident satisfaction, and preserved their presence of mind even when the enemy's fire was at its hottest and when their superiors and comrades were falling dead or wounded beside them. On this point there is remarkable unanimity among the reports of the various commanding officers.

To the Head-quarters.

(Signed) Vice-Admiral ITO SUKEYUKI,
Commander of the Combined Squadrons.

September 21st, of the 27th year of Meiji.

THE REPORT OF THE "SAIKYO MARU."

At 5 p.m. on the 16th September, the Flying and Principal Squadrons and the *Akagi* and *Saikyo* left the temporary anchorage for Hai-yung. At 8 a.m. on the 17th that island was passed, and turning to the N.E. the fleet steamed for Ta-lu island. At 10 a.m. Ta-lu was sighted on the port bow, and at 11.10 a.m. the Flying Squadron signalled that smoke was visible in the E.N.E. At 11.40 a.m. it was again signalled that torpedo boats and men-of-war of the enemy were seen (12 men-of-war and 5 torpedo-boats). At 10 minutes past 12 the Flagship signalled to prepare for action.

At 12.20, the Flagship signalled to our ship "Avoid fighting," and in compliance with that order we assumed a position in rear of the Principal Squadron. At 12.50, the enemy opened fire upon our van, and our Squadrons answered. At 1.5 p.m., or thereabouts, the firing between the two fleets was at its height. At 1.9 p.m. the *Saikyo* also joined the battle, opening fire at a range of about 3,000 metres. At 1.14 p.m. a shell from the enemy passed through the officers' rooms on the upper deck and fell into the sea at a distance of about 20 metres. This shell must have come from one of the sister iron-clads. The officers' rooms and their vicinity were greatly damaged. At 1.27 p.m. an enemy's vessel was seen to sink. At 1.44 p.m. the Flying Squadron was observed to proceed at full speed to the rescue of the *Hiyei* and *Akagi*. At 1.55 p.m. the *Hiyei* signalled that she had taken fire, and was seen running southward. The *Akagi* was also seen retiring on the port side of the *Hiyei*. Three of the enemy's vessels that had pursued the *Hiyei*, changed their course and pursued the *Akagi* for about half an hour, but finally put about and re-joined their main division. At 2.22 p.m. the *Ting-yuen*, *Chen-yuen*, and one other vessel came to attack us (the *Saikyo*) and a 30.5-c.m. shell struck us, penetrating the saloon and bursting at a spot between the saloon and the engine room. The shell wrought great havoc. The saloon and several other rooms in the vicinity, sky-light, hatch, barometer, chronometer, and other objects were destroyed, the upper deck was penetrated and the steam-pipe connecting with the rudder was shattered, so that the steam steering gear became unserviceable. We sig-

mated at once that our steering gear was disabled and separated from the Squadrons. Relieving tackle was used, but as it proved very difficult to handle, our speed became greatly diminished. We then had recourse to the hand-wheel and steamed on at the highest possible speed. At this time one of the enemy's vessels was sighted in the vicinity of Ta-lu. She was apparently in a disabled condition, for she could not open fire even when we approached within short range. About the same time, however, the enemy fired at us from the port side, at a range of some 2,000 metres, and a shot striking us at the water line astern the ship began to leak slightly. The shot appears not to have been strong enough to penetrate the side completely. Cork was at once hammered into the fissures, and fresh backing was fastened on. At 2.40 p.m. two vessels, one the *Ping-yuen*, another probably the *Kuang-king*, and also a torpedo-boat, came direct at us. We fired at the torpedo-boat, and apparently hit her badly, for her people showed signs of confusion, and she put about, soon disappearing among the smoke of the contending squadrons. The two men-of-war passed within some 500 metres' on our port side, and of the shots that we fired at them two were seen to hit. At 2.55 p.m. a torpedo-boat was sighted ahead, and at 3.5 p.m. she discharged a torpedo from her bow tube. But it passed a little to our right. At 3.6 p.m. the same boat discharged another torpedo from a position about 40 metres ahead on our port. The missile passed under the bottom of our ship and did us no injury. At 3 p.m. one of the enemy's vessels took fire. The flames spread to the bridge, completely disabling her, and finally she was observed to be in a sinking state. At 3.30 p.m. we shaped a course to the south, when three torpedo boats of the enemy pursued us for about half-an-hour. Finding, however, that they could not easily come within effective range they put about. At 3.50 p.m. the *Akagi* was sighted proceeding to the scene of the battle. At 4.20 p.m. the *Hiyei*, which had left the rank on account of a fire, was seen returning to the scene of battle. We exchanged signals with her, and learned that she had got the fire under control. We informed her that we were proceeding to the temporary anchorage, which we reached and dropped anchor at 1.15 a.m. on the 18th.

THE REPORT OF THE "AKAGI."

On the 16th of September our vessel, accompanying the Principal Squadron and the Flying Squadron, left the temporary Anchorage and started for the island of Hai-yung. At 6.58 a.m. of the 17th, in compliance with an order from the Flagship, the *Akagi* steamed into the anchorage of the island and reconnoitred the interior of the harbour. At 11.15 a squadron of the enemy was sighted in the direction of Takushan. At 20 past 12 preparations for action were made, and at 1.9 p.m. we opened fire. At this time the two iron-clads, *Ting-yuen* and *Chen-yuen*, were on the port side of our vessel and we vigorously exchanged shots with them. The ship took up a position on the starboard of the Principal Squadron, in obedience to a command from the Flagship, but owing to the slowness of our speed we were gradually left behind. At 1.20 p.m., the *Lai-yuen* and other vessels forming the right wing of the enemy, came within 800 metres of us. We opened fire from our port broadside and swept away the men that were on the bridge of the *Lai-yuen*. On this occasion Lieut. Sasaki was wounded and Cadet Hashiguchi was killed. Sub-Lieutenant Kaneko took the place of the Lieutenant. At 1.25 p.m. several vessels of the enemy passed us and a shell hit our bridge and killed Commander Sakamoto (Captain of the ship), and two gunners, wounding other two gunners. Lieutenant Sato took the place of the Captain and commanded the ship. Again a shell hit the lower deck in the fore-castle, destroyed the magazine situated there, killed four firemen and wounded one, a steam-pipe being also shattered. Another shot hit the upper deck of the fore-castle and killed three seamen. The *Lai-yuen*, *Chih-yuen*, and *Kuang-chia*, passing our stern, now attacked us again. Our vessel was in im-

minent peril, for as the steam-pipe was gone and the magazine in the fore-castle destroyed, any attempt to procure a supply of ammunition involved using the funnel, and that of course, could only be done at a great loss of speed. We turned our bows a little to port and as soon as we had put a little distance between us and the enemy, temporary repairs were undertaken by Engineer Hirabe and his subordinates. These proved efficacious and our speed was not reduced to so great a degree as was apprehended at first. Thus the enemy in pursuit could not come up with us quickly. Still they persisted in their design and pushed after us at increased speed. We were therefore obliged to change our course to the south and we sought to check their pursuit by firing at them with our stern guns. Several shots hit our mainmast, finally bringing it down. We then hoisted our flag upon the fore-mast and fastened a flagpole upon the remnant of the main-mast. At 2.15 p.m. the enemy's vessels, the *Lai-yuen* and others, came within 300 metres of our stern and a shell fired from the *Lai-yuen* hit the bridge and wounded the chief navigator. Our stern guns were meanwhile worked with the utmost speed. Lieutenant Matsuoka took the place of the navigating officer and commanded the vessel, while Warrant-officer Kondo directed the battery in the bow in place of the Lieutenant. At 2.20 p.m. our 4th stern gun hit the quarter deck of the *Lai-yuen* and caused a violent conflagration. The other vessels went to the rescue of the *Lai-yuen* and in the interval we left them seven or eight hundred metres behind. At 2.23 p.m. the chief navigating officer, having had his wounds dressed, resumed his duties on the bridge. At 2.30 p.m. the distance between us and the enemy having become sufficiently great we gave the crew a rest, reduced our speed, and began to repair the steam-pipe. We saw at a distance the Principal Squadron heading for the *Ting-yuen* and *Chen-yuen*, and so, with the view to join the Squadron, we changed our course to the north. At 2.40 the roll was called, and a rest was again given. At 4.55 the repairs of the steam-pipe having been concluded, we proceeded at full speed to the position of the Principal Squadron, and joined it at 5.50 p.m.

GREAT BRITAIN.

The vernacular press of Tokyo publishes a telegram from Hiroshima which says that, according to news just received from London, an extraordinary meeting of the Cabinet was held on the 4th instant, and considerable public excitement prevailed in the United Kingdom. The principal reason for the Cabinet's meeting is said to have been connected with the necessity of providing for the protection of British subjects in China. There is also a rumour that the complications between Great Britain and France have assumed a grave aspect. The telegram adds that the British Squadron in these waters will be considerably increased.

With such vague information before us it would be futile to make any definite comment. That additional ships should be sent out seems very natural, for it is freely predicted by the foreign residents in China that, in the event of Japan's successes continuing, and, above all in the event of a Japanese invasion of China proper, the ability of the Chinese Government to protect the life and property of aliens would be very questionable. Contingencies demanding the intervention of the British navy might at any moment arise. As for the rumoured complications between England and France, we trust that the telegram is erroneous. The intelligence sent from Shanghai a few days ago that France had preferred to the Peking Cabinet some demands of an exceptional character in connection with the ill-treatment suffered by some of her citizens at the hands of Chinese soldiers, does not come on good authority, but would be very disquieting, if true. Should France or Russia attempt to take advantage of China's present difficulties for purposes of territorial aggression, Great Britain could not easily hold aloof.

THE KOBE CORRESPONDENT OF THE "NORTH-CHINA DAILY NEWS."

We have been requested by the Kobe correspondent of the *North-China Daily News* to publish the following:—

"JAPAN MAIL," Sept. 20.
"Special" Telegram to "Japan Mail."

Nagasaki, Sept. 19, 6.50 p.m.

A report has reached this place that further engagements have occurred in Korea, both ashore and afloat, and victories are assigned to the Japanese arms. No definite particulars are obtainable in regard to the military affair, but it is stated that a Naval battle has been fought in which three ships have been sunk on each side, and that the killed on the Chinese side includes von Hanneken and seven other foreigners.

"JAPAN MAIL," Oct. 1.
It is not often that the source of false intelligence can be distinctly traced, but a case of some interest has just come under our notice. On the 20th of Sept., the Kobe correspondent of the *North-China Daily News* sent to that journal a telegram with reference to the naval fight on Sept. 17th. The telegram said that "three Japanese ships were destroyed;" that "the *Saikyo Maru* and *Hiyei Kan* had a narrow escape," and that "the *Matsushima* was seriously damaged and put back for repairs." The Kobe correspondent of the *North-China Daily News* is, we believe, the Editor of the *Kobe Herald*. Where did the Editor of the *Kobe Herald* obtain the news that the three Japanese ships were destroyed in the fight? No such news emanated from any Japanese source, so far as we know.

The correspondent of our Shanghai contemporary, in sending the above, accompanies it by some rude remarks which ought to disqualify his communication for any notice whatever. We are not concerned, however, and cannot be affected, by any insolent personalities emanating from the chorus of local writers whose *metier* is to bait the editor of the *Japan Mail*. We are concerned, however, to expose mischievous errors, and in this instance the facts are plain. On September 21st the *North-China Daily News* published the following telegram from its Kobe correspondent, adding that the telegram should have reached Shanghai on the night of the 20th:—

A great battle has taken place, in which the Japanese fleet is reported as victorious, of Hai-yuentao, Thornton Haven, on the 17th of September. The fleets sighted each other at 11.45 a.m. The Chinese commenced the action at a quarter past twelve. The Chinese fleet comprised the *Chen-yuen*, *Ting-yuen*, *Chih-yuen*, *Chih-yuen*, *Lai-yuen*, *King-yuen*, *Wei-yuen*, *Yang-wei*, *Chao-yung*, *Kuang-chia*, *Kuang-hai*, *Ping-yuen*, and six torpedo vessels, against eleven Japanese. The *Chih-yuen* and another were sunk. The *Chao-yung* and *Yang-wei* were run ashore. Three Japanese were destroyed. The *Saikyo Maru* and *Hiyei Kan* had a very narrow escape. The *Matsushima* was seriously damaged and put back for repairs. Fire broke out on board the *Hiyei Kan* and she had to be withdrawn. The fire was extinguished by means of her own pumps, several lives being lost. Very little satisfaction is to be obtained from the official despatches, which are palpably incomplete.

It will be perceived that among all the items of intelligence contained in this telegram one and one only is given as a report. That one is the victory of the Japanese fleet. Everything else is stated as an established fact. The names of the Chinese ships that were sunk or run ashore are given; three Japanese ships are declared to have been destroyed; the *Saikyo* and the *Hiyei* are said to have had a very narrow escape, and the *Matsushima* to have been seriously damaged. Challenged to show where he obtained the news that three Japanese ships were destroyed, the correspondent of the Shanghai journal quotes a telegram from Nagasaki published by the *Japan Mail* which says:— "A report has reached this place . . . it is stated that a naval battle has been fought in which three ships have been sunk on each side." The *Japan Mail's* telegram was avowedly based on a report and on hearsay. The telegram of the Shanghai paper announces as an unquestionable fact that three Japanese ships were destroyed. If our telegraphic rumour was the source of the Kobe correspondent's message to Shanghai, why did he pervert one portion of it and one portion only into the form of a proven fact? He left the Japanese victory a rumour and he altered their rumoured loss into a reality. Nor is that all. If he used our telegram, or one like it, at all, he largely supplemented it. He gave the names of the Chinese ships engaged and of the Chinese ships lost and he gave also the names of the Japanese ships that suffered damage. If these details were known to him, he must also have

known that the Japanese had officially denied the loss of any ship. He stands convicted as the author of the first emphatic assertion that the Japanese had three ships destroyed, and although we do not for an instant suppose that he had any wilful intention of deceiving the public, we cannot choose but note the plain bias that keeps a Japanese victory in the form of a rumour, and converts a rumoured Japanese loss into a certainty.

THE PYŒNG-YANG PRISONERS.

The statement published in this journal on Wednesday, September 19th, that 14,500 prisoners had been captured by the Japanese at Pyŕng-yang, has been, and is, so persistently quoted by writers seeking to discredit the *Japan Mail*, that we must crave permission to lay the facts briefly before our readers. It was, as we have said, on Wednesday, September 19th, that the statement first appeared in our columns. Not the smallest doubt was then entertained in Tokyo as to the accuracy of the figure. The question that agitated men's minds was, not whether such a crowd of Chinese soldiers had been taken prisoners, but how they could be disposed of so as not to greatly embarrass the military authorities in Korea. Under the circumstances, we had no hesitation in accepting the figures relating to the Chinese losses, and on the strength of them we eulogised the taking of Pyŕng-yang as a remarkable feat of arms. That, we again repeat, was in our issue of September 19th. During the course of that day further information was received, and having examined it, we wrote as follows in our issue of the September 20th:—

With regard to the Chinese losses, Major-General Kodama, on the strength of information furnished by Lieut.-General Nozu, telegraphs that over 2,000 were killed, and that although the number of wounded is not accurately known, it is at least twice that of the killed. Concerning the prisoners, however, there is much uncertainty. The intelligence received in Tokyo on the 18th gave 14,500 as the assured total, but neither Major-General Kodama nor General Yamagata speak of more than 600. The general opinion appears to point to about 7,000, but as that is obviously a compromise between the large total originally named and General Yamagata's comparatively small body, we hesitate to credit it. Further information must be awaited.

The facts are now before our readers. On September 19th we accepted and published the universally believed account that 14,500 prisoners had been taken. On September 20th, that is to say, in our very next issue, we not only withdrew the original figure, but declared our hesitation to credit even the much smaller estimate of 7,000. We do not think that it was possible to be franker or more careful of the truth. The first belief was erroneous, and we erred to the extent of accepting it, though considering the circles in which it was momentarily held, we should have erred equally had we questioned it. But in our very next issue, 24 hours later, we corrected it, told our readers that we hesitated to believe even in 7,000 and said that "further information must be awaited."

One other point has to be noted. During the night of September 18th, a telegram arrived from Field-Marshal Yamagata speaking of 600 prisoners having been taken. This telegram was in our hands before we went to press on the morning of the 19th. But it was not interpreted as throwing any doubt on the previously received number, for the Field Marshal's message seemed to refer to an additional capture made by the column sent in pursuit of the fugitive Chinese, and not to the total capture.

Any readers of the local foreign press who have taken the trouble to follow pretty closely what is laid before them in its columns, must have been amused and astonished to observe with what insistence and vehemence this original error of 14,500 prisoners is referred to. One would imagine that the *Japan Mail* had deliberately invented a gross falsehood and had adhered to it through thick and thin, whereas in truth it merely recorded in one issue a universally accepted estimate, and frankly corrected it in the next. We shall not waste space

by making any detailed reference to the absurdly unjust charges that have been levelled against us in connection with this affair. We shall simply quote two, as typical and entertaining. The first of these was published on September 28th. It ran thus:—

In the battle at Ping-yang we were told that 14,500 prisoners were captured, and when Count Yamagata had the temerity to assert there were only 600, General Opinion, a purely mythical personage, was quoted to prove that there could not be less than 7,000.

Now will our readers compare this with our own paragraph, quoted above, on which it is based. We wrote:—"The general opinion appears to point to about 7,000, but as that is obviously a compromise between the large total originally named and General Yamagata's comparatively small body, we hesitate to credit it." Thus, so far from quoting general opinion to prove that there had been 7,000 prisoners, in contradiction of Field-Marshal Yamagata's telegram, we actually pointed out that general opinion seemed to have struck a compromise between the telegram and the original estimate, and that it did not deserve credence. Misrepresentation is carried to its limit when in the face of our comment that general opinion in this case seemed to be mere conjecture, we are accused of citing it as conclusive; and when, in the face of our explicitly declared incredulity in the estimate of 7,000, we are charged with quoting it to prove that there could not have been less than 7,000!

The second quotation that we propose to make is of later date, namely, October 6th. It runs as follows:—

The *North China Daily News* adheres to the story of the sinking of the four Japanese warships with as much obstinacy as the *Mail* struck to its 14,500 prisoners.

Here we are declared to have "stuck obstinately" to our 14,500 prisoners. But it has been shown above by actual quotations from our own columns that the idea of 14,500 prisoners was abandoned in the very next issue of the *Japan Daily Mail*. Published on September 19th, the statement was corrected on September 20th. Can that be called "obstinate adherence" to a story?

On the above extracts, and the journalistic methods illustrated by them, it is unnecessary to comment. They speak for themselves. The public will exercise its own discrimination.

THE 17TH SEPTEMBER, BY FOREIGN WITNESSES.

The *North-China Daily News* publishes an account of the naval battle, the details of which purport to have been furnished by the foreigners on board the Chinese ships. Nothing could be more interesting than such a report, were it compiled intelligently and minutely so that the reader could form a clear conception of the evolutions of the two fleets. But our Shanghai contemporary's account is not complete. It is a disjointed narrative, dealing with a number of independent events, and it does not enable us to form any accurate idea of the general character of the battle. One statement indeed is made that helps us to understand what happened, and is also interesting because it tallies with the general account given by the Japanese themselves of their tactics. "The Japanese," we read, "came on in line and carried out a series of evolutions with beautiful precision." But then, just as we hope to hear something lucidly descriptive, we are put off with the exasperating comment, "the tactics of both sides are too highly technical for the lay mind to grasp but in common speech they may be resolved into this. (1) The Japanese having higher speed—the modern equivalent to the weather-gauge—kept circling around the Chinese, enlarging their radius as they came within range of the big guns of the armoured *Ting-yuen* and *Chen-yuen* and coming closer in as they came opposite the unarmoured ships and guns of less calibre. (2) The Chinese kept their wedge formation, but as all the halyards were shot away in the Admiral's ship early in the action, they

had simply to watch the leaders and act at discretion."

As to the shooting on both sides, we are told:—

The foreigners present differ in their opinion as to the shooting; one gallant fellow who is badly wounded maintains the marked superiority of Friedrich the Great of Essen; no doubt under his skilled management, Krupp came out well; but his testimony is impaired by the fact that he holds a brief for that eminent ordnance maker; a compatriot of his of equal scientific ability is of deliberate opinion that the Japanese fire was much more accurate, of greater range, and of more penetrating power than the Chinese.

It is to be remarked, however, that the foreigners from whose testimony the account is supposed to have been collated, agree in praising the behaviour of the Chinese officers and men on board the ship. "One of the most pleasant features of the whole affair," we are told, "is to hear the ungrudging testimony of the foreigners of rival nationalities to their shipmates, both foreign and Chinese, their courage and skill, and their absolute silence about their own doings." Against this we may set the following extract from a private letter dated September 23rd, Tientsin:—"We are all of course much excited by the news of the past 10 days, and are gradually getting hold of more details of the sea fight, as several foreigners were on board the Chinese ships and four of them have turned up here, more or less wounded. Two were killed. They all describe the confusion, want of discipline, and utter demoralization on board each ship; how the Japanese out-manœuvred them, and then how they ran short of ammunition at a critical moment. They say that when the Japanese withdrew from the final attack on the two iron-clads, the latter had only 15 rounds of ammunition left, and there were still three hours of daylight. There seems little doubt that the Japanese can now walk over the course and get where they want to, whether it be Peking or Moukden, or both. All they will have to provide for will be the getting back again, for unless they do so this year, either place may be their Moscow next year." It is difficult to determine between these greatly varying statements.

From the *N.C. Daily News*' account we obtain the first statement of the casualties on the Chinese side. Including the loss of life in the ships sunk or otherwise destroyed, we have the following total:—

Killed 700

Wounded 252

The casualties on the Japanese side, it will be remembered, were 78 killed and 160 wounded.

Our Shanghai contemporary's account contains the following remarkable statements:—

"With regard to this disabled Japanese" (a ship which the *King-yuen* had been trying to sink or capture) "not one of our informants here will deliberately say, 'I myself saw her founder,' but without exception they all maintain that she sank soon after the destruction of the *King-yuen*."

"The foreign survivors to a man regard the statement that the Japanese lost no ships as a barefaced lie; at any rate it can easily be proved."

The above assertions illustrate the kind of testimony we have been receiving from the other side. No one will say that he saw a Japanese ship sink, but all agree that to deny the sinking of a Japanese ship is a barefaced lie! It is quite true, as the account says, that no difficulty exists in proving whether or no the Japanese did lose a ship. But will any proof convince those who do not wish to be convinced?

A travelling man dining at a restaurant ordered a broiled chicken for his dinner. It was placed before him and he tried in vain to make an incision with his knife and fork. Turning to the girl who had waited on him he said: "I was here five years ago and ordered a chicken for dinner." "Oh, yes," answered the girl flippantly. "I remember. It was I who waited on you." "How strange—how very strange!" remarked the man, in a low, awe-struck tone. "Why is it strange?" inquired in girl. "It's more than strange, it's wonderful—such a coincidence could hardly happen twice—same girl, same chicken," and he looked reverently at the specimen before him, while the girl made a hasty retreat.

SHANGHAI WAR NEWS.

The *North China Daily News*, in its issue of the 26th of September, says:—

A private telegram received yesterday from Tokyo confirms the Japanese report that only four Japanese vessels were injured, none of them very seriously, in the recent fight, and that no Japanese vessel was sunk. It is a significant fact that two Japanese cruisers passed Chefoo on Sunday. They may be only on the look-out for Chinese transports or cruisers, but they show that the Japanese navy is still active, whatever the Chinese are doing.

Our contemporary thus abandons its belief in the Chinese story that four Japanese vessels were sunk.

Three days later (Sept. 29th) the same journal publishes a letter from its Kobe correspondent, under date Sept. 24th. The correspondent, after quoting Vice-Admiral Ito's report of the naval battle on the 17th September, says:—

It must be admitted, as the *Japan Mail* finely observes, that the success achieved by the Japanese was very marked. Yes, very marked; so marked as to be absolutely incredible save to a paid apologist capable of swallowing any falsehood that is not levelled against Japan's fair name.

It is entertaining to read this now that the facts of the battle are known beyond all question. Does the unfortunate correspondent of the Shanghai journal still find them "absolutely incredible." We recommend him to desert the regiment of journalistic curs that spend their time yapping at the *Japan Mail*.

A telegram received by the *North China Daily News* from its special correspondent in the North says:—

Captain Fong of the *Tai-yuen* has been executed for cowardice. The *Kuang-chia* stranded on a reef near Talien-hwan while escaping from the battle, and was afterwards blown up by the Japanese, making the total Chinese loss five ships, including the *Yang-wei*, which was rammed by the *Tai-yuen* while the latter was running away.

The Japanese do not claim to have blown up the *Kuang-chia*. They say that they observed her aground in Talien Bay, and that she was blown up on their approach. With reference to this we may note how accurately the Japanese identify the Chinese ships and how little the Chinese seem to know of the Japanese vessels. The Japanese named twelve of the Chinese vessels engaged on the 17th September, and they identified the *Kuang-chia*. But the Chinese never named a single one of the ships that fought against them that day, and could not even indicate the vessels that they claimed to have sunk.

We read this in the *North China Daily News*:—

H.I.H. the Empress-Dowager has proved herself again what she always has been, a patriotic and able lady. A decree dated the 25th instant from the Emperor states the Empress-Dowager feels so much the horrors of war that her people are now undergoing that she has no heart to enjoy the pleasures that have been under preparation the past year to celebrate her sixtieth birthday anniversary. Hence she commands that everything shall be curtailed and that the grand ceremonial congratulations to have taken place at Elho Park by the Emperor and his Court shall be dispensed with, and that everything on a reduced scale shall be gone through in the Forbidden City only. The Emperor says that he in duty bound asked her Majesty again and again to reconsider her decision, but in vain, and hence the birthday celebration shall be within the palace only and the economies thus effected will very likely be diverted towards war expenses. The effect of this decree will doubtless add immensely to the popularity of the Empress-Dowager in the Empire.

The *Shanghai Mercury* gives the following as Admiral Ting's report of the naval battle—it will be noted that Admiral Ting is very doubtful about the sinking of 3 Japanese ships:—

On September 16th, a battle took place between the Chinese and Japanese fleets near Ta-tung-k'ou. The fight lasted five hours. The *Chih-yuen* was sunk, the *King-yuen* burnt, and of the *Chao-yang* and *Yangwei* (the two looking perfectly alike) one was burnt and the other run on shore; the *Ting-yuen*, *Chen-yuen*, *Chin-yuen*, *Lai-yuen*, *Ping-yuen*, *Kuang-ping*, *Kuang-chia*, *Chen-chung*, *Chen-nan*, also two torpedo boats, have returned

to Port Arthur. The other two torpedo boats are missing.

Only ten vessels took part in the engagement, because the *Ping-yuen*, *Kuang-ping*, *Chen-chung*, *Chen-nan*, and the four torpedo boats, were still in the river, and when they came out, all was over. As far as we could see and have seen, three Japanese ships were sunk. The Japanese had a great number of quick firing guns and used them very rapidly. We soon discovered ourselves surrounded by the enemy's vessels and thus were attacked on all sides. The extent of damage done to our ships is not yet ascertained.

The same journal says that the Taotai Kung, telegraphing from Port Arthur to Wei-hai-wei, reported:—

On September 16th, a naval engagement took place between the Chinese and Japanese fleet near Ta-tung-k'ou, which lasted from 11 a.m. till 5 p.m. The cruiser *Chih-yuen* had taken to flight previously and ran to Port Arthur. The *Chih-yuen* and *King-yuen* were sunk, *Chao-yuen* and *Yang-wei* burnt. Admiral Ting is slightly wounded.

We must do the Taotai and the Admiral the justice of saying that their reports seem to deserve all credence. As to the Admiral's statement that only 10 vessels actually fought on the Chinese side, the four others with the four torpedo-boats being still in the river Yalu when the engagement commenced, and not having emerged from it until they were too late to take a part, we do not venture to pass any opinion. Doubtless it was made in good faith. We note as very interesting that neither Admiral Ting nor Taotai Kung claims a victory for the Chinese fleet.

DEATH OF BISHOP RAIMONDI.

We regret, says the *Daily Press* of the 23rd ult., to have to announce the death of another old and much respected resident in the person of the Right Rev. Bishop Raimondi, D.D., the head of the Roman Catholic Mission in Hong-kong, which took place yesterday at 12.45 p.m. at his residence, the Mission House, Glencaly. His lordship left Milan, his native town, in 1852 for the South Sea Islands as a missionary, and after remaining there two years was transferred to Australia. In 1857 he was in Labuan in the pursuit of his calling among the natives, and in 1859 came to Hongkong. On the death of Father Luiz to 1867 he was created Vicar-Apostolic of Hong-kong and its dependencies, and on the 22nd November, 1874, was consecrated Bishop at Rome and given the title of Bishop of Acantho, but he retained the post of Vicar-Apostolic until the time of his death. Seven years ago he commenced to break down, and his medical advisers ordering him to the bracing climate of Australia, he went down to Tasmania, from whence he took a trip to Mexico. After remaining a short time there he returned Hongkong apparently recovered, but the recovery did not last long, for shortly after his return his health again gave way and has remained feeble ever since. For a few months past he had been living at the Peak, but on the 14th inst. came down to the Mission House, where he breathed his last at a quarter to one yesterday afternoon, in the sixty-eighth year of his age. From the time Bishop Raimondi arrived in the colony he devoted the greater part of his attention to the education of the youth of both sexes, and it is mainly to his untiring zeal and perseverance that the various educational institutions and orphanages of the Roman Catholic denomination owe their existence and their present sound footing. In this connection we may mention that his Lordship at one time had to make great exertions to raise the standard of his schools in the face of very strong competition arising in the colony by other denominations, and his efforts resulted in the introduction of the Christian Brothers, to effect which he was obliged to take a trip to Rome and obtain the permission of the Pope and the consent of the General of the Order. He also travelled almost all over the world to beg assistance for the erection of the buildings for his institutions and for the maintenance of the very numerous orphans under his charge. He was no mean linguist, speaking several European languages and Chinese dialects and Malay.

PROTECTIVE INOCULATION FOR DIPHTHERIA.

Dr. Koch has for some years been devoting his attention to the discovery of means to render animals immune from diphtheria, and has, it seems, been finally successful in discovering a method of inoculation which, if adopted in time, will with almost complete certainty, save human beings infected with the disease. The principle of the new method is, briefly this:—

1.—Diphtheria is an acute infectious disorder due to the inoculation of the throat with a specific micro-organism, known as the Klebs-Loeffler bacillus.

2.—As a result of the growth of this organism in the throat a virulent chemical poison, belonging to the class of bodies known as toxins, is produced; and the effect of this poison is to produce the serious and often deadly local and constitutional symptoms of diphtheria.

3.—This toxin can be obtained from pure cultures of the Klebs-Loeffler bacillus.

4.—If large animals, such as the horse, cow, or goat, are inoculated with gradually increasing doses of this toxin, they become gradually accustomed to the action of the poison, so that at last doses may be inoculated enormously larger than those which would at first have proved rapidly fatal.

5.—This tolerance is supposed to be due to the development in the blood of a substance capable of neutralizing the effects of, or of actually destroying, the diphtheria toxin. This substance, which is contained in the blood serum of animals thus artificially rendered immune, is called the diphtheria anti-toxine.

6.—Blood serum containing this anti-toxine, if inoculated into man or other animals, produces the same anti-toxic effects as it produced in the animal from which it was taken: that is to say, it prevents infection in those exposed to infection, and it rapidly cures in those already attacked by the disease.

7.—The immunity produced lasts a short time only two or three weeks, it is believed. It thus differs markedly from the immunity from small-pox produced by vaccination, which lasts for many years.

8.—On the other hand, the inoculation produces no unpleasant local effects like those due to vaccination, nor does it produce any constitutional symptoms resembling those that render the inoculation of Koch's tuberculin so serious a measure. It appears to be entirely harmless, and can be repeated with impunity as often as seems necessary. Moreover, its effects are markedly beneficial, even if inoculation be delayed to the second or the third day of the disease.

The medical profession has been so many times disappointed by celebrated "cures" which saved a hundred per cent. of cases of diphtheria, that it will be slow to believe the good news that this dangerous and widespread disease has finally met its match. The method must be tried on a large scale, and in many parts of the world, before it can be finally accepted as successful. It is sufficiently simple: all that is necessary is that in every large city there should be a bacteriological institute in which a supply of artificially immunised animals is kept on hand, so that serum containing the anti-toxine can be obtained whenever it is required. "An important adjunct is that facilities should be offered at the same institutes for the bacteriological diagnosis of every suspected case of diphtheria. Otherwise, the inoculations will be made in numerous cases of common sore throat, and the list of "recoveries from diphtheria" due to the cure will thus be greatly swelled. It is in this manner that former vaunted cures for diphtheria obtained their short-lived reputation. But by the bacteriological method of diagnosis all spurious cases can be excluded, and the merits of the anti-toxic inoculation rigorously tested. We have great hopes of the new discovery. It is the work of one of our most competent investigators, and the lines along which it proceeds are those by which alone we can hope to discover the means to cope with diphtheria and other zymotic diseases.

Mr. Figg: "What made you so late coming home from school?" Tommy: "Teacher kep' me in." "Why?" "It was just a—misunderstanding." Well, what sort of misunderstanding?" "Well, I didn't understand my jography."

THE NEW TREATY.

THE conclusion of a revised Treaty with Great Britain has caused some excitement among the foreign communities in Japan. That was to be expected. Japan is the home, permanent or temporary, of many of the Europeans and Americans who have settled there, and it is natural that any radical modification of the conditions of residence should be scrutinized very closely. During a period of some thirty years, foreigners in Japan have enjoyed the privilege of being tried by judges of their own nationalities according to the laws of their own countries. It is a high privilege, valued in proportion to the degree of appreciation with which men have learned to regard good laws and trained judicial officials. But it is, of necessity, a temporary privilege. Its enjoyment involves violation of Japan's Sovereign rights. One of the first essentials of a State's independence is that its jurisdiction should extend to every person within its territorial limits. Japan has made earnest and worthy efforts to qualify for the exercise of that essential right, and it cannot be reasonably alleged that her claims should continue to be ignored. In truth there has been for the last five or six years a general consensus of opinion that Consular Jurisdiction should be abolished. Every scheme of Treaty Revision, from whatever source it emanated, has been based upon the understanding that Japan must recover her Judicial Autonomy. Every revised treaty hitherto negotiated has embodied that concession. The revised but not concluded Treaty with all the Powers, in 1886, embodied it. The revised and concluded treaty with the United States in 1889 embodied it. The revised and concluded Treaty with Germany in 1889 embodied it. The revised and concluded Treaty with Russia in 1889 embodied it. The proposed Treaty between Great Britain and Japan in 1889 embodied it. The proposed Treaty between Great Britain and Japan in 1892 embodied it. In fact, Consular Jurisdiction received its death-blow long ago. Its abolition, when first brought into the field of practical politics, might have been surrounded by many safeguards. That was the golden opportunity. No one closely watching the growth of public opinion and national sentiment in Japan, could fail to see that the terms then obtainable by the foreign negotiators were such as Japanese statesmen must find it impossible to concede a few years later. Every passing month educated in the people a fuller sense of their international rights, and brought them nearer to the possession of constitutional machinery for giving effect to the popular will. The expediency of seizing that favourable moment for an immediate settlement was unceasingly urged in these columns. But it was not seized, and

one by one guarantees then obtainable from Japan passed out of the range of possibility. Long ago it became hopeless to think of stipulating for the employment of foreign experts upon the Japanese Bench. Long ago it became hopeless to think of pledging Japan to submit her new laws for foreign inspection before putting them into force. Long ago it became hopeless to think of providing that her Civil and Commercial Codes must be in full and satisfactory operation before her resumption of jurisdiction over foreigners. No Japanese Cabinet making any of these concessions could remain in office for an hour. It has indeed been urged—and that, too, by men whose views merit all respect—that the third of the above guarantees should be embodied in any revised treaty; that the satisfactory operation of the new Codes should be made an essential preliminary to the abolition of Consular Jurisdiction. But Japan could never be expected to accept such a condition. No independent State would accept it. "Satisfactory operation" must mean "satisfactory" from the point of view of Foreign Powers. In other words, the insertion of such a clause in a treaty would endow Foreign States with absolute discretion to fix the time for restoring to Japan her Judicial Autonomy. A revised treaty on such lines, so far from relieving Japan from her bondage, would recognise the right of Foreign Powers to keep her tied for ever if they pleased. Nothing, in short, remained for Great Britain to ask when she finally approached the subject of Revision, except that Japan must have an intelligible body of civil and commercial laws in operation before assuming jurisdiction over foreigners, and that a reasonable period must be allowed to elapse before the proposed changes were introduced. Both of these provisions are secured by the new Treaty and its accompanying notes. It will not be seriously claimed in any quarter, we imagine, that England should have altogether declined to negotiate on the basis of restoring Japan's Judicial Autonomy. Restoration was inevitable, and unquestionably England's prestige and influence are better consulted when she leads in such a matter than when she follows.

The Jurisdiction question, therefore, is finally disposed of. Naturally the fact is unwelcome. The nationals of every civilized country prefer their own laws and their own judges to the judges and laws of any other country. Englishmen, had they tribunals of their own in Paris or Berlin, would object seriously to the substitution of French or German tribunals. Frenchmen or Germans similarly circumstanced in London would be similarly conservative. Such an objection becomes greatly intensified where there is question of submitting to the tribunals of an Oriental country. But it is chiefly a sentimental objection where Japan is concerned. Its

most uncompromising formulators have never attempted to support their arguments by practical evidence. Never once has any effort been made to establish the unfitness of Japanese tribunals by citing recorded instances of their incompetence or partiality. That has been the flagrantly weak feature of the conservative case throughout. It has been invariably based upon the vaguest generalities. Fifty years hence the reluctance to pass under Japanese Jurisdiction would be as strong as it is to-day: probably stronger, indeed, for whatever additional knowledge foreign residents might then have acquired as to the working of Japanese legal tribunals, would be outweighed by the force of prescription. Of such knowledge only the pettiest measure has been garnered by foreigners during a quarter of a century. They are not concerned to garner it, and the process is exceedingly difficult. Half a century hence they would be in a like plight of ignorance, whereas the roots of their exclusive habits would have struck much deeper. To wait twenty years, fifty years, would have been futile, and Japan could not afford to wait. Something was due to her. Something had to be conceded to her earnestness and steadfastness of progressive reform. We are glad that England has been the Power to make the concession.

But although the Jurisdiction problem must be counted as finally solved, it does not follow that practically useful suggestions may not be made with regard to the terms of other treaties awaiting, or in process of, revision. Everyone knows that the British Government has always been glad to receive advice from men of experience. We presume that other Governments are equally liberal. In point of fact, it would be difficult to indicate in the new Anglo-Japanese Treaty a solitary provision concerning which HER MAJESTY'S Ministers, when they approached the negotiations, were not in full possession of the British community's views. But unfortunately the exposition of their views at the hands of their journalistic representatives has too often been disfigured by violence and rancour. Nothing could well have been more discreditable or weakening to any cause than the unreasonable abuse heaped upon HER MAJESTY'S Government since the publication of the new Treaty, and the hysterical intemperance of the terms employed in the present and in the past to deprecate the restoration of Japan's Judicial Autonomy. It may be hoped that such displays are at an end, and that the temperate section of the foreign community will now take the matter into their own hands, and formulate in sober, simple terms any practical suggestions they may have to make. The Treaty has to run the gauntlet of many negotiators. Whatever improvements it undergoes will be for the benefit of British subjects just as much as for that of the

subjects or citizens of the Power effecting such improvements. The most-favoured-nation clause provides for that. There may be points well deserving closer attention or clearer enunciation: for example, the duration of leases under which lands are held for commercial or manufacturing purposes; the limitation of charges to which lands within the present foreign settlements will be subject, and so forth. The German residents of Yokohama have already forwarded a memorial on the subject, and it will doubtless receive full consideration. Certainly nothing can be gained by adhering to the old habit of angry denunciation and vague objection.

THE CHINA ASSOCIATION AND THE FOREIGN OFFICE.

WE have often had occasion to note the unhappy fatality that seems to pursue the opponents of Treaty Revision. They certainly have a good case; a case that might be powerfully stated; a case that might be placed before the public in such a light as to command sympathy from all and possibly to carry conviction to many. But they are doomed to discredit themselves by mistakes whenever they seek to be explicit, and when they deal in generalities their calamity is to drift into the vagueness of evident prejudice. The communication addressed by the Secretary of the China Association to the British Foreign Office on the subject of the revised Treaty with Japan illustrates these regrettable features. Mr. GUNDRY, venturing into historical details, writes:—

It will be within the knowledge of your Chamber that the question of extra-territorial jurisdiction has been the crucial point in all negotiations that have taken place for the revision of foreign treaties with Japan. Negotiations were conducted with the United States many years ago on that basis; but no serious apprehension appears to have been entertained by the Foreign Community, at the time, that they would reach a definite issue. It is also matter of common knowledge that a treaty was formulated with Germany (about 1889), in which the eventual surrender of extra-territorial privileges was contemplated. But it is equally notorious that those treaties failed to reach maturity. That they did not do so may probably be ascribed to the exaction, by the Powers concerned, of safeguards more stringent than Japan was disposed to give; and it was understood to be on that same ground that the negotiations with England made shipwreck in 1890.

It might have been reasonably expected that in a document representing the views of such a body as the China Association, and discussing such a question as Treaty Revision, recent historical events, directly relating to that question, would be accurately stated. But Mr. GUNDRY's statement is conspicuously inaccurate. He speaks of negotiations conducted "many years ago with the United States" of America on the basis of surrendering extra-territorial jurisdiction; "but," he adds, "no serious apprehension appears to have been entertained by the Foreign Community, at the time, that they would reach a definite issue." Now, as a matter of fact, the negotiations in question did "reach a definite issue." They resulted

in the conclusion of a treaty providing for the restoration of Japan's Judicial Autonomy. From a practical point of view the treaty was rendered valueless by the addition of a clause subordinating its operation to the consent of the other Treaty Powers. But the negotiations did mature, and it is altogether misleading to allege that the apathetic attitude of the Foreign Community at the time was due to any conviction of their probable failure. That, however, is a minor inaccuracy, though it possesses a certain significance to which we shall presently allude. Very much more remarkable is the total omission of any reference to the Treaty actually concluded with the United States in 1889. Why does Mr. GUNDRY, as the mouthpiece of the China Association, make no reference whatever to that Treaty? Why does he refer to the United States at all if he omits the most important incident in her treaty relations with Japan? But that, too, is a minor inaccuracy. Sins of omission are not very serious except as illustrating the marked looseness of a record that purports to cover all the salient facts of the case. It is when Mr. GUNDRY passes to speak of the revised Treaty with Germany in 1889 that his blunders become remarkable. "It is matter of common knowledge," he writes, "that a treaty was formulated with Germany (about 1889) in which the eventual surrender of extra-territorial privileges was contemplated." Reading this curious description of a remarkable and much remarked event, we are compelled to conclude that what is "matter of common knowledge" may not be matter of personal knowledge, and that the Secretary of the China Association has only the vaguest acquaintance with the story of Treaty Revision in 1889. Certainly if he knew that the Treaty with Germany was actually concluded and signed by the high contracting Parties, and if he knew that it provided for the restoration of Japan's Judicial Autonomy on terms varying slightly from those embodied in the new English Treaty of 1894, he would recognise the great inaccuracy of saying that such a treaty had been merely "formulated," and that the eventual surrender of extra-territorial privileges had been merely "contemplated." But it is plain that he did not know, for, by way of crown to his previous display of ignorance, we find these words:—"That they" (*i.e.* the German Treaty of 1889 and the American Treaty of many years ago) "did not mature may probably be ascribed to the exaction, by the Powers concerned, of safeguards more stringent than Japan was disposed to give." There can be no mistaking the sense of these words. They mean, and are intended to mean, that the treaties were not concluded because Germany and the United States demanded guarantees which Japan could not be induced to concede. That is quite erroneous. Germany

did not again refer to such an ancient affair as the first revised treaty with America—Germany made no attempt to exact safeguards irksome to Japan. She accepted Japan's proposals. The obstacle that prevented the German Treaty from going into force, the obstacle that wrecked the whole course of Treaty Revision in 1889, was not of Germany's making, or of any Foreign Power's making: it was of Japan's making.

But perhaps the strangest feature of Mr. GUNDRY's historical *résumé* is that he altogether ignores the Treaty carried virtually to conclusion with all the Foreign Powers in 1887. That Treaty provided for the complete restoration of Japan's Judicial and Tariff Autonomy after the lapse of twelve years. Had it gone into force, we should now be within five years of the consummation it embodied. That it did not go into force was not because of any opposition on the part of Foreign Powers. It was because Japan drew back. But the Secretary of the China Association does not even allude to it.

The defective and misleading character of Mr. GUNDRY's *résumé* cannot, we think, be purely accidental. History is too plainly written to be thus distorted inadvertently. Ever since 1884 the Foreign Powers have declared their readiness to negotiate with Japan on the basis of fixing a definite period for the abolition of Consular Jurisdiction. That was the basis of the Treaty concluded with all the Powers, negotiating *en masse* from 1884 to 1887. That was the basis of the Treaties concluded with America, Germany, and Russia in 1889. That was the basis accepted by Great Britain in 1890. But now, in 1894, we have the China Association coming forward and declaring that "it would be as premature now as it would have been in 1890 to predict, beforehand, that the conditions" (necessary for abolishing extraterritorial jurisdiction) "will have been reached in any given number of years." Thus the China Association announces its conviction that the Governments of all the Powers have been proceeding, for the past ten years, on an entirely mistaken basis, and that the time has not yet come when any negotiations pointing to the abolition of Consular Jurisdiction after a stated number of years can be safely commenced. No difference could be more radical than that existing between the China Association and the Governments of all the Treaty Powers. Since 1884 the Governments of all the Western Powers, whether negotiating together or independently, have signed treaties assigning a fixed limit of years for the continued existence of Consular Jurisdiction. The China Association now declares that no such limit can yet be assigned. If the China Association and the conservatives sharing its views are to be taken as guides, all the Governments of the West have been stultifying themselves

for the past ten years, and must now turn round and retract the concession forming the basis of all their previous negotiations with Japan. Recognising these facts, it is easy to understand why history fared so ill at Mr. GUNDRY'S hands. To have set down the real record would have been to place the China Association in direct and open conflict, not alone with the Government of Great Britain, but also with the Governments of every other European Power and of the United States.

That was precisely the mistake made by the promoters of the Citizens' Meeting of 1890 in Yokohama. They committed the meeting to a declaration that "the time had not arrived when an estimate could be formed of the period within which the unconditional relinquishment of extraterritorial jurisdiction in Japan could be safely promised." We pointed out in these columns, at the time, that such a declaration could only mean the abandonment of the negotiations on the basis hitherto accepted. In other words, it could only mean the postponement, *sine die*, of Treaty Revision, so far as concerned the jurisdiction question. Our comments exposed us to great odium and abuse. They also elicited emphatic denials that the attitude of the Meeting had been anti-revisionist. But we are now borne out from point to point by the manifesto of the China Association. The Association, avowedly endorsing the Meeting, declares that it would be premature to fix any time for abolishing Consular Jurisdiction. Therefore it would be premature to open negotiations based on a limit of time. Therefore Treaty Revision on the basis hitherto invariably adopted is premature.

Still further to emphasize the above conclusion, Mr. GUNDRY cites the case of the *Kowshing*. "The circumstances of the recent sinking of the *Kowshing*," he says, "may serve to illustrate the divergence between Eastern and Western ideas. The difference is not merely in Code and technical provision, but in spirit and conception." This, we think, is one of the most unhappy passages in the letter. The case of the *Kowshing* is still *sub judice*. It is at least an open question whether there can be fairly laid to the charge of the Japanese any sin other than their omission to save the Chinese soldiers who were precipitated into the water by the sinking of their ship. Still more was it an open question when Mr. GUNDRY wrote. The affair happened on July 25th. The China Association's letter is dated August 24th. It was therefore written wholly on the strength of telegraphic information and before any detailed official accounts had reached London. Could anything be more hasty or unjust than to quote a solitary occurrence, the barest outlines of which were known, by way of proof that a whole nation is uncivilized? Does Mr. GUNDRY know nothing of the admirable record Japan has earned by

long years of unvaried kindness and helpfulness toward shipwrecked strangers? Is all that record to be wiped out by a single act committed against an enemy's mutinous soldiers who refused to surrender and were endeavouring to murder even their own foreign officers? We know, too, how frequently English public opinion has been betrayed into excesses by want of deliberation. When the news of that affair still known as "the massacre of Sinope" reached Great Britain, there went up an almost universal cry of anger and shame. The Emperor of RUSSIA was denounced as a monster outside the pale of civilized law, and was compared to some of the furious and treacherous despots of mediæval Asiatic history. Yet it was afterwards proved that no foundation existed for these accusations. So, too, when London learned what had happened at the Pagoda Anchorage on August 23rd, 1884, it was declared that the French fleet's action had been "not acts of honourable warfare but deeds of barbarity." But before a year had passed that extravagant notion was abandoned. These and many similar incidents show the need of caution before passing final judgment in cases where the passions of the witnesses on each side have been powerfully excited. Yet a body of grave men like the China Association snatch at a story the barest outlines of which they have learned by telegraph, a story involving the conduct of one Japanese naval commander alone, and adduce it as conclusive proof that the whole Japanese nation is unworthy to be counted civilized. Such haste, to say nothing of its indecency, betrays deeply rooted prejudice. It suggests also that a distressing lack of valid arguments must have been experienced when recourse was had to such an incident. Finally, we have to note that if the inference formulated by the China Association be conceded, the idea of admitting Japan to the comity of nations must be abandoned for many years to come. If there does really exist between her and Western nations "a difference, not merely in Code and technical provision, but in spirit and conception," then her place is with the outer barbarians, and there she must remain until her national character has undergone radical renovation. Yet one other point must be alluded to, as showing how difficult it is to credit the sincerity of all this agitation. The first public protest against Treaty Revision was made by the Yokohama Citizens' Meeting of 1890. It is now endorsed in 1894 by the China Association. The proposition enunciated by both bodies is that the time has not come for assigning any limit to the exercise of Consular Jurisdiction: it must continue to be exercised for an indefinite period. If that be true now, it surely was still truer five years ago, and yet truer ten years ago. Why, then, was no remonstrance formulated in 1886 when all the Powers had

agreed to a revised treaty providing for the complete abolition of Consular Jurisdiction after the lapse of 12 years? Why was no remonstrance formulated in 1889 when the United States, Germany, and Russia concluded treaties providing for the complete abolition of Consular Jurisdiction after the lapse of 5 years, and when England, France, Italy, and Austria agreed to negotiate on the same basis? What was it that suddenly awoke the Foreign Community to the perception of so vital a fact ignored by them for so many years previously?

It is because these reflections are forced upon us by the China Association's letter that we regard the exponents of the Anti-Revision doctrine as the victims of a merciless fate, which unceasingly betrays them into inaccuracies, excesses, and anomalies fatal to a fair presentment of their case.

JAPANESE POSTAGE STAMPS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Now that the supply of Silver Wedding Stamps is getting low, and we have to go back to the old style, the contrast becomes very marked. With all the inconveniences of a stamp so big that it took two licks to get it wet, the wedding stamp had this advantage, that it was made of paper strong enough to hold its own, while the ordinary twos and fives are of such wretchedly poor paper, that they not only curl badly but split when they do curl. At my local office I was kindly informed that it was "Shikata ga nai," that I must spend a minute or two wetting on my curled stamps before I attempted to affix them!!

I beg you to use the influence of one corner of your paper to induce the Department of Communications to use for their stamps paper as good as that of which the wedding stamps were made.

Yours truly,

WILLIAM H. NOYES.

Maebashi, Joshiu, October 9th, 1894.

THE GERMAN ARMY RESERVE.

SIR,—I had the honour to serve in the German army, and am still liable to be called for in case of war. Therefore I can not help raising a vigorous protest against the wanton assault you made in yesterday's issue against our patriotism, thereby causing the indignant surprise of all your German and surely of your English readers too. It is apparently unfair to compare the present willingness of the Japanese reservists to reënter the ranks with the attempt which, under the pressure of the "Allgemeine Dienstpflicht," some individuals make in times of peace, to escape conscription. This occurs everywhere where the army does not consist of mercenaries but of the citizens themselves. And I am sure you dare not say that the Germans showed any reluctance to defend their country in the times of war.

It would in general increase the value of your paper if you would show more fairness towards our country, but you keep us Germans under the constant impression that this is not the case.

I am, Sir, yours sincerely,

DR. MAX CHRISTLIEB.

Tokyo, October 4th, 1894.

[We certainly did not intend to question the readiness of the Germans in general to come forward for the defence of their country.—Ed. J.W.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is an old custom of yours to tell your readers funny things about Germany. At one time it is the judicial system of Germany which you denounce as thoroughly rotten, another time you say that the German railway bridges are badly built and generally collapse after a few years. We Germans in the Far East got by-and-

by accustomed to your little jokes, and do no more care very much for them. But what on earth induced you to extol the patriotism of the Japanese reserves by comparing them with the wretched Germans who try by every means to escape conscription? Unless your comparison be quite senseless, you must mean by it that many Germans did not do their duty when called to war. But then you do not know that in the Franco-German war thousands and thousands of Germans voluntarily went to fight for their Fatherland; you do not know that the professors of the German Universities had to quit their lectures because there were no students left to attend them! So you do not know that every educated German thinks it an honour to serve his country as an ordinary soldier! I think an Englishman whose country keeps an army of mercenaries ought not to reproach the most military nation of the world for a want of military spirit.

There are many things in Old England which you might use as examples to show that things are better in Japan than in Europe.

I am, Sir, your obedient Servant, DR. L.
Tokyo, October 6th, 1894.

[We do not believe that things are better in Japan than in Europe. We have never said that the judicial system in Germany is rotten. We have not alleged that German railways are badly built and generally collapse after a few years. We do not believe that the Germans are wretched fellows who try by every means to escape conscription.—Ed.]

THE RECENT EARTHQUAKE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your esteemed paper of the 8th instant contained an account of damages done by the earthquake of the 7th inst. Among other items, it stated that the new Law Courts on the Hibiya Parade ground had received injuries, "part of the scaffold coming to the ground and some of the ornamental brickwork being loosened." As these buildings were erected under my architectural supervision, I, being naturally concerned on reading your account, sent one of my assistants to inquire into the facts. His inquiry bringing a denial of all damages both as to scaffolding and as to the building itself, I went myself to-day and a careful investigation showed that your reporter's work in reference to these buildings, was manufactured out of whole cloth,—the fabrication having not a single fact to excuse itself. I learned also from the night-watchman, who with a policeman made investigations shortly after, that no noise of falling timbers, &c., was heard, nor damage discovered. This therefore would seem to prove that your reporter could have obtained no such news from police headquarters. The fact that the greater earthquake of June 20th, left not a crack discernible in these big buildings, a fact so reported in your paper at the time, might have suggested caution. The craving on the part of a reporter to furnish sensational news is universally known, and it may not be possible always to repress consequent abuses. Still to send forth recklessly unsubstantiated news on such serious items, is needlessly disquieting. It is sad enough to have to report the real facts of these incalculable powers, and a baseless sensational report on them cannot be too severely censured.

Yours sincerely, R. M. SEEL,
Architect.

Tokyo, October 10th, 1894.

THE INVASION OF CHINA BY JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The pending war must have turned the thoughts of all students of history to the Invasion of Russia by Napoleon in 1812, and it may perhaps be of interest to many of your readers to have the salient facts of that invasion brought succinctly before them with a recent opinion of Lord Wolseley as to the fatal error that was committed. That campaign took place under conditions many of which are similar to what the Japanese army will have to contend with in Korea and China; it was carried on in a hostile country at a considerable distance from any basis of operations, with bad roads and means of communication, and with winter approaching.

Napoleon crossed the Niemen at Koono on June 24th, 1812, with his "Grand Army" of 600,000 men and 1,200 guns. It was commanded by well known generals of tried ability, such as Ney, Davoust, Augereau, Murat, St. Cyr, Grouchy, and Desaix.

The Russian forces opposed to him numbered only 215,000 men. Their commanders were unknown to fame.

He crossed the Niemen without resistance and the Russians fell back on Smolensk, exhausting

the country of all supplies and taking away all horses.

The French entered Wilna (about 600 miles from Moscow by the route taken by Napoleon) on June 28th, but did not leave until July 16th. Whatever Napoleon's reasons were for this delay it was no doubt a grave mistake. Before he arrived at Wilna, the horses of the French army, owing to the bad roads and heavy rains, began to fail and he had in consequence to leave behind there 100 guns and 500 waggons.

He reached Witepsk on July 28th, the Russian general, Barclay de Tolly, retreating gradually before him. Great heat was then succeeding the heavy rains.

He left Witepsk on August 13th, 150,000 men were then missing from the army of 600,000. These were either dead or in hospital or wandering about the line of communications as stragglers, and this in spite of hardly any fighting.

His object was to force on a decisive battle. This the Russians avoided, and, although on the 16th, 17th, and 18th August some considerable skirmishes took place near Smolensk, they continued to retreat in good order.

He entered Smolensk to find the town a mass of burning ruins and all food and supplies carried away or destroyed.

The tactics of the Russians were simple yet clever. They engaged in rear-guard actions; they withdrew their main army further and further into Russia; and they left the Cossacks to harass the French advance, to capture or destroy all provisions in the surrounding country, and to kill off all French stragglers.

He left Smolensk on the 25th August. He had then 250 miles to march before reaching Moscow. The country between those towns was very fertile, but the Russians had left it as bare as the Sahara.

The Russians finally decided to let him give them battle at Borodino, 75 miles from Moscow, where they had entrenched themselves, and this he did on September 7th.

He had had, as above mentioned, 600,000 men with him when at Koono on June 24th. He was only able to place in line at Borodino 130,000 men!! His losses in action had been but few, but sickness and the evils of marching through a hostile country had in the short space of two months and a half reduced his army by more than three-fourths.

The Russian army at Borodino was of about equal numerical strength with the French, but could not in other respects compare with it. The battle was one of the most bloody on record, of the 260,000 combatants over 80,000 were killed or wounded. It ended in the Russians retreating, but without losing guns or colours, and the French entered Moscow on September 14th.

There Napoleon remained some time negotiating fruitlessly for peace, the Czar declining to discuss terms so long as the enemy remained in Russia. Winter meanwhile was drawing near, and the Russian army was being strengthened.

He left Moscow on October 19th, having virtually gained nothing beyond the destruction of that city and several other towns. His army was then only 90,000 strong.

By November 9th, when he reached Smolensk he had with him only 45,000 men. Day by day saw this small remnant of the "Grand Army" degenerate into a mere half-starved, half-frozen rabble, and when Koono was entered towards the middle of December there were not 6,000 armed men remaining; to represent the six hundred thousand that had left there just six months before.

These are the historical facts. As to the grave error committed by Napoleon, Lord Wolseley thus expresses his opinion: "It was, I think, a fatal error of Napoleon to have advanced beyond Smolensk in 1812; but he might have retrieved it in a great measure if, after an interval sufficient to prove his assured possession of Moscow and to rest his army there, he had forthwith begun his return march upon Smolensk. He could have effected his retreat without difficulty up to September 21st, or even a few days later; for he might there have selected a line through districts that had not been devastated. He might have chosen his winter quarters so as to be within reach of his magazines, whilst he continued to threaten Russia with a fresh invasion the following year, leaving her for the present with her ancient capital destroyed, many of her best towns ruined, and the impotence of her generals and armies to resist his advance clearly demonstrated to the world."

All those whose sympathies are with Japan, must hope that the lessons taught by that invasion have not been taught in vain.

Yours faithfully, PRECEDENT.
Tokyo, 11th October, 1894.

YOKOHAMA LITERARY SOCIETY.

The Annual General Business Meeting of the Yokohama Literary Society was held in Van Schaick Hall on Friday evening. The President, Mr. J. T. Griffin, presided; and there was but a scanty attendance.

The CHAIRMAN congratulated the Society upon the success attending its last session and hoped that the ensuing year would be equally prosperous. Notwithstanding the hard times and a depreciated dollar, their balance in hand was increasing, and now stood at the respectable total of \$255.97.

MR. A. J. WILKIN proposed and MR. SARGENT seconded the adoption of the following report and accounts.

NINTH ANNUAL REPORT.—SEASON 1893-1894.

Your Committee have the pleasure to report a successful season, the Society continuing to flourish.

Fourteen meetings were held, with a good average attendance.

The number of members on the roll is 135.

The work of the Society has been eminently satisfactory, no less than eleven original papers and special lectures being given during the Session.

Appended hereto is the usual list of meetings, and the Treasurer's accounts, showing a balance in hand of \$255.97.

During the Spring the offices of Treasurer and Secretary became vacant; Mr. C. Griffin undertook the duties of the former, and the President carried on the Secretary's work.

The remaining members of Committee now tender their resignation with best wishes for the continued prosperity of the Society.

LIST OF MEETINGS.—SEASON 1893-1894.

- No. of Meeting.
129.—Annual Meeting. Election of Officers, etc.
130.—Paper on Korea, Lieut. Perkins, U.S. M.C.
131.—Paper, "Recollections of Yokohama in the Sixties," Mr. A. J. Wilkin.
132.—Essay, "Another Miracle," Mr. Percival Lowell.
133.—A description of the Art of Japanese Fencing, Mr. G. F. Fenton.
134.—Lecture, "The modern Practice of Photography," Professor Burton.
135.—Readings, etc., Special musical programme.
136.—Paper, "Chinese Social Customs," Mr. Happer.
137.—Paper, "Certain phases and phenomena of Sleep," Rev. Dr. Mescham.
138.—Lecture, "Chinese Social Customs" (2nd series), Mr. Happer.
139.—Miscellaneous Readings.
140.—Paper, "From the battle-field at Chancellorsville into Libby Prison," Prof. Clay MacCauley.
141.—Lecture, "The Nature of Atoms," Dr. Munro.
142.—Paper, "Voices from the Rocks," Mr. Wilkin.

TREASURER'S ACCOUNTS, SEASON 1893-1894.

RECEIPTS.	
To Balance in hand 1st October, 1893.....	\$603.61
To Members Subscriptions, 235 at \$1.....	405.00
To Interest per Chartered Bank.....	5.08
	\$1013.69
EXPENDITURE.	
By Rent, Van Schaick Hall, 24 nights at \$7.....	\$168.00
By Stationery, Printing, &c.....	55.75
By Postages and Condit Hire.....	27.27
By Lecturer's Expenses (Professor Burton).....	35.12
By Refreshments (including 4 doz. Plates, 4 doz. Cups, and 4 doz. Spoons \$5.70).....	150.69
By Balance.....	\$55.97
	\$612.83

To Cash in hand October 21st, 1894. \$405.97
Audited, compared with Vouchers, and found correct.
WALTER S. YOUNG.

The next business was the election of officers and committees. The CHAIRMAN said that he had been President of the Society for four years. He would be very glad if the members would give him a year's rest. He suggested the names of Mr. Wilkin and the Rev. E. S. Booth for the consideration of the members.

As a result of the voting Mr. Griffin was re-elected President by a large majority. Another ballot was taken to obtain a two-thirds majority for the other officers, and eventually the meeting made unanimous by show of hands the election of Mrs. T. J. Morris, as Vice-President; Mr. Sargent, as Secretary; and Mr. Walter S. Young, Treasurer. The Musical Committee was next selected, the choice falling on Mr. S. E. Unite, Mrs. W. W. Campbell, and Mrs. O. A. Poole.

On the nomination of the CHAIRMAN, the Messrs M. Sale and Brokaw, and Messrs. C. Griffin and N. Sargent were elected on the Refreshment Committee.

MR. WILKIN in proposing a vote of thanks to the outgoing officers and committee suggested that the incoming Committee should take into consideration the question of issuing family tickets. At present each member paid a \$3 subscription. He suggested that a \$6 subscription should cover a family of three, while a \$10 subscription would suffice for a family of any size.—(Hear, hear.)

MR. SARGENT thought a sliding scale of this description would be very practicable in view of the prosperity of the Society.

The CHAIRMAN said that the suggestion should receive the Committee's attention.

The Rev. E. S. Booth suggested that the incoming Committee should confine itself to the question of making the subscription \$2 for each lady and \$3 for gentlemen members.—(Hear, hear.)

The CHAIRMAN, while promising to lay this suggestion before the Committee, said that he thought the Society's charges could not be considered exorbitant. At the present rate of exchange \$3 did not come up to the lawyer's fee of 6/8—(laughter)—and that could be but a reasonable sum for 14, 15, or 16 meetings such as they held last season.

The meeting then resolved itself into a social conclave for the rest of the evening.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

The following circular has been issued:—

An arrangement having been made that the above mentioned Society should send a number of lantern slides to the Lantern Slides Society of America, which Society will then send an equal number of slides to our Society, a committee has been appointed consisting of Messrs. I. Ishikawa, Kajima Seibei, and myself to collect negatives from which the Japanese slides may be made, and I am instructed by the committee to request you to send me any number of negatives not greater than six, to be used for the purpose just mentioned.

The following points should be observed:—

The negatives should be such as represent Japanese Scenery, Life, Manners, &c.

The size is not of consequence, but should you wish only a part of any negative reproduced, you should indicate this by drawing lines on such negative defining the part to be reproduced.

The negatives should be securely packed, and both within and without the package should be your full name and address.

They should reach me before the 10th October.

They are to be addressed to me at 7, Ichome, Nagata-cho, Kojimachi-ku, Tokyo.

W. K. BURTON

P. S.—The number of slides to be sent to America is 100. Should the number of negatives received exceed this, the committee will use their judgment in determining which to reproduce.

THE RECENT VOYAGE OF THE "SIKH."

The brief report of the last voyage of the Northern Pacific liner *Sikh*, from Tacoma to Yokohama, which appeared in our shipping column on Friday, deserves extension for several reasons. In the first place, the good old ship which has encountered a few "dustings" in the Arabian Sea, the Indian Ocean, and on the China Coast, experienced on this voyage as heavy a drifting as ever she yet received; while she also established an exceptional precedent for the mail-ship course of the Northern Pacific, having run the farthest north of any mail or merchant steamer to avoid the exceedingly bad weather ranging south of the stormy Aleutian Islands. In an interview with the Chief Officer, our representative gathered some interesting details of the voyage, and was also courteously allowed to look through the ship's log-book. The *Sikh* left Tacoma at 9.30 a.m. on the 16th September, and after a pleasant run down the Sound arrived at Victoria at 5.20. Her stay there was very short, for she was fully loaded at Tacoma, and at 6.30 p.m. the same day her head was turned towards the Orient. The weather was hazy with a light easterly wind. Next day the wind shifted to the south, and a heavy sea was encountered. The entries for the 18th ult. open with "moderate breeze," "head sea," "overcast." Towards noon rain squalls set in, and the wind increased to a fresh gale. Heavy seas were being shipped forward, and the outlook was anything but pleasant. All day this hard weather continued and far into the night. By 8 o'clock next morning the N.N.W. gale had moderated somewhat, and for that and the following day no striking change was observed. Sail was set on the 21st, the breeze from the N.N.W. freshening towards noon. The vessel was still heading north in the direction of the Unalak Pass. At 1 p.m. on the 22nd, Wagamonok Island, one of the Aleutians, was sighted bearing W. by N. The ship was then in lat. 53° 15' N., and the temperature was very low. At 4.16 p.m. Wagamonok Island was abeam, 7 miles distant. By this time the breeze had freshened to a gale and two hours later it was blowing with hurricane force. Heavy seas struck the ship fore and aft, and a substantial stanchion

on the port bow gave before the force of the waters. The ship laboured on before the gale for two days, and then it was decided to steer yet farther north. But bad weather still pursued, and at 10.30 a.m. on the 28th the ship was hove to and the hatches battened down. The hurricane abating somewhat towards noon of the 29th the *Sikh* was again put on her course, and then the sea gradually went down. The farthest north reached was 53° 11' N. lat. 148° 43' E. long. A more melancholy ocean than that traversed by the Northern Pacific and the Canadian Pacific steamers in the autumn would be difficult to find, but here to the north of the Aleutians the seascape seems drearier still. Not a solitary bird nor a shoal of fish was seen the whole of the way. Nothing but a heaving mass of desolate green-grey water, destitute of life. From the 1st of October till the day of arrival in Yokohama, the 5th, moderate breezes and fine clear weather were met with, a refreshing contrast to the preceding meteorological conditions. Captain Rowley and his officers consider that if they had not gone behind the shelter of the Aleutian Islands worse weather still would have been encountered, but whether they will take the same course next voyage remains an open question. It is bitterly cold in those high northern latitudes and therefore very trying to the crew. Circumstances will dictate the next course, and we hope that on the *Sikh*'s next run across they will be more favourable and pleasant for all concerned.

CRICKET.

AN ELEVEN V. ALL COMERS.

A very good game of cricket was played on Wednesday afternoon between a team comprising all comers and a representative eleven of Yokohama. At the close of play the respective scores were:—All-comers 137; the Eleven, 123 for nine wickets. The opening was somewhat more lively than we have seen of late on the Yokohama Cricket ground, the two first bats taking the score up to 81 before a separation was effected. Of this the retiring bat, the Rev. T. S. Tyng made 18. Cocksedge remained in some while seeing several men come and go ere Morris disturbed his wickets. His 62 was the top score of the day and included five fours. Towards the close of the All-comers' innings Crawford went on to bowl, and achieved a wonderful success, as the following analysis shows:—Balls 20, runs 0, maidens 4, wickets 3.

About four o'clock the Eleven went in to bat. It looked impossible in the time remaining to play out the match, but with Edwards and Braess at the bowling nothing could be certain. As it was, when stumps were drawn nine wickets had fallen and it yet required 14 runs to tie. Crawford played a very confident game, and only gave two chances in his whole innings. His score of 46 included one four and seven fives. To the Captain of the Club, however, belongs the honours of the match. He played a fruitless game, placing his balls admirably, and, as will be seen, carried out his bat for 48, the second best score of the day. Edwards' bowling analysis again is of very high average. Scores:—

THE INTERPORT CRICKET MATCH AT SHANGHAI.

FIRST DAY.

The most notable thing about the interport cricket match, which commenced to-day (1st October), says the *China Gazette*, was the utter collapse of the Kobe team after tiffin. Play started at 20 minutes past the advertised hour, the visitors winning the toss and going in first. The start was not promising, one of the first brace of batsmen, Wilkinson, going out for "duck" before the match was five minutes old, but after this the Kobe team seemed to settle down, and runs succeeded one another with great rapidity, until after about an hour's play, when the tiffin adjournment took place, the visitors had made the very respectable score of 90 for three wickets. After tiffin the teams were photographed together by the popular secretary of the Recreation Club, and the Kobe men resumed their innings, with everything apparently in their favour. But as if to instance the proverbial uncertainty of cricket, the team proved an utter failure after this. Lucas, who seemed a batsman likely to stay in for the whole afternoon, was disposed of almost by the first ball played him, and the wickets succeeded one another, in their fall with a melancholy monotony, until the last man was dismissed, ten runs only having been added to the score. The Shanghai team then took the field, and though the beginning of the innings was anything but promising, they managed to stay in for the rest of the day with the result set forth in the subjoined score. The play all round confirmed the opinion we formed on Saturday evening of the Kobe team, namely that they shine best in the field. Indeed two or three of their men in this respect are equal to any players we have ever seen here, Lightfoot and Braess for instance, whilst Duff behind the wickets is not to be surpassed. For the attack the visitors depend chiefly on Elias and Pakenham; the former is a very swift and straight bowler, with a very tricky leg-break, whilst Pakenham, with his peculiar delivery and accuracy of pitch, is a bowler not to be trifled with. The combined strength of these two bowlers, however, assisted by Ross, Braess, and one or two others, was not sufficient to separate St. Croix and Farbridge for nearly three hours this afternoon. To these two batsmen, indeed, the success of Shanghai during the day is to be chiefly attributed. In addition to their services in this direction they materially assisted in getting rid of the Kobe team, as will be seen from the score, for a comparatively small total. The day was an ideal one for cricket, and there was a large attendance of spectators in consequence, including an unusual number of ladies. Appended are details of the day's play.

Play began at 11.20, Kobe having won the toss, sending Duff and Wilkinson to the wickets, to face the bowling of Farbridge and St. Croix, the former at the Pavilion end. The first three balls of Farbridge were sent down without event; Duff was tempted to cut the fourth, and in trying to score a second run off it, Wilkinson was run out. Lucas, the next man in, scored a run off the first ball in the next over (St. Croix), which Duff followed up with a 2 off the third, and a single off the last ball of the over. Farbridge then sent down a "maiden," but the next over cost three runs, two scored by Duff and one by Lucas. The board showed 10 runs in 15 minutes. St. Croix's next over cost 5 runs, one scored by Duff and 4 by Lucas; Duff then sent Farbridge away for 3, and Lucas the same bowler for 2, bringing the score up to 20. Farbridge then put another "maiden" to his credit, and in the next over St. Croix distinguished himself by bowling Duff—26 for two wickets, of which the retiring batsman contributed 14. Pakenham succeeded and "blocked" St. Croix for the remainder of the over. Lucas then scored a run off Farbridge, and the next over was a "maiden" to St. Croix's credit, Farbridge sending down one also directly after, but four runs were scored off St. Croix in the next over. At 12 o'clock 40 was posted, after a 2 made by Pakenham off Farbridge. St. Croix then bowled a "maiden," after which Farbridge was replaced at the Pavilion end by W. H. Moule, off whose first over Pakenham scored a single run. Abbott was then substituted for St. Croix at the far end of the wicket, and Pakenham scored two runs off his second ball, and two more off the third. The score continued to go up, Lucas making most of the hitting, and at 72, which was reached after an hour's play, Mann was put on to bowl in place of Moule, whose last over was very badly knocked about the field, Lucas scoring a boundary hit and Pakenham two singles of it. The newcomer, however, was punished for 7 in the first over, and Abbott then for 3. At 80 Pakenham was very neatly caught by

Farbridge off Mann for 33. He had played very steady cricket, and the chance which Farbridge so gracefully accepted was the first he gave. At tiffin the score stood at 90. Lucas having made 38 out of this total, Edwards, Pakenham's successor, not having done anything as yet.

On resuming, Lucas and Edwards continued their innings. St. Croix and Farbridge bowled. St. Croix dismissed Lucas on the fourth ball for 38—90 for 4 wickets. Lightfoot succeeded, and shortly afterwards Edwards was neatly caught by Farbridge off St. Croix for 1—91 for five wickets. Braess, the next man in, began by scoring 3 off St. Croix, but on the first ball of the next over, he was clean bowled by Farbridge—96 for six wickets. Lias, who succeeded, played St. Croix's first over very carefully, but went out directly afterwards, l.b.w. on a ball delivered by Farbridge—97 for 7 wickets. With nothing added to the score, the newcomer Ross was caught and bowled by Farbridge. Since tiffin time five wickets had fallen for 9 runs, and things began to look decidedly bad for Kobe. This ill-luck apparently was not to change, for the next batsman, Griffiths, was bowled by the first ball he received from Farbridge, who in this over took two wickets without having a single run scored off him. Noel joined Lightfoot, who scored a 2 off St. Croix, and shortly after Noel brought the score up to 100; but at this stage Lightfoot was bowled by St. Croix for 3, and the innings closed for just 100.

At 2.30 the Shanghai innings began, F. H. Sawyer and J. Mann going out to the bowling of Pakenham (Pavilion end) and Lias. The innings commenced badly, Pakenham sending down a "maiden" to Mann, and Lias dismissing Sawyer with the very first ball he bowled. A. P. Wood succeeded, and treated the remainder of Lias' delivery carefully, and the first two overs were "maidens" to the credit of the visitors, with the loss of a wicket to Shanghai. The first scoring was a single by Mann off Pakenham, but this batsman was dismissed by Lucas immediately after without anything else being done. Two wickets for one run. W. H. Moule, succeeding, promptly scored a run off the visitor's crack bowler, and then another off Pakenham. Wood then sent Lias away to the boundary, and Moule scored a single off Pakenham—10 being posted after 15 minutes' play. Wood then scored a 4 off Lias. Moule did his share of the hitting also, and 20 was posted five minutes after. Lias and Pakenham then sent down a "maiden" each, but Lias' next over was productive of three runs, scored by Moule.

The batsmen continued playing steadily and with singles and twos gradually brought the score up to 40, which was posted just after 50 minutes' play. At this stage Edwards went on to bowl in place of Pakenham at the Pavilion end, and shortly after Wood was caught by the wicket-keeper (Duff) off Lias for 19—42 for 3 wickets. Directly after the advent of the next batsman, Farbridge, Moule scored a 3 off Edwards, and Farbridge followed up with a single off the same bowler. Farbridge then scored a "boundary" off Lias, and a 2 and a single off the same bowler shortly after. At 54 Ross replaced Lias at the far end, and with 2 added to the score Moule was caught in the slips off Edwards for 24—56 for 4 wickets. St. Croix succeeded, and had not been long at the wickets when he began to score, making a couple of very pretty strokes off Ross, one for 4 and one for 2. After an hour and a quarter's play 80 was posted, at which stage Pakenham resumed the attack at the Pavilion end, Braess going on in the next over in place of Ross, at the far end. In spite, however, of the change the batsmen seemed determined to stay, and at 4 o'clock the board registered 90. Shortly after Lias resumed bowling at the far end, but still the scoring went on, and at 4.15, 100, the total made by the Kobe team, was posted. At 102 St. Croix was badly missed by Lucas at long-on, a miss that cost the Kobe team a good many runs; 120 was posted at 4.45, and still there was no sign of a dissolution of the partnership of Croix and Farbridge, one over of Pakenham's alone costing 11 runs, chiefly scored by St. Croix. At 130 Lucas went on to bowl in place of Lias, but shortly afterwards gave place in turn to Braess, whilst Edwards again took Pakenham's place at the Pavilion end. In spite, however, of these repeated changes of bowlers St. Croix and Farbridge managed to play out the afternoon and added materially to the total, which, when stumps were drawn, stood at 196, St. Croix having made 77 and Farbridge 65. Score is as follows:—

Kobe.—First Innings.			
C. M. Duff, b. St. Croix	14
F. E. Wilkinson, run out	0
C. Lucas, b. St. Croix	38
G. C. Pakenham, c. Farbridge, b. Mann	38
E. B. S. Edwards, c. Farbridge, b. St. Croix	1
C. H. Lightfoot, b. St. Croix	1

SECOND DAY'S PLAY.

The interpost match has ended. It resulted in a victory for Shanghai by an innings and 149 runs, an achievement which must be taken to more than compensate for the defeat of the Shanghai team in Kobe last year. It will be remembered that at the close of the Kobe innings yesterday (October 2nd), the score stood at 100; Shanghai then went in and scored 196 before stumps were drawn for the day. St. Croix and Farbridge being the two not-out men, the former with 77 to his credit and the latter 66. The two batsmen returned to the wickets this morning and gave quite as much trouble to their opponents as they did yesterday, St. Croix not being disposed of before he had made 81, and Farbridge putting together the record score of 111. The Shanghai innings for the comparatively poor total of 60. At the close for 309, and the second Kobe innings close of the game a very interesting little ceremony took place, in which Mrs. Pakenham, wife of the popular Captain of the Kobe team, very gracefully presented the Kobe flag to Mr. St. Croix, Captain of the Shanghai team. Appended are details of the day's play.

At 11.25 St. Croix and Farbridge resumed batting for Shanghai, Lias (Pavilion end) and Edwards bowling. The first over of Lias cost a run, scored by St. Croix, and the same batsman made a 3 off Edwards soon after, bringing the total up to 200. Immediately after, however, he was cleverly caught in the slips by Edwards off Lias for 81—200 for 5 wickets. T. Wallace, who succeeded, played very carefully for some time, leaving most of the hitting to Farbridge, who sent away both bowlers two or three times on long journeys, bringing the score to 210 at 11.40. Five minutes later 220 was posted, chiefly through Farbridge's hitting, Wallace contributing just two single runs. At 225 Pakenham went on to bowl in place of Edwards at the far end. Scoring became slower after this for some time. Out of the next thirteen overs eleven were "maidens," six to the credit of Pakenham and five to that of Lias. Just as Farbridge was making the stroke which brought his score to 100, he was badly missed by Edwards in the slips, an escape which was hailed by the sympathisers of Shanghai with the heartiest applause. Wallace continued his slow and careful play, for which he is to be highly commended. Nothing would tempt him, and when he had been an hour at the wickets he had only 8 runs to his credit. Shortly after, however, he played a ball of Pakenham's on to his wicket, and retired after a very creditable though moderate innings of 10—251 for 6 wickets. On resuming after tiffin Farbridge and A. J. H. Moule continued the Shanghai innings, Lias and Pakenham still bowling. Some lively hitting came off without delay, Farbridge scoring 3 off Pakenham, and Moule a boundary stroke off the same bowler, which, with a couple of singles, brought the score to 260. At 265, however, Moule was caught by Lias, very low down, for 9, and Crawford took his place. At 266 Farbridge was caught at long-on by Edwards off Lias and retired with the record score of 111 to his credit, amidst the heartiest applause from Kobe and Shanghai alike. He had played very freely, and had given only one of two decided chances in his long innings—266 for 8 wickets. Platt, who succeeded, began by scoring a "boundary" off Lias, which Crawford followed up by a 2 off Pakenham. Platt's career, however, was not a long one, for at 272 he was clean bowled by Lias, and was replaced by Abbott, who speedily began scoring, making a 2 off Pakenham and a 3 off Lias, and then a "boundary" off Pakenham. Crawford did his share of the hitting too. At 2.20 the board showed 290 and ten minutes later 300 was posted. At this stage Ross went on to bowl at the

Pavilion end, and in the next over Braess was substituted for Pakenham at the far end. The score however, still crept up, Crawford having three narrow escapes in one over, two at point and one at slip. But at 309 Abbott was caught for 27, and at this figure the innings closed, Crawford carrying out his bat for 11.

At 3 o'clock Kobe's second innings commenced, Duff and Lucas going out to the bowling of Farbridge (Pavilion end) and Croix. Both batsmen got speedily into work and 10 was posted after five minutes' play. Five minutes later the board showed 20 contributed about equally by each batsman, but at this stage Duff gave a chance off St. Croix, which Crawford accepted, and Duff retired with 11 to his credit. Wilkinson, who succeeded, scored 2 off the first ball delivered him by Farbridge, but shortly after lost his partner Lucas, who was bowled by Farbridge for 11—26 for 2 wickets. Pakenham was the next man in, but he had only made 2 runs when he was caught by the wicket-keeper (Platt) off St. Croix—31 for 3 wickets. Lias then joined Wilkinson at the wicket and began adding to the score very freely, treating each bowler with equally impartiality, and as Wilkinson ably backed him the runs began to mount up, and 40 was posted at 3.45. But at 44 Wilkinson was bowled by St. Croix for 14. Four wickets down. Edwards succeeded and scored a 2 on the first ball he received, which Lias followed up with a similar stroke off Farbridge, and a couple of single runs brought the score up to 50 shortly after; but unfortunately at this stage Lias was caught by W. H. Moule off Farbridge for 8. With 5 wickets down for 50 runs, things began to look badly for Kobe, and the next man to go in, Lightfoot, received many injunctions from his team companions to play steadily. He did so, but unfortunately he lost his partner Edwards, who was caught by A. J. H. Moule at square-leg off St. Croix for 6—55 for 6 wickets. Braess, who succeeded, was caught by W. H. Moule at mid-off of St. Croix, for 1—57 for 7 wickets. Ross, who went in next, hit wicket in playing a ball from St. Croix, and retired without scoring—57 for 8 wickets. Noel, the next man in, scored a 2 off St. Croix, but was caught shortly after by Wood off the same bowler—57 for 9 wickets. Griffiths, the last man in, brought the score up to 60 by a run off St. Croix, before he had been two minutes at the wicket. Lightfoot, however, was caught immediately after by Farbridge off St. Croix for 4, and the innings closed for 60, Shanghai thus winning by an innings and 149 runs. Score and analysis:—

CRICKET IN ENGLAND.

After an interesting neck and neck contest throughout the season for the County Cricket Championship, Surrey has secured the coveted position by one point ahead of Yorkshire. While the former team had the good fortune to be able to finish and win their match on 25th August against Sussex, the Northern eleven were confronted by unfavourable conditions, and thus their contest with Somerset had to be abandoned—a circumstance which gave Surrey first place with eleven points against Yorkshire's ten. Surrey and Yorkshire have played so consistently well and so com-

pletely distanced all their rivals that it would have been pleasant to see them leaving off on perfectly even terms, but after all there is a certain fitness in the Surrey men standing first, as they hand-somely beat Yorkshire both at Bramall-lane and the Oval.

Among the batsmen of the champion county Brockwell is well to the front with an average of 34, while he is followed by Street with 28. W. W. Read, although only third, has shown no decline from his last year's figure (27). Of the bowlers, Richardson has done remarkably well with 120 wickets at 11.1.3 apiece. Next him is F. E. Smith, a useful addition to the team, with a record of 14. There is no Brockwell among Yorkshire's bats, but F. S. Jackson, who tops the list with 28, further enforces his claim to a high rank among all-round cricketers by his excellent position among the bowlers with an average of less than 13. As to Middlesex, T. C. O'Brien stands first with a batting average of 34.9, but the others show a falling-off all round.

Only one more match, the return between Notts and Kent, remained to be played to complete the County Championship competition when the mail left. The positions are:—

	Played.	Won.	Lost.	Drawn.	Tied.	Points.
Surrey	16	13	2	1	0	20
Yorkshire	15	12	2	1	0	20
Middlesex	16	8	5	3	0	3
Kent	14	6	6	2	0	0
Lancashire	16	7	7	2	0	0
Somerset	16	7	7	2	0	—1
Notts	15	4	9	2	0	—3
Sussex	16	3	12	1	0	—4
Gloucestershire	16	3	13	0	0	—11

The first fixture between Yorkshire and Kent was abandoned owing to rain.

LETTER FROM AUSTRALIA.

(FROM OUR OWN CORRESPONDENT.)

Healesville, Victoria, August 27th.

The China-Japan war, which undoubtedly will prove to be an event of far-reaching consequences, is not a topic of much interest to Victorians, if one can judge by the slipshod manner in which the subject is treated by the local press. The *Argus* in its leading columns remarked that there was a myth to the effect that a Japanese general invaded Korea in the Middle Ages. Subsequently the same journal informed its readers that were it not for the possibility that Great Britain's interests might be affected, the war between China and Japan might be regarded as a fight between kites and crows. The information which has reached us from London bearing on the war has been of a most meagre and contradictory kind, the Chinese and Japanese accounts of the events which have happened being irreconcilable. Victorians will not be long in finding out how seriously their trade will be interfered with by the war. Japanese rice, which has always sold for 3d. a pound more than any other kind of rice, is rising in price week by week, and will be soon unprocurable. The China tea trade will also be greatly affected by the war. During last year no less than 15,936,445lb. of China tea were imported into the colonies, of which Melbourne received 9,600,577lb.

The *Argus* recently gave the following "local" note:—We learn by the latest Japanese papers that an exhibition has been held in Yokohama of upwards of 20 studies in oil, by Mr. E. W. Brooke, a native of Melbourne. He is the son of Mr. J. H. Brooke, editor and proprietor of the *Japan Mail*, who was Minister of Lands and Works in this colony in 1860-61. His son, the artist, studied painting in Europe, and some of his works have been hung in the Royal Academy, London, and in the Paris Salon. They are chiefly figure pieces and landscapes, and are highly spoken of by the local journals.

On July 29th an exploit of unusual heroism took place at St. Kilda, Melbourne. After dark, on a cold boisterous night, 5 youths put out in a dinghy with the object of reaching a yacht lying at anchor in Hobson's Bay. The dinghy overturned and the 5 youths were thrown into the water. Only the eldest, Ernest Simes, was able to swim. After placing his four companions so that they could keep a hold on the dinghy, he commenced to swim to shore, taking the youngest in tow. After landing him safely, he went back to the dinghy three times to save the others; all of whom, with the exception of one, were rescued. This feat was accomplished by Simes with his clothes and boots on.

The gold discoveries in and around Coolgardie are rapidly increasing. The Landonerry Claim was declared to contain the richest quartz in the world, and in proof of this a block named "Big Ben," weighing 222lb. was exhibited. This find has since been outdone by the discovery of a man called Dunn. Not long ago Dunn carried

into Coolgardie on the back of a camel £6,000 worth of gold and left from £10,000 to £20,000 worth stacked at the claim. Dunn declares that there is at least £100,000 worth of gold in the 34 acres which constitute his claim. Another fortunate discoverer, Elliot, a farmer from Victoria, has obtained from a trench 5 ft. long, wide and 5 ft. in depth 4,000 oz. As is but natural, disputes over the claims are numerous. The title of one man to a claim was questioned on the ground that the spot had been pegged out on a Sunday. Sunday being a *dies non*, it was argued that no legal act could be performed on that day. But the warden decided that Sunday pegging was legal.

Tom Corrigan, the most popular steeplechase rider in the colony, was killed by the fall of his horse in jumping a fence at the Caulfield Steeplechase a few weeks ago. Corrigan had the reputation of being the straightest rider in the colony. His funeral was worthy of a prince. It was representative of all classes of the community. The cortege was one of the largest ever formed in Melbourne, the procession of vehicles, horsemen, and pedestrians extending for a length of over 2 miles. Some 70 or 80 wreaths, many of which were most elaborate and costly, were conveyed in a vehicle behind the hearse. The deceased horseman's riding boots and riding jacket were carried on the coffin and buried with him.

Then close his eyes and lay him to sleep 'neath turf that he loved so well,
And comfort the ones that he left behind, the ones that he loved the most;

And bury his colours with him, too, and toll one parting knell.
For the straightest rider who ever breathed has reached the Winning Post.

The Australians are nothing if not enterprising, and the efforts that they make to obtain up-to-date information on all subjects in which they are thoroughly interested in certainly very praiseworthy. The farmers and Government of Victoria are sending an agent, Mr. J. M. Sinclair, to America, for the purpose of obtaining full information on the following subjects (1) the tillage, harvesting and handling of wheat from the field to the seaboard; (2) the exportation of compressed fodder; (3) pig-raising and curing industry; (4) fodder plants and grasses likely to be of value to Victorian farmers; (5) improved agricultural machinery or labour-saving appliances.

The season for exporting butter to England is just beginning. It is curious to note that butter in Victoria is as cheap in the winter as in the summer, owing to the fact that from May to September butter is not exported, and the local market is consequently over-supplied. The total quantity of butter which arrived in London from the Australian colonies last year was, approximately, 10,000 tons. Taking the average price of butter at £100 per ton, we get in round numbers £1,000,000. Out of the 10,000 tons Victoria sent over 7,000 tons. The trade is still on the increase and it is generally admitted that the quality of Victorian butter, though not equal to Danish, has improved greatly during the past twelve months.

A small town in the Mallee country, Hopetoun has lately gone in for a Court of Petty Sessions. The Police Magistrate on the opening of the Court "complimented the town on the fact and hoped that Hopetoun would become of sufficient importance for a Higher Court to be held there before long." This elicited a stream of clever satire from a Melbourne wit as follows:—

Hopetoun must not be satisfied with a simple Court of Petty Sessions, and its people must keep the bright ideal sketched for them by their police magistrate always before their eyes. When they have a real criminal session there, and a proper Melbourne judge with a red gown and a harte temper, and a well-filled calendar, including two murder cases, and one each of arson, forgery with violence, and larceny as a bailie, all the prisoners being *bona-fide* residents of Hopetoun, then, and not till then, will they be justified in decorating the town with bunting and exalting themselves over the inhabitants of adjacent Beulah, which cannot even raise one miserable case of false pretences.

The following extract is from the same pen:—There is a certain grim humour in the latest story from the Western Australian goldfields. Typhoid fever broke out at the Murchison so badly that the three doctors were down with it at the same time. It was found impossible to bury the daily victims in the alluvial soil on account of the danger of polluting the water supply, so that an impromptu cemetery had to be formed by scraping out graves in the stony face of the nearest range. Finally, wood for coffins ran short, and the only resource was to make a levy on the hotels and stores, and knock up shells from old packing-cases. In the pressure of this ghastly business there was seldom time to paint the wood, or even to remove the original stencil-marks, and one day a mournful cortege passed through the town bearing to their last resting-place the remains of a departed miner, whose coffin bore in bold, black letters the simple legend, "Keep cool."

Dr. Talmage has been lecturing in Melbourne. To the more intelligent section of the community he was a great disappointment. His anecdotes were mostly of the antediluvian type, and his imperfect

acquaintance with the views of even the advanced clergy, to say nothing of those of eminent scientists, led him to make observations calculated to give great offence to the educated classes of Melbourne. One of his lectures was entitled "Where do we come from; or the absurdities of Evolution." Among the many foolish things which he said in the course of the lecture was the following—"The great author of creation was present at the creation and wrote an account of it. Charles Darwin and Herbert Spencer were not present and have written an account of it. I prefer to believe the creator's account." The lecture throughout was a misrepresentation of the views of evolutionists of which this colony is full, and naturally called forth columns of adverse criticism from clergymen and laymen alike. Either Dr. Talmage knew that he was misrepresenting the views of evolutionists or he did not. If he did, he acted dishonestly and bore false witness against his neighbour. If he did not he was guilty of the most daring presumption in insulting the intelligence of his audience by lecturing on a subject of which he was ignorant.

Cremation seems to be on the increase in Melbourne. The Trahan Council have decided to establish a crematorium at the St. Kilda Cemetery. Movements in the same direction are taking place elsewhere.

The *Taiyuan*, which was to have left Fanchow on July 8th, is bringing 2,000,000lb. of tea for Melbourne, and the *Arlis*, which was to sail on the 10th of the same month, 1,900,000lb.

The colony is passing through another political crisis, and there is every probability of a dissolution of parliament taking place within a week or two. The finances of the colony are the crux of the situation. The budget, which was laid before the house a few weeks ago, showed a large deficit, about £700,000. The national revenue, omitting the railway income, has dropped to about £4,000,000 per annum. The following table will show how Victoria has been going down the hill in the matter of revenue. The returns for the last few years are:

	Revenue.
1889	£8,675,000
1890	8,519,000
1891	8,340,000
1892	7,728,000
1893	7,000,000

The task which each government in turn has failed in performing is the arrangement of national expenditure so as to enable the government to live on its income. With the revenue at £4,000,000 per annum, the expenditure per head of the population would be about £3 8s. In the boom-time the Victorian expenditure actually went up to £5 8s. per head. The extravagant Australian habits, however, are not to be rooted out in a day, and each government that proposes heavy retrenchment endangers its existence thereby. Sir James Patterson, the present premier, was bold enough to inform the House a few days ago that it has the reduction in the income of members of Parliament which was the real cause of the attempt to oust the present Government. A vote of want of confidence has been proposed and seconded, and a ballot will be taken the day after tomorrow. But while petty disputes and undignified wrangling are going on in the House, the condition of the colony is recognised by true patriots to be very serious. While since 1889 the revenue has undergone a reduction of 33 per cent., taxation has increased at an astounding rate. Postal rates have been doubled. Railway rates nearly so. Every article of clothing imported into the colony is so taxed as to be hardly procurable by any but the well-to-do classes. And yet the shrinkage continues. The accumulated deficit of the colony is now over £3,000,000 and the bills floated by the Shields Ministry are about to fall due at the rate of £250,000 per annum. The way out of the difficulty lies in the reduction with an unsparring hand of all official salaries, the lowering of railway freights and taxes on produce, so as to enable the producer, who is the backbone of the colony, to realise sufficient profit to be able to pay his way, which at present in too many instances he cannot do. That the colony has been brought to its present state by careless extravagance and lack of public spirit, as well as ability in leading statesmen, admits of no manner of doubt. The depression, however, can only be temporary. A great future is before Victoria. The extent of poor country is surprisingly small. Millions of acres of fine cultivable land still lie waste. Industries at present in their infancy or still unborn, such as honey and scent farming, hog-raising, sugar-beet, olive and castor oil cultivation, opium and silk-growing will yield large profits in another decade. The Western Australia gold discoveries will make their influence felt throughout Victoria, from which many of the discoveries had, and if only the new Ministry in New South Wales, under the leadership of Mr.

G. H. Reid, an ardent advocate of Free Trade, accomplish the object it has set before it, the federation of the colonies and the abolition of all trade restrictions, this colony will enter on a new era of its existence and the troubles of 1893 will be remembered only as a nightmare.

IN THE YOKOHAMA KU-SAIBANSHO.

Before Judge YUGA MOTOTAKE.—Wednesday, September 10th, 1894.

KANEKO RUIZO V. AH SHING.—AN IMPORTANT POINT OF LAW.

Mr. Anzai Rinpachiro represented the plaintiff, Mr. Masujima Rokuichiro appearing for defendant.

This was a claim for yen 10.48, being amount said to be due for rice supplied to the defendant during several months of 1891.

Plaintiff in his claim stated that he had supplied to defendant altogether 1,500 *kin*, 1 *to*, 4 *sho* of rice from the 3rd of January to the 4th of March, 1891. This was valued at yen 53.89, of which yen 43.41 had been paid, leaving a balance of yen 10.48, the subject of the present claim.

Defendant denied all knowledge of the debt, or liability for the same, on the ground that no such transaction ever took place.

Mr. Anzai, in opening the case for the plaintiff, pointed out that there was no pass book, as both were on friendly terms and such a thing was thought unnecessary.

The ledger of the plaintiff, a rice merchant, was here produced to show the delivery of the goods, but there was no name against any of the deliveries, merely No. 16, which purported to mean the Chinese tailor on that lot.

Mr. Masujima said he could not admit the claim. There were two Chinese tailors doing business at No. 16—Ah Shing and Chang Chow. He contended that some employee of one or the other must have been the purchaser of the rice, not the principals of the firm. Besides, in this case, the Statute of Limitations would apply, three years having been allowed to lapse since last payment.

Mr. Anzai was of the opinion that the question of the Statute of Limitations was of the utmost importance, consequently he would like to argue this first and obtain judgment thereon previous to going on with the case.

Mr. Masujima was of opinion that as the defendant in the case was not the right person, even if the question of the Statute be decided against him, it did not follow that he would lose the case.

Mr. Anzai was of the same opinion, for even should the question of the claim be decided in his favour, if the Statute of Limitations applied it would be waste of time to continue. The real question, however, was from what date the Statute of Limitations applied: whether from the actual date of last payment, or from the 1st of August when the Chinese came under Japanese jurisdiction. The law, Counsel contended, should apply from that time forward, not from any period anterior to that date, but from the date the treaty with China was abrogated.

Mr. Masujima acknowledged that the treaty with China had been abrogated, previous to which the Chinese, as is the case with other nationalities having extraterritorial privileges, were tried before their own courts, viz., the Chinese in Chinese courts, the British in British courts, &c. The abrogation of the treaty undoubtedly ended China's jurisdiction over her own subjects, but this did not put an end to the question of law in this case. The Statute of Limitations fixes the period within which actions can be brought. Why was not the action brought forward within that time, not after three and a half years had elapsed? Why was it not brought up in the Chinese Court before and not left to now? The Court was no doubt different now, but there could be no difference in the application of the law.

Mr. Anzai contended that the Chinese definition of the Statute of Limitations was quite different from the Japanese reading of the law. Japanese bringing actions before the Chinese Court must go under Chinese law, so also in the case of Chinese bringing actions against Japanese must submit to Japanese law. Therefore, as only a few months had elapsed since the new law came into effect, the Statute of Limitations could in no way apply.

Mr. Masujima urged that three and a half years having actually elapsed, how could it be stated now that the Statute of Limitations could only apply from the taking over of jurisdiction by Japan.

The Judge having retired to consider his judgment, decided that as the period of one year, the full limit of time allowed, had expired, plaintiff had no standing in Court.

The question will be appealed.

BRITISH CONSULAR REPORT FOR NAGASAKI.

Mr. Fraser transmits, under date of May 18, the Nagasaki Trade Report for the year 1893, which has been drawn up by Mr. A. M. Chalmers, Acting-Consul at that port. Mr. Chalmers writes:—

The total foreign trade of Nagasaki for the year 1893 amounted to £871,640, showing a decrease of £48,077 as compared with the preceding year. The figures for the two years are as follows:—

Imports	1893...£458,301	1892...£438,237
Exports	413,339	481,480
Total	£871,640	£919,717

It will be observed that exports show a total falling off of £68,141, while imports, on the other hand, have increased £20,064. The decrease in exports in mostly due to a falling off in the coal supply, and the increase in imports is accounted for by an unusually large importation of rice.

IMPORTS.

COTTON MANUFACTURES remain at about the same figure as last year, and the import is now one of very small moment. Importation of cotton for trade with Korea was also trifling, and the trade with that country continues to decline.

The import of WOOLLEN MANUFACTURES shows an increase of nearly £1,000, but remains quite insignificant.

The METALS imported are of a very miscellaneous order, the principal demand being for pig-iron, iron rod, sheet, nails, and pipes.

The import of BROWN SUGAR shows an increase on that of 1892 of £7,491 and 1,978,107 lbs. The greatest monthly import was during April, amounting to 1,338,021 lbs., valued at £5,657. This trade is for the most part in the hands of Chinese, though 3,143,776 lbs. were imported by Japanese merchants. The importation of WHITE SUGAR shows a slight decrease as compared with 1892, amounting to 209,651 lb.

The total import was 2,892,001 lbs., valued at £85,717. The demand was brisk from April till November, and throughout the year prices were good.

There is an undertaking on foot to construct a sugar refinery at Moji, which will have a serious effect on the trade of Nagasaki as far as refined sugar is concerned, but this may be compensated for by an increased importation of the raw material. The success or otherwise of this undertaking will have an important bearing on the import of sugar throughout the country, the import of the raw material being to so large an extent in the hands of Japanese merchants.

The import of KEROSENE OIL has increased in quantity, 47,075 gallons, but shows a falling off in value of £6,185. Stocks at the beginning of the year were about 33,000 cases, and imports during 1893 were eight cargoes or part cargoes of American, amounting to 260,000 cases, and two part cargoes of Russian, about 34,000 cases, aggregating in all about 329,000 cases, most of which went into consumption during the year, there being only about 10,000 cases on hand at the end of the year. The consumption shows an increase of about 10,000 cases of American oil and a decrease of about 7,000 cases Russian oil as compared with 1892. The trade continues to favour the American oil, and a considerably higher price is usually obtained for it. The year was a fairly good one both for importers and dealers, stocks being comparatively low and prices being consequently better during most of the year. Tanks for the storage of Russian oil in bulk are in course of completion, and will probably be ready for use during the spring of 1894. Dealers have been very careful about making contracts for forward deliveries on account of the erection of these tanks, and it is expected the importation of oil in bulk will seriously affect present interests. Re-export to Korea was less than in 1892, partly owing to short stocks here during the winter months. Only about 29,000 cases went from here.

Only 2,660 tons of COAL, Cardiff, were imported during 1893, solely for the use of foreign ships of war.

The import of RAW COTTON again shows a considerable increase, being 8,203,687 lbs., as against 7,164,472 lbs. in 1892, valued at £130,129, as against £123,212, an increase of £6,917. The native production of raw cotton is now of small account, producers being quite unable to compete with the importers. By far the greatest supply of this article comes from China, whence we imported 7,009,445 lbs., valued at £108,004. India holds the second place, the figures being 1,212,325 lbs., valued at £20,871. From America 71,882 lbs., valued at £1,254, were imported during the year.

The import of HIDES has dwindled down to 235,630 lbs., valued at £2,996. They came entirely from Korea, but the trade in this article with Nagasaki is dying out, Korean hides now going almost exclusively to Osaka. The prevalence of cattle disease during 1892 interfered seriously with the production of this article.

RICE was imported during 1892 to the amount of 8,891 tons, valued at £50,929. The shipments which arrived during the last 3 months of the year, 8,764, coming from Annam. The remainder was imported from China, Korea, and Siam.

ORZONES shows a falling-off as compared with 1892, and a difference in value of £11,026.

Two STEAMERS were imported during the year.

EXPORTS.

The export of TEA in 1893 amounted to £10,050, as against £6,839 in 1892. Native sellers continue to ship their stocks direct to Kobe, where there is a better market.

RICE was exported during the greater part of the year to the total amount of 4,383 tons, valued at £31,258. For the reasons explained in last year's report on the trade of Nagasaki, the rice grown in this neighbourhood is more easily shipped from Moji. The total export from that port in 1893 was 9,085 tons, valued at £54,569. From Nagasaki the greater part, that is to say 4,215 tons, valued at £30,006, were exported to Russia.

The total export of COALS from this port during 1893 amounted to 381,631 tons, valued at £156,459, a falling-off as compared with 1892 of 36,646 tons.

The returns for Takashima coal are as follows:—Output: large coal 125,304 tons, small coal 127,016, total 252,320 tons.

Sales and Destination.

	Large, Tons.	Small, Tons.
Hongkong	11,935	37,990
Shanghai	14,085	34,514
Yokohama	25,175	2,135
Osaka	564	7,001
Singapore	11,627	5,270
Three other ports ...	4,231	391
Total	67,617	87,301
Bunkers, &c.	68,925	62,941

Grand Total.... 136,542 150,242

The Stocks of Japanese coal available on December 31, 1893, were only about 3,000 tons, and through the year the mines were unable to meet the foreign demand, local shipping requirements consuming the greater part of the output.

While the export of coal from this vicinity shows a decrease, the export from the special ports of export has considerably increased. The figures are as follows:—Shimonoseki, 64,037 tons; Moji, 431,259 tons; Karatsu, 42,292 tons; Kuchinoetsu, 452,524. Total, 990,112 tons; value £386,715. This shows an increase of 281,378 tons as compared to that of 1892.

The export of FLOUR shows a serious falling off, the figures being for 1893, 1,100,888 lbs., valued at £4,020, as compared with 3,289,416 lbs. valued at £14,242 in 1892.

SHIPPING.

The total shipping entered in the port of Nagasaki during 1893 was 713 vessels carrying a tonnage of 950,540 tons. As compared with the preceding year this shows a decrease of twenty vessels, but an increased tonnage of 52,266 tons. At the commencement of the year the Pacific Mail and the Occidental and Oriental Steamship Companies sent their regular mail steamers here for coaling purposes. Several of these steamers are British, but the United States now figure for the first time for many years in the shipping returns of this port. Fifteen United States steamers called during the year with a carrying capacity of 35,584 tons. British shipping shows a decrease of fourteen vessels, but an increased tonnage of 401,525 tons, as compared with 372,638 tons in 1892. Norwegian shipping shows an increase of seventeen vessels and 9,500 tons.

KUCHINOETSU.—The total shipping that entered Kuchinoetsu during the year was 224 vessels and 237,647 tons, of which 84 vessels and 131,404 tons were British. Norwegian shipping with twenty-nine vessels and 40,818 tons shows an increase of twenty vessels and 22,007 tons as compared with the preceding year.

MOJI.—The shipping at this port has more than doubled itself in the year, judging by the tonnage entered. The total is 342 vessels with 495,906 tons, as against 209 vessels with 247,206 tons in 1892, an increase of 133 vessels and 248,610 tons. Of this total 228 vessels and 384,004 tons are British, as against 123 vessels and 178,868 tons in 1892. Norway again shows an increase, her shipping being twenty vessels with 14,834 tons burden, as against six vessels with 4,974 tons in the preceding year. A new feature in the table of

shipping for Moji is the entrance of thirteen Austrian vessels, with a tonnage of 32,500 tons. The total shipping for the three ports within this Consular district amounts to 1,279 vessels and 1,684,093 tons, as against 1,107 vessels and 1,322,240 tons in 1892. Japanese shipping shows a falling-off of twenty-nine vessels and 16,587 tons; German shipping of fourteen vessels and 5,377 tons. Britain, on the other hand, shows an increase of 107 vessels and 254,374 tons, and Norway an increase of fifty-one vessels and 41,376 tons, nearly doubling her tonnage for 1892.

PUBLIC WORKS.

The only item of information on this head is that the construction of the railway line between Sago and Tsukazaki was commenced during the year under review. Tsukazaki is about forty-five miles from Nagasaki.

The immediate approaches to Nagasaki present great engineering difficulties, and the Kiushiu Railway Company do not seem disposed at present to grapple with them nor to meet the expense.

LOCAL INDUSTRIES.

The COTTON SPINNING industry is progressing favourably. Owing to cheapness of labour most of the factories can obtain excellent prices. Cost of labour in Miiki averaged for the year 17'37 sen (about 5d.) a day per man, and 7'85 sen per woman; at Kurume, 15'05 sen per man, and 9'95 sen per woman; at Kagoshima 15'35 sen per man, and 5'57 sen per woman. At the last-mentioned place the day averaged 103 hours, while at Miiki and Kurume the spindles were working 23 hours and 24 hours a day throughout the year, excepting holidays. The threads manufactured are for the most part (excepting Kagoshima) Nos. 16 to 16½, and the prices obtained about 11 yen per bale (of about 400 lbs.).

In Nagasaki the cotton factory is hampered by scarcity of labour, and is only able to work twelve hours in the day. Through the year the factory was working 324 days. The small output is due to want of experienced workmen, but owing to the cheapness of silver as compared with gold they are able to compete with the imported manufactures and command good prices, about 88 yen per bale as above stated. The Nagasaki mill finds its market in Osaka and in Oita and Kumamoto Kens.

The ELECTRIC LIGHT COMPANY in the town of Nagasaki has a capital of \$40,000, consisting of 1,600 shares at \$25. The income for 1893 was \$3,790.93, and expenditure \$2,926.11, leaving a margin of profit amounting to \$864.82. The plant and wires are valued at \$33,498, but additional machinery is being ordered from Osaka.

GENERAL REMARKS.

Trade between Europe and this port has reached a very low ebb, mostly owing to the disastrous fall in exchange. It may, however, be partially accounted for by the gradual development of local industries throughout the country, which are becoming efficient enough to meet the limited requirements of this locality.

Exports to England have dwindled from £16,189 in 1891, £5,748 in 1892, to £3,128 in 1893. Imports also have dwindled from £164,266 in 1891, £77,293 in 1892, to £64,627 in 1893.

The export trade to Russia, amounting to £54,133, is for the most part a miscellaneous trade with Vladivostok.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 8.

Great Britain is negotiating with the Powers regarding the necessity for taking common action for the protection of their subjects in China; and for eventually stopping the present conflict between China and Japan.

The French Government has ordered to China three cruisers and a gunboat.

London, October 9.

The suggestion of intervention by the great Powers between China and Japan is entirely premature.

Her Majesty's ships *Eolus*, *Pigeon*, and *Redbreast*, have been ordered to the China Station.

Three Russian war-vessels have left for the Pacific and two Russian ironclads are to leave shortly.

[The *Eolus* is a twin-screw cruiser of the second-class of 3,600 tons and 9,000 horse-power; the *Pigeon* is a gunboat of the first-class of 775 tons and 1,800 horse-power; and the *Redbreast* is a gunboat of the first-class of 865 tons and 1,400 horse-power.—Ed. J.M.]

London, October 10.

It is believed that the Powers have agreed to bring pressure to bear upon Japan in reference to the integrity of Korea, and to oppose any attempt on the part of that country to exercise the rights accruing after conquest.

Earl Grey is dead.

Grey (Earl), The Right Hon. Henry Grey, K.G., born Dec. 28, 1809, the eldest son of the late earl, who was Premier in 1830-32, was educated at Trinity College Cambridge, and, as Lord Howick, was returned to the House of Commons in 1826. As member for Winchester, in 1830 for Higham Ferrers, at the general election of 1831 for Northumberland, and after the passing of the Reform Bill for the northern division of that county. On the formation of his father's ministry, he was appointed Under-Secretary for the Colonies, but in 1833 resigned, in consequence of the determination of the Cabinet not to attempt the immediate emancipation of the slaves. He afterwards held for a short period the post of Under-Secretary for Home Affairs, and on the formation of the Melbourne administration in 1834 became Secretary for War. Having at the general election of 1841 lost his seat for Northumberland, which he had represented for ten years, he was returned in September of that year for Sunderland, and exercised his powers as a debater in opposition to the Peel government. Lord Howick succeeded his father as third Earl Grey, July 17, 1845, and on the construction of a Whig cabinet by Lord J. Russell in 1846, accepted the position of Secretary of State for the Colonies, resigning with his colleagues in 1852. Lord Grey, who figured prominently in the opposition to Lord Derby, was not included in the Coalition cabinet, did not approve the policy of Lord Aberdeen's cabinet in declaring war against Russia, and explained his peculiar views on this question in a long speech, May 25, 1855. For many years he has only rarely spoken in the House of Lords; but he frequently wrote long and weighty letters to *The Times* on the questions of the day. His lordship was the author of "Colonial Policy of Lord Russell's Administration," 1853, and of "Essay on Parliamentary Government as to Reform," 1858, of which a new edition appeared in 1864.—*Men of the Time*.

[SPECIAL TELEGRAM.]

The Times of October the 10th says:—"Japan will not relinquish her pretensions, when in the full flush of victory. Any attempt to procure the cession or even suspension of hostilities at the present time is therefore manifestly doomed to failure unless supported by an overwhelming display of force, which is utterly out of the question. Any Government attempting to bring about a general agreement to put pressure on the combatants further than is necessary for the protection of Europeans, would inevitably find itself left in the lurch and would make an enemy of the most powerful nation in the East. China and Japan must be allowed to fight out their quarrel."

(FROM THE "N.C. DAILY NEWS.")

London, October 1.

H.R.H. the Duke of Cambridge has been busily engaged at the War Office on account of telegrams passing with the East, which are believed to have reference to an increase of the garrison at Hongkong.

It is reported that the Chinese troops have evacuated Korea, and are now massed at Chiu-lien'eng, thirty miles to the west of the Yaloo River, to oppose the advance of the Japanese in Manchuria.

Many Chinese are said to have deserted lately on account of their arms and ammunition being bad.

The correspondent in Shanghai of the *New York Herald* asserts that the troops at Chiu-lien'eng have mutinied, and that the soldiers have destroyed their arms, and that there is a panic at Peking, where the Chinese situation is considered hopeless.

Peking, October 1.

An Imperial Edict, dated the 30th September, appoints General Sang Generalissimo of the various Peiyang army corps now in Manchuria and Korea, as well as Chief over the Manchurian levies, with the exception of the Kirin division under the Tartar-General E-kô-tang-s. The various generals are further commanded to give implicit obedience to General Sang on pain of death.

London, October 4.

The treasure and archives from Moukden are being removed into the interior.

London, October 5.

The married officials of the Customs at Peking are leaving, owing to the animosity of the natives to foreigners.

Hongkong, October 5.

The typhoon commenced on the night of the 4th, and continued all the 5th. Ample notice having been given, there is no known damage afloat, but considerable damage ashore.

(FROM TONGKIN PAPERS.)

Paris, September 20.

The Army Manœuvres at Beaune are completed.

M. Casimir-Perier was present at the grand review of the troops and made a speech in which he thanked the Generals and the Army for the progress that had been made, and expressed the hope that the country and the army would always be united in sentiment.

Paris, September 21.

Admiral Humain has been appointed chief of the general staff of the French Navy.

Paris, September 22.

M. Goulle, editor of the *Petite République*, has been sentenced to three months' imprisonment and a thousand francs fine for a libel on the President of the Republic.

(FROM MANILA PAPERS.)

Madrid, September 17.

General Bourbon has to-day published a letter disclaiming the manifesto he was said to have published in France, claiming to succeed the late Comte de Paris as head of the Legitimists.

(FROM JAPANESE PAPERS.)

Fusan, October 9.

Mr. Otori, Japanese Minister, will shortly leave for home at the request of the Government.

Sendai, October 10.

The Karita-dake has burst into action, and the local police have been dispatched to inspect the scene.

Hiroshima, October 10.

Colonel Nadamura and Commander Saito, Imperial Chamberlains, who were despatched by the Emperor to proceed to Korea to visit the Japanese army, returned here last night.

A report has reached here to the effect that a detachment of Japanese Infantry and Cavalry attacked 2,000 Chinese soldiers at Wi-ju, and defeated them. Wi-ju is now occupied by Japanese troops.

The gold and silver bullion and three horses captured at Pyông-yang have arrived at Headquarters.

Hiroshima, October 10.

Count Goto and Viscounts Takashima and Niire arrived here last night.

Kobe, October 10.

A successful political lecture meeting of the *Fuyu-to* was held at the Daikoku Theatre to-day, at which addresses were given by Messrs. Hoshi Toru, Tatsuno Shuichiro, and a few other prominent Radicals.

Nagoya, October 11.

Governor Tokito left for Tokyo last night on being summoned by the Home Minister. Rumour has it that he will be removed to another position.

Hiroshima, October 11.

The war correspondent of the *New York Herald* returned here yesterday.

A train which left Kobe on the 10th inst. at 9 a.m. for this town was derailed in the neighbourhood of Umeia Station about 7 p.m. Slight damage was done to the engine-car, but nobody was injured. After some delay the train was replaced on the track and reached here some thirty minutes late.

Marquis Hachisuka, President of the House of Peers, and Viscount Watanabe, President of the Accounts Examination Bureau, arrived here to-day.

Kobe, October 11.

The *Kaishin-to* held a public meeting to-day, an audience of over one thousand persons attending. Messrs. Shimada Saburo, Ozaki Yukio, Tanaka Shozo, Takata Sanaye, and other distinguished members of the party spoke.

Hiroshima, October 12.

Count Inouye, Minister of Home Affairs, will leave for Korea on the 15th inst., having been appointed Japanese Minister to the peninsula Kingdom.

Mr. Saito, ex-Vice-Minister of Agriculture and Commerce, will accompany Count Inouye to Korea.

Mr. Otori, the present Japanese Minister to Korea, will return home on the arrival in that country of Count Inouye.

Mr. Yoshikawa, Minister of Justice, will hold temporarily the portfolio of Minister of Home Affairs in conjunction with his present office.

Onomichi, October 12.

A grand general assembly of the Strict Enforcement party was held here to-day, at which over four hundred persons were present. Addresses were given by Viscount Tanii, Baron Ozawa, and Mr. Suzuki Shigeto.

Hiroshima, October 12.

Marquis Kuroda, Vice-President of the House of Peers; Count Itagaki and Mr. Hoshi Toru have arrived here.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Oriental Hotel, 87, Main Street, on Mondays and Thursdays in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION OF PROBLEM No. 142.

WHITE.

1-B to K5 1-K x B, dis. ch.
2-Kt to Q5 ch. mate if 1-K to Q6, dis. ch.
2-Q to Q5 mate if -B (B6) moves
2-R mates.

Correct solutions received from Omega, W.H.S., J.D., and Digamma.

PROBLEM No. 144.

By A. GUNTZER.

White to play and mate in two moves.

We give this week two games in the Tarrasch-Walbrodt match, in which the younger player was hopelessly outgeneralled by the astute Doctor. Score and notes from the *Illustrated London News*.

GAME No. 172.

GIUOCO PIANO.

WHITE.

Walbrodt.
1-P to K4
2-Kt to KB3
3-B to B4
4-Castles

BLACK.

Tarrasch.
1-P to K4
2-Kt to QB3
3-B to B4

Authorities are fairly agreed that in this opening, Castling may well be delayed for a few moves. Some suggest here P to B3 as it tends to strengthen the centre afterwards by P to Q4. White by proceeding as in the text soon loses the advantage of the first move.

5-P to Q3 4-Kt to B3
6-P to B3 5-P to Q3
6-B to Kt3

White now cannot gain time by B to Q4, the reply to which would be Kt x P, as the B is not attacked.

7-P to QKt4 7-B to K3
8-B x B

A much more questionable proceeding is this capture, as to which there is something to be said for both sides.

9-P to QR4

8-P x B

Stale and unenterprising play characterises this advance, and indeed the whole of White's action in this game.

10-B to K3
11-B x B
12-Q to Kt3
13-Kt to Kt5
14-P to KB4
15-Kt to KR3
16-Kt to Q2
17-QR to K sq.
18-Kt to B3
19-P x P
20-P to Q4
21-P to K5
22-Kt x P
23-R to K4
24-R to Q sq.
25-Kt to B3
26-P x P
27-P to B4
28-R x P
29-Kt to B4
30-Q to Q3
31-Q to Q4
32-Q to B5

The point of all this is, that if Q takes Kt, the R at QB4 would be left en prise after the exchange.

33-Kt x Kt 33-Kt x R (on Q sq)
34-Kt to B4 34-Kt to B6
35-R to Q4 35-Kt to Q4
36-Kt to Q3 36-R to K sq.
37-P to K3 37-R to R8 ch.
38-K to R2 38-R to R7
39-K to R sq. 39-R x Kt
40-P x R 40-Q to KB2
41-Kt to K sq. 41-R to R8 and wins.

R to K4 is answered by Q x P ch. Dr. Tarrasch plays with accuracy and elegance throughout.

GAME No. 173.

PETROFF'S DEFENCE.

WHITE.

Tarrasch.
1-P to K4
2-Kt to KB3
3-Kt x P

BLACK.

Walbrodt.
1-P to K4
2-Kt to KB3

To avoid this early exchange of the centre Pawns Kt to Q B3 may be recommended; and White seems to be at least in no worse position for the defensive move, as he keeps up the attack at the same time.

4-Kt to KB3 3-P to Q3
5-P to Q4 4-Kt x P
6-B to Q3 5-P to Q4
7-Castles 6-B to R2
8-R to K sq. 7-Castles
8-B to KB4

Better than P to KB4, which shuts in the B for a time and leaves the QP weak on the King's diagonal.

9-P to B4

Although this move leaves the Q weak, there is enterprise in White's game which is in refreshing contrast to the play of his adversary.

10-Q to Kt3 9-P to QB3
11-B x P 10-P x P
12-B to B sq. 11-Kt to Q3
13-B to KB4 12-Kt to Q2
14-Kt to B3 13-Kt to QKt3
15-B to Kt3 14-P to Kt4
16-P to Q5 15-K to B sq.
17-P to QR4 16-P to B4
18-Kt to Q2 17-P to Kt5
19-P to R5 18-R to QB sq.
20-Kt (B3) to K4 19-Kt to R sq.
21-P x P 20-P to Kt3
22-R to R7 21-P x P
23-R x Kt 22-R to B2
24-Kt x Kt 23-Q x R
24-B to Kt3

A piece is simply lost by Black and there is not much to be said, except that the finishing strokes by White are both interesting and effective.

25-Kt x P ch. 25-B x Kt
26-B x R 26-B x P
27-R x KB 27-B x Q
28-B to K5 ch. 28-R to B3
29-B x R ch. 29-K to Kt sq.
30-Kt x B 30-Q to Q4
31-Kt to B sq. 31-Q to Q3
32-R to Kt7 ch. 32-K to B sq.

If K to R sq., White wins by R to Kt6, dis. ch. The same idea forced the interposition of Black's Rook at move 18.

33-B to K7 ch. and wins.

The result of the above match was a severe blow to the admirers of Walbrodt, who proved himself quite incompetent to meet a real master in single combat. It is, however, an instructive commentary on the value of simultaneous play as a test of a player's skill, that immediately after so decisive a defeat, Herr Walbrodt achieved the great feat of playing fifty-one simultaneous games! Of these he won no less than forty-two, losing five, and drawing four!

Dr. Tarrasch seems to be in grand form just now. By a telegram dated Leipzig 12 September, he was leading in the great International Chess Tournament there. Thirteen rounds had been played up to that date with the following result:—

Tarrasch, 10½; Lipke, 10; Teichmann, 8½; Janowsky, 8½; Walbrodt, 8; Blackburne, 8; Marlo, 7½; Berger, 7½; Schiffers, 7; Mieses, 6; Schlechter, 5½; Zinkl, 5; Suetting, 5; Baird, 4½; Scheve, 2½; Mason, 2; Seuffert, 2; Weydick, 2.

END-GAME No. 13.

CHESS IN MEXICO.—The *Two Republics*, published in the City of Mexico, gives an account of a tournament recently played there divided into seven classes. Twenty-seven names are mentioned and there are other entries, so that the game would appear to be in quite a flourishing condition. The following neat ending occurred in one of the games between two of the leading players:—

BLACK—(MR. R. B. KEYS).

WHITE—(SEÑOR E. CALICA).

The continuation was—(1)—, R x B; (2) R x R (which is best), and now Black plays the pretty move of Kt—Kt5, which wins. In the actual game Señor Calica replied Q x Q, which is, of course, answered by R—Q ch and mate next move.

MAN-OF-WAR.

Charleston (18), U.S. cruiser, Captain Coffin, 2nd October.—San Francisco via Honolulu.

LATEST COMMERCIAL.

IMPORTS.

The market does not look quite so well as it did last week. Yarns are quiet again, but with no change in quotations. Shirtings, gln., active, but arrivals equal sales and there is no reduction in the available supply; 8½lb. are lower in price, but without finding buyers. Fancies generally are dull, but a few thousand pieces of Turkey Reds have been sold at late rates. Woollens.—Nothing doing beyond retail parcels of Cloth and Italians. Blankets meet with some enquiry, but purchasers are slow to move.

COTTON PICK GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds. 39 inches	\$2.25 to 2.75
Grey Shirtings—9 1/2 yds. 45 inches	2.60 to 3.25
F. Cloth—7 1/2 yds. 34 inches	1.60 to 1.90
Indigo Shirtings—22 yards, 41 inches	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches	1.75 to 3.75
Cotton—Italians and Sateens Black, 32 inches	0.16 to 0.21
Velvets—Black, 35 yards, 21 inches	6.85 to 9.05
Victoria Lawns, 12 yards, 42 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4 yds. 24/25 yards, 30 inches	1.60 to 1.75
Turkey Reds—2.8 to 3 1/2 yds. 24/25 yards, 30 inches	1.80 to 2.10
Turkey Reds—3.8 to 4 1/2 yds. 24/25 yards, 32 inches	2.35 to 2.75
Turkey Reds—4.8 to 5 1/2 yds. 24/25 yards, 32 inches	2.05 to 3.15

WOOLLENS.

	PER YARD.
Flannel	\$0.27 to 0.45
Italian Cloth, 30 yards, 32 inches	0.30 to 0.35

Nos. 20s, Hominy	—
Nos. 26s, Hominy	—

METALS.

Spot market quiet at last rates. Deliveries have been good, but they appear to consist chiefly of goods imported to meet contracts which have been kept "naisho" until now.

	PER PICUL.
Flat Bars, 4 inch	\$3.25 to 3.30
Flat Bars, 4 inch	3.35 to 3.40
Round and square up to 4 inch	3.25 to 3.40
Iron Plates, assorted	3.50 to 3.65
Sheet Iron	4.45 to 4.60
Galvanized Iron sheets	9.00 to 9.25
Wire Nails, assorted	5.60 to 5.90
Pin Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.60 to 1.65

KIKOSKKE.

Market firm with a fair business done. Prices well maintained, deliveries good and the stock decreasing. Present figures in godowns and tanks give 550,000 cases in all, of which not more than 75,000 are Russian.

Chester	\$1.75 to 1.77
Comet	1.74 to 1.75
Devco	—
Russian Anchor	1.74 to 1.75
Russian Moon	1.70 to 1.74

SUGAR.

Brown—Holders of Formosa have given way in price and consequently considerable sales have been made. Manilas have moved to some extent at former quotations. Unsold stock, all kinds included, is now down to 75,000 piculs. White—Large sales of partially damaged cargo at low rates have filled buyers for the time. The general market is quiet, but prices for "sound" refined are steady at last quotations.

	PER PICUL.
Brown Takao	\$4.20 to 4.40
Brown Manila	5.10 to 5.15
Brown Datong	3.40 to 3.50
Brown Canton	3.70 to 4.40
White Java and Penang	7.10 to 7.20
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Good current business at quotations. Holders have gained a little advance in price on Filatures, good Re-reels, and good Kakeda. But the stock is heavy (close on 15,000 piculs), and it remains to be seen if the demand will equal the supply.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Coates, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of goods, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is THE JOURNAL for Investors, Speculators, and business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by an financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold: and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

YOKOHAMA: SATURDAY, OCT. 20TH, 1894.

MARRIAGE.

On the 16th instant, at Christ Church, Yokohama, by the Rev. E. C. Irwine, M.A., LEONARD JOSEPH, third son of WILLIAM GRAFTON HEALING, Esq., of Tewkesbury, Gloucester, to MABEL ALICE, third daughter of the late Edward Morris, Esq., of Yokohama.

SUMMARY OF NEWS.

SOME wounded Chinese prisoners have arrived in Tokyo.

MR. SAITO SUICHIRO accompanies Count Inouye to Korea.

THE *Sendai Maru* conveys 500 Japanese emigrants to South America.

THE Yokohama Exchange for Yarn, Cotton, and Metals will be formally opened on the 25th inst.

MR. SAMUEL ADELSTEIN'S *Soirée Musicale* at the Public Hall last Saturday was a great success.

THERE is talk of a railway being built between Seoul and Ninsen, a distance of a little over 15 miles.

THE War Department is said to have ordered 20,000 more carts in addition to the 47,000 now in use.

MOST of the Yokohama Cricketers have went down to Kobe this morning by the French

mail steamer. The Inter-port match is arranged for Monday and Tuesday.

RAINY and windy weather brought about the postponement for one week of the Autumn Regatta.

HIS MAJESTY opened the present session of the Imperial Diet, sitting at Hiroshima, in person on Thursday.

THE sailing race last Saturday was won by *Nandeska*, which turns out to be a fast boat in a gale of wind.

MAJOR-GENERAL OSHIMA, who was wounded at Phyong-yang, is said to have left the doctor's hands on the 13th.

KAWAKAMI OTOJIRO is drawing crowded houses at the Minato-za, Yokohama, with his melodrama of the War.

A SWORD and bullet-proof garment is said to have been invented by a Mr. Nakamori Kane-kichi of Yokkaichi.

CHINESE traders are reported to be returning to Ninsen and reopening their stores. They are mostly Tientsin and Chefoo men.

COUNT INOUE having been appointed Japanese Minister to Korea, the portfolio of Home Affairs has been accepted by Viscount Nomura.

A SHORE nine beat a team from the U.S.S. *Charleston* at baseball on Saturday, by one run. Owing to rain only six innings were played.

THE funeral of the late Captain Sakamoto, of the *Akagi Kan*, took place at Saseho on the 14th inst. The ceremony was very largely attended.

THE direct telegraph line between Tokyo and Nagasaki, which passes through Hiroshima, has been completed, and the wire put in use from the 15th inst.

FIRE broke out at Tsuchizaki, Akita Prefecture, on the 14th inst., destroying the Tsuchizaki Branch of the First National Bank and twenty other buildings.

A MESSENGER of the 30th National Bank was robbed of 58,000 yen while travelling by train between Yawata and Hikone on the night of the 15th inst.

PRINCE WI-HWA, who comes to Japan on a special embassy from the Korean Court, put into the port of Izuhara, Tsushima, through stress of weather.

THE record prizes of the B division in the Sailing Club have been won by *Daisy* (17-rater), with 11 points; *Sayonara* (14-rater), 14 points; and *Jessica* (12-rater), 8 points.

THEIR IMPERIAL MAJESTIES the Emperor and Empress have granted yen 800 towards the relief of sufferers in the inundated districts of Oita Prefecture.

THE Agricultural and Commercial Exhibition open only to residents in Kanagawa Prefecture, was a great success. Some 512 competitors out of a total of 2,884 won prizes.

PUBLIC subscriptions contributed to the War Department for the purpose of affording comforts to the Japanese soldiers at the seat of war, totalled yen 1,400,000 on the 18th inst.

THE Radicals intend introducing a strong representation into the Diet advocating speedy steps being taken to reinforce the Navy, the completion of fortifications, and to increase the efficiency of the military equipment.

AN accident occurred on the railway near

colliding with an engine. A driver and stoker were killed, three other men were injured, while three engines and seven trucks were damaged.

It is alleged that a certain foreign spy of the Chinese Government, accompanied by a woman, arrived at Nagasaki on the 10th inst. by a foreign steamer. He left there on the 15th for Yokohama via Kobe.

DURING the four weeks ended the 10th inst. the Yuju-Kwan, Kudan, Tokyo, wherein articles captured by the Japanese in Korea are displayed, was visited by over 73,000 persons, who paid 2,000 yen for admission.

THE schooner *Golden Fleece*, 127.41 gross tonnage, has been sold to Mr. J. Keruan for \$3,200. The schooner *Josephine*, 17 tons, was sold to Mr. A. E. Fischer for \$900. Both sales took place by order of the U.S. Consulate General Court.

ON Monday afternoon, while a careless coolie, who accompanied Mr. Faga on a shooting expedition, was attempting to open a fowling-piece, when near Masuda station, the charge exploded and struck a little girl of seven years of age, wounding her severely in the legs.

MR. KUSUMOTO MASATAKA, having headed the list of candidates preferred by the Lower House for His Majesty's approval, has been re-appointed President of the House of Representatives. Mr. Shimada Saburo is the new Vice-President of that body.

DURING the week ended the 9th inst. 45 dysentery cases and 9 deaths were reported in Kanagawa. There were 35 typhoid fever cases and 5 deaths, and 24 dysentery cases and 8 deaths in Shizuoka, and 59 typhoid fever cases and 12 deaths in Saitama during the week ended the 13th.

REUTER telegraphs:—According to the opinion of the Imperial physicians, the malady of the Emperor of Russia is incurable, though he will probably live several months. The Grand Duke Alexander will attend the Emperor to Corfu, after which he will proceed to Darmstadt to escort the Princess Alix to Russia, where the wedding will take place in November. This news about the Russian wedding was next day said to be incorrect. The United States has declined to have anything to do with the Korean affair. Her Majesty's ships *Spartan* and *Edgar* will shortly be ordered to Singapore. Six steamers of the Russian Volunteer fleet are to leave Vladivostok equipped as war cruisers.

THERE is little alteration in the Import trade. Yarns do not improve in value or demand, and Grey Shirtings are about in the condition last reported. Woollens are not in immediate request, though the time is approaching when a demand for Cloths and Blankets should be made. No improvement is reported in the Metal trade, though small lots continue to be taken at late rates. The Kerosene trade is steady, and the immediate future of Oil seems fairly good. The stock of American is decreasing, while the Russian product has been replenished by the arrival of the *Volute* with a full cargo. Not much has been done in Sugar, and late rates are maintained. The Silk trade is small, and to induce business offers of parcels have been made at lower rates but without leading to bargains. Waste Silk has been in some demand, and more might have been taken had small concessions to buyers been made. The Tea trade is dull with little doing. Exchange

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Count Inouye's appointment as Japan Minister to the Korean Court is considered by most of the Metropolitan papers as a wise act on the part of the Government and a courageous one on his part. The *Hochi* finds the occasion suitable for describing the Count's former connection with Korea, and declares him to be better acquainted with her affairs than any other Japanese statesman now in office. No blame is laid by our contemporary on Mr. Otori because of the slow progress Korean reforms made under his guidance. It ascribes his ill-success entirely to the want of a fixed policy on the part of the Japanese Government. Count Inouye, eminent and influential as he is, must, in his new official capacity, observe the Foreign Minister's orders and instructions, and therefore his departure for the sphere of his new duties may be safely taken as a sign that a firm Korean policy has been adopted by the Ito Cabinet. Such a policy once fixed, the rest will follow naturally. Arguing in this strain, the *Kaishin-to* organ in the end seems to imply that the appointment of the Count is employing a great means to accomplish a small end. The *Nichi Nichi*, lavishes many epithets of eulogy upon the Count. It entertains no doubt of his ability to root out all the evils in the Peninsular Court and Cabinet, and to remove all the obstacles lying in the way of administrative reforms. Under his auspices, Korea will soon see herself on the highway to improvement and civilization, not to her advantage alone, but to that of the world at large.

The *Niroku* tells the Diet now sitting that it rests with it, on the one hand, to make known to the world the solidity of the nation's union, and on the other, to accomplish a political reform not smaller in importance than that of the first year of *Meiji*. With the latter end in view, the Metropolitan journal advises the Parliament, first, to stand boldly upright before the Government and to take every possible advantage of the present occasion to extend its rights; secondly, to breathe into the forces abroad a spirit of renewed confidence, by proving to them that they are stoutly backed by the whole nation; and thirdly, to take steps to have the Civil Service Examination Regulations suspended, so that no manner of obstacle may stand in the way of competent men being employed to serve the State at this juncture. The *Shin Choya* asserts the advisability of holding the ordinary session for a week or so immediately after the present special session, and of deciding forthwith that the Government should carry out the Budget of the 27th fiscal year for the 28th. Our contemporary considers that any inconveniences entailed upon the Government by such an arrangement are inevitable at a crisis like the present, and reminds the members that by adopting its proposal, they will be able to stay at home, mixing with their friends and acquaintances, and doing much good to the country by moving the people to useful and laudable actions, such as contributing to the war-fund, assisting distressed families of officers and men serving abroad, and so forth. The performance of such functions, we read, ought to be held more than sufficient to compensate for any regret the members may feel at being prevented from discharging their duties to the country in the parliamentary sphere.

The *Fiji* is at a loss what to say about the future condition of the Japanese money market, which, strange to say, has not yet, in our contemporary's opinion, suffered any disturbance at the present. That fortunate state of affairs is ascribed to the working of the great monetary organism, the Bank of Japan. The Nippon Ginko occupies an eminent position in the Japanese money market and can guide the financial affairs of the empire into any groove desired. Great as the Bank's power is, however, it is not boundless. Unless it discontinues its economical machinations at the proper moment, it may find itself unable to stay off a

panic, involving the whole country in utter financial ruin. The big bank is compared to a patient affected with malaria, who takes a dose of quinine prematurely, and is sure to suffer for the temporary ease he thus obtains.

The *Yomiuri* says that it has received information to the effect that the trustees of an elementary school in Tokyo intend to have their boys engage in a great sham fight on the Emperor's Birthday, the 3rd of November next, on the old parade ground at Hibiya and advises other elementary schools throughout the Empire to follow this example. No method, urges the Progressionist organ, could contribute more powerfully to inspire the rising generation with courage and *elan* such as are shown by their fathers and brothers now marching forward to the goal of glory in China.

The *Fiji Shimbu* has an article in which it urges the importance of drawing a clear line of demarcation between politics and military matters. The latter, important as they are at present, must not be allowed to throw other state affairs completely into the shade. In the Liberal organ's opinion, the mistakes committed by the Government in civil matters, since the breaking out of the present war, are as conspicuous as its successes in war-like affairs have been. While frankly admitting that gratitude should be felt on account of the latter, our contemporary thinks that the nation should not leave the former unrebuked. When the above article was penned, its writer, we are inclined to think, was not yet informed of Count Inouye's appointment to the Court in Seoul, for the mistakes complained of are evidently connected with civil reforms in Korea.

The *Nippon* has a long leader extending over three issues and still unfinished. In order to bring the present war to a happy termination, three things, writes that journal, must be well considered by all true patriots and statesmen:

- 1.—How to deal with Korea?
- 2.—What demands should be preferred to China?
- 3.—What relations should Japan hold with European Powers in order to carry out in full the measures adopted, after due reflection, with reference to Korea and China?

Our contemporary's solutions of these problems will be reproduced in our next summary. What the *Nippon* has hitherto advanced is all of an introductory character.

A prominent writer in the *Asahi* recommends Japanese men of science to go on expeditions to Korea at this juncture. They ought to be pioneers in the scientific field in the Peninsula. Where neither European nor American philosophers have trodden, some new treasures of botany, zoology, or geology, are not unlikely to be found. Such expeditions would not be in the least at variance with Japan's purpose in the present war, which is to civilize Korea and to enlighten her people. On the contrary, they might render substantial help to the achievement of that purpose, and might confer inestimable benefits on both Korea and Japan, in the form of discoveries in mechanics, chemistry, medicine, and sanitation.

The *Yomiuri* thinks that the construction of a few lines of railways in Korea would be the most efficacious means of effecting permanent reform in the Peninsula. Two lines which would certainly pay are one between Seoul and Inchon and another between Fusan and Seoul. Other novelties in the way of economy and industry recommended in the same article, are the improvement of harbours, especially those of Inchon and Fusan, the opening of Special Ports of export for rice and peas, the establishment of rice and peas Exchanges, and so forth.

The *Kokkai* devotes a corner in its leading columns to Viscount Nomura, the new Home Minister. He is told that his special aim in filling the chair vacated by Count Inouye, should

be to see that the autonomic system in the *fu*, *ken*, *shi*, and so forth, is carried out in practice. The nation knows that he was once a leader in a political party called the *Jichi-to*, or 'Self-Government Party,' and further that mainly through his representations the Government established the autonomic system some years ago.

Marquis Saionji, the new Minister for Education, is advised by the *Kyōiku Jiron* and a few other journals, not to be ambitious of making new laws and establishing novel systems, as most of his many predecessors have been. His immediate predecessor, Mr. Inouye, established and reformed not a few educational institutions, and resigned before he had seen any results of his work. The complex nature of the educational systems organized by the learned invalid, Mr. Inouye, may in the eyes of his comparatively young successor, who was educated in France, appear wanting in order and uniformity and therefore requiring reformation. But the nature of the work he has to superintend should induce him to curb all ardour for renovation.

The *Hochi*, a warm advocate of a foreign loan, is pained to hear of another domestic loan, but has courage enough to declare that the country can amply meet it. According to its calculations, seemingly founded upon sound data, the amount of specie that will be withdrawn from the Bank of Japan through the floating of domestic loans to the proposed amount of yen 120,000,000, will be yen 40,000,000. After considering in full the consequences of this withdrawal, the *Hochi* rests assured that the country is able to bear them, provided the state of things remains as it is now, and especially provided the Authorities do not fail to keep the financial machine well oiled, whatever that may mean.

EDITORIAL NOTES.

MANIFESTO OF THE RADICAL PARTY.

A GENERAL meeting was held by members of the Radical Party on the 7th and 8th insts., in the course of which a Manifesto and several other important matters were decided upon. The Manifesto is couched in the following terms:—Contrary to the clearly established fact that Korea is an independent nation and as such recognized by all the rest of the world, China has persisted in regarding that country as her own dependency, thereby attempting to disturb the peaceful international relations existing between the neighbouring Powers. Japan has declared war against China, being forced to this step by the dictates of justice. A righteous war cannot admit of mediation, and it is therefore certainly the duty of Japan to humiliate her antagonist so far as to be able to dictate terms of peace under the walls of Peking. The policy adopted by our Party in the foreign relations of this country is to keep primarily and always in view the cause of faith and brotherhood and strictly maintain the independence of Japan; being neither fearful of any strong Power now inclined to act insultingly towards any weak one. The actions of China towards Korea and Japan are entirely opposed to these principles, and it is for this reason that war has broken out. For the same reason our Party should give its support to the Government in the prosecution of the present war. Having discerned the general tendency of the world, especially that connected with the Orient, our Party (despite the incompatibility of our ideas with those of the Ministry now in power, in many important matters of State) has given its approval to the extension of the Navy and of navigation, the encouragement of emigration schemes, and so on. Now that the country is engaged in this tremendous struggle, His Imperial Majesty has summoned an extraordinary gathering of the Imperial Diet, with the intent, it is supposed, of requesting that Body to deliberate on the expenses required in the prosecution of this war with China. Anything relating to the war necessitates

he utmost promptitude; moreover, as the present session is to be of very short duration all matters connected with war-disbursements should be approved of as far as needful. Decisive resolutions are of extreme importance to both the Diet and the Cabinet in the discharge of their respective duties. Briefly stated, the most necessary thing now is for the people's Representatives to place absolute confidence in the Authorities and for the people to have perfect trust in their deputies, so that the satisfactory operation of the constitutional system of government may be ensured and the objects for which the present war has been undertaken achieved.

Another resolution arrived at in the same meeting is as follows:—This meeting expects that those members of the House of Representatives who are identified with our Party should, in grateful recognition of the personal superintendence bestowed by His Imperial Majesty upon all matters connected with this war now being waged against China, endeavour to manifest its belief that the Imperial Policy should be supported and aided by the earnest co-operation of the nation.

COUNT OKUMA ON THE SITUATION.

We find in the *Yiji Shimo* the epitome of a conversation which Count Okuma is said to have held with a certain visitor on the burning question of the day. The first essential at present, remarked the statesman, is cordial unity between all classes of the people, so that the Army and Navy will be enabled to push on boldly and unhesitatingly, and thus facilitate the conclusion of a most honourable peace at the earliest possible date. Nothing can be more dangerous than internal dissension in the case of a country that has undertaken a foreign war. And yet the least delay in the management of the present affair would be fraught with equal peril, for should the war be protracted for any undue length of time reckless adventurers of the Major von Hannecken type would offer their aid and services to China, which would result in the equipment of a far more efficient army. Another necessity is to impress foreign countries with the truth of the fact that the Japanese people are to a man united in their desire to prosecute the war; that therefore they are willing to set aside all differences of opinion in the approaching session of the Imperial Diet. To this end the proof that public opinion is unanimous with regard to the war and its prosecution, should be substantiated. Some may possibly, let us say, find fault with the extraordinary session now summoned, condemning this step as not being in strict keeping with the Constitution. But this is no time to contend over such a point. It may, in this connection, be remarked that the provision referring to an announcement forty days in advance whenever a session of the Imperial Diet is convened was made simply for the purpose of avoiding any unnatural hostility between political parties; and therefore at such a time as this when all partisan strife is suspended and every mind engrossed in the war, the calling together of a special session at short notice does not at all involve a violation of the spirit of the Constitution. It is therefore expected that, when the Cabinet Ministers explain the inevitability of this step and declare that they have summoned a special session on their own responsibility, the Imperial Diet will accede to this explanation. A responsible Cabinet enjoying the full confidence of a nation is, so to speak, in the possession of unlimited power in this direction. The Count then referred to an event which happened during the administration of Lord Beaconsfield's Cabinet, when Suez Canal shares were purchased by the exercise of the arbitrary power of the Cabinet, the Ministers being ready and willing to resign if their action failed to receive the subsequent approval of Parliament. In the deliberations of the Diet, continued the sage of Waseda, the members should say all they have to say on the occasion, while the Government ought to conduct its affairs so as to avoid the giving of future offence.

It must not be forgotten that whenever Japan's influence in the East is extended, as will be the natural result of the victories by land and sea, envy of foreign Powers will be excited. This the envy can be easily transformed into hatred, and the next step is active interference in Japan's affairs. Those points should be kept in mind by the authorities.

There is a good deal of shrewdness in the above remarks. Even at such a moment it is evident that Count Okuma has not lost sight of his pet theory of party government; he even hints in the above, if we judge aright, that the Cabinet should resign if it fails to obtain the approval of the Diet in the matter of the extraordinary convocation of the present special session. But it goes without saying that any such step would be suicidal. The management of the war cannot be taken out of the hands in which it now lies unless the Ministers be convicted of gross carelessness and ruinous failure. So far everything points to the conclusion that the right men are in the right place, and that despite the barking of malcontents like Mr. Ozaki Yukio or the partisan innuendoes of Count Okuma, the present Cabinet will see Japan triumphantly through the war.

KOREAN POLITICS.

THE *Sōul* correspondent of the *Kokumin* condemns in every strong terms the conduct of the Tai Wōn-kun and his followers. He accuses the Viceroy of having tried secretly to thwart the measures which Japan advised the new Government to adopt for the benefit of Korea. The chief motive of such action on the part of the Viceroy is, according to the *Kokumin's* correspondent, his ambition to take the government of Korea into his own hands and to make his grandson, of whom he is very fond, its king. Japan was regarded as a stumbling-block in the path, therefore the Viceroy tried, behind the scenes, to undermine the new programme advised by Japan. The too partial confidence placed by Mr. Otori, the Japanese Minister, in the pro-Japanese party at the Court of Korea and his failure to take any decisive steps aided the Viceroy in the furtherance of his scheme and in the formation of a faction hostile to Japan. The *Kokumin's* correspondent enumerates facts of actual or supposed occurrence which corroborate his attack on the aged Viceroy. It is alleged that a secret understanding existed between him and the Chinese troops at Phōng-yang with a view to instigating the Tong-hak insurgents and others to assault the troops and Japanese residents in Sōul as soon as disaster should overtake the Japanese army. It is alleged that members of the Cabinet were seduced in order to insure the nomination of his grandson to the Crown and the appointment of his followers in the Central Reform Office with a view to breaking up that party, which is chiefly composed of pro-Japanese politicians. It is further alleged that various artifices were secretly employed to prevent the entry of Boku Yeiko into the Cabinet. Among these artifices are quoted the coalition between the Viceroy and those opposed to Boku's entry into the Cabinet, and the mischievous designs of that coalition to oppose Japan's friendly help in matters relating to the army and the police, and to stir up the Koreans into attacks on the Japanese, as witness the murder of six Japanese in Jen-an towards the end of last month. The appointment of Ninstead and a certain Russian to drill the Korean soldiers, regardless of the original arrangement that matters relating to the training of soldiers should be solely entrusted to Japanese officers, as also the arbitrary punishment of native police and the dismissal of the Chief of the Police, are subjects for adverse comment. One decided proof that the Viceroy is at the bottom of his heart opposed to Japan, continues the writer, is the delay that has taken place with reference to despatching a special Ambassador to Japan. It was decided on the 26th of July to send an Ambassador, but the project has not yet been carried out. At first Boku Teiyo was ostensibly selected for the mission; then the Viceroy's

grandson, then the King second son. The fact is that the Viceroy is opposed to the project, and is attempting to postpone its fulfilment on one pretext or another. Japan despatched an embassy some weeks ago, yet a helpless country like Korea that owes so much to Japan, hesitates to return the compliment. Under the circumstances the situation of the pro-Japanese party may easily be conceived. They are now utterly powerless and merely anxious for their personal safety.

The *Kokumin* commenting upon this correspondence, says that should the state of affairs just described be allowed to continue, the Viceroy, as a natural outcome, would be obliged to retire from active life, Boku Yeiko would enter the Cabinet and the King's second son would ascend the throne, his eldest son being imbecile, and moreover a descendant of the Bin family.

"MANUAL OF CHRISTIAN LIFE."

THE Rev. A. Lloyd, has published a little book called "The Manual of Christian Life." It was written, the preface tells us, during a summer vacation among the mountains of Shiohara, and its tone of peaceful, happy faith seems to reflect the circumstances under which it was composed. The plan of the work is to lead its readers through the various stages of Christian belief, from the threshold of faith to death "in the full and perfect assurance of a happy resurrection." We shall not follow the author along this path. It is enough to say that he seems, in our humble judgment, to have furnished an itinerary that will save many feet from halting or error. One feature of the book, however, attracts special attention. In a recent London journal we find this paragraph:—

Churchmen who were present at the Anglican Missionary Conference of May last, when "Chinese and Japanese Problems" were under discussion, may remember some indignation which arose over a paper from the Rev. Arthur Lloyd, a Professor of English Literature at Tokyo. Mr. Lloyd accused the English prelate, Bishop Bickersteth, of "intruding" into the quasi-diocese of an American bishop. The Rev. Samuel Bickersteth at once denied the accusation, and now the Bishop himself sends home a long letter in which he claims to show that (1) neither Church has had an exclusive right to work in Japan; (2) that the successive arrangements which have been made have been submitted to, and been sanctioned by, the authorities of both Churches. Perhaps the presence of these two prelates has had something to do with Mr. Curzon's lament over the divisions of Christianity in the Far East.

Now this little book of which we are speaking contains a dedication:—

TO
The Right Reverend Edward Bickersteth, D.D.,
Bishop of the Church of England in Japan, in grateful recognition of much kindness shown me during many years, ἐν ἀγάπῃ μακαροφύλις.

It is pleasant to be thus enabled to infer that Mr. Lloyd's paper read at the Anglican Missionary Conference was not intended as a personal attack on an old friend, but was simply an appeal to principles. Many people may differ from, though many certainly agree, with the view taken by Mr. Lloyd in his paper, but all endorse the high esteem in which he evidently holds Bishop Bickersteth.

PROSPEROUS HIROSHIMA.

THESE are hard times in Tokyo and most of the larger cities and towns: not by reason of any failure of the crops or because the two great staples, silk and tea, have not done well this year. As matters stand, the year has so far been a decidedly prosperous one, better in every direction than 1893. But the fact is that the people have no money to expend on anything but the actual necessities of life. Curio-dealers and picture-sellers, bookstores, and places of amusement are bemoaning the loss of their best customers. The *yose* or music-halls are well-nigh deserted; professional singers and instrumentalists, or those who cater to the amusement of the public are barely able to make ends meet. The Yoshiwara in Tokyo, whose daily receipts are popularly supposed to be not much less than ten thousand *yen*—a mild estimate—is losing money rapidly, the number of visitors being less than half of the

general average. The banks, both public and private, refuse to make advances on any but "gilt-edged" securities, and look askance at even such matters as flour and other cereals, with the exception of rice. In the midst of all this Hiroshima is having a season of exceptional prosperity. Practically the capital of Japan for the moment, it is reported that the residents are rapidly piling up fortunes, and that the impetus thus given to the city will result in making it the equal to if not the rival of Osaka in future. The *Asahi* and *Miyako Shimbun* give a list of the prices prevailing, showing that everything there is three or four times higher than even in Tokyo. Local carpenters, whose daily wage has hitherto averaged 20 to 25 *sen*, are now making over one *yen* per diem, and this without any particular exertion. Bread and meat are exorbitantly dear. An *aji* of moderate size that will fetch a little over one *sen* in Tokyo readily finds buyers at six times that amount in Hiroshima. The local barbers who used to be content to get two *sen* for a shave and four *sen* for hair-cutting, now ask eight *sen* for the former and twelve *sen* for the latter service. A microscopic bit of beef or pork brings a fabulous sum when compared with the rates ruling in Tokyo.

The people of Hiroshima, says the local correspondent of the *Miyako Shimbun*, appear to be thoroughly alive to the necessity of making hay while the sun shines. Boot-blacks have for the first time set up their stalls in the large thoroughfares and get three *sen* per shine. They are largely patronized. The bazaars have added new attractions in the shape of professional singers and comedians, and hence do a thriving business. All the local merchants are well content, their wares selling for twice or thrice the amount they would ordinarily bring. And besides, concludes the correspondent, they are shrewd enough to take advantage of the moment, and, unlike the tradespeople of Tokyo, exhibit their finest wares in the shop-fronts, depending rather on the attractiveness of the exhibit than on any old established clientele.

THE "JIJI SHIMPO" ON THE POSITION OF THE VICEROY LI.

THE telegram received from Shanghai to the effect that the Viceroy Li had committed suicide, cannot be believed until further news is received, but of the fact that his position is a most trying one, there is no doubt. Owing to want of unity in the Chinese Government, the Viceroys of the other districts not only make no attempt to give assistance in the war, but criticize censoriously those who are conducting it. The Central Government is not much better than these Viceroys, for it is composed of ignorant statesmen with antiquated ideas who make it their sole business to issue impracticable orders. Thus, the Viceroy Li is obliged to undertake the tremendous task alone, with the sole aid of the province under his immediate control. The defeat of the Chinese Army at Pyöng-yang and the practical crippling of the Squadron, to the organization of which he had devoted years of care and attention, must have been hard blows for him to bear. How much harder they were made by the censure of the statesmen in Peking can well be imagined. The Viceroy had to fall back upon his confidential advisers, but here again he has discovered that his confidence was misplaced, and that the men whom he considered his sole supporters were really as untrustworthy as his selfish critics. They simply looked after their own interests. The son-in-law of the Viceroy and the Taotai of Tientsin, two of his most confidential advisers, embezzled the disbursements for military and naval preparations, and there is not a gun or rifle available for use in the Arsenal at Tientsin and elsewhere. That accounts for the supply of ammunition running short in the Chinese ships during the naval battle of the 17th ult. A second equipment of the Chinese Squadron is therefore out of the question, however urgently the Peking statesmen may press the Viceroy to fit out the surviving vessels and attack the enemy. The Army appears to be in the same helpless condition,

ammunition and rifles being nowhere procurable. When by chance a small stock of ammunition is discovered somewhere and sent out to the army, it is found that the cartridges are not adapted to the rifles furnished. It is believed that owing to some such cause 200,000 rounds of ammunition were left behind in Kasan by the fugitives from Pyöng-yang. The Viceroy Li is therefore in a desperate situation, abused by his enemies and betrayed and abandoned by his confidants—the Taotai of Tientsin is said to have fled—it is impossible for him to advance or to retreat. The *Jiji* thinks that no statesman in his position has ever been placed in such a dilemma, and does not wonder that rumours of his suicide have come to be circulated.

NEITHER SIDE TO BLAME FOR THE WAR.

In discussing the relative degree of justification for the present war, writes the *Keizai Zasshi* in its calmest and most philosophical vein, the Japanese newspapers are inclined to hoist the whole burden of responsibility on China's shoulders, as if Japan had only unmixed justification on her side. That this view is held by all may be proved by a glance at the leading columns of any Tokyo journal. Yet the opinion is, unromantically considered, only the outcome of enthusiastic patriotism, of that spirit which unconsciously finds a vent even through the point of the pen. Upon calmly discussing the facts we shall find that it is impossible to make any distinct demarcation between the relative degrees of justification; no more practically possible is it than to attempt to decide whether the North or the South had more in its respective favour in the great civil war of the United States. And how much more difficult is it to determine the question when one independent country comes to blows with another of like status! With regard to the present trouble China despatched troops to A-San simply because Korea, which she was accustomed to look upon as her dependency, had asked her to send reinforcements to assist in quelling the Tong-hak insurrection. On the part of Japan it was believed that to allow China's troops to engage in this work would end by converting Korea into a real dependency. And more than this; the Tong-hak uprising being the result of administrative oppression, there were certain circumstances which did not admit of Japan's holding aloof. Hence she also despatched troops and placed obstacles in the way of the Chinese army. Such being the case, any argument that tends to cast the whole blame on China's shoulders and absolutely justify the action of Japan, is open to the charge of being far too self-appreciative. No such argument need be employed in discussing the merits of an international war: the simple phrase "collision of interests" covers the whole ground. The *Keizai* thus cannot see that the action of China in the affair is wholly unjustifiable, yet it concludes at the same time that, for the sake of the preservation of Japan's interests, the step taken by the latter was unavoidable.

FOREIGN LOANS.

THE subject of a foreign loan is now being actively discussed, says the *Tokyo Asahi Shim-bun*, not a few people believing that the question will be brought up for deliberation before the present extraordinary session of the Imperial Diet. Our contemporary has made inquiries in authoritative circles and has learned that the problem of raising a foreign loan has certainly presented itself to their minds. It has been argued that as the duration of the war cannot be predicted with any degree of certainty, it is therefore equally impossible to make an estimate of the probable cost. A domestic loan of fifty million *yen* has been announced, remarks the *Asahi*, and to float another would be attended with serious consequences to the economic conditions of the country. Moreover, upon examining into the methods of procedure adopted by foreign countries under similar circumstances, it appears that a domestic loan is almost invariably followed by a foreign loan; therefore, conclude the advocates of the latter step, should there be any further necessity to raise funds a foreign

loan ought by all means to be resorted to. It has, however, been finally decided that all matters relating to the floating of loans should be left wholly to the judgment of the Minister of Finance, who will personally decide whether, for the sake of raising a required war-fund, a foreign or a domestic loan is in place. And even should a foreign loan be decided upon the Minister of Finance will, in consideration of the condition of the money-market, determine whether a loan at a low rate of interest, repayable in a long term, shall be raised, or whether the term shall be limited to the shortest time possible, so as to repay the whole by raising another domestic loan immediately after the conclusion of the war. At all events it is considered certain that the question of floating a foreign loan will be brought before the present extraordinary session of the Diet.

The *Hochi Shim-bun* has a good deal of interest to say on the same subject, which it views in a wholly different light. Our contemporary regards the rumour that the Government is contemplating the raising of a foreign loan as wholly unfounded. Of course it stands to reason that the farther the Japanese Army advances and the greater the number of troops sent to the seat of war the more rapidly will the amount of the attendant expenses increase, until an extraordinary sum is reached. And so the first War Loan of thirty million *yen* can not be expected to last longer than a very limited space of time. Under the circumstances, therefore, it is palpably evident that the necessity for floating another loan will sooner or later arrive. Yet even in this case the *Hochi* does not believe, arguing from the standpoint of public sentiment, that there will be any need of borrowing money from a Western country. It is in fact stated that when the Expeditionary Army was about to be sent into the field, the Minister of Finance declared on his own personal responsibility that there would be no particular difficulty in getting together for the prosecution of the war a fund of at least one hundred million *yen*. It would now be an easy matter, in view of the signal victories that have attended the arms of Japan both on land and by sea, to arrange for a loan of fifty or even eighty million *yen* either in England or the United States; still this is the very last measure to be resorted to. The *Hochi* understands that most of the Cabinet Ministers objected to the idea of a foreign loan from the outset, so it is not probable that any proposal of the kind will now emanate from the Government.

THE "KEIZAI ZASSHI" ON THE RAISING OF A WAR FUND.

JAPAN has twice tried the experiment, remarks the *Keizai Zasshi*, of floating a loan in England, once in 1869 and the second time three years later. These two experiments were practical failures, simply because English capitalists knew very little about Japan at that time, and the Japanese officials entrusted with the matter were without experience in such undertakings. They obtained money, it is true, but at a great disadvantage. Could the Authorities now hope to raise funds in London on better terms? We (*Keizai Zasshi*) can not think this possible, for our Government officials have as a rule but little experience in the money market and might easily be gulled or led astray by crafty bankers or brokers. As a natural consequence, though the rate of interest on loans is low in England when compared with that of Japan, this rate would rapidly mount upwards if Japan should make her appearance as a borrower. These considerations cause us to oppose any scheme relating to the raising of a foreign loan, especially as it is not difficult to find capitalists at home quite willing to advance all that is necessary, and particularly as the difference between silver and gold is so great at present.

The *Keizai Zasshi* does not desire to be understood as at all afraid of a foreign loan. On the contrary, it deems it conducive to the interests of the country to borrow abroad at a reasonable rate. And this leads it to suggest that the Government should allow foreigners to purchase

the bonds of any loan to be raised hereafter, just as they are permitted to hold Nakasendo Railway scrip and Redemption Bonds. Were this done the *Keisai* feels persuaded that foreign capitalists would invest their money in Japanese Government bonds, thus making it possible for the Authorities to reap the same, or even a greater, profit as they would if officials were sent abroad for the special purpose of raising a foreign loan.

With regard to the doubt whether or not the Japanese money market could stand the strain of the withdrawal of an enormous amount of the circulating medium, the *Keisai* plainly and resolutely says that it would not be difficult at all to do so if the people should be prepared to go back some three centuries or thereabouts in their status of living; and the peers call to mind the fact that their ancestors had generally but one suit of clothes in those days. Again, if the Government, on its part, is prepared to see the Redemption Bonds fall to eighty *yen* as the seven per cent. Capitalized Pension Bonds once did to sixty *yen* some twelve years ago, then it will be a very easy task to get together two hundred, or even more, million *yen* of ready money.

LIEUTENANT O'BRIEN.

LIEUTENANT MICHAEL J. O'BRIEN, of the Fifth Infantry, says an American paper, who has been chosen to represent the United States in Japan, is well known in local military circles. His luck in getting the appointment was the subject of general discussion among the army men in Fort Sheridan yesterday. Some time ago the War Department was given an invitation by the Government of Japan to send five officers of the United States to accompany the forces. Only one man was selected, and Lieut. O'Brien was the fortunate man. He is to make an exhaustive report of the military operations, and if the opinions of his fellow-officers are sustained he will do the task well. He will have an opportunity to make himself as famous as Captain Greene, who performed a similar commission for the United States during the Turko-Russian War in 1878. Lieutenant O'Brien is stationed at present in Fort Leavenworth. He was in Chicago during the riots and left with his company shortly after the manoeuvres at Evanston. He is 31 years old and graduated in the class of '85 at West Point; he is an honour graduate of Fort Leavenworth. He is a protégé of Patrick A. Collins, the Consul-General at London. Lieut. O'Brien hails from South Boston. On June 14, 1885, he was appointed Second Lieutenant of the Thirteenth Infantry. Later he was transferred to the Sixth Regiment. In 1892 he was made First Lieutenant of the Fifth Infantry. He is a crack shot. He married the daughter of Capt. Kendal of the Sixth Cavalry, and has two children.

STATEMENT OF SURGEON-GENERAL ISHIGURO.

THE *Setsu Maru* reaching Hiroshima on the evening of the 2nd inst. brought back one hundred and eighteen officers and soldiers wounded in the battle of Phýng-yang, all of whom were at once conveyed to the Hiroshima Barrack Hospital. Early the next morning Surgeon-General Ishiguro, accompanied by a number of his subordinates, visited the Hospital and himself dressed the wounds of eleven officers, besides personally examining the injuries of all those believed to have been seriously wounded. He expressed himself as highly gratified with the condition of the wounded men, and observed that during the twenty-five years of his official connection with military sanitation the progress manifested by this department of medicine, as evidenced in the civil war of the elder Saigo, contrasted most favourably with the condition of former year; and now that another opportunity arrived to test the degree of progress achieved, the result was still more gratifying. The most noteworthy points were, continued the Surgeon-General, the total absence of any formation of pus or indeed any inclination in that direction, and his desite

the fact that the bandages applied on the field at Phýng-yang had not been attended to or changed for nine days; the total absence of any indication of defective surgical treatment at the seat of war; and finally the gratifying fact that out of one hundred and eighteen disabled soldiers sent across the sea only four showed any feverish symptoms. The first and third points are due to the soldiers having been made to carry disinfected bandages with them and also to their having received instruction in the art of attending to their wounds. The second is attributable to the improved instruction given at the Military School of Surgery. Twenty days had gone by since the wounded soldiers were first admitted to treatment, and in that short space of time not a few who had received deep-seated injuries were entirely restored to health. In other words, compared with the results achieved in the Civil War of 1877, their recovery was effected in just one-third of the time formerly required. The advance made by the military surgery of Japan is indeed remarkable. In this context the case of a wounded Chinese prisoner, now in the same Hospital, may be cited by the way of contrast. He fell into the hands of his Japanese captors some thirty days after having been wounded in the battle of A-san. During that period he had been subjected to the old method of treatment, as still practised by the Chinese. More than a month has elapsed since he came under the skilled supervision of the Japanese surgeons, but as the first treatment was so clumsy and defective he is still far from being convalescent. Surgeon-General Ishiguro further expressed his extreme satisfaction that the object for whose attainment he had so long and earnestly laboured was so nearly reached. The thought even brought tears of gratitude to his eyes, concludes the *Hochi Shimbun*, from which we have taken the above particulars.

INTERVIEW WITH THE CORRESPONDENT OF THE "NEW YORK HERALD."

THE Chemulpo correspondent of the *Kokkai* and *Tokyo Asahi Shimbun* gives the result of an interview with the war correspondent of the *New York Herald*. The conversation was held at Chemulpo on the occasion of the latter's return thither from Phýng-yang. It was on the 18th ult., said the *Herald's* representative, that he sailed up the Tai-dong on a junk. Here and there on the banks one could see dozens of dead Chinese, all in an advanced state of decomposition. So fearful was the resulting stench that he was continually obliged to carry a bottle of scent in his hand. The number of corpses gradually increased as the boat approached Phýng-yang, the surrounding air being thereby vitiated to such an extent that it was almost impossible to eat his meals. The dead bodies of the Japanese were found to be nearly always fearfully mutilated: heads and arms were missing, having evidently been carried off as trophies by the barbarous Chinese soldiery. In marked contrast to this savagery, he gave a striking instance of the generosity shown by the Japanese to the soldiers and people of China. On the 16th, just after the fall of Phýng-yang, a heavily-laden Chinese junk was captured by the Japanese troops on the lower course of the Tai-dong. Four Chinese sailors and one China-woman were on board. The woman was discovered to be the wife of a Chinese telegraph expert, formerly stationed at the Chinese Telegraph office at Chemulpo but subsequently stationed at a similar post at Phýng-yang, where he had been taken prisoner with several others on the 16th. The junk was requisitioned for Japanese service and her crew ordered to assist in conveying stores brought by Japanese steamers to the lower Tai-dong up the river to Phýng-yang. Delighted to find themselves mercifully treated, the men worked for several days with admirable diligence. Their enforced labour was however not of long continuance. About a week later they were brought into the presence of Lieut.-General Viscount Nozu and were told that although they belonged to a nation that was the bitter enemy of Japan they

themselves were not considered as foes. In recognition of the service which they had rendered the Japanese army they were about to be set free, and thirty *yen* would be paid to each man, in lieu of travelling expenses. Moreover, they should be furnished with a pass securing their safe passage through the Japanese lines. The four men were completely dumbfounded at this magnanimous liberality, and so struck were they by the chivalrous generosity of the Japanese that they repeatedly refused to accept the proffered money. It was literally with tears of gratitude they were at last obliged to take the gift. The woman was similarly treated and was at the same time assured that though her husband was a prisoner and in confinement his life was perfectly safe. A similar spirit actuates the Japanese army in its treatment of the Chinese prisoners of war. When the *Herald's* correspondent was in Phýng-yang there were no less than eight hundred Chinese captives employed in various matters connected with the Japanese army. Yet their treatment was so kind and liberal that, in the correspondent's opinion, they were more like guests than enemies taken with arms in hand. The action of the Japanese army in all these points certainly surpasses that of any civilized country placed in similar circumstances. Indeed the *Herald* correspondent had been compelled in his letters to write so favourably of the Japanese that he apprehended the accusation of partiality; yet all that he had written was fact, pure and simple, and without the least colouring. The war conducted by Japan is a civilized warfare, and so, however much England may espouse the cause of China, that country with its savage methods of fighting can never hold its ground against Japan. The correspondent believed that the Flag of the Rising Sun might within the month be planted on the walls of Peking. He had sent off his first letter to the *New York Herald* from Phýng-yang, and had caused a copy of this to be forwarded to Viscount Mutsu. He had come back to Chemulpo only to procure certain necessary articles for his further journey and also, according to a previous promise, to deliver an address before the Representatives and Consuls of the various Treaty Powers stationed at Sôul and elsewhere. The next step would be direct to the Yalu by steamer.

THE TONG-HAK LEADER INTERVIEWED.

WE find in the vernacular press an account of an interview which a certain Japanese gentleman is said to have had with Kim Ho-kin, the leader of the Tong-hak (*Tôgaku-îdô*) insurgents, at the latter's head-quarters at Chen-la. The information is reported to be official. The gentleman in question set out from Sôul on the 2nd of last month and reached Kim's head-quarters five days later. There was no difficulty experienced in meeting with the insurgent chief, and the conversation that followed was carried on entirely in writing; it lasted for fully three hours. Kim's explanation of the cause of the uprising of his followers was to this effect:—He and his compatriots, regarding with indignation the usurpation of supreme power by the Min faction, and utterly unable to endure its despotic rule, had frequently petitioned the Government to enforce the removal of the Mins. All their efforts in that direction proved fruitless, for the Mins kept a sharp look-out and never let a word of complaint reach the ears of the King. Kim and his fellow-thinkers therefore reluctantly determined to resort to violent measures in order to attain their object, and the rebellion broke out. Kim expressed himself as deeply regretful that the uprising had directly led to the war between Japan and China. What he and his followers regarded with the liveliest satisfaction was that the Min faction had been overthrown, thanks to the chivalrous exertion of Japan, and that, by having prevailed upon the Tai Wôn-kun to come out of his retirement and to re-assume the chief supremacy, a number of administrative abuses were about to be done away with. The original aims of the insurgents were thus, he declared, for the most part suc-

cessfully accomplished. He and his followers ought, therefore, to give up their arms and go back to their peaceful avocations: but there was still one thing which caused them solicitude, the fact that they knew nothing of the particulars of the reformatory methods about to be undertaken by Japan and the Tai Wōn-kun. Kim now warns his followers to refrain from any further disorderly acts; but both he and they are exceedingly anxious to get some information concerning the plans of the new government. The insurgent chief further said that he had retreated from Chōn-ju, to which place the royal army had been despatched to attack the Tong-haks, simply because as a loyal man he could not offer resistance to forces sent out by the King. There is no foundation whatever for the reported new uprising of the Tong-haks. The rumour is due to the presence of certain lawless hordes engaged in devastating some districts to the north.

The interviewer describes Kim as being about forty years old, with a peculiarly dignified expression of countenance. His range of knowledge is not particularly wide, yet for a Korean he may be termed a man of great culture, probably the result of his partiality for foreigners. He has the gift of presence of mind in a rare degree, and is very conscientious. With all this he has the faults common to all Koreans: suspicion and want of sincerity; only he is shrewd enough not to discover these sentiments so readily as the rest of his countrymen do. In a word, he is neither a very good man, nor a hero, nor a knave, but yet an able man with burning enthusiasm disguised under a cool exterior. The interviewer finally suggests that he should be appointed to some suitable post through the intervention of the Japanese Government. Such an appointment would be both popular and beneficial to Korea.

TWO EXCITING MOMENTS.

A Tokyo contemporary gives several excerpts from a letter of Captain Yamada, one of the officers who played a conspicuous part in the battle of Phiyōng-yang and whose company was in the very heat of the fight. After speaking of isolated instances of bravery, he states that there were two occasions during the battle when men and officers alike experienced the keenest pleasure. The first was when he and his regiment came upon a millet-field from which quite a fusillade had been kept up by hidden Chinese. The field was surrounded and the Japanese gradually drew an ever-narrowing circle about the doomed sharpshooters, of whom there may have been over one hundred concealed amid the waving grain. "It was the best kind of sport," writes the enthusiastic warrior; "our men blazed away whenever they caught a glimpse of the foe. They ran like rabbits hither and thither, looking for an outlet, but could find none. I never enjoyed a better 'pig hunt' (*butagari*). But it takes a good deal of military ardour to enter into the spirit of such a scene. The second occasion is one calculated to arouse a responsive thrill in every breast. After the battle was over and the victory of the Japanese troops definite and complete, every one as with one voice burst out into a glorious triumphant shout of "Nippon Teikoku Banzai!" The cry was taken up even by the wounded and echoed far and near. Captain Yamada says that it was done without premeditation, and that the whole host hurrahed as one man.

A DESPERATE ANIMAL.

THAT the universal patriotic enthusiasm of the Japanese is not confined to either sex is now plainly evident, since case after case has occurred of women pleading to be allowed to serve in the army in whatever capacity. That this feeling has extended in some degree to the domestic animals is, however, news, always excepting the instance of the White Horse of Ise. We now learn, on the unimpeachable authority of a Tokyo *Ko Shimbunshi*, that a very remarkable instance of intelligent patriotism has been observed in the case of a common—we say common advisedly, to distinguish him from the equine marvel of the Ise Shrine—horse hailing

from Gifu Prefecture. It appears that among a number of steeds brought up for the inspection of the local authorities, with a view to being sold for military purposes, there was one animal which rejoiced in a triad of owners, all of them being residents of Tanijima-mura,—and we would call attention to the fact that these minute details confirm the veracity of the narrative. Fault was however found with the horse: he had been too hard-worked probably; at all events he was condemned as unfit for military service. On the way home the crestfallen owners loaded their joint property with reproaches, possibly—though this is not distinctly stated—adding blows to words. The horse was finally stabled, evidently in very low spirits. The following morning, October 6th, when the stable-door was opened, the animal was found lying dead, a huge gaping wound appearing in the abdomen, while the clenched teeth still convulsively held a large sickle. Investigation showed that the animal had deliberately committed suicide by disembowelment, of course in despair at having been found unfit to serve with the army. The villagers immediately came in large numbers to view the miracle, and the horse was subsequently given a proper funeral. "How remarkable," says one of our *Ko Shimbunshi* contemporaries, "that the patriotic feeling should inspire even dumb animals!" Remarkable, indeed. There is just one point, however, that we should like to have explained: how did the horse manage the fatal weapon? Did he insert his head between his forelegs while standing; or did he sit on his haunches and work head downwards; or did he finally stand on his forelegs only and inflict the wound while in that trying position?

THE CENTRAL TREASURY AND WAR DISBURSEMENTS.

ACCORDING to the weekly reports issued by the Bank of Japan, remarkable the *Jiji Shimpō*, the total sum of money in the Central Treasury was only 1,803,637 yen during the week ending September 22nd. That amount was reduced by nearly one-half a week later, the report for September 29th showing only 955,443 yen in hand. The rate of diminution of the contents of the Central Treasury will give an idea of the vast amount of money daily spent in prosecuting the war. It is by no means easy to foretell how long the war may be kept on with that small amount of cash in hand; but as the first instalment—three million yen—of the thirty million War Loan recently raised has not yet been received at the Treasury, and moreover as the Treasury is itself entitled to issue exchequer notes to meet any sudden emergency, it need not be presumed that any particular difficulty will be met with in expending the amounts demanded by the war. The *Jiji* urges in conclusion that the patriotic public should contribute to the War Fund, seeing that such immense sums are required in prosecuting "our righteous war with China."

WEDDING.

DESPITE the inclemency of the weather a very large number of ladies and gentlemen gathered at Christ Church on Tuesday afternoon to be present at the nuptials of Miss Mabel Alice Morriss, daughter of the late Mr. Edward Morriss, of the Hongkong and Shanghai Banking Corporation, and Mr. Leonard Joseph Healing. The Church was profusely decorated with marguerites and bamboo chandeliers, pew-heads, and altar rails being adorned with bunches of the graceful flowers; while two floral arches, one at the end of the aisle, the other over the prayer cushions on which the bridal couple knelt, added considerably to the pretty effect. The bride was given away by her brother, Mr. P. de C. Morriss. She was attired in a robe of white satin, with bunches of May blossoms, her corsage being trimmed with pearls and chiffon. Her bridesmaids were, Miss Eldridge, Miss Fanny Eldridge, Miss Thomas, Miss Divers, and Miss Nina Smith. They wore dresses of white silk trimmed with *eau de nil* moire ribbons and chiffon; and white Leghorn hats trimmed with white flowers and bunches of pink May blossoms. All

wore gold brooches in the shape of a bunch of May blossom, set with pearls, the gift of the bridegroom. Immediately preceding them in the bride's procession were two pages in white costumes, Masters Norman Dare and George Cook. Mr. H. V. Heuson attended the bridegroom as best-man. The Rev. E. C. Irwine, M.A., officiated throughout, Miss Leach presiding at the organ. A reception was afterwards held at the residence of Mr. and Mrs. Holme Cook. The honeymoon is to be spent at Dzushi.

THE TELEPHONE AS AN AID TO FRAUD.

FOR reasons that will be apparent, the following paragraph, from the *Kobe Chronicle*, should be given all the publicity possible:—"An ingenious attempt to defraud a merchant of Hyogo by means of a telephone message is reported. On Tuesday Mr. Kakizaki, a kerosene oil merchant, received a telephone message which purported to come from Mr. Adachi, a dealer in Osaka, saying that the banto of the latter was in Kobe on business, but finding himself short of money would apply to Mr. Kakizaki for 200 yen. In due course, about 3 o'clock in the afternoon, a man who said he was the banto of Mr. Adachi, called upon the Hyogo merchant, and said that being short of money he had telegraphed to his master, who had directed him to go to Mr. Kakizaki's office, where he would receive two hundred yen. He also produced a telegram authorizing him to receive that amount. Mr. Kakizaki who, it appears, was defrauded of four hundred yen some time ago by a somewhat similar device, took the precaution of telephoning to Mr. Adachi direct, but as soon as he expressed his intention of doing this the bogus banto left the shop, saying that he should shortly return. Mr. Adachi immediately replied from Osaka that he knew nothing of the telephone message sent in his name, and of course nothing more was seen of the banto or his confederates.

A LADY VOLUNTEER.

SEVERAL Tokyo *Ko Shimbun* have an interesting story to tell of a Miss Osuye Araki, now in the capital, whose one aim seems to be to get to the seat of war and serve her country there. She is said to be the daughter of a *shishō* of Yamaguchi Prefecture, twenty-four years old, and unusually quick and intelligent. Shortly after the outbreak of hostilities she came up to Tokyo and engaged herself as a domestic in the house of a merchant in Kanda District. Her prime object, however, was to go to Korea, and after making all the inquiries she could, she finally applied to the Ushigome District Police for employment in or in connection with the army: she was, she stated, even willing to go as a coolie or in the most menial capacity if the Authorities would only accept her services. After some well-meant advice, which she refused to listen to, she was told that there might be a chance of getting employment through the Red Cross Society. Her application there proved successful and she is now training for a nurse and will shortly be sent to the seat of war. It goes without saying that the metropolitan press can find no words too laudatory to express their high opinion of the young lady's patriotism and determination.

A POSSIBLE RENEGADE.

A NUMBER of vernacular journals, particularly the *Tokyo Asahi Shimbun*, give some interesting particulars concerning the person of Ishii Heitaro, recently arrested on landing at Nagasaki on suspicion of being a spy in the employ of the Chinese Government. Ishii is believed to be a native of Okayama Prefecture: that he is a Japanese admits of no doubt whatever. He went to Shanghai a number of years ago and then entered the service of a resident Japanese merchant, only to be discharged a little later for general worthlessness and dishonesty. He then formed a connection with an abandoned woman and opened a book-store, which proved a fresh failure, all his partner's means being engulfed in the venture. Thereafter he appears to have led a roving, hand-to-mouth, vagabond existence, and it was matter of remark

that when the last Japanese left Shanghai in a body he refused to accompany them, alleging his own perfect safety. Now the man has turned up in Nagasaki, and five or six hundred taels were found in his possession on his being arrested. The suspicion against him is very strong, particularly as Ishii is well-versed in the Chinese colloquial and is known to have been on an intimate footing with a number of Chinese subordinate officials. Such a suspicion alone is enough to make him an object of universal execration just at present.

THE "JIJI" AND THE "NICHU NICHU."

We regret to see that two of the leading papers in Tokyo, the *Jiji* and the *Nichi Nichi*, suddenly disregarding all sense of decorum and dignity, have fallen into recriminations against each other of the most personal nature. The cause of this procedure is that the report of the battle of Phŷng-yang appeared in the *Jiji* several days earlier than in the other papers. The *Nichi Nichi*, thinking it strange that the report from its two war correspondents who were present at Phŷng-yang, did not reach its office as soon as the *Jiji's* report, demanded an explanation of its correspondent in Sŷul, one of the two who went to Phŷng-yang. The answer was that the war correspondent of the *Jiji* who rode back to Sŷul from Phŷng-yang as soon as the battle was over, in return for help given him in the matter of war correspondence by the regular reporter of the *Nichi Nichi*, undertook to carry the report for the latter paper as well as his own. The two reports ought therefore to have arrived in Tokyo by the same mail. The *Nichi Nichi* at once published the letter from its Sŷul correspondent—a letter full of personalities about the *Jiji's* representative—and hinted that if the correspondent of the *Jiji* had really taken charge of the *Nichi Nichi's* report, he had kept it over a mail. The *Nichi Nichi* sarcastically observed at the same time that it was satisfied that the report of its correspondent had appeared before the others in the columns of the *Jiji*. The *Jiji Shimpō* protested against this charge in its issue of the next morning, giving the account of the very reporter accused, Mr. Sugi, who has returned to Tokyo. Mr. Sugi says that he could have received no assistance from Mr. Kuroda, the *Nichi Nichi's* reporter, as that gentleman fell ill on the evening of the 14th ult. On the contrary, it was Mr. Kuroda who was helped in various ways by the *Jiji's* correspondent; who himself was kindly assisted by Aide-de-camp Katsura. It was true that he undertook to carry the *Nichi Nichi's* report, together with various other important letters entrusted to him by several officers. These he sent to a ship which was about to start from Phŷng-sang to Chemulpo, thinking that the quickest way. His own report was not yet completed so that he could not send it by the quick route, but posted it from Sŷul, so that it was utterly beyond his power to keep the documents sent from Phŷng-sang from reaching Tokyo before his own report. Mr. Sugi adds that the conduct of the *Nichi Nichi's* Sŷul correspondent had caused much displeasure to a certain officer at Phŷng-sang, and that he was only saved from being disgraced by the intervention of the representatives of the other papers. The *Jiji* says that the charge of the *Nichi Nichi* is to be considered merely as the senseless attack of a shameless man whose mind has become deranged by jealousy and spite. It concludes by remarking that it cannot regard a paper guilty of such odious conduct as its contemporary, and that it ought not to be allowed to exist in the metropolis of the Empire. The *Nichi Nichi* returned to the charge in its next issue. It confines itself chiefly to the question why, if the *Jiji's* reporter really thought that sending letters from Phŷng-sang was quickest, he did not forward his report, which was by that time nearly complete, by that route. It then uses most abusive language against Mr. Fukuzawa, the Editor of the *Jiji*, ending by promising to teach a lesson to an old bigot when a letter bearing on the dispute arrives from its correspondent, Mr. Kuroda. The *Jiji* replies that

the *Nichi Nichi* has gone beyond the limits of journalistic decorum, for without commenting on the facts enumerated by Mr. Sugi, it has confined itself to venting its spite and envy. The fact that it has not published the contradiction of the charges preferred against him, sent to it by Mr. Sugi on the 13th instant, is an undeniable proof that those charges were utterly unfounded. The *Jiji* then declares that it will not trouble itself further with the affair, but will leave it to the judgment of the public.

DIFFICULTY AMONG THE OSAKA SPINNERS.

TOGETHER with the development of the cotton-spinning industry in Osaka, which city is now regarded as the centre of this industrial enterprise in Japan, difficulties appear to be of frequent occurrence among the spinners themselves, as well as between the masters and the workmen. The latest instance of the kind is a trouble that has quite recently arisen between the Meiji Spinning factory and the rest of the guild, as reported in the *Hochi Shimbun*. The matter is of a somewhat scandalous nature and has finally resulted in the excommunication of the offending factory. The offence is one of not uncommon occurrence in the case of newly-started concerns, and the Meiji Spinning Factory was, if our memory does not fail us, established in the early part of the present year. Upon experiencing exceeding inconvenience in the running of its machines, the Meiji, in direct violation of the covenant of the guild, decoyed some sixty skilled workmen over from the Osaka, Naniwa, and other factories of old standing. This action soon reached the ears of those factories, and being highly incensed at the breach of the agreement originally entered into by the upstart concern upon becoming one of the guild, they held repeated deliberative councils and sent in strong remonstrances. The Meiji at first tried to shuffle out of the trouble, but finally, on finding its little game of no avail, promised to surrender the decoyed men and to dismiss several of its principal officers. This was, it now appears, a mere temporizing device, for when the prescribed date for the fulfilment of the promise arrived, the factory requested a further delay, and at last roundly declared its inability to redeem the pledges made. The rest of the guild held conferences and finally ostracised the offending factory, striking its name from the list and even voting the sum of three thousand yen in order to better carry out retaliative measures. They have since gone a step farther and have resolved to refuse to do business with the cotton and yarn merchants who supply the Meiji Factory.

There is no doubt, premising the correctness of the above data, that the Meiji Spinning Factory has been guilty of a breach of faith all round and stands in need of exemplary correction. We now learn from other vernacular papers that the Authorities have in contemplation the compiling of suitable regulations calculated to provide against such troubles in future. From the above it would appear that it is high time for such a step to be taken.

THE NI-KAN BOYEKI KYOKAI.

FROM the *Shogyo Shimpō* we learn that an Association entitled the *Ni-kan Boyeki Kyokai*, or Japanese-Korean Commercial Association, has just been started at Isarago, Shiba District, Tokyo. The prime mover is Mr. Yoshida Bunzo, formerly Chief of the Japanese Post Office at Sŷul. Our contemporary reports that Mr. Yoshida first conceived the idea of the Association while still in Korea in an official capacity, particularly when he saw that the chief commercial power was in the hands of the Chinese, while their Japanese rivals were being gradually forced into the background. Resolving to restore the influence of his countrymen in the Korean markets, Mr. Yoshida resigned his post in February of the present year, and has ever since then most earnestly devoted himself to the organization of a Commercial Association having for its object the promotion of trade relations between Japan and the Peninsula. The war has given great impetus

and weight to his plan, the announcement of which has now been made in order to enlist the support of the public at large. His immediate programme is to get together several thousand supporters, each of whom is to pay a monthly charge of fifty sen. In return for this every member shall have the right to receive a copy of the monthly proceedings of the Association, wherein the most useful information will be given for those interested in the commerce of Korea. Each member will, moreover, enjoy unusual facilities for any trade enterprise in the kingdom. Sales-rooms will at first be established at Sŷul and Phŷng-yang, and later on in such places as Fusan, Wŷn-san, Kai-yang, etc. The Association will also make inquiries into the industrial, marine, and mining affairs of the country. In a word, the programme proposed by Mr. Yoshida bears a close general resemblance to that already carried out by Mr. Arai in China for like purposes. It is said that many distinguished business-men in Tokyo, Osaka, Kyoto, Kobe and elsewhere have promised their support to the scheme. A list of the names of the leading supporters is given in the *Shogyo Shimpō*.

THE CHITANI QUESTION.

THE complications about the appointment of the late Judge Chitani were solved by his death, but trouble incidental to them has arisen. It is said, writes the *Jiji Shimpō*, that in pursuance of the original intention, the Minister would have treated him as Chief Judge of the Okinawa Local Court. But here an interesting question arose, namely, whether the deceased Judge's representatives could claim that he should be treated as a judge of the Supreme Court. Supposing that his representatives are incompetent to make such claim another point has to be settled, and that is whether the failure of the Judge to proceed to Okinawa was due to personal considerations or to matters relating to his official functions. The distinction of these two points makes a great difference in the salary due to him for several months prior to his death, since should his objections be referred to the latter ground his representatives would receive his full salary, while in the other case they would only receive one-half. The point is of much moment to the Judge's family, as it is said that he had received no salary since January last.

GENERAL MEETING OF THE STRICT-ENFORCEMENT PARTY.

THE Strict-Enforcement Party, writes the correspondent of the *Hochi*, has played a conspicuous part in bringing about the present war, for, although it is chiefly by the august influence of the Emperor and the loyalty and bravery of the Army and Navy that we can hope to see China chastised and freed of her bigotry, unless this Party had loudly maintained that Japan should shake off her self-humiliating policy toward foreign countries, the present war with China might never have taken place. The Party should therefore hold itself responsible for the termination of the affair. It held its general meeting on the 12th instant at Onomichi, Hiroshima Prefecture. More than 300 adherents were present, the majority of whom were members of both Houses of the Diet. Mr. Suzuki Shigeto, M.P., addressed the assembly on the motive of its meeting, and was followed by Baron Ozawa and Viscount Tani, members of the House of Peers. The Viscount's speech was the longest and elicited the loudest applause. Nothing is more satisfactory, said he, than to see the Japanese Army and Navy achieving glorious success and gaining victory after victory. But they must be enabled to win still more glorious victories by being entirely freed from anxiety as to the feelings of the nation. The only way to do this is for its 40 million citizens to be firmly united and to support it to the utmost of their power. China is a vast country, but because her people have no national sentiment, she is always liable to be disgraced by other Powers. Japan is comparatively small, but its people, whenever any grave affair with a foreign country is in question, lay aside any internal dissension that may have been

dividing them and present a firm and united front to the enemy. It is this spirit that is actuating the Japanese at present and all encouragement should be given to it. Until Moukden is taken, the Taku forts are reduced, and the terms of peace dictated within the walls of Peking, many hardships will have to be undergone by the Army and Navy, and the people must give their heartiest support to the Authorities by practising frugality at home, but not sparing their subscriptions to the war. Those assembled then sat down to light refreshments and after having given three lusty cheers for the Emperor, the Army and the Navy, and for their Party, the meeting adjourned.

THE PRESENT STATE OF JAPANESE MARINE INSURANCE.

THE marine insurance business of Japan is now in a very shaky condition, observes the *Yiji Shimpō*, owing to the fact that while the transportation of ordinary merchandise has greatly decreased since the commencement of the war, the risk to which steamers are exposed has been considerably augmented. The ships chartered by the Government can be counted by scores, and as they are coming and going in a comparatively limited space of water the danger of collision is unusually great. Unless the collision or other accident is proved beyond dispute to have been incidental to warlike operations, the insurance companies are obliged to make good the claim. The premia on these special ships have, it is true, been doubled, but that is found quite inadequate to the increased risks, these being far greater than was at first supposed. The ships in question are obliged to undertake voyages without showing lights, and as they proceed at full speed there is also danger of their boilers bursting. Another trouble of the Japanese insurance companies is that the foreign insurance offices, in spite of having previously undertaken to re-insure these steamers, have now gone back on their promise, leaving the Japanese to bear the responsibility alone. The foreign companies have confined their insurance to merchant-vessels liable to encounter the risks of war, and in these cases have raised the rate of charges considerably. The *Yiji* learns that the Hongkong and Bombay insurance companies recently held a general conference and decided to raise the charges to double or two-and-a-half times the usual rate. The Japanese companies have not yet reached that point, and do not like to withdraw their insurance from steamers in the Government service. They are solicitous too of not subjecting their clients to any embarrassment in consideration of the purpose for which the ships are engaged.

COLLISION BETWEEN THE TOKYO ASSEMBLY AND THE CITY COUNCIL.

THE question of the Water-works is once again responsible for the occurrence of a difficulty between the Assembly and Council of the Metropolitan Municipality, the former having charged the latter with negligence of duty. The City Assembly is now in session deliberating on a bill relating to the prolongation of the period in which the Water-works are to be constructed. From the time of the introduction of the bill and the attendant investigation, an opinion seems to have arisen among the members that the City Council had signally failed to discharge its duties in the matter of constructing the Works, and that it should therefore be impeached. The Assembly was formally opened on the 1st inst., and on the following day the report of the Committee selected to investigate the bill, was read. As soon as the reading was over, one of the members moved that the strangers' gallery should be cleared. Upon this vote being negatived the same member proposed that, as a previous question, an impeachment bill should be resolved upon, the text of this document reading as follows:—"That whereas the same Council which had at first declared that the Water-works could be completed in five years, viz., in the period 1891-1895, now demanded that the term of completion should be prolonged until 1898; and

whereas a Council unable to redeem its publicly made pledge should, in consideration of the responsibility incumbent upon it, be compelled to resign; therefore be it resolved that a bill relating to the renewal of a public promise concerning the period in which a public work was to be completed, should be presented to the City Assembly by a new Council." A hot dispute ensued, but at last, on being put to the vote the impeachment resolution was carried by a narrow majority of one. Hereupon the Assembly resolved, with a view, to urging the resolution upon the Council, to prorogue their meetings for some time. Turning to the doings of the Council, one is puzzled and surprised to see it going on in an every-day manner, as if wholly indifferent to the resolution fulminated against it by the Assembly. The opinion of Mr. Yamagata, Secretary of the Municipality—the Governor of Tokyo being absent just at present—is said to be that neither the Governor nor Secretary need resign according to the vote, if adverse, of the City Assembly; the Councillors, themselves being nominated from among the members of the Assembly, may similarly disregard its actions, so long as they have no conscientious scruples in so doing; for there is no explicit provision in the Law of the Organization of Cities which requires them to be amenable to the vote of the Assembly. The prolongation of the period for the construction of the Water-works is, in the Secretary's opinion, really unavoidable, so that it is going much too far to charge the Council with neglect of duty for simply having bowed to the inevitable. Should the Assembly persist in suspending its deliberative meetings so long as the Council sees fit to pay no heed to its resolution, then the City Office will have either to adopt the carrying out of the original bill or else must dissolve the Assembly agreeably to the sanction of the Minister for Home Affairs. All these points are to be decided so soon as the Governor returns from Hiroshima.

A NEW LIGHT ON THE DISCOVERY OF AMERICA.

A PAPER with the above title was recently read before the British Association by Mr. H. Yule Oldham. If we look at a map of the Atlantic Ocean we shall see, he said, that at three points the New World is comparatively easy of access from the Old: first, the north of North America by way of Iceland and Greenland; secondly, Central America, with the help of the steady north-east trade-winds; thirdly, Brazil, which is not only the nearest point to the Old World, but has the additional advantage of winds and currents tending in its direction. Columbus took the second route, but there is little doubt that he was anticipated in his discovery by nearly five centuries by Norsemen who came by the first route. Mr. Oldham brought forward reasons for believing that in 1447, the year of the birth of Columbus, a Portuguese ship taking the third route reached the coast of Brazil. The middle of the fifteenth century was the time of Portugal's greatest activity. Expedition after expedition was sent out by Prince Henry the Navigator to discover the wealthy Black Country, which was supposed to exist beyond the Great African Desert. In 1445 Cape Verd was rounded for the first time by a modern vessel. The Canary Islands were already known to the Spaniards; but the Portuguese discovered Porto Santo and Madeira. There is, then, nothing inherently improbable in the suggestion that one of the numerous Portuguese ships which at this time were cruising off the coast of Africa, should, by the prevailing winds and currents, have been carried to the coast of Brazil. Now is there any actual evidence that such a thing occurred? Mr. Oldham brought forward two facts which, taken in conjunction, go far to establish it. There is at Milan a remarkable manuscript map, dated A.D. 1448, drawn by Andrea Bianco, of Venice, one of the best known map-makers of his time. On this map are shown for the first time the results of the Portuguese discoveries as far as Cape Verd, but in addition there is drawn at the edge of the map, south-west from that Cape, a long stretch of coast-line labelled "Authentic

Island," with a further inscription to the effect that it stretches 1,500 miles westward. Such a name and inscription are quite exceptional on maps of this kind, and must have been inserted on account of definite information. What that information was we gather from "The Discoveries of the World," by Antonio Galvano, published in the 16th century. In this book it is stated that in 1447 a Portuguese ship was carried by a great tempest far westward until an island was discovered, from which gold was brought back to Portugal. Bianco's map of 1448 was made in London, and it therefore seems probable that Bianco, touching at Portugal on his voyage from Venice to England, there received information about the newly discovered "island." There can, then, be little doubt that nearly half a century before the voyage of Columbus a Portuguese ship had discovered the coast of Brazil.

SKITS FROM THE "MARU MARU CHIMBUN."

THE oldest-established as well as the most popular and best edited of Japanese humorous periodicals, is the *Maru Maru Chimbun*; nevertheless there can be little doubt that the circulation of even this favoured weekly falls considerably below two thousand. Since the death of Mr. Nomura Fumio, a many-sided man, and one with a keen perception of the ridiculous, the *Maru Maru* has rarely risen to those heights of humorous fancy that were once the delight of its readers. It poses now as a *farceur*, and particularly as a political satirist, sparing no Party and evidently deeming any one and every one legitimate game. The mainstay of this journal is at present a contributor widely-known under the sobriquet of *Uguisu-tai*, who seems, to judge by American standards of wit, to be a compound of Bill Nye and James Whitcomb Riley. Some of this writer's minor poems are really excellent, while his farcical sketches and anecdotes, devoid of that coarseness which is so often a feature of Japanese humour, rarely fail to excite a laugh.

In a recent number we find some paragraphs on Hiroshima that, despite the difficulty of rendering native wit into idiomatic English, are worthy of reproduction. The "Hiroshima Correspondent" says that the town appears as if the New Year's and the *Bon* holidays had struck it at the same time, with a large portion of Tokyo thrown in gratis. He gravely comments upon the paradox that the more people coming to Hiroshima the smaller the town grows. Accommodation is so scarce, he continues, that those who have "rooms" of only one mat, or even half a mat in size, proudly affix a placard at the entrance stating that "desirable suites" may be had on the premises. The demand for rooms (*ma*) is so great that residents having *noruma* (idle) fathers or *sonna* (foolish) sons, include these facts in the list of accommodations. Upon entering a barber's shop the resemblance of the large number of black-heads, waiting to be cut, to a charcoal-dealer's outfit, especially to those balls of pulverized and dried charcoal known as *tadon*, at once strikes the ingenious observer. Some people get tired of waiting for their turns and go away, in which case the barbers dub them *mōkaranai o-kyaku* (either, as written, "unprofitable guests," or else to be construed *mō karanai*, "guests who do not wish their hair cut").

Another writer makes a pertinent suggestion with regard to the Chinese prisoners taken at Phyōng-yang and elsewhere. It is obvious, as he astutely points out, that it costs many to feed these people in Japan while keeping them doing nothing. Why not put them to some practical use? It is said that the walls of Moukden are well-nigh impregnable, and that in order to take the city the siege-guns will have to be so aimed that their missiles will fly over the walls and into the city proper. In the writer's opinion a great deal might be done in this direction with a flight of large arrows. Now, says he, take the tallest and wiriest prisoners; let their queues be fastened firmly to the heels of their boots so

that their backs will be stretched and arched like a bow. Let the girdle act as a notch on which to rest the arrow-head,—and could one possibly wish for a better weapon? The suggestion is accompanied with an illustration showing a Chinaman strung in the above way and in the act of being shot off by a most smug-faced and contented-looking soldier.

MR. MAEDA'S MANIFESTO.

MR. MAGDA MASANA, widely and favourably known for his untiring devotion to the promotion of Japanese industrial interests, has issued a long and interesting manifesto on the relation between the war and industrial enterprise. It goes without question that the manifesto faithfully reflects his enthusiasm in and loyalty to the cause he has espoused. The writer prefaces his remarks by stating that he cannot understand how it comes that just at the moment when extraordinary exertion is called for on the part of those engaged in commerce and industry, they should content themselves with acting as on-lookers of the war, all the while neglecting to attend to their graver duties. The unusual development of commerce or industry generally begins with such extraordinary events as war, famine, or revolution; now therefore is the time of all others for those engaged in various practical avocations to put forth their utmost energy. A glorious termination of the war will take place at no very distant time, to judge from the success hitherto achieved by the arms of Japan; but is it possible to expect such a result for Japanese commerce as the matter now stands? Mr. Maeda is disposed to doubt this. Remember, he continues, that for hundreds of years the commercial rights of Japan have been suppressed or impeded by the hateful and despicable men of China; and that the trade relations existing between Japan and Korea are just about experiencing a vital and thorough change. Just at this critical moment the Chinese are about to be thoroughly humbled. Here we have an opportunity such as will not soon occur again. Is not this the time when the commercial privileges of China should be seized upon; when the profits accruing from that Empire's trade with Korea should be made to fall into the pockets of Japanese merchants, and Japan should become the undisputed mistress of the markets of the Far East? Mr. Maeda is thoroughly disappointed to find that business men are not alive to the gravity of their mission at present. His recent extensive tours throughout the greater part of Japan have convinced him, to his great and unpleasant surprise, that those who are dubbed "leading business men" are in reality standing wholly idle and merely gazing listlessly at the issues of the war. For what purpose then have such organizations as Chambers of Commerce—and there are many such institutions in Japan—been established? He has for his part already devoted more than two decades to the development of Japanese agriculture, commerce, and industry, with the solemn resolution of sacrificing himself to the cause of these interests. During this period of activity he has succeeded in organizing the Tea Guild, the Five-Two Staples Guild (*Go-ni Kwar*), the Match Guild, and the Kyushu Coal Guild. While he is personally ready to sacrifice his ease, interests, and even life itself to the development of the nation's resources, there is one reflection which fills him with concern: who will act as his successor after he is gone? Whatever happens he urges, in conclusion, that should success ever be achievable in commerce, industry or agriculture, it can only be made so by means of organizing commercial combinations that will work harmoniously. Union and coöperation are the only methods by which success may be attained.

ESTABLISHMENT OF THE TOKYO EXCHANGE.

DESPITE the long-continued prevalence of troubles among the projectors, the Tokyo Exchange has at last been formally started. The opening ceremony was held on the 1st inst. in the presence of more than six hundred guests, including both officials and private individuals. Congratulatory addresses were deli-

vered by several of those present. Viscount Enomoto, Minister of State for Agriculture and Commerce, spoke to the following effect:—Since October of last year, when the new Exchange Regulations were first put into operation, no less than eighty-three Exchanges of various kinds have been established in the larger cities, thus greatly facilitating the conduct of business. Until the present, Tokyo has, in spite of its extreme importance as the centre of the Empire, possessed only two Exchanges, the one for rice and the other for stocks and shares. It is therefore most gratifying and worthy of praise that through the exertions of a number of distinguished business men an Exchange has been thus started, in which such staples as salt, sugar, oil, cotton, cotton yarns, cotton cloths, metals, and metallic ware and all cereals except rice are to be dealt in. The speaker then enjoined those connected with the Exchange to conduct its affairs so that the greatest possible benefit might accrue to the public at large, and that it might be taken as a model for all other institutions of the kind.

Commenting upon the above, the *Mainichi Shimbun* remarks that the inauguration of regular transactions in the above-mentioned nine articles of importance ought not only to confer immense benefits upon the merchants occupied with such staples, but also to tend to facilitate the smooth working of business of this description the country over. The want of such a regular mechanism of transactions has been keenly felt in the case of every one of these commodities: in that of cotton yarns, for instance, where, owing to the inadequate supply, it has hitherto been virtually impossible to enter upon positive contracts, as every body is eager to buy. Of the nine staples, transactions are expected to be most lively and numerous in the matter of yarns, salt, oils, and miscellaneous cereals, with least done in metal wares, as is proved by the fact that among more than fifty brokers belonging to the Exchange not one deals exclusively with the last mentioned commodity. The Exchange aims first of all at the avoidance of any speculative tendency in the conduct of its business, proposing thereafter to encourage transactions of a practical kind. The first part of this programme is regarded as very difficult at the present moment, when speculative transactions are of such very extensive prevalence; nevertheless it is by no means impracticable, according to the nature of the organization of Exchanges. An instructive contrast is furnished by the Oil Exchange and Cotton Yarn Exchange of Osaka. In the case of the former institution the transactions are virtually free from vicious ingredients, because the establishment is organized and kept up only by merchants actually trading in oils. The latter institution is wholly different, as it is not organized by business men at all. The transactions carried on within its walls are one and all tainted with speculation. It is stated that six-tenths of the shares of the new Tokyo Exchange are held by men really engaged in trading in the nine commodities enumerated; and it is for this reason confidently hoped that the objects aimed at will be attained.

MR. KAWASHIMA JUN ON THE WAR.

MR. KAWASHIMA JUN, a well-known member of the House of Representatives, and an adherent of the Constitutional Reform Party, has published in the vernacular press his views about the war. China, he says, is one of Japan's nearest neighbours and the two countries are intimately related as regards their history, literature, and religion. Yet China is apt to be arrogant, unfriendly, and discourteous toward her neighbours, and has not only laid herself open to disgraceful treatment from Western Powers, but has also disturbed the peace of the Orient. She does not even distinguish between the rights properly belonging to a State and those appertaining to individuals. Such being the case, it is questionable whether, supposing that China should be allowed to renew her friendship with Japan after the termination of the war, she would deserve to be admitted into an alliance with Japan for the purpose of pre-

serving the future tranquillity of the Orient. Mr. Kawashima thinks not, and maintains that even after the war is over, China should be regarded as an irreconcilable foe. She should be deprived of her power of resistance in the future and made to pay a large indemnity, say from 200 to 400 million taels, and to cede a portion of her territory, namely, the two provinces, Lian-tung and Formosa. Japan would thus be the first Power in the Orient, and the next question to be decided is how she is to carry out the task of preserving the peace of the East in spite of aggressive designs on the part of Western Powers. Mr. Kawashima's opinion is that the only way to effect this would be to open up and utilize the resources of Lian-tung and Formosa, to strengthen their defences, to perfect the army and navy of the country, and to enter into a defensive and offensive alliance with Korea. In case of an emergency occurring hereafter in the East, Japan should observe strict neutrality and act as an arbitrator after the matter is over, or she might conclude an alliance with England or Russia on a footing of absolute equality and thus aspire to the sovereignty of the East.

Commenting on the above opinion of Mr. Kawashima, the *Keisai* says that it fully endorses the statement that China should hereafter be regarded as an irreconcilable foe, but observes at the same time that the cession of Formosa and Lian-tung and an indemnity of 200 to 400 million taels would not crush China. The loss of these two provinces would make no impression on the big country, while the idea of demanding a large indemnity is too European and not applicable to China. Mr. Kawashima's remarks are a little premature. Should the Japanese Army come to occupy Kirin and Shinkiang, and the Navy to devastate the coasts of the Gulf of Pechili unopposed, Mr. Kawashima will not be content with the demands which he now makes, but will soar higher still.

SAMOA.

THE tripartite protectorate of Samoa by Germany, England, and the United States—the government by a Consular Triumvirate so severely criticised by Mr. Robert Louis Stevenson—is not likely to endure much longer. It is highly probable that before long the United States will withdraw from any active participation in the matter, and in view of this contingency the German residents are anxious to press Germany's claims to a preponderant influence in Samoa. A more energetic enforcement of these claims was advocated some months ago in a memorial addressed by the German Colonial Association to the Imperial Government. Recently a large number of the German inhabitants of Apia conveyed their thanks to the Association in a letter in which it is stated that a petition is shortly to be sent to the German Emperor requesting him either to establish a German protectorate or to annex the islands. This, says the letter, would be greeted with satisfaction, not only by the German elements of the population, but also by all the other respectable inhabitants (Mr. Stevenson is thus excluded as clearly as if he had been mentioned by name). Any other solution of the difficulty, such as a twofold protectorate by England and Germany in the event of the complete withdrawal of the United States, would, says the letter in conclusion, finally lead to the extinction of German influence in the South Seas. It is probable enough that the definite annexation of the islands, whether by Germany or England (for annexation by the United States seems to be out of the question), would be better than a continuance of the present anomalous régime.

The future attitude of the United States Government with regard to Samoa was clearly shadowed by Mr. Cleveland in his last annual message to Congress. In effect the view held is that it is unwise for the United States to meddle in the affairs of the island; they are too far distant to be of any use, and a continuation of the protectorate entails inconveniences and even dangers. The present status is no longer

tenable is fully recognized on all hands, but it is improbable that, if the United States withdraws, England will lightly submit to the annexation of the islands by Germany. New Zealand has claims that cannot be overlooked, and another Berlin Conference will be needed to bring the matter to a settlement.

BRICK CHIMNEYS AND EARTHQUAKES.

In obedience to instructions issued by the Home Office that inquiries should be made as to the construction of brick chimneys with reference to earthquakes, the Committee of Investigation has submitted a report which, epitomized, is as follows:—The effect of earthquakes upon chimneys being of great importance, the Committee are conducting minute inquiries into the matter. No definite opinion upon the subject can yet be given, but the investigations carried on thus far warrant the following observations. Judging from the fact that the debris of chimneys as high as 100 feet which have suffered from a shock, is not thrown, as a rule, beyond 3 or 4 *ken* from the base, it may be concluded that the space within a radius of 4 or 5 *ken* from the base should be considered most dangerous, the space beyond being comparatively safe. Defective mortar is the most potent factor that has thus far led to the falling of chimneys. Inferior mortar and an imperfect method of building up bricks which deprives the mortar of its adhesive power, are points frequently faulty. Regardless of form, a brick chimney should be constructed so that there is one layer of headers for every three or four layers of stretchers, and the bricks forming the outer side should be interlaced with those of the inner side at every third or fourth layer. The foundation should be durably constructed upon a firm soil, and where the soil is not sufficiently solid, as is often the case in the elevated quarters of Tokyo, the basement should be extended on four sides. Where the soil is very soft, as in Honjo and Fukagawa, the weight of the chimney should be distributed over a wider area, by driving piles in the site where the chimney is to be erected or by some other method. The shape of the chimney is of great importance in connection with earthquakes. A chimney whose line of slope approaches a parabolic curve appears to be the most durable. The merit of cast-iron chimneys has not yet been established. As regards chimneys made of a combination of bricks and cast-iron, a few of which have already been constructed in Tokyo, special attention should be paid to making the bands reach to the base. This kind of chimney and cast-iron chimneys have hitherto escaped with only slight damage, but there is no ground for guaranteeing them against a severe shock.

INFERNO.

The *Miyako Shimbun* and other metropolitan journals have a curious story to tell about the *Saikyo Maru* and her miraculous escape in the naval engagement off Hai-yang. The vessel being unarmed and apparently the object of the enemy's fiercest fire, not to speak of other unwelcome attentions in the shape of frequent torpedoes, the great thing was to increase her speed to the highest possible limit. For this reason the boilers were tested to their utmost extent, coal being heaped on the fires, until the boiler-room and stove-hole became terrifically hot, "ten times greater than the ordinary heat" says the *Miyako*, probably forgetting that the hyperbole, literally taken, would mean considerably above 1,000° Fahrenheit. At all events, though the stokers were relieved as much as possible, the dreadful heat grew rapidly insupportable and several men fainted in the discharge of their duty. Seeing this, the others showed a disinclination to obey the oft-reiterated command *sekiān wo kaberu*, "put on coal!" At this point several warrant-officers took up their station at the entrance to the boiler-room and with drawn swords threatened instant death to any who should falter. It was a heroic but necessary and successful measure. Deeming death certain in any case, the firemen concluded that it was

better to die while labouring in the service of their country, and for five mortal hours worked in a temperature unparalleled in the annals of steam-navigation. Several were more or less severely affected by the temperature, but no fatal cases occurred. The *Saikyo Maru* ran the gauntlet of her huge enemies and carried the Admiral through the heat of the action.

A BIG FIND.

The *Kokumin Shimbun* says Kobayashi Masutaro, a *jinrikisha* coolie, residing at Tobe, Yokohama, discovered *yen* 8,000 on the 19th inst. in the neighbourhood of the Shokin Ginko. The *jinrikisha* man took the money to the Bank, but was told that the money did not belong to that Bank. He afterwards gave his find to the Isezakicho Police Office. It was finally ascertained that the money was lost by Mr. Yamamoto, of the Yokohama Branch of the Third National Bank at Bentendori. *Yen* 20 was presented to the finder.

SALE OF THE "GOLDEN FLEECE."

By order of the Marshal of the U.S. Consulate-General, Mr. John W. Hall sold by auction at the Consulate on Saturday the schooner *Golden Fleece*, a vessel of 127.41 tons gross tonnage, built at Humboldt, California in 1875, which has been lately trading among the South Sea Islands. The bidding started at \$1,000 and rose gradually to \$3,200, at which price it was knocked down to Mr. J. Kernan.

FATAL RAILWAY ACCIDENT.

The freight train which left Kyoto Station on the 16th inst. at 2.15 a.m. collided with a locomotive at Baba Station, says the *Nichi Nichi*. An engineer and a fireman were killed, the conductor and two stokers being more or less severely injured. The engines and seven trucks the destroyed.

SALE OF THE "JOSEPHINE."

The sealing schooner *Josephine*, whose adventures were recently related in Court, was sold by auction at the U.S. Consulate-General on Monday by Mr. Jno. W. Hall, acting under instructions from the U.S. Marshal. The bidding started at \$750, and closed at \$900, at which price Mr. A. E. Fisher secured the little vessel.

THE EMPEROR OF RUSSIA.

A telegram received yesterday in Tokyo says that His Majesty the Emperor of Russia's strength is declining and that the symptoms of his malady have become aggravated. It seems that the Czar's illness was the result of influenza. Being ordered by his physicians to seek a warmer climate than that of St. Petersburg, he moved to Livadia, and there the symptoms of this serious trouble declared themselves. It is to be feared that His Majesty's state leaves little room for hope.

PARTICULARS OF THE FORMOSA MASSACRE.

The provincial newspaper issued in Tosa gives particulars of the massacre of 71 Japanese men and women engaged in camphor refining, to which reference was made some weeks ago in these columns. There were in all 81 Japanese in the little camphor colony in Formosa, and of these only 10 survived to tell of the horrible fate of their 71 unfortunate companions. The Tosa paper has the account which it publishes from the lips of one of the survivors. Tsunasaki Takekichi, the founder of the colony, had lived for some time in Formosa when he noticed that there were forests of camphor trees on the island, and conceived the idea of refining camphor. With that object in view he went to Nagasaki and enlisted the services of 69 men and 12 women. This little party was taken over in a sailing ship of his own to Formosa, together with enough provisions and other necessities to last them for a long

time. They reached a certain harbour in Formosa in the Spring of last year. The ship was anchored and the greater part of the merchandise was left in the care of a merchant in the neighbourhood. Then the party started for the interior where an extensive camphor forest was known to exist, taking with them a portion of the provisions, etc. The place was quite isolated, the men only discovering five huts during the whole distance of some 13 *ri* from the coast to the forest. The party was overjoyed at finding camphor trees in great abundance and of large size. As soon as they had erected some rough huts, they set about felling down trees and refining the camphor. The prospect was very bright, for as each of the men was paid more than a *yen* a day, he could lay by the sum of 100 *yen* in a comparatively short space of time. After a while an arrangement was made between the employer and his workmen to divide the proceeds obtained from selling the camphor on their return home. The number of casks of camphor increased fast, and by last July a shed 4 *ken* square was filled with them. At that time, when the prospects of the little colony were in such a flourishing condition, a terrible calamity overtook it. At about 3 p.m. on the 15th of July a native suddenly made his appearance and threatened the workmen in a loud voice that unless they surrendered all they had and left the place at once, they would be put to death. With this he left them, and it was not a mere threat, for before the employer could summon all his workmen who were scattered about in the forest, a large body of natives approached the plantation and opened fire. All this took place so suddenly that resistance was out of the question, and most of the men and women fled for their lives. When those who had managed to escape beyond the pursuit of the natives returned four days later, after having undergone indescribable privation, to the spot where their huts had stood, a most horrible sight met their eyes. The corpses of 69 men and women were scattered about, already half devoured by wolves and hardly to be identified. The huts were burnt to ashes and nearly all the property had been carried away by the savages. One after another the survivors returned to the scene of the disaster, making in all 12 men, for none of the women had escaped death. Having, at the suggestion of one of the men, taken a finger-nail from each of the victims to be carried back as mementoes to their families, the sad little party made for the harbour where they had anchored their ship, but on reaching it after a wearisome journey, they found that the vessel had been brought close in to the shore and destroyed. Considering it unsafe to stay there, the 12 survivors once more started for the interior. After travelling about 6 *ri* over pathless mountains, they came to a steep declivity of great height. They resolved to descend this by the aid of stout creepers that grew there. The first two men who tried the descent fell down and were dashed to pieces on the rocks below. The remaining 10 managed by exercising greater caution to reach the bottom safely and from there they made their way to the coast. Fortunately they discovered melons growing in abundance there so that they were able to satisfy their hunger and thirst. Early next day they espied a little boat completely equipped drifting about the coast. Taking with them a large stock of melons they boarded the boat and boldly pushed out to sea. On the 7th day they reached the harbour of Ezaki, in Loo-choo, where they were kindly treated, and from there they were conveyed a few days after to Fusan in a sailing-vessel. In Korea four of the men who had received wounds from the rifles of the savages were, through the kindness of an officer, admitted into a hospital and the remaining six were sent home on a Japanese transport. From one of these, a native of Tosa, the local paper obtained the above particulars.

This sounds very circumstantial. But it must be remembered that when the news of the above outrage first reached Japan, no confirmation of it could be obtained.

ARMY MEDICAL REPORT.

We take the following from the report of the Chief of the Medical Department of the 5th Corps at Pyŏng-yang:—Mindful of the obligation incumbent upon Japan after having joined the Geneva Convention, the staff of the Medical Department of the Japanese Army in Korea endeavoured, in spite of the fact that 500 Japanese wounded officers and soldiers required their immediate attention, to extend succour to the Chinese left wounded on the battle-field. After careful searching they found 116 Chinese whose wounds had hindered their escape. These soldiers were collected at one spot, and through the interpretation of Lieut.-Colonel Fukushima they were informed of the motives of the Medical Department of the Japanese Army in thus succouring those of the enemy who were found wounded. They were told that though the Chinese put to a horrible death their prisoners-of-war and mutilate their corpses, the Japanese, on account of the Geneva Convention, care for the wounded prisoners in the same way as their own wounded soldiers, and that therefore they should submit fearlessly to the treatment of the Japanese Medical Department. The wounded prisoners bowed low and appeared deeply touched by this unexpected mercy. So strong had the impression been that they should be killed in cold blood as soon as they fell into the hands of the Japanese, that many of the wounded soldiers fired out of thickets at those who approached them and made great resistance when they were being carried away. Mr. de Guerville, the correspondent of the *New York Herald*, came early on the morning of the 22nd of September to where the Chinese soldiers were being attended to and asked to be shown the hospital interior. The chief of the Medical Department complied with his request and explained how part of the staff was told off to treat the Chinese prisoners, though they could ill be spared by the Japanese patients, but how, owing to the difficulty experienced by the commissariat in transporting necessary things, he could not do for the wounded men all that he would wish to. He assured Mr. de Guerville, however, that the necessary disinfection of the wounds had been perfectly and satisfactorily attended to in every case, and asked him to visit the wards of the Japanese soldiers in order that he might see that friend and foe were treated alike. The press representative was full of admiration for the kind manner in which the Chinese prisoners were treated, and observed that no country in the West would out-do Japan in its kindness to prisoners of war. He announced his intention of informing the papers of Russia, France, and Italy on this subject, as he was able to write in the languages of all those countries, besides giving an account to the American papers that he represents.

FOREIGN ASSISTANCE TO THE RED CROSS HOSPITAL.

The strong desire of the foreign residents of Tokyo to contribute something toward lessening the hardships and sufferings of the brave men now fighting Japan's battles, will soon find active expression. Two events of great interest are on the tapis. The first is a concert under the patronage of the Foreign Corps Diplomatique; the second, a theatrical performance in the organization of which Baroness d'Anethan and Mrs. Sannomiya are taking a prominent part. The immediate object of both entertainments will be to add funds to the coffers of the Red Cross Hospital. The concert will be given in the early days of November, in the hall of the Musical Academy in Ueno Park. It will be an afternoon affair. We do not know whether the full programme has yet been arranged, but we learn that a part of the performance will be the First Act of *Faust*, with orchestral accompaniments and all operatic accessories. Tokyo is fortunate in the possession of two exceptionally gifted amateurs,

tenore robusto and a *basso*. By these gentlemen the rôles of *Faust* and *Mephistopheles* will be played. We need scarcely dilate upon the treat thus assured to the music-loving public. The theatrical performance will include two pieces, and the place of representation is to be the Imperial Hotel. The names of the plays are not yet announced, but we learn that several ladies and gentlemen of different nationalities have agreed to be cast for the principal parts, and as the lady patronesses are sparing no efforts to secure success, the prospect is altogether encouraging. Apart from the excellent object of these efforts—an object that cannot fail to enlist support—we think that the public will be specially grateful for them, in view of the benumbing influence exercised by the war on social gaieties of every kind. Tokyo being entirely deprived this winter of the balls and parties that usually enliven it, people will be charmed to listen to a first-rate concert and witness some really good theatricals.

THE IMPERIAL DIET.

Yesterday the Imperial Diet met for the transaction of regular business. Its proceedings have not yet been fully telegraphed, but the following speech was delivered by His Excellency Count Ito in the House of Peers:—

GENTLEMEN,—The Korean affair having developed into a war between this country and China, His Majesty the Emperor was pleased to remove the Imperial military headquarters to this place, and to assume in person the solemn duty of general control over the expeditionary forces. His Imperial Majesty has further been pleased to convene here an extraordinary session of the Diet, so that you may take part in the deliberation of military measures of urgent importance. I have now the honour, in the discharge of my official duties, to avail myself of this opportunity for laying before you a general account of the circumstances that led to the present war between Japan and China.

It was Japan that took the lead in concluding with Korea a treaty recognizing her independence, and in thus introducing her to the rest of the world. Subsequently, in the course of a few years, other countries also opened communications with Korea, recognizing her independence and concluding treaties with her on that basis. From the close proximity of Korea to our shores, it follows that her tranquillity or disorder, her prosperity or decline, have most important bearings upon this country's welfare. Unfortunately Korea is not only weak and enervated, but is also afflicted with the curse of misadministration. Internal disorders are frequent, and, what is worse, the Government is so helpless to restore order that such disorders very often constitute dangers to the foreign residents of the country. Since Korea is thus daily declining, Japan has to consider her case seriously. If Japan chooses to leave her to her fate, well and good. But if, on the contrary, by way of completing the original programme of this empire when we recognised Korean independence in anticipation of any other nation, Japan, be desirous, as she undoubtedly is, of protecting her rights and interests in Korea, then it is imperatively necessary for her to secure the consolidation of Korea's independence as the basis of general peace in the East. Since the Restoration, in pursuance of the Grand Imperial Policy, it has been Japan's aim at home to promote civilization, and abroad to develop foreign intercourse. Valuing, as she does, the general peace of the East, it has ever been her desire to advance in her career of civilization hand in hand with her neighbours. Such, consequently, has always been the policy pursued by this country toward Korea, whenever trouble occurred in the peninsula, and similarly in her intercourse with China, Japan has always been frank and just, highly appreciating the Middle Kingdom's friendship and good will. For instance, at the outset of the present trouble, Japan desired, in accordance with the spirit of the Tientsin Treaty, to divide equally with China the responsibility of rendering assistance to Korea, and maintaining the peace of the East. China, on the other hand, wantonly rejected Japan's proposals on vain pretexts. Thereupon Japan had single-handed to advise Korea about the reform of her Administration. Korea was prompt in complying with Japan's friendly counsels, but China secretly and openly tried all means to thwart the work of reform, thereby creating a state of affairs that ultimately made war inevitable. At this point I shall lay before you correspondence that passed between the Governments of the two countries, as

an assistance to the right understanding of the situation. (Here follow various documents, of which translations will be published in our next issue.) What has thus far been read will show you how haughty and insulting has been China's attitude in this matter. On the one hand, she insisted on Korea's being her dependency; while, on the other, she pretended to recognize the autonomy of that Kingdom. In other words, China, while herself all the while interfering with Korea's affairs, tried to prevent the intervention of any other State, thus placing Korea under her sole management. China's object was evidently to utilize Korea's internal disorders for the purpose of increasing her own prestige there, and instead of helping the peninsula Kingdom to renovate its strength and preserve its independence, she sought to destroy its very existence and annex its territory. In pursuance of that policy, China tried, on the one hand, to obtain the withdrawal of the Japanese troops, on the false pretext that the *Togaku-to* had been subdued, thereby to gain time to send reinforcements to Korea by way of intimidation. On the other, in utter disregard of the Tientsin Treaty, she attempted to instigate Korea to reject Japan's friendly advice. There are abundant proofs to establish this point, but I do not think it necessary to dwell upon them at any length. At this stage of the affair, certain Powers took the friendly office of mediation, and approached the Governments of the two countries. But their well meant advice was rejected by China. Thereupon His Majesty's Government instructed its *Chargé d'Affaires* in Peking to declare to the Chinese Government that, since China was bent upon aggravating the complication, she alone must be held responsible for any emergency that might thereafter arise. China not only rejected Japan's friendly counsel and sought to disturb the peace of the East, but she even committed acts of warfare against this Empire. Under such circumstances, the only course left for Japan was to accept the challenge. Since the issue of the Imperial Rescript relating to the declaration of war, our Army and Navy have been able, by virtue of His Majesty's glory, as well as by the devotion and skill of the officers and men, to achieve repeated victories. You will heartily join with me in congratulating the country upon such an auspicious state of things. You, gentlemen, have already listened to the Speech from the Throne, and I have no doubt that you are prepared to perform your important legislative functions, so that the ultimate object of the present war may be attained by hearty co-operation between the Government and the people.

SERIOUS SHOOTING ACCIDENT.

An unfortunate shooting accident occurred near Matsuda Station on the Tokaido line about 3 p.m. on Monday. It appears that Mr. and Mrs. Faga were out on a shooting expedition in the neighbourhood, and Mrs. Faga, feeling tired, sat down to rest at a tea-house. A double-barrelled gun which had been in use happened to be still loaded, and the coolie who always accompanied Mr. Faga when out shooting, attempted to withdraw the charge. He bungled the operation when the gun went off and the contents of the barrel struck Iné, a girl of seven, third daughter of Nakamura Eisuke. The girl received the full charge in the upper part of her legs, and fell at once to the ground. When picked up it was found that she had sustained the worst wound on the inner part of her right thigh, which bled profusely. Medical assistance was sent for, and a telegram also despatched to Yokohama. Dr. Rokkaku, Police Inspector Kitano, and Chief Public Procurator Ando, of Yokohama, took the next train going to Kodzu, whence they proceeded to Matsuda in *jinrickisha*, arriving there about 5 o'clock. Mr. Faga, who had gone off in pursuit of further sport sometime before the accident happened, returned to Matsuda about 5 o'clock and offered pecuniary compensation. The police thought, however, that all that need be done in the matter was to detain the coolie, whose carelessness had brought about the accident, and the man was brought into Yokohama next day. Dr. Rokkaku who extracted the leaden pellets as soon as possible, and otherwise treated the wounds, expects no serious results other than those that usually attend gun-shot injuries.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

WAR ITEMS.

Various telegrams of a brief character have been received with reference to the occupation of Wiju by the advance guard of the Japanese army on the 8th instant. Some accounts say that the Chinese troops driven from the place were only a scouting party; others, that they had instructions to defend the town. All put their number at fully two thousand, a figure too large to be reconciled with the hypothesis of a mere scouting party. The Japanese advance guard is said to have consisted of two companies and a squadron of cavalry belonging to the Fifth Division. That is about the force—some 200 men—that we should expect to find employed for such a purpose. One of the telegrams alleges that the Chinese had built forts and made preparations pointing to a stubborn stand on the south bank of the Yalu, but that, on the approach of the enemy, they dismantled the forts and retired. That they retreated across the river seems pretty certain. The latest intelligence—non-official, however—is that the defending troops are massed at Chulien-cheng, near the north bank of the river, a strong and commanding position, which the Japanese must of course capture.

The *Hochi Shimbun* publishes a telegram from Hiroshima to the effect that Major-General Tachimi's brigade entered Wiju on the 11th instant. The same message reports that the enemy's troops on the northern bank of the Yalu do not seem to exceed twelve or thirteen thousand, and that they have constructed a number of forts both up-stream and downstream. But their preparations for defence are not spoken of as very formidable.

In the *Kokkai* and the *Hochi* we find a statement that the Viceroy Li, who recently posted his head-quarters at Lutai, some eighteen miles from Tientsin, has now assumed supreme command of the naval and military forces, and raised his standard at Shan-hai-kwan. That place lies to the north of Tientsin at a distance of about 170 miles. It is the spot that has always been spoken of as most suitable for landing an army to attack Peking. Taku, at the mouth of the Peiho, is, of course, the nearest and most convenient place for such a purpose, so far as mere distance and routes are concerned. But Taku is defended not only by forts of immense power, but also by a bar which prevents vessels of any size coming closer than seven miles. It is virtually impregnable, supposing—a large hypothesis—that the Chinese troops really defend it.

The vernacular press has something to say about the return of Mr. Otori, Japanese Representative in Seoul. It seems to be generally concluded that want of success in procuring the practical inauguration of the reforms mapped out by the Japanese Government is the reason of Mr. Otori's recall. The *Kokkai* says that the Cabinet in Tokyo has no intention of stultifying itself in this matter. Japan's interference in Korea was prompted entirely by a sense of the necessity of introducing into that country's administration such a measure of order as should obviate the constant recurrence of insurrections and the correlated danger of foreign intervention. That her military and naval operations, undertaken solely to further the consummation of that purpose, should have been crowned with success, is altogether a secondary consideration. She means to achieve the mission that she set herself, and indeed if she exhibited any indifference on that point, her enemies would find striking justification of their charge that aggrandisement, not reform, was her real aim from the outset. As yet the work of reform in Korea has unquestionably hung fire. We have seen fine schemes upon paper, but it does not appear that anything substantial has been done, and Mr. Otori, rightly or wrongly, is held responsible for the failure. The *Kokkai* affirms that his Government directed Mr. Otori to return as far back as the 10th of September, but that in consideration of some active steps taken by him at the time, his departure from Seoul was not pressed. Repeated ill-success having, however, ensued, he was

again recalled on the 25th of September. The vernacular press adds that Count Goto has been urging the despatch of Mr. Hayashi Yuzo as Mr. Otori's successor, and that Count Inoye's visit to Korea is also to be attributed to Mr. Otori's failure to carry out the programme of reform.

A telegram to the *Nichi Nichi* from Hiroshima says that some additional spoils of war and four more guns have been found in Phyoŋ-yang. It adds that the Chinese prisoners and wounded were to arrive at Hiroshima on the 11th or 12th instant.

The horse ridden by General Yeh as well as two ponies used by the Manchurian cavalry, have been submitted for the Emperor's inspection at Hiroshima.

Shanghai telegraphs that Moukden has been taken. That is a trifle "previous," and decidedly Shanghai-landish.

The *Nichi Nichi* says that the sum which the Diet will be asked to vote in its special session, for national defence, will be 70 million yen, and that the rate of interest will be less than 6 per cent—presumably 5. This meagre statement leaves us entirely in the dark as to whether the sum mentioned is to supplement the 50-million loan already in process of issuing or whether it is inclusive of that sum. We opine the former. Recently it was roughly estimated that the expenses incurred in connection with the Korean campaign are 300,000 yen daily or about 9 million yen per month. On that hypothesis the funds available at the outbreak of the war together with the loan of 50 millions would suffice for nearly a year's operations. But we greatly doubt the accuracy of such an estimate, and we note also that it does not include any outlay on account of the Navy or in connection with the second corps d'armée now understood to be on the verge of the arena. Our own belief is that a million yen per diem will be found to have been expended when all the items of the account come to be added up. Even on that supposition it will be one of the cheapest wars ever conducted. Japan has certainly enough money to meet all her needs for a considerable time, but whether she will be wise if she relies solely on her own resources is another question. Probably the indirect losses entailed by such independence would be a large multiple of the total actually expended upon belligerent operations. Between her and the European market, however, there is always interposed that terrible barrier of the standards. England will lend only on a gold basis, and it would be hard for Japanese financiers to take the risk of selling a gold loan for a sum in silver that might prove seriously inadequate to re-purchase the original amount of the yellow metal when the debt matured.

It will be remembered that uncertainty existed as to the ratio between the quantity of gold and silver included in the treasure captured at Phyoŋ-yang. We now learn from the *Nichi Nichi Shimbun* that there were ingots of gold weighing 25,350 *kwan* (1 *kwan*=84 lbs. av.), bars of silver weighing 143,910 *kwan*, and a mixture of both metals weighing 4,600 *kwan*.

The Viceroy Li, whose importance to China at the present crisis may be estimated by the ubiquity that rumour assigns to him, does not appear to have proceeded either to Lutai or to Shan-hai-kwan, but to be still directing affairs from Tientsin. Such is the information conveyed in a telegram from Shanghai published by the *Yiji Shimpō*. It differs from the news journalistically received last mail from China, which represents the Viceroy as then resolved to proceed to Lutai, inspecting the Taku and Peitang forts en route. To whatever point the Viceroy repairs we do not expect that he will effect much against Japan. The *Yiji*'s telegram says that his appearance in the arena is expected to be the signal for the total and final "doubling up" of the impertinent little empire opposed to him. This reminds us of the coup that the Chinese cavalry was expected to make when England and France invaded the Middle Kingdom. China had 3,000 mounted braves and she resolved with courteous ferocity to let

the invaders land and then pound them into dust under the hoofs of this mighty horde. But there happened to be 300 Sikh Cavalry and Royal Dragoons in the British force. The Chinese made the mistake of allowing these troublesome folk to land and the result was that the 3,000 mounted braves never appeared in the arena again.

If we were disposed to vaunt our foresight and ridicule the misplaced confidence of others, we might here recall the unqualified predictions that we ventured to utter on the eve of this war as to the certainty of Japanese success in every encounter with the Chinese, and we might also point to the curiously changed tone of the writers who pooh-poohed our prophecies and spoke with bated breath of China's immense resources and proud invulnerability. But we content ourselves with noting that no measures now within reach of China's capacity are considered even by the *North-China Daily News* sufficient to guarantee Peking against a Japanese invasion. The Vice-President of the Board of War, Wang, has been ordered to raise 30,000 volunteers for the defence of Tientsin, and various other similar efforts are said to have been made by the Chinese Government. Concerning all this, however, the leading Shanghai journal writes:—"We can hardly hope that these measures will prevent the Japanese reaching Peking, but they may delay their advance until General Winter comes to China's aid."

According to the Shanghai journals a great flotilla of transports containing Japanese troops is said to be cruising about somewhere in the Gulf of Pechili. In its issue of October the 8th the *North-China Daily News* said that 70 of these transports were reported to have passed the north-east promontory on the 1st of October, and that a British man-of-war had previously seen 60 of them. The same journal in the same issue published another report "on good authority" that 40,000 Japanese troops had landed on the 6th instant at Taliu-whan. This Bay of Taliu lies about 40 miles to the east of Port Arthur, and a landing there would of course mean an advance against the latter place. Such are the rumours circulating in Shanghai.

It appears that General Yeh was not killed after all at Phyoŋ-yang. It will be remembered that the body evidently of a high officer was found outside the city three or four days after its capture, and from documents discovered on the corpse it was supposed to be that of General Yeh. But we read in the Shanghai journals that the General arrived safely at Wiju and telegraphed thence on the 2nd instant to the Viceroy Li.

Here is an interesting paragraph from the Tientsin correspondent of the *China Gazette*—

The railroad was never so busy as it is just at present. The traffic up and down, of all kinds of railway vehicle, has never ceased this morning, the commotion being due to the movements of troops destined for the Korean frontier and the Chinese ports considered by the authorities to be open to attack by the Japanese. I have already in a former letter, mentioned 25 battalions of Honan soldiers as proceeding to Tungchow. They have just been diverted from their march there, by orders received from Peking, and sent away instead to Shan-hai-kwan or beyond, as occasion may require. The change in the route of these troops is supposed to be due to a belief, which is obtaining general hold in Peking, that the Japanese contemplate a march on the capital, or on Moukden, via Shan-hai-kwan. Five of these twenty battalions are still some considerable distance, I believe, from Tientsin, not having been able to keep up with their comrades on account of the incompleteness of their equipment. The Commander of the division, General Chang, is said to have arrived, but if this be true, the fact has been kept a secret from the soldiers, most of whom are in ignorance as to the whereabouts of their leader. One thing, however, is certain; most of General Chang's body-guard are in Tientsin, for I have seen them for myself. They are men of very fine physique, clad in black velvet coats, black calico trousers, and an orange coloured vest over all, with a green silk sash round the waist. All the Honan soldiers in Tientsin remind me of what I have read of the Irish rapparees; they are the most jolly and rollicking fellows you can imagine and are thoroughly good-hearted. In ancient times I believe, the ancestors of most of these men were Nestorian

Christians, and they have always been foremost in the political revolutions of the Empire. The Honanese troops have saved the present dynasty from destruction twice at least, and it is to be hoped that their loyalty will be suitably rewarded on the present occasion.

The *China Gazette* publishes a rumour that General Wei, who commanded a Division of the Chinese Army at Phyöng-yang, was wounded on that occasion and has not been heard of since. Appended to this rumour is a statement that the General, having stolen 100,000 Tls. out of 200,000 entrusted to him to pay his troops, is quietly sneaking back to his home in Anhui. But against this story we have to set a report published by the *North-China Daily News*, namely that General Yeh, in recent despatches, highly eulogizes the discipline preserved by the Division that General Wei commanded. If it be true that General Wei was wounded at Phyöng-yang and has not since been heard of, it may be that his was the body mistaken by the Japanese for that of General Yeh and buried with military honours at Phyöng-yang.

We read in the *Nichi Nichi Shimbun* that all the Foreign Consuls in Shanghai, with the exception of the British Consul-General, have addressed to the Government in Peking a protest against China's failure to observe the conditions essential to the preservation of Shanghai's neutrality. The arsenal is specially referred to. It is alleged that work is pushed on there with the greatest activity, and that small arms and ammunition are manufactured in considerable quantities. Purchases of warlike material are also freely made from foreign merchants, and Europeans and Americans are enlisted for service with the Chinese Navy and Army. China having thus violated her engagement to respect the neutrality of the place, Japan can not be any longer held to her pledge, and should her men-of-war be seen one fine morning in the Woosung River, no breach of promise can be laid to her charge. Disquieted by the prospect thus unfolded, the foreign Consuls have forwarded a strong remonstrance to Peking. So writes the *Nichi Nichi Shimbun*. It is by no means a new question. For many weeks the Japanese Cabinet is understood to have urged the above view of the case upon the British Government, since it was to the latter that the two empires gave their pledge to respect Shanghai's neutrality. Acting under instructions from London, the British Consul-General proceeded to the Arsenal and assured himself by direct inspection that the capacities of the place were too insignificant to be worthy of notice. Three hundred stand of small arms—if we remember rightly—represented the maximum monthly output of the factories according to the Consul-General's report. It must be confessed, however, that the pettiness of a sin is rather a miserable plea to urge. China ought not to carry on the work of an arsenal under the shelter of Shanghai's neutrality. There can be no second opinion on that point. What may fairly be said, however, is that by including Shanghai in the field of hostile operations, Japan would invite complications far more serious than any inconvenience she can suffer from China's bad faith in the matter. For her own sake she had better let things drift. That, however, constitutes no apology for China, and it is very much to be desired that England should use her best endeavours to correct abuses, the unrestrained practice of which indirectly affect her reputation for impartiality.

Commander Saito, of the Imperial Navy, having been directed by the Emperor to obtain particulars of the injuries done to the Chinese ships in the fight on the 17th September, has presented a report from which the *Kokkai* extracts the following:—

Chao-yung—This ship was so severely injured by the Japanese cannonade that she became unmanageable and also took fire. Enveloped in flames, she finally sank.

Yang-wai—This vessel also was set on fire by the Japanese shells, and her crew barely succeeded in navigating her into shallow water. An examination of her condition subsequently made by the *Chiyoda*, showed that she had received 65 shots

from 12 c.m. and larger guns about 4 feet below the water line, and that she had been hit many times by smaller projectiles. The ravages of the fire, however, made it difficult to form an exact idea of her injuries.

Chih-yuen—This ship's condition was very similar to that of the *Chao-yung*. She turned over on her port side and went down bow foremost, her screw revolving in the air.

King-yuen—This vessel received the fire of the four ships of the Flying Squadron in succession. Shell after shell was seen to strike her. She burst into flames, and after steering wildly in various directions, took a heavy list to port and went down.

Ting-yuen—This ship had her woodwork set on fire by the Japanese shells, and becoming enveloped in flames and smoke, continued burning for two hours. At an early period of the fight she manoeuvred slowly, and seemed unable to use any guns larger than her 15-c.m. Her main mast was shot away, and she was not seen to run up her flag again.

Lai-yuen—This vessel also was set on fire and burned for about an hour and a half, but did not seem to become unmanageable. It is said that she was set on fire by a shot from the *Akagi's* stern-chaser when she attacked that gun-boat.

Chen-yuen—This ship fought stoutly throughout. When the Principal Japanese Squadron engaged the two ironclads *Ting-yuen* and *Chen-yuen*, the Flying Squadron having gone in pursuit of the enemy's other vessels which were in full retreat, the *Chen-yuen* received such injuries that she manoeuvred with difficulty and was also threatened with destruction by a conflagration. But the *Chen-yuen* stood by her, protected her, and never slackened her fire to the last.

Ching-yuen, *Ping-yuen*, *Kwang-yi*—These three ships, at the time of their fight, showed no outwardly visible injuries, but were apparently unable to use their principal guns.

Chi-yuen—This vessel from the commencement of the fight kept a long way off, and received only a few shots from the *Naniwa*. She did not appear much injured, but, on the other hand, she made no use of her heavy guns throughout the engagement.

Kwang-shan—This ship, in attempting to escape, ran on a rock, and five days later, when the *Naniwa* and *Akitsushima* were in sight, her crew blew her up. Her shell and one mast alone remain of her now.

Chan-nan, *Chan-chung*—These ships made their escape in company with the torpedo boats and did not take any direct part in the engagement. They were consequently uninjured.

News is hourly expected of the landing of the Second Japanese Army at some point in the Gulf of Pechili.

Two telegrams have been received from Shanghai, each announcing the same fact though in somewhat different terms. One message says simply that the Viceroy Li has committed suicide; the other, that he has committed suicide by taking poison. The *Fiji Shimp* publishes these telegrams and is evidently disposed to credit them in consequence of the duplication of the message. But there have been so many rumours about the Viceroy Li that we hesitate to place any faith in this last story. It seems to us quite apocryphal.

A telegram from Hiroshima says that 571 Chinese prisoners arrived at Ujina on the morning of the 14th inst in the steamer *Wakanoura Maru*. There had been two deaths on the voyage—one apparently due to a man's jumping overboard—and among the prisoners were 110 wounded. These captives are to be sent to Tokyo and Osaka.

The news from the front in Korea is that the Chinese troops massed on the northern bank of the Yalu are said to aggregate 25,000 men, but reconnaissances made by the Japanese have not disclosed such a large force. Chinliencheng is obviously the point at which the Chinese intend to make their stand, and all appearances go to indicate that it will be obstinate; as obstinate, at any rate, as Chinese troops seem capable of making. Chinliencheng is, in fact, to be another Phyöng-yang. The Japanese, on their side, will not cross the Yalu until all their preparations for an immediate advance in force are completed. Still, intelligence of a battle ought to reach us in a few days at latest.

According to the *Fiji Shimp*, the draft of a telegraphic despatch addressed to the Viceroy Li by the four Chinese Generals Tso, Li, Wei, and Na, before the taking of Phyöng-yang, has

come into the possession of the Japanese. Our contemporary gives a copy, which we translate:—

Since the arrival of the undersigned at Phyöng-yang, reconnaissances have been conducted to examine the features of the ground and the dispositions of the enemy. At Kai-song on the South and Gensan on the East the Japanese are posted in force. Squadrons of cavalry are sent out by them daily for scouting purposes, and their men-of-war enter the various ports in the peninsula with a similar object. Their plan of action apparently is to send small forces against us from day to day in order to draw us out of our entrenchments and lead us into an ambushade. Their men-of-war, also, cruise in the neighbourhood of Port Arthur and Wei-hai-wei, hoping to induce our ships to come out so that their services may not be available for conveying re-inforcements. Between Wi-ju and Phyöng-yang the two towns of An-ju and Chön-ju are easily accessible from the sea. The Japanese can land there from small vessels. Should they do so, thus cutting our communications, our main position, Phyöng-yang, can be invested on all sides. Phyöng-yang, owing to its commanding situation, is the most important place in Korea and will undoubtedly be the object of a Japanese attack such as must not be lightly regarded. That the enemy has not yet directed a large army against us seems to be owing to his uncertainty as to our strength. Our four corps have not yet fully arrived, but even though they were all here, we should only have something over thirty battalions (?). That force would be more than sufficient to meet the enemy, unless we are obliged to divide it, in which case not only would there be difficulty in holding this important position, but also it might be impossible to carry out a uniform strategical plan. We are informed that the Japanese are procuring re-inforcements to the extent of 15,000 men. In that event our army may find itself surrounded, and unable possibly to obtain re-inforcements or procure supplies of food and ammunition, may simply become a helpless target for the enemy's balls. After mature deliberation the undersigned four Generals have concluded that it will be best to send suitable garrisons to Wi-ju, An-ju, and Chön-ju, and to post strong forces of our best troops in Gensan, Hwang-ju and Hai-ju, arranging for combined attacks by these various corps. In this way disaster will be avoided and the necessity for retreat averted. The plan concerns the defeat or victory of the whole army, and we pray that it be sanctioned.

(Signed)

Tso.
Li.
Wei.
Ma.

Dated August 18th, 1894.

This despatch is not easily comprehensible at first sight. The writers seem first to condemn the idea of dividing their forces, and then to recommend that very plan. The explanation is that the Four Generals are simply asking for re-inforcements. They have men enough, they say, if they can keep them together, but they have not enough to guard the various positions of importance and to fulfil the strategical programme that they deem most advisable. They enunciate that programme, and apply for re-inforcements to carry it out.

The *China Gazette* says:—

The Duke Kwei Kung has arrived in Tientsin, with 3,000 men of the Peking Field Force as a bodyguard, and the entire strength of this, China's choicest Tartar army, numbering some 48,000 men, is expected to reach the neighbourhood shortly—if it is not already there by this time. The Duke, whose relationship to the Court we have already explained, is in daily conference with the Viceroy who is determined to remove his headquarters to Lutai, where a large army will be gathered. The advent of these Tartar warriors in Tientsin is hailed with anything but pleasure by the people, who stand in mortal terror of the wild Manchus, who are generally quite as dangerous to friend as to foe.

The *Nichi Nichi Shimbun* says that Mr. Sultzberger, "Private Secretary to the Viceroy Li," left Shanghai on the 8th inst by the French Mail steamer *Saghalien* for Tokyo, and that public opinion regards him as the bearer of a secret message. Mr. Sultzberger is not the Private Secretary of the Viceroy Li, we think, but of Lord Li, formerly Japanese Representative in Tokyo. Lord Li, a most enlightened and liberal-minded statesman, strongly advocates the principle of settling all international difficulties by arbitration and without appeal to the sword. There are, however, complications that defy such a mode of ar-

The first batch of the Chinese prisoners taken at Phyōng-yang reached Tokyo a little before noon yesterday. Many of them were wounded and had to be carried through the streets on stretchers, all the rest being provided with *kuruma*—which is certainly the height of courtesy—to screen them from any rudeness on the part of the excited and enthusiastic crowds that lined the road of march. Nearly all of the Chinese looked well, if a little thin, and were tall, well-built men, but with an expression of the most hopeless despondency. Most of them kept as far back in their *kuruma* as possible, to avoid the curious gaze of the crowd, while not a few were visibly affected and shed tears. It was most remarkable to see how very quiet and orderly the good people of Tokyo were at this, their first sight of their enemies. There was absolutely no cheering and not an abusive epithet leveled at the heads of the prisoners, but there was tremendous eagerness to see as much as could possibly be seen. The whole lot of captives was under the escort of a troop of infantry with fixed bayonets, and proceeded quietly and without disturbance through the streets, which were densely thronged despite drizzling rain. The captives numbered 56 in all.

The little *Akagi* has been thoroughly repaired. She took a trial trip on the 12th instant and has now rejoined the active fleet. The *Akagi*, we may mention, was built in Kobe.

The Tong-haks are still giving trouble in Korea. A telegram sent from Hiroshima on the 15th instant says that they are active in Chon-shan, Chun-chon, and Chōl-la, and that in the two latter places they have united their forces and show a disposition to march upon Sōul. A force of Korean troops has been sent against them, and, at the request of Mr. Otori, it has been supplemented by some Japanese gendarmes.

The News Agency remarks that not many days remain during the present year for naval operations in the Gulf of Pechili. After the end of November navigation becomes almost impossible in the northern ports of the Gulf. It is probable, therefore, that the Japanese Squadrons will make a resolute effort to come to blows once more with the Chinese ships before winter closes down.

On its march from Wiju—of which place it now has undisturbed possession—to Moukden, the Japanese army will have to take Chiu-lien and Feng-huang, each of which is a position of great natural strength. The Chinese have erected a number of forts at these places and have a large body of troops to garrison them. But it is not expected, says the News Agency, that the invading army will find at either town a task so formidable as that overcome at Phyōng-yang. The Chinese are said to be in great difficulties for provisions; so much so, indeed, that they will welcome the Japanese advance as a pretext for retiring upon Moukden. It will be remembered, however, that this same embarrassment about commissariat was said to exist in the case of the garrison at Phyōng-yang, whereas, when the place fell, considerable stores of grain were found there. We do not see any special reason why the Chinese troops in Manchuria should be short of provisions. Their communications with their bases in Fengtien, Kirin, and Hei-lung-chiang are always open, and though the marine route is closed by Japanese ships, that should not cause any perplexity, inasmuch as stores are presumably drawn altogether from the interior. Japanese journalists frequently write as though a Chinese army depended chiefly upon supplies furnished by the regions traversed on its march, but that is not the case.

Now that the Japanese forces are on the eve of invading Manchuria, our readers will be interested by the following extract from an exhaustive article recently published by *The Times* on "The Chinese Army":—

With regard to the second Tartar force, the army of Manchuria, its exact numbers are not easily to be ascertained, but it is raised from the 180,000 Bannermen on the register in the three divisions—viz., Fengtien, Kirin, and Hei-lung-chiang—of that vast province. The Bannermen

also furnish many recruits, especially to the cavalry, and the Chinese population has increased in an almost extraordinary manner during the last few years, and, as military service is obligatory, could be drawn on in case of necessity. How large a proportion of these numerous tribesmen, whose *métier* is supposed to be fighting, have received any training and modern weapons is matter of diverse opinions and estimates, but the best information puts them at 80,000. There are a number of facts which show that this is not excessive, and among these might be mentioned the circumstance that the Governor of Kirin alone held a review of 15,000 men armed with Mauser rifles which was witnessed by several English travellers. Moukden, the chief town of Fengtien and the old capital of the Manchus, is the headquarters of the southern division of the army of Manchuria, Kirin of the middle division, and Tsitsihar of the northern division, of Hei-lung-chiang. It is believed that the strongest numerically and the most efficient is the first-named division, which probably numbers 30,000 men, all armed with rifles. Unfortunately these troops do not possess a uniform weapon, the picked regiments having Remington repeating rifles and the others Enfields. The artillery attached to this division consists of four batteries of Krupp field-pieces, besides a considerable number of heavy siege guns placed in the forts that have been constructed along the Russian and Korean frontiers. For operations in Korea the Fengtien division is one that would be mainly called on for troops, and there is little doubt that a considerable portion of its strength has already been despatched to the Yalu river which separates Fengtien from Korea.

A telegram from Ninsen says that, on the 12th instant, a party of rioters numbering some 1,500, came together in the neighbourhood of Heruyan (?), and the local authorities being unable to cope with them applied to the Japanese for assistance. It became necessary at last to use fire-arms, with the result that 8 of the insurgents were killed and 10 wounded.

There is no news from the seat of war. It is rumoured that Major-General Tachimi's troops have crossed the Yalu, but we question the truth of the report. Probably the massing of the battalions preparatory to an advance in force against Chiu-lien occupies some time.

Great activity prevails at Hiroshima, but it is not permissible to publish any information on that subject.

The news of the Viceroy Li's suicide is denied. We never placed any confidence in it.

There is to-day an almost absolute dearth of news from the seat of War. The troops ought by this time to have crossed the Yalu into Manchuria, supposing that such an operation is immediately contemplated. But it would seem that an expedition in some other direction engrosses attention for the moment.

A very brief telegram in the *Nichi Nichi Shimbun* announces that a ringleader and 91 men of the Tong-haks were taken prisoners on the 15th instant, and that a leader and 130 men were killed on the 16th.

LETTERS FROM HIROSHIMA.

(FROM OUR CORRESPONDENT.)

Hiroshima, October 13th, 1894.

As you doubtless know by this time, a change will take place in the personnel of the Japanese Minister at Sōul. Mr. Otori will be replaced by Count Inouye, the present Minister of Home Affairs. Mr. Otori's services to his country at this important crisis are recognised on all hands, but the juncture demands a man of first-rate capacity, with personal prestige and influence sufficient even to control the Cabinet at home. News from the Korean capital for the past few weeks has not been encouraging. It is plainly discernible that the reformative efforts of the Korean Government have thus far borne little practical fruit. The principal business of the politicians in Sōul seems to consist in petty contests for personal ascendancy. It is even reported that the Tai Wōn-kun has shown himself disposed to assume a defiant attitude toward the friendly counsels of the Japanese Minister, and that the progressive elements or, in other words, the politicians generally accredited with Japanese inclinations, are losing influence

in the Cabinet. At all events, things do not seem to be moving at all satisfactorily. Such a state of affairs can not be tolerated by Japan, whose honour is now involved in successfully accomplishing the reform of the Korean Administration. The appointment of a statesman of Count Inouye's resolution and sagacity to the post of Minister to Sōul, is, on the one hand, a most tangible proof of the earnestness with which the Japanese Government regards the question of Korean reform and regeneration; while, on the other, it inspires the public with reasonable confidence that whatever good can be got out of the Korean nation, will surely be evolved under the guidance and supervision of the new Minister. I am informed that the post was sought by the Count himself. He has been much concerned at the methods thus far adopted in dealing with the important task undertaken by Japan. If Count Inouye should be found incapable of setting the Koreans on their own feet, we may conclude that the work is not achievable, and that there is no hope for Korean independence. In the event of the Count's going over to Korea, a successor at the Home Office will have to be appointed. Who will obtain the portfolio I am not yet in a position to inform your readers. Count Inouye is now staying here and daily conferring with the Premier, Count Ito.

Some persons say that Mr. Suyematsu will accompany Count Inouye to Sōul. The rumour doubtless had its origin in the fact that the able President of the Legislative Bureau recently visited the Korean capital to observe how things were moving there. The knowledge thus obtained would no doubt be useful to Count Inouye in case of his appointment to Sōul. But at present I have good authority for saying that Mr. Suyematsu is not likely to accompany the mission.

Of the notables that recently arrived here, I may mention Count Goto, ex-Minister of Agriculture and Commerce; Count Soyejima, a Privy Councillor; Count Itagaki, leader of the Radical party; Viscount Hayashi Tomoyuki, and so forth. Mr. Yoshikawa, Minister of Justice, is expected this afternoon at 5.56. To-day the trains have brought a large number of the members of both Houses of the Diet, most of whom took part in the Opposition meeting at Onomichi yesterday. The members of the Diet have been able to find quarters in and around this city without having recourse to such inconvenient places as Onomichi and Miyajima. The Houses will assemble the day after to-morrow, and the formal opening by the Emperor will probably take place on the 17th instant. As to the probable President of the new House of Representatives, opinion generally points to Mr. Kusumoto Masataka.

With regard to the meeting at Onomichi above alluded to, it was held in a Buddhist temple there. Those present numbered a little over three hundred, of whom 96 were members of the Diet, including several eminent Peers. Mr. Suzuki Shigetoo moved a resolution which was unanimously carried, namely, that the present Japanese-Chinese complication should be dealt with throughout with firmness and resolution, and that, in order to attain that object, no amount of expense should be refused. Speeches were made by Baron Ozawa and Viscount Tani. They agreed in insisting, on the one hand, that the present war should be carried to the bitter end, and, on the other, in declaring that the nation must place in the hands of the Government whatever sum of money may be necessary for the purpose—sentiments in which those present unanimously concurred. Three cheers for the Emperor, the Empire, the Strong Foreign Policy Party, the Army and the Navy, completed the demonstration. A reunion then followed, as is customary on such occasions, during which a number of fireworks enlivened the quiet seaport town of Onomichi.

Mr. A. B. de Guerville, war correspondent of the *New York Herald*, who was present at the battle of Phyōng-yang, is now staying here. He is daily engaged in visiting the principal personages in Hiroshima. He has obtained permission to accompany the second army now about to leave. I do not know of any other

foreign correspondent having applied for permission to accompany the second army.

Hiroshima, October 14th, 1894.

The Chinese captives of Phyöng-yang arrived here to-day. They came by the *Wakamoura Maru* which entered the port of Ujina at eight in the morning; but they were not landed until about half-past three in the afternoon. It was one of the most miserable sights I have ever witnessed to see these poor fellows come on shore at Ujina. A dirtier, a more beggarly looking, and a more stinking mass of human beings I have never seen. Of course nothing else could have been expected of a set of men naturally prone to dirty habits, who, after living a campaign life for a number of weeks in an Army far from being remarkable for either discipline or organization, have been prisoners for nearly four weeks, first on the field of battle and afterwards on a long sea voyage. They were sun-burnt, emaciated, and extremely mean-looking. They were of various ages: a few were mere boys of seventeen or eighteen, while many were nearly fifty. With the exception of two or three, they were of medium stature, not higher than the ordinary Japanese. Most of them had their queues cut at varying lengths of a few inches to a foot, while the part of their heads ordinarily shaved was covered with a growth of several weeks. None of them wore any headgear. Their garments were in most cases ordinary Chinese clothes, tattered and dirty in the extreme. I had expected that they would look dejected and ashamed; but I had forgotten that they were Chinese. Their general appearance was mean and haggard, but not a trace of dejection or conscious shame was discernible in their expression. Many were even smiling in a foolish and vacant manner. They were probably happy to think that they had fallen into the hands of civilized people. With the exception of a few, they are ordinary soldiers. As to their number, I had been told that it was seven hundred, but from the rough counts I made on the spot, it could not exceed five hundred. Besides them, however, there were 111 sick and wounded, so that the total number that arrived to-day may be approximately put at 600. The sick and wounded were at once sent by rail, one half to Tokyo and the other half to Osaka, there being a military line between Hiroshima and Ujina. Before putting them in the train, the wounded prisoners had their bandages changed, while equally suitable medical attention was paid to those suffering from internal diseases.

After a short rest, the healthy captives were formed into a procession two abreast. They were preceded by an officer on horseback and a few soldiers, and at regular intervals a few guards escorted them. The rear was brought up by a small detachment of foot about fifty strong. I may here mention a fact which I ought to have stated in the above general description of the prisoners, namely that the only bodily restraint put upon them was the binding of their hands in front separately to the two ends of a small hempen cord about two feet long, so that they can freely use their hands for ordinary purposes of eating and washing. It was a little past five that the procession began to move toward Hiroshima. When the nearest extremity of the city was reached it was near dusk. The streets through which the captives were led were lined on both sides with a dense crowd of people, one half of whom consisted of soldiers eager to have a look at the kind of men against whom they were shortly going to fight. Beyond greeting these miserable specimens with a hearty laugh, the soldiers, it must be noted, did not utter a single rude remark to the poor fellows. At the parade ground before the citadel, the prisoners were allowed to rest for a few seconds, during which time they were questioned in Chinese by an officer (a Major) whose name I have not been able to ascertain. The conversation, I regret to say, was Greek to me. The captives were then led into the citadel, where they were to be supplied with food. Originally it had been arranged that a portion of them should be lodged in the building oc-

cupied by His Majesty the Emperor, so that he might have an opportunity to see them. But it being completely dark when they arrived at the parade ground, I presume this part of the programme was not carried out. They were to be put in the train for Otsu in the course of the evening, but they may perhaps be allowed to sleep in the barracks here to night, so as to be inspected by the Emperor to-morrow morning. But I cannot be positive on this point. On their arrival at Otsu, they will be allowed to wash themselves and to replace their dirty rags by clean Japanese clothes, and then no doubt they will feel so completely at home that, like their predecessors—the sailors of the captured war vessel *Tsao-kiang*—they will cry to be allowed to stay in this country for ever.

I stated in a former letter that the port of Ujina was spacious enough to afford shelter to twenty ships of the *Saikyo Maru's* size. But I have since found by actual observation that it can easily hold double that number of steamers. At present the port presents an extremely lively aspect. Further than that I will not adventure, for that is the limit prescribed for the Japanese newspapers in matters concerning the movements of troops in the country.

Hiroshima, October 15, 1894.

Concerning the preliminary proceedings of the Houses of the Diet to-day, it is unnecessary for me to make any mention here, as the particulars must have at once been telegraphed to Tokyo. My time will be better employed in giving you a brief description of the place where this memorable session is to meet. As stated in a previous letter, the temporary buildings stand in the south-eastern corner of the Parade Ground adjacent to the head-quarters of the gendarmes, the edifice for which, a two-storied brick building of good appearance, is appropriated to the use of the official staff of the Houses of the Diet. The compound is enclosed by bamboo fences of a temporary nature, and there are three gates on the front. Entering by the central gate, which by-the-by is shut on ordinary occasions, you come to the principal doorway, which, through a passage about 12 ft. wide and 50 ft. long, leads right to the door of the apartment set apart for His Imperial Majesty's use. Adjacent to the Imperial apartment the rooms for dining purposes. Between the row of these rooms at the back and a corresponding series of apartments facing the front of the building are located the halls for the assembly of the Houses. The one on the right, as you enter from the central doorway above alluded to, is that of the Upper House and the one on the left that of the Lower House. The arrangements in the halls are in general similar to those in the buildings in Tokyo. The tables and benches are of unvarnished wood of the coarsest character, reminding one of a schoolroom in a provincial village. The gallery for spectators is a narrow place at the back of the hall slightly raised above the last rows of seats for the members. They can not hold more than 150. Altogether the building, though somewhat better than the original plan, is rough and tasteless in the extreme. With the exception of the Imperial apartment, the windows are fitted with paper *shoji*, and in many places, the roughly united planks freely admit both draught and sunbeam. However, it being still very warm here, there will be little fear of the members taking cold. With very slight improvements, the building can be turned into an excellent hospital or office. The idea said to be entertained by some persons of holding in this building the ordinary session during the cold winter months, is simply monstrous.

In one of the rooms appropriated for the use of the members of the Upper House, were displayed for the inspection of the members a collection of the trophies of the victory at Phyöng-yang, recently brought back by Lieutenant-Colonel Nakamura, who had been despatched there as Imperial Messenger. There were banners and flags of all shapes and devices, one being that of General Yeh, the commander-in-chief of the Chinese forces; a dozen rifles, mostly of American make, fixed with

small and slender bayonets, whose edges and points were blunt and unsharpened; a large number of swords and spears of various shapes, some of them being of unwieldy dimensions; several suits of uniform, mostly of cavalry troopers; cavalry harness with its accessories. There were also a few reminiscences of the naval victory of the 17th ultimo. A number of Naval photographs, evidently reproductions from those taken by an engineer of the *Saikyo Maru*, attracted much notice. However, as might have been expected, they are indistinct and incapable of imparting any clear notion of the actual engagement. But they are curious and interesting enough in their way. There was also a draught-pipe (ventilator) taken from the Chinese war-ship *Yang-wei*, which, if I remember rightly, got on a shoal and afterwards was destroyed by fire. The pipe is perforated by a large number of shot, mostly from 12 centimeter guns.

A subject that would interest your readers very much if handled properly, is the embarkation of troops, horses, and warlike goods. But unfortunately it is a subject on which it would not be judicious for me to write in detail. I may, however, attempt to give a very general idea of how the thing is managed, without making any direct allusion to particular cases or incidents of the embarkation. Supposing that a body of troops, constituting a regiment or any smaller group, intended for transportation abroad has been drafted by rail to the city of Hiroshima, and that a sufficient number of transports have come into the port of Ujina, the shipping of material of war and provisions begins several days previous to the embarkation of troops. The goods trains go direct to Ujina, which is now connected with this place by a military line. On arrival there they are put into temporary storehouses erected at a convenient distance from the wharf. The wharf is about 120 yards long, and paved with stone, gradually sloping into the sea. Owing to the latter circumstance, boats can not be brought alongside the edge. A sort of a floating pier is fitted up whenever shipping takes place, by putting a number of planks firmly united together on to a junk moored lengthwise at a distance of a few yards from the shore. The junk itself is completely covered over with a similar combination of planks. To the outer edge of the pier thus constructed boats are brought lengthwise, and goods are hauled into them with the greatest ease. The number of these floating piers can be increased as much as the space on the wharf admits, in accordance with the needs of particular occasions. Troops and horses are conveyed to the boats over the same passages. On embarkation day, the waters of the harbour are very lively with almost uninterrupted lines of boats coming and going between the wharf and the transports, which lie at distances varying from half a mile to a mile and a half. Troops and horses are marched from here to Ujina along the smooth road connecting the two places. Everything is managed with such consummate regularity and rapidity, that the shipping of, say, an army corps consisting of more than 20,000 men, together with all accessories, such as horses, provisions, and ammunition, can be effected in an incredibly short space of time, though exactly how long I cannot state in this place. How many transports the Government has now under its control, is not known exactly. But it may be safely presumed that the number can not be less than sixty.

LETTER FROM PHYÖNG-YANG.

(FROM OUR CORRESPONDENT.)

Phyöng-yang, September 19th.

I came here on a transport in about five days from Tokyo. Being the only foreigner who can report part of the events, I thought it might interest you to know some of the things I have been a witness of. It would be useless to say anything of the battle and of the defeat of the Chinese, for the telegraph first and the official reports after must have given you a full account of these. I shall not insist either on the ad-

mirable *ténue* of the soldiers, the perfect organization of the different services, or the great ability shown by the military staff. What has proved a thousand times more interesting to me is the way the Chinese prisoners and wounded have been treated, and for this I hardly know how to express my admiration. In entering the forts of Phýng-yang the Japanese found the mutilated heads of those of their companions who had been captured, wounded, or killed, in the first day's battle. Upon taking possession of the building previously occupied by the Chinese General, General Nozu and his staff found the frightfully mutilated head of a young lieutenant, wounded and captured the day before. Would it have been surprising if, after seeing such atrocities the Japanese soldiers had refused quarter to the Chinese who fell into their hands? Who could have blamed them if they had done so? But far from doing anything of the kind, they are treating their prisoners in the kindest possible way. I have seen these men—the worst looking lot of human beings I ever saw. They look more like wild beasts than men. The filth that prevails among them is indescribable. Most of them also are without uniforms and minus their queues, for as soon as they saw that the battle was lost their first care was to take off the former and to cut off the latter, in the hope of passing themselves off as Koreans. The roads, the camps, the forts, the whole country around the city, are littered with blue and red uniforms and black queues. These men are well lodged and well fed, and even taken out walking for their health! I had some conversation with a captured commander. He said he could not understand the meaning of the Japanese kindness; he was surprised at being given three meals a day, with as much rice and water as he needed (which is more than generous considering what it costs Japan to get food up here). I asked him if he were not grateful to the Japanese for not cutting off his head, and ashamed of the way in which the Chinese had treated their Japanese prisoners. He answered that no words could express his gratitude; and that, as for the barbarous conduct of the Chinese towards their prisoners, it was due to "habit and to high orders." He could hardly believe me when I assured him that I had seen Chinese prisoners in Ujima, and that they were well treated. I went from there to the hospital for wounded Chinese. They were treated exactly as if they were Japanese. I saw several difficult operations performed in which the surgeons displayed the utmost skill. The hospital was in every way admirably organized. Returning thence to the head-quarters of the Commander-in-Chief, whose guest I am, I witnessed two interesting scenes. Four Chinamen were brought in, and, half scared to death, dropped on their knees. They were boatmen who had helped the Japanese soldiers to cross the river—they had given their assistance somewhat under compulsion. A good sum of money was handed to these men as a reward, and they were told that their boat would be returned to them and that they could go back to China. To avoid the risk of their being stopped by Japanese soldiers or ships they were given a passport. The poor devils looked at each other unable to understand such generosity. Behind these men was a Chinese woman who was very pretty and who, far from looking scared, seemed to be *à son aise*. She was the only woman found in the deserted city. She was in no way maltreated, but on the contrary was supplied with food and money. She is the wife of the Chinese telegraph operator at Phýng-yang. It seems marvellous to one acquainted with the manners of European soldiers in time of war that this woman in a city taken possession of by fifteen or twenty thousand soldiers and coolies (men of the lowest class), was treated with the highest respect. If these facts do not call forth the admiration of the world, I am at a loss to know what will do so. I do not see how Japan can be refused the place she rightly claims among the civilized nations of the world. I am not well enough acquainted with the state of affairs in Japan to be able to speak of Treaty Revision. I have heard, how-

ever, that many foreigners object to it from a fear lest they should fail to receive justice at Japanese hands. It appears to me that if the Japanese treat foreigners in their courts as kindly and as fairly as they treat their enemies in the battle-field, there would be no possible cause for complaint. And it must be considered that foreigners will not have to face soldiers excited by battle and by the barbarous conduct of their adversaries, but trained and self-controlled judges.

P.S.—Villages and cities have been sacked by the Chinese and entirely abandoned by the Koreans. The Japanese officers are doing all they can to get the Koreans to return to their homes, which the fugitives are doing little by little. The Koreans are astonished at the treatment they receive from the Japanese, who do not take a turnip without paying down its value.

THE BATTLE OF PHÝNG-YANG.

The Chinese have been badly routed and have fled North toward the Manchurian frontier. It is likely they will not stop until they get there. Phýng-yang, the famous stronghold, where from 16,000 to 20,000 of them had surrounded themselves with forts and fortifications, which they thought impregnable, has been taken by the first division of the Japanese army, about 12,000 men, after one day's fighting. The city was defended by 27 forts, and such an amount of fortified works that it is estimated that to build them in the 40 days they spent there 10,000 Chinese must have been at work night and day. In addition to these fortifications, Phýng-yang is magnificently protected by nature itself. Built on the plateau of a high hill, which it entirely covers and which is extremely high and steep at the North, it is nearly surrounded by a wide river, which protects it at the South, East, and West. Not satisfied with the old, high and thick stone walls, or with their new fortifications, the Chinese crossed the river and built on the other bank a long line of forts, well provided with many cannon, 30 of which were excellent modern quick-firing guns (several Krupps of 1890). I have explained in a previous letter how I went in a military transport from Japan to Chemulpo—from there I expected to try to join the army by land, which would have taken at least 8 or 9 days. Upon my arrival, however, the commander of the place, General Yanya, told me that he was sending a transport to the Phýng-yang river, a 20 hours' run by steamer, and that I should probably be able to reach the army in a day and a half. It was considered quite safe, as Japanese men-of-war were guarding the entrance of the river, and gunboats would of necessity escort us. The river, though no steamer had ever entered it, had been surveyed some three years ago by officers of the Japanese navy, and had been reported navigable. After quite a number of experiences, we anchored about 45 miles up the river and 30 miles from Phýng-yang. The water being too shallow for the steamer to proceed further, a number of army officers who were on board and myself decided to attempt to continue the voyage in small sampans, which we had brought on the steamer's deck. They are flat boats, of the shape of our row-boats, and of course uncovered. We left at 7 in the evening. Two sampans were loaded with provisions and ammunition for the army, another had twenty soldiers on board, and the fourth, beside myself and Japanese servant, 10 officers and 3 soldiers. It was pitch dark when we sailed, and I must say this night trip, up an unknown river surrounded by immense black mountains was most impressive. Packed like sardines in a box, we managed, however, to sleep until about 4 a.m., when I was suddenly awakened by the rain. We were in a dense fog, and soaking wet. My companions, however, did not seem to notice it and kept on snoring, as only Japanese can do. When at last they woke up, by six o'clock, in spite of their uniforms and decorations, they were far from looking dignified. The commander himself looked awfully depressed, especially as he could not find his boots, and his high riding boots were filled

with water. By 10 o'clock, the sun having pierced the fog and the rain having stopped, the temperature, which had been icy during the night, suddenly rose to 93. We were then but a short distance from Phýng-yang, where the battle was raging. Soon we saw dozens of dead soldiers, and horses and oxen which the river was carrying down to the sea. We arrived in time to see the end of the first day's battle, which had been fought in the following manner.

Two weeks ago the Japanese generals in Sôul decided that the attack should take place on September 15th. The first division of the army was divided into three detachments, the first under General Tatsumi, the second under General Oshima, the remaining division under the Commander-in-chief, General Nozu. The first as seen by the map I sent you, took its position north-east of Phýng-yang, the second south-east, the third west. Meanwhile, a brigade sent by sea direct from Japan to Gensan had come down from there and seized the Northern roads. The Chinese were therefore completely surrounded. But what cannot be imagined, and what no words can well describe, are the great difficulties presented by the march from Sôul and the suffering and privations of officers and soldiers. The country had been sacked by the Chinese troops, cities and villages had been deserted by the people, and not a bit of provision or water could be found anywhere. Arms, ammunition, artillery, food, had to be carried by pony, and mostly by Japanese coolies brought from Japan. There are over 10,000 of them between the first and second divisions. It would have been impossible to use waggons, as there are no roads at all. This being one of the most mountainous countries in the world, and even paths being sacree, one can easily imagine the difficulty met with by a whole army in march. In addition there were a great many wide and deep rivers, and not one bridge to cross them. In spite of the fatigue and suffering, the soldiers never lost their spirits—they were as well disposed, as full of hope and energy, as happy, as good-natured, and as joyful at the arrival as they were at the start. It must be said that this army is magnificent. The men are well dressed, their arms as good as any in the world, the discipline excellent. I have seen them after forced marches, and even after a battle, looking as well and strong as could be. We are accustomed to hear of the "small" Japanese, but the soldiers of the first division are far from short, and are the best built men in the world. In this they can compare with many European troops, and especially with the Italian troops, which I saw manœuvring a few months since.

In the afternoon of the 14th the Commander-in-chief having heard from the different detachments that they had arrived and had taken up their positions, sent word back to them that they should begin the attack before daylight the following day.

At 3 a.m. on the 15th Gen. Oshima's division marched forward. These soldiers have done nearly all the fighting since the beginning of the war. They are the troops who fought and defeated the Chinese at A-san. In front of the river the Chinese had erected three very powerful forts, commanding the head of three bridges of flat boats. Five thousand Chinese defended them and the approaches, which are covered with small trees and thick bush. These men were from Tientsin and Port Arthur, and therefore part of Li Hung-chang's best troops. They were armed with excellent rifles and made a brave, daring, and great fight. They were far superior to the other troops. General Oshima had hardly 3,000 men to fight these 5,000 and their forts. It was from the beginning a hard fought and deadly battle. The Chinese were on the alert and poured a continued and well directed fire from the quick-firing guns of the forts, and a very efficient rifle firing from the bushes. The Japanese, however, managed to gain ground little by little and at 3 in the afternoon they had swept the Chinese from the bush. At that time General Oshima was wounded in the side by a rifle shot, and considering that it would be dark before six, and that his men had

had neither food nor water since 2 a.m., and that nothing could be had on the battle-field, he decided to go back to his last camping-place.

The other detachments had also began the attack before daylight. General Tatsumi, after a hard struggle, by 2 p.m. was master of the forts and hills commanding the city from the East, and but a few hundred yards from the last walls. He then brought together all the artillery at his disposal to bombard the place and make an opening in the high walls for his troops to enter the city. Soon after three, the Chinese raised the white flag above the gate just opposite his guns. Firing was stopped, and the Chinese Commander sent word begging that the bombarding be stopped and promising that he would surrender the city at daybreak. The General, who was anxious to give his soldiers a rest and something to eat, agreed to this. At 8 p.m., however, when darkness was complete, the whole Chinese army made a *sortie en masse* trying to force their way through the troops of the Commander-in-chief, General Nozu. Failing to do so, they threw their whole cavalry, about 1,250 horses against the Sato detachment commanding the northern road. They were received with a terrific fire, which killed 250 of them. At this minute, taking opportunity of the disorder in which the shooting had put them, 450 Japanese cavalry-men, who were posted between the Nozu and Sato's detachments, made a glorious charge. They came like thunder and lightning upon the Chinese, cutting them to pieces and killing 500 of them. At this place, in front of the Sato's position, the dead bodies of 270 Chinese soldiers and 310 horses were found in a space of 200 yards. While this fighting was going on, however, the remainder of the Chinese army managed to escape, going north by some unknown paths in the mountains. When we entered the city the following morning, it was altogether deserted. Most Koreans had fled from it before the arrival of the Chinese, and the few who had remained had run away with the Chinese, fearing to be killed by the Japanese. The sight presented by Phŏnyang, I shall never forget. Everywhere was ruin upon ruin. Every house has been thrown open, doors and windows smashed, and chests and boxes broken and sacked by the Chinese. Hundreds of dead Chinamen and Koreans, horses, oxen, pigs, and dogs were lying in their blood, the odors being still worse than the sight. A few scared and barking dogs and some small black pigs running in all directions were the only living things to be seen. The dirt and filth were beyond description. While part of the different detachments were taking quarters as ordered beforehand, the Commander-in-chief and Etat-Major, marched across the city to the palace which had been left a few hours since by the Chinese General. It is a large building surrounded by several belts of stone walls, on high grounds, overlooking the city. It is composed of a very large hall, used also as a reception room, surmounted by an immense Chinese carved roof supported by wooden columns painted red. The front is entirely open and has no doors or windows—the left and back are closed by paper windows; to the right, two paper doors lead to three rooms. Back of this main building are several small ones. In the large hall we found the head of a young and brilliant Japanese Lieutenant who had been wounded the day before while leading his company to the assault of a fort. In the different Chinese forts the heads of over 20 Japanese prisoners were found, frightfully mutilated. The Chinese general having offered considerable sums of money, not only for a Japanese head, but even for part of a head, so much for the nose or the ear, many poor and innocent Koreans have been killed, not only by Chinese but by their own people anxious to get rewards. This is simply awful, and it seems to me high time that the civilized nations of the world should express their indignation to the Peking Government, for there is not the slightest doubt that orders came from there. It is proved by the letters and papers left behind, together with love letters, battle,

plans, etc., by the Chinese generals. How can England support against Japan such barbarians as the Chinese, especially when Japan is on the side of right and justice? Especially when the Japanese are fighting the war of civilisation in Asia? The 700 prisoners of war taken here were treated as well as the Japanese soldiers are. I went to see them this morning. Never before did I see such a miserable lot of wild-looking creatures. They looked more like beasts and savages than men. They were undoubtedly the dirtiest set of people I ever put eyes on—among them are a commander and a number of officers. To those I talked through an interpreter. My presence seemed to scare the life out of them. What was the "Foreign devil" doing here? It is not surprising. I am the only foreigner here, and my quick arrival in spite of so many difficulties has surprised the Japanese themselves. My presence has created quite a sensation. The Chinese commander upon my arrival took a Sphinx like attitude—I opened the conversation by saying that I know Li Hung-chang well, and had often seen him and other officials in Tientsin. The expression on his face immediately changed; he brightened up, smiled, and exclaimed:—

Oh! he is China's great man. If he had always been listened to China would now be in another position. I knew the American Consul in Tientsin!

Indeed! and do you know Mr. Tenney, the Secretary of the Consulate who is the teacher of Li Hung-chang's boys?

Oh yes, very nice man. I see you know Tientsin! Yes, how are you treated here?

Oh! so well! so very well!—we are given three meals a day, rice and water, fresh.

Are you not glad they did not cut off your head? Oh! no words could express our feelings, no words, it is too good, I cannot understand it.

Simply, because Japan is a civilised country. Are you not ashamed, seeing this, of the way you treated Japanese prisoners!

Yes, but it is habit and orders from high places. I saw the Chinese prisoners at Ujina, in Japan; they were well treated and well provided for, and the Chinese residents in Japan are under protection of the government and have not been annoyed.

Oh! it is very strange and good! How do you explain your defeat and the victory of the Japanese? The commander shook his head.

I cannot understand, no I cannot, such a strong place and strong forts. The Japanese soldiers and arms must be very good, I think better than the French in Tonkin. Cannot understand.

From there I went to the hospital, where the Chinese wounded are given as good and attentive care as if they were Japanese. There are 210 of them. The place is admirably arranged and the surgeons I saw at work (modern school of surgery of course) cutting legs and arms, extracting bullets, etc., did it with surprising skill. The quickness and dexterity of the aides, in washing the wounds, sewing them up, dressing them and etc., were amazing. Better could not be done in the New York or Berlin hospitals. I have already mentioned that the Red Cross ambulances, as all the other services of the Japanese, were perfection. The Chinese have none. The surgeons' apparatus, medicines, bandages, etc., the whole as complete as possible are carried in large lacquer chests divided in to drawers and compartments. Only three of the Chinese wounded have died. The others have recovered, or at least are in a fair way of getting well again. In returning from there I witnessed two interesting scenes. I was talking with the Commander-in-chief, General Nozu, when four Chinese were brought to the palace. The poor devils were scared to death and dropped upon their knees. They were four boatmen who had been ordered during the battle to take some Japanese officers across the river, and who had done so. Now they were presented with a good sum of money as a reward, and they were told they could go back to China. In order to prevent them being arrested by the advanced guards, or by men-of-war, they were given passports. They could hardly believe it was true. They looked at each other with the greatest fear, for a long time not daring to walk away. I noticed none of them had a queue and asked

Commandant Muraki why it was. He smiled and answered, well, we had them cut. There are no earthly reasons for a man to wear such a thing. It is a reminder of barbarism. Behind the boatmen stood a Chinese woman, the only one of her sex, Korean or Chinese, found in this deserted city. She looked very pretty, interesting, and lady like, in short, quite civilised. She was not scared a bit and spoke freely. I had noticed her the previous evening cooking some food for some Japanese soldiers, and had wondered how a Chinese woman could possibly happen to be there. Now I learned that she is the wife of the Chinese telegraphic operator of Phŏnyang. She has not been annoyed at all, is absolutely free to go about, has been supplied with food, and which is more and quite wonderful, in this place occupied by 16,000 soldiers and coolies, she, the only woman here, and an enemy's wife, has been treated with the utmost respect. She had come to ask the release of her husband, who is among the prisoners. Now if all this does not speak highly in Japan's favour and for the magnificent discipline and behaviour of her soldiers, I do not know what will. I hardly know how to express my admiration at all I have seen. It is simply too admirable to be described. Japan is proving that she has a right and a real one to be considered as a great civilised nation. It is high time for the Foreign nations to understand it and to bow to their younger sister. England has already revised the treaties imposed upon Japan. I understand that the Washington Cabinet is not against the idea of doing the same. Why not do it at once and in such a way as to show our great appreciation of Japan's conduct? Some nations are said to object to treaty revision (and the English residents in Japan do so) on the ground that once the Consular Courts are abolished, it would be impossible for foreigners coming under Japanese Jurisdiction to have fair play. Well! I shall only say that if Japan treats (and she certainly will) foreigners in her Courts as she does her enemies on the battle-fields, those, as these, will be better treated than they would in many European countries.

I have visited the camps and forts of the Chinese. These last are very well built, but what filth and dirt everywhere! The camps are full of cooking and porcelain utensils, saddles, bridles, and harness. Everywhere on the walls, on the paths out in the country, are found piles of excellent cartridges of different calibre, mostly for Winchester and Martini rifles. Arms of all description have been picked up, from the finest modern rifles to the oldest swords, lances, arrows, spears, etc., and rifles used a century ago, some long and thin like an Arabian gun. But the strangest sight of all is to meet, at a every two or three steps, the Chinese uniforms of blue cotton with large red bands, and hundreds of long queues. As soon as the Chinese soldier finds out that he is beaten, he throws off his uniform and cuts his hair in the hope of passing himself for a Korean! A hair dealer would make a fortune in coming here and picking the endless number of queues. The Chinese left behind them (besides millions of fleas, which seem to have taken me for their head-quarters), 200,000 dollars' worth of gold and silver, 30,000 dollars in Korean copper coin; enough rice to feed the whole army for 15 days; many cannon, among which are 34 fine modern quick-firing guns, 1,000 Winchesters, a very large amount of cartridges, and thousands of flags of all kinds and colours. The losses on the side of Japan are 8 officers killed—26 wounded—154 soldiers killed, 421 wounded. About 1,000 Chinese were killed and 700 made prisoners. The number of wounded is supposed to be about 2,000. General Tso Ka-okin is reported to have been killed. As I have said, I am the only foreigner here. I am the guest of Commander-in-chief, General Nozu, in the Staff's head-quarters. The three little rooms in the palace are occupied by the General and his aides and secretary. In the large hall, or reception room, there is a large platform on which the Chinese Commander used to sit with his staff. It is covered with the finest of mats. Screens have been placed around, and it is now my bed room. The nights

are as Siberian as the days are tropical, but fortunately the Chinese Commander has left behind some fine silk and velvet blankets, padded with the softest of furs. I enjoy them immensely. The Japanese officers are doing all in their power to bring the Koreans back to their cities. These are getting to understand that they have nothing to fear from the Japanese; on the contrary; they can get a great deal of money from them, as the Japanese never take a thing, but pay well for all that is brought to them. Every day sees the number of returning Korean increasing, and even some woman have come back.

Several Regiments are pursuing the Chinese. We shall stay here until the 25th, when General Yamagata will arrive to take command. We shall then proceed North to Wi-ju, on the Chinese frontier, where the Chinese will make another attempt at fighting it is supposed.

A. B. DE GUERVILLE.

POLITICAL ITEMS.

The vernacular press alleges that the official opening of the Diet's extraordinary session at Hiroshima will take place on the 18th instant, and that the Houses will sit on Sunday the 21st as well as on week-days. Presumably the prorogation will take place on the 24th instant.

It is alleged that the various political parties differ as to the procedure to be adopted in expressing their views about the war. The *Kaishin-to* advocate an Address to the Throne; the Reform Party (*Kakushin-to*), a Representation to the Government; and the *Kokumin Kyokai*, a Resolution. The matter is now under discussion and the probable result will be that the three. Parties will embody their views in a Resolution.

The above three Parties constitute the *Ko-ha*, or strong Foreign-Policy Association. The *Jiyu-to*, on the other hand, appear to be opposed to any parliamentary action of the kind proposed. They hold that it would be premature for the Diet to thank the Army and Navy, and further that to address the Throne about the war at the present stage would be to infringe the Imperial Prerogative, to divulge military secrets and to hamper the action of the Administration.

Viscount Nomura Yasushi, a Privy Councillor, has been appointed Minister of State for Home Affairs, and Count Inouye goes to Korea as Minister Plenipotentiary with the special treatment of a *Shin-nin*.

The election of the President of the House of Representatives has resulted as follows:—

Mr. Kusumoto Masataka	157 votes.
Mr. Kono Hironaka	147 votes.
Mr. Kataoka Kenkichi	127 votes.
Mr. Hoshi Toru	124 votes.

The last three members belong to the *Jiyu-to*, the first, Mr. Kusumoto, to the *Kaishin-to*, or Party of Progressive Reform (*i.e.* the Opposition). Mr. Kusumoto held the post of President in the last Diet. In the election when the House of Representatives met last May, he received 153 votes and Mr. Kono 147, the majority being only 6 whereas now it is 10. It is not possible to deduce from these figures any exact idea as to the strength of the opposing parties in the Diet: the method of voting by *scrutin de liste* forbids precise inference. But we may at least conclude that the Opposition are as strong as they were last session.

The returns of the Presidential election in the House of Representatives telegraphed to the Tokyo News Agency on Monday afternoon and published by us on Tuesday morning were slightly incorrect. The figures given by the *Official Gazette* are as follow:—

Mr. Kusumoto Masataka	157 votes.
Mr. Kono Hironaka	152 votes.
Mr. Sasa Tomofusa	133 votes.

This list is much more intelligible than the one previously published. According to the latter, it appeared that the *Jiyu-to* put forward three candidates, a procedure bound to entail dissipation of strength and therefore failure in the face of a united Opposition. But

it is now seen that there was only one *Jiyu-to* candidate, and that neither Mr. Hoshi Toru nor Mr. Kataoka Kenkichi stood. It is also seen from the above returns that both Mr. Kusumoto and Mr. Kono must have received the support of several politicians belonging to camps different from their own. The votes cast for them aggregate 309, whereas the total number of members present was only 298. We explained last May that the method of voting is by *scrutin de liste*: that is to say, each member writes down three names indicating his choice of three candidates for presentation to the Emperor. Under such an arrangement members of unpronounced views are not unlikely to indite the names of a *Jiyu-to* candidate and a *Kaishin-to* candidate on the same paper. In the last Diet Mr. Kusumoto received 153 votes a Mr. Kono 147, the difference being 6. In the present Diet each candidate has obtained more numerous support, and the difference is reduced to 5. The actual strength of the various political parties in the present House of Representatives is said to be as follows:—

<i>Jiyu-to</i>	114
<i>Kaishin-to</i>	47
<i>Rikken Kakushin-to</i>	32
<i>Kokumin Kyokai</i>	33
<i>Zaisei Kakushin-to</i>	5
Independent	69

The organs of the *Kaishin-to*, dividing these six groups on the broad lines of "government" and "opposition," give to the latter 162 votes, and to the former 115, while 23 are considered to be without bias for either side. But it is difficult to reconcile such an estimate with the results of the Presidential election. The "moderates" appear to be at least as strong in the present House as in the last. In the May session, the Moderate candidate for the Presidency obtained 147 votes in a House of 294: he has now obtained 152 votes in a House of 298. The latter record is better than the former. On the other hand, the Opposition candidate, who obtained 153 votes in a House of 294, has now obtained 157 in a House of 298. If any inference is deducible from the figures, it would seem that the Opposition is slightly weaker than it was last session. We do not think, however, that any hard-and-fast inference is deducible.

Mr. Sasa Tomofusa, whose name appears third on the list, is a member of the *Kokumin Kyokai*. He has always been an important figure on the political stage, and within the Diet his reputation is that of a painstaking, conscientious member.

The *Jiyu-to* did not put forward any candidate for the Vice-Presidency. The result of the election was:—

	Votes.
Mr. Shimada Saburo (<i>Kaishin-to</i>)	156
Mr. Sasa Tomofusa (<i>Kokumin Kyokai</i>)	143
Mr. Taguchi Ukichi (<i>Zaisei Kakushin-to</i>)	136

Mr. Taguchi is the editor of the *Keisai Zasshi*; a man universally liked and respected, but virtually new in the political arena. The number of votes cast for him seems to us a healthy sign of the House's disposition.

No immediate interest attaches to the distribution of parties in the House. It is not at all probable that any question relating to home politics will brought up for discussion. The war and the means of providing funds to carry it on will probably occupy the exclusive attention of the Diet during the few days of its session.

An Imperial Rescript announces that the official opening of the Diet takes place on the 18th instant at 10 a.m.

The following Government Delegates have been appointed:—

Mr. Suymatsu Kencho.	Law Bureau.
Mr. Tajiri.	Finance Department.
Mr. Matsuo.	Finance Department.
Major-General Kodama.	War Department.
Rear-Admiral Ito.	Naval Department.
Chief Paymaster Kawaguchi.	Naval Department.

The following Government Measures will, it is said, be submitted to the Diet in its extraordinary session:—

Bill relating to War Expenditures.
Bill relating to the issue of War Bonds.
Bills seeking <i>ex-post-facto</i> assent to various Imperial

perial Urgency Ordinances issued in connection with the war.

Bill for increasing the tax upon *Saki*, Tobacco, and Incomes.

Bill for the construction of a railway between Hiroshima and Bakan (Shimonoseki).

It is alleged that the Diet will be asked to sanction a total domestic loan of 70 million yen for war purposes, at an interest of 6 per cent. or less.

The official opening of the Diet took place on the 18th instant. The Speech from the Throne was as follows:—

My Lords and Gentlemen—We have convoked an extraordinary session of the Imperial Diet on this occasion, and have ordered Our Ministers of State to lay before you, as measures of great urgency, Bills relating to military and naval expenditures.

We regret to say that China, having, in disregard of her duty, declined to cooperate for the preservation of the peace of the Orient, war has resulted. But the sword having been unsheathed must not be returned to its scabbard until the object of the war shall have been attained.

It is Our earnest desire that Our loyal subjects, acting in perfect union and harmony, should devote themselves to promote the interests of Our Empire, so that the complete and final triumph of Our arms being secured, the blessings of peace may speedily be restored to the Orient, and the honour of Our nation vindicated. My Lords and Gentlemen, We invite your efforts to bring about the full realization of that object.

Messrs. Kusumoto Masataka and Shimada Saburo have been duly appointed President and Vice-President respectively of the House of Representatives.

It is reported that in the event of the Government's not introducing a Bill in the present session of the Diet with reference to the enrolment of volunteers (*Giyu-hei*), Mr. Haseba Junko and other Satsuma members of the House will introduce one.

The following measures, according to the *Nichi Nichi Shimbun*, have been submitted by the Government to the Lower House:—

1.—Bill relating to the Special Financing of Military Expenditures.

2.—Bill providing for the raising of 100 million yen, by means of public bonds and loans, for the purpose of Military Expenditures in China and Korea.

3.—Extraordinary Military Budget. (Total amount 150 million yen, of which 26 millions was to be taken from the Reserve and the remainder raised by issuing Military Bonds.)

4.—Imperial Ordinance No. 143, for *post-facto* approval.

The Bills introduced officially in the Upper House, have reference solely to measures for which *post-facto* consent is sought.

TOKYO CHAMBER OF COMMERCE ON REMEDIAL MEASURES.

The Osaka Chamber of Commerce met the other day, says the *Mainichi Shimbun*, for the purpose of discussing remedial measures for the money market. The following conclusions were arrived at:—

That the Bank of Japan should be requested to enlarge its scope of discounting commercial notes so as facilitate advances by increasing the number of securities.

That the Bank of Japan should exercise the utmost caution in raising the rate of interest, and should maintain, to the utmost of its ability, a quiet level in the money market.

That the connection now existing between the Bank of Japan and private banking concerns should be rendered still more intimate, so that the two may more efficaciously render mutual assistance.

That both national and private banks should be advised to do everything to facilitate the circulation of money.

A copy of the foregoing resolutions was then sent by the Osaka Chamber of Commerce to each of the sister institutions throughout Japan, asking for their concurrence and support. On receipt of the document the Tokyo Chamber appointed a special committee and began, on the 24th ult., to institute inquiries into the important problem. Since that date the Committee has held frequent deliberative meetings

and, as might have been expected, great diversity of opinion has been noticeable among the members. Mr. Amenomiya Keijiro maintains that there is no need to deliberate on remedial measures as applicable to the money market, for the simple reason that so long as the methods employed in raising the War Fund be selected with due caution, so as to avoid any disturbance of the economic world, it would be far better to leave the matter alone. Only when any further necessity arises for the Government to recoup the war-chest, the Authorities should be induced to have recourse to a foreign loan. Mr. Shibusawa, whose views on the subject we have already reproduced at length, was opposed to this opinion of Mr. Amenomiya. He contended that, supposing one hundred million yen required for the prosecution of the war, it would be unnecessary either to float a loan in the foreign money markets or to make an additional issue of convertible notes. There is now, he said, a specie reserve equivalent to seventy-seven million yen in the vaults of the Bank of Japan; should even thirty million of that amount be appropriated for war purposes the par ratio between silver and paper currency would not be disturbed. There are moreover fifty million yen from the Domestic Loan, and should the surplus Revenue be added to these two items the total would not fall short of one hundred million yen. The Committee held its last meeting on the 2nd inst., when, after a somewhat lengthy discussion, a decision was arrived at which differed slightly in details from that resolved upon by the Osaka Chamber of Commerce. This decision was to the effect that the Bank of Japan should be requested to abstain from raising the rate of interest for some time to come; that the shares of certain trustworthy banks and corporations, hitherto not included by the Bank of Japan in its list of good securities or received by it in hypothecation, should be made hypothecatable, so as to increase the catalogue of acknowledged securities; that should the specie reserve fall below one-third of the total issue of convertible notes, the Minister of Finance should be requested to raise a foreign loan in case of any further outlay becoming necessary in connection with the war. The reason why the Chamber passed the last resolution in particular is said to be that as no unusual disturbance was manifest in France even when the specie reserve had fallen to about one-quarter of the total value of the notes in circulation, and moreover as in England, Austria, and other countries the reserve had, on occasion, been reduced to one-third without interfering with the relative values of silver and paper, therefore Japan ought to be able to do at least that much without incurring any special risk. The following table sets forth the amount of specie held in reserve by the Bank of Japan since the outbreak of hostilities with China:—

Date.	Silver Yen.
July 30th—August 4th	77,301,960
August 6th—August 11th	77,184,823
August 13th—August 18th	77,841,774
August 20th—August 25th	78,408,623
August 27th—September 1st	79,259,329
September 3rd—September 8th	79,201,137
September 10th—September 15th	78,572,362
September 17th—September 22nd	77,977,580
September 24th—September 29th	77,122,336

It is apparent from the above that the total specie reserve is now only some 180,000 yen less than at the beginning of August. The total value of convertible notes now in circulation is 137,581,939 yen. The amount of specie corresponding to one-third of that sum is, approximately, 45,860,000 yen. At that rate we find a surplus of 30,000,000 yen which the Tokyo Chamber of Commerce deems available for war purposes.

The *Nichi Nichi Shimbun* scoffs at the rumour that the Government is contemplating the floating of a foreign loan. The report is altogether baseless. The Authorities, says our contemporary, have from the outset of the war been prepared to raise, and that without special difficulty, a sum of one hundred or even two hundred million yen in this country. Under such circumstances, it is highly improbable that the Government will introduce any proposal of the kind in the present session of the Imperial

Diet; it would, on the contrary, disapprove of such a measure should the idea be brought forward by any of the representatives. It is possible that the rumour that several foreigners have offered to undertake the raising of a foreign loan for Japan, may have given rise to the story; or it may, indeed, be nothing more than a fabrication of certain interested stock-jobbers.

SERICULTURE IN JAPAN.

Some interesting correspondence on the sericulture of Japan has appeared in the *Keisai Zasshi* over the signatures of two men, apparently sericulturists. The letter treats of the comparative inferiority of Japanese silk to French and Italian varieties, and give a suggestion as to its improvement. Everybody interested in the silk industry of Japan, observe the writers, regards with great regret the fact that Japanese silk fetches in Europe or America 20 to 30 per cent. less than French or Italian, and even the best kinds, such as those produced in Tomioka, Muroyama, or Tokuyue are 20 or 30 per cent. cheaper than the corresponding French or Italian varieties. The correspondents of the *Keisai Zasshi* made careful investigations to discover whether this difference in value is due to imperfect skill on the part of Japanese artisans, or to the inability of Japanese merchants to obtain the full confidence of foreign weavers, or whether the coarseness of the Japanese fibre makes it less adapted to the manufacture of fine threads. They found, however, that the difference is not great enough to justify such a wide divergence in price between Japanese silk and that produced in France and Italy. Last fall the problem was finally solved. The two correspondents called on Mr. Tokuyue, a celebrated silk manufacturer in Gumma Prefecture, and learned from him that when the competitive silk exhibition was held in Yokohama in 1874, the silk procured from white cocoons was judged to be better than that obtained from the bluish-white ones, which had hitherto been chiefly raised by the silk growers of Gumma Ken. The manufacturers were consequently advised by the central and local authorities to give preference to white cocoons, which advice was followed not only in Gumma, but also in most of the other silk-raising districts in Japan. This, however, turned out to be a serious mistake. The reason why the thread of the bluish-white cocoons was considered by the judges of the Yokohama Exhibition to be inferior to that of the white cocoons, was due to the defective method of manufacturing the former and to want of uniformity in its lustre. Convinced that the bluish-white cocoons must produce thread of a finer quality than the white variety, Mr. Tokuyue took a quantity of silk manufactured from the former to the Chicago Exhibition and had part of it examined at the New York Silk Conditioning House. The result of the examination was that the silk was pronounced to be third in rank among the six best kinds produced in Japan, Italy, China, and France in point of elasticity, while in respect of strength and diminution of weight in process of manufacture it was superior to the best yellowish variety of Italy and only surpassed by the yellowish variety of France. Mr. Tokuyue thinks that if sufficient attention be paid to the raising of the worms producing the bluish-white cocoons, it will not be difficult for Japanese silk to become superior to the best French kinds. The reason why the pure white silk threads are not valued so highly in the Western market as the varieties produced in Italy and France is that they are deficient in strength and elasticity and are liable to become frizzled, thus making them unfit for weaving purposes.

The opinion of Mr. Moriyama, the celebrated weaver of Kiryu, coincided with that of Mr. Tokuyue. He observed that for weaving white *habutaye*, or handkerchief silk, the white silk is of course best, but for weaving material to be dyed, whether in a dark or a light shade, the bluish silk is much superior to the white, being stronger and much more elastic and lustrous. For dyeing a deep black the silk should be of a bluish or of a yellow tint.

The correspondents sent circulars containing the above information to all the principal silk raisers in Japan, and the replies received from them agree that the worms that produce the bluish silk are both hardier and more easily fed than any others. The thread of the bluish variety is, however, inferior to that of the white, being somewhat coarser. The correspondents are confident that this defect can be remedied by repeated careful sorting, and they advise silk-raisers to take active steps in the matter before it is too late. It is indeed high time, as the bluish-white variety of cocoons is now very scarce in Gumma, Yamanashi, and Hokkaido.

THE "JIJI SHIMPO" ON FOREIGN LOANS.

Though not absolutely opposed to the idea of raising a foreign loan, the *Jiji* seems to think that it would be unadvisable for the Government to take any such step on account of the present economic condition of Japan and of the foreign market. The *Jiji* assigns, as the reasons of those who advocate the raising of a foreign loan, 1st, the supposed incapacity of Japan to furnish, without disturbing the stability of the present financial system, the required amount of specie, which will of course increase as the Japanese army pushes more and more into the interior of China; 2nd, the danger of producing a panic should further large demands be made on the Japanese money market, which is already unusually tight. The first argument is based on the financial position of the country, while the second is due to considerations connected with monetary circulation and is therefore chiefly held by the speculative class. The *Jiji* is opposed to the first reason inasmuch as, up to a certain limit, the diminution of specie can be continued without disturbing the stability of the financial system of the country. There are still in the vaults of the Nippon Ginko about 77 million yen in specie, of which 22 millions are in gold. If this be converted at the ruling market rate, the total amount of specie at present in the Bank of Japan exceeds 86 million yen, or 63 per cent. of the total value of convertible notes now in circulation. Our contemporary's opinion is that this reserve can be reduced with impunity to 50 million yen, considering that in 1891 the ratio which the specie reserve bore to paper notes was only a little over 1 to 4. The second reason given for the advisability of a foreign loan is considered by the *Jiji* to be even more baseless. It observes that the money market at present is not so much tight as depressed, since bankers and capitalists are taking the greatest precautions in order to be prepared for an emergency. That the circulation of money is greatly impeded in spite of the fact that the total currency in circulation is greater than it was last June, may be inferred from the fact that the deposits in the Nippon Ginko have greatly increased of late. So long as the war continues, no amount of money imported from abroad can remedy this state of affairs. Our contemporary thinks that it would not be easy for Japan to raise a large foreign loan, in London for example, owing to the fact that English capitalists do not know enough about this country to be tempted to invest their money in Japanese bonds unless at a great profit.

The *Jiji* scoffs at the remarks of the *Jiji Shimpō*. It does not consider that the amount of specie reserve is already smaller than is safe, but it contends that to undertake to raise a foreign loan after the reserve has considerably diminished would be a very unwise policy, as foreign capitalists would take advantage of the situation and would only advance their money at ruinous rates. The Radical organ maintains, therefore, that a foreign loan should be raised now as the country is at present in no pressing straits. It does not share the *Jiji's* opinion that foreign capitalists, being ignorant of Japan, would demand unusually favourable terms for money advanced by them.

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

THE WAR.

PHYÖNG-YANG is separated from Wiju by a distance of 138 miles. There are in that interval many obstacles to military transport and many positions at which troublesome resistance might be organized by a resolute commander. The Japanese forces have not hitherto been able to accomplish any feats of marching in Korea. The best time made by them was on their first campaign. Leaving Söul on July 25th, they took possession of the Chinese fortified camp at A-San, 67 miles distant, on the 30th of the same month, and re-entered Söul on August 4th, thus covering 134 miles in 11 days; an average of fully 12 miles per diem. But the column that marched against A-San was small and had few encumbrances. The progress of such a force is a very different affair from the progress of an army. No such record was subsequently achieved. It is difficult, indeed, to determine what time was actually required for the march of the forces from Söul to Phyöng-yang, because the column's advance was checked for several days owing to a change of strategical programme which involved the simultaneous despatch of a force from Gensan. But the first stages of the Söul army's northward movement did not exhibit a higher speed than 6 miles *per diem*; a decidedly slow rate of advance. Assuming that as a basis of calculation, the distance between Phyöng-yang and Wiju should have required 23 days to traverse. Phyöng-yang fell on September 16th. The assaulting forces underwent great hardships in connection with its capture and some repose must have been allowed them before resuming the march northward. They seem to have remained three or four days in Phyöng-yang, and to have set out from that town on or about the 20th September. Hence they should have reached Wiju on the 13th or 14th October, whereas they reached it on the 8th. That shows an improved rate of march as compared with the record of the campaign southward of Phyöng-yang.

The Chinese may be said to have made no stand in Korean territory since the battle of Phyöng-yang. They have allowed themselves to be driven incontinently from a country which they call a "dependency" of the Middle Kingdom. Between Phyöng-yang and Wiju there are several positions of strategical importance. An-ju and Chöng-ju are the chief of these. An-ju, a walled town, whose battlements rise on the north side to a height of 70 or 80 feet above the plain, lies at the entrance to a defile in the mountains through which the main road passes. Its capture would have been a necessity for an army marching north, and its defence, if resolutely undertaken by even a small force, might have involved much delay and a heavy tale of casualties for an assaulting column. The Chinese, during their retreat of 41 miles from Phyöng-yang to An-ju, had time to

conceive the project of rallying there and to muster courage for the purpose. But they were still so perturbed when they reached the town that they halted only long enough to abandon the remnants of their artillery and a quantity of ammunition. At Chöng-ju, 30 miles farther on, they had been instructed, it is said, to make a stand pending the advent of reinforcements coming across the Yalu and over-sea from Taku. They made no stand whatever, but continued their flight incontinently. Finally, at Wiju on the banks of the Yalu, they were content to show themselves and then flit across the river.

The Japanese are thus in possession of the whole of the Korean peninsula from north to south. Is not the fact suggestive? A few years ago, when Great Britain, withdrawn from Port Hamilton, her subjects in the East found comfort in the intelligence that she had exacted from China a promise guaranteeing the integrity of Korea. Nobody showed any disposition to ridicule such a promise given by such a Power, for it chanced that China's military prestige had just then been raised out of the dust on a pinnacle of happy accidents in Tonquin and Annam. But we have now a practical standard by which to gauge the value of a Chinese guarantee. Suppose that Japan had been Russia—we apologise to the Northern Power for quoting it in this context but crave permission to borrow its name merely for the purposes of a concrete illustration—suppose Japan had been Russia, and that the duty of protecting her little dependency against invasion from the direction of the Tumen river, instead of from Chemulpo, had been imposed upon China 73 days ago, may it be fairly assumed that the task of protection would have been better or more successfully performed, and that two months and a half would not have sufficed for the Imperial Bear to lay one paw on Wiju and another on Söul, just as it has sufficed for Japan to drive the last banner-man across the Yalu? Bulk is generally advantageous in a buffer. China is very bulky, and her interests in Central Asia certainly lie in the same nutshell with those of Great Britain. But when her capacity to resist crushing comes to be put to a practical test, she proves a mere puff-ball, a buffer of dust. She crumbles away at the first touch of steel, and English diplomacy is doubtless taking keen note of these things.

TO MOUKDEN.

THE Japanese army is now concentrated at Wiju. What dispositions, if any, the Chinese have made for disputing the passage of the Yalu, we have as yet no intelligence. It is a river of considerable width, consisting of three branches at Wiju. The first, about 600 feet across, is shallow. Between it and the next channel lies an island about a third of a mile wide. Then

comes the main branch, some 650 feet in width and from 20 to 25 feet deep; then again another island, and then the third channel. Were the Japanese compelled to cross at Wiju the operation might be made terribly costly. But the Yalu may be negotiated higher up or lower down. It widens greatly below Wiju, but not until Antung is reached, some 6 or 7 miles farther down, do we find a place where vessels of any size can approach the northern, or Chinese bank. Takushan, 30 miles distant on the coast, is the usual place of call for ships. It was there, apparently, that the force of 4,000 men, convoyed by Admiral TING's squadron, landed on the 16th of September. Since the naval victory on the 17th of September the command of the whole Korean coast is in Japan's hands. If there is any possibility of using her men-of-war to assist the operations of her land forces, we may be sure that she will do so. Reports, apparently trustworthy, say that the Chinese have erected eight forts on the northern bank of the river and that they are busily building others. But it is alleged that they have only some nine thousand troops on the spot. We can not credit that. Ten thousand men at least escaped from Phyöng-yang, four thousand were carried over-sea from Pechili on the 16th of September, and large re-inforcements are said to have been moved southward from Fengtien. There ought to be at least twenty thousand men massed on the Manchurian frontier in the vicinity of Chiu-lien-cheng. A battle is therefore imminent. Chiu-lien-cheng is said to be a very strong place. The town, surrounded by massive walls, stands on lofty ground, having the river in front and mountains on either side. But it seems questionable whether the Chinese have made any resolute attempt to strengthen its natural defences. On the whole, we do not anticipate that the Japanese army will be much delayed by the enemy's preparations to dispute the passage of the frontier.

The Yalu now becomes the Japanese basis of operations. Thence to Moukden a distance of 173 miles has to be traversed. Marching into an enemy's country in the closing days of autumn the Japanese army has a serious task before it. It can scarcely hope to reach Moukden before the middle of November, and by that time campaigning will have become difficult on account of the cold. No pain has been spared to equip the army against rigours of climate. Vast quantities of wadded garments have been purchased by the War Office in Tokyo during the past two months, and forwarded to the seat of war. There is no reason to expect that the troops will suffer seriously from cold before they reach Moukden. To bring them back again, however, before winter fairly sets in, would be a difficult task. We should not imagine

that anything of the kind is contemplated. They army can winter very comfortably in Moukden, and take the field once more when spring comes. Such a programme does not involve any of the terrible catastrophes so freely predicted by prophets of evil. If the Manchurian SOVEREIGN is content to leave his ancient capital and the tombs of his ancestors in the possession of a foreign enemy, the Japanese troops may be nearly as comfortable there as they would be in barracks in Hiroshima or Nagoya.

COUNT INOUE'S MISSION TO KOREA.

COUNT INOUE'S Mission to Korea naturally strikes the public as a notable incident. His Excellency has for many years been regarded as one of the most sagacious and daring statesmen that Japan possesses. He played a prominent part in the stirring events of the Restoration, and his influence has been powerfully felt in the domestic and foreign policy of the empire ever since the fall of feudalism. It would be easy to indicate leading officials who enjoy a larger share of popularity than Count INOUE, for though he possesses in a remarkable degree the faculty of winning confidence and affection, his radical and uncompromising methods necessarily provoke many enmities. But if he has often been the object of attack and slander, even his critics and assailants have never failed to recognise his great abilities, and thus, through good report and evil report, he has steadily risen in the nation's esteem until he now holds such a place that were his countrymen required to select a statesman preëminently qualified to deal with an emergency demanding keen insight, quick decision, and unflinching courage, their choice would certainly fall upon him. The portfolio held by Count INOUE in the present Cabinet is generally acknowledged to be of paramount importance. He accepted the administration of Home Affairs at a time when several questions seriously affecting the relations between the Government and the people lay within the sphere of that Department's functions, and his management of those troublesome problems has been such as to disarm censure and restore contentment. That a Cabinet Minister so valuable at home and so conspicuous as a national leader, should be sent in the ordinarily insignificant capacity of Japanese Representative to Söul, and should agree to go, indicates clearly not alone the difficulties hitherto encountered by Japan in her attempts to reform the administration of the peninsular Kingdom, but also her resolve to carry the task to completion. She owes it, in fact, to her own reputation for consistency and honesty that there should be no half-heartedness or paltering with this important question. The avowed motive of her

armed intervention in Korean affairs was to place the administration of the Kingdom on such a footing of order as should deprive political factions of pretexts to disturb the public peace, and should put an end to the constant recurrence of crises calculated to provoke foreign interference. It can not be claimed that she has yet made much progress toward the consummation of that end. Political intrigue seems to have become a kind of second nature with the Koreans, and perpetual struggles for self-aggrandisement have so thoroughly demoralized the statesmen and nobles of the little Kingdom that in every emergency, however perilous to national integrity, they see only a fresh opportunity to gratify personal ambition. Japan's efforts to reorganize have apparently set the rival factions again by the ears. The TAI WÖN-KUN, whose reputation and ability it was sought to utilize, seems to have under-estimated the seriousness of his patrons, seems to have concluded that to mar their purpose mattered little provided that he remade himself. Perhaps the old man's sanguinary record did not justify confidence. But if a fair record be essential, it would result that all prominent Koreans must be excluded from an active share in the reformed administration. Herein, in truth, lies another difficulty. More than once during the past fourteen years the desire for reform has been translated into action by Korean patriots, but so thoroughly Korean were the treachery and ferocity of their methods that failure was always accompanied by disgrace. Yet the men thus discredited and attainted are the only Koreans that have proved the earnestness of their reforming purpose. They are precisely the persons whose services Japan must enlist for the achievement of her programme, and, at the same time, they are precisely the persons whose association with any programme provokes keen opposition on the part of those that were formerly their intended victims. It is easy to appreciate the immense difficulties of the task that Japan has set herself, and to understand that the ablest statesmen she possesses will find in it full employment for their talent and tact. Mr. OTORI'S recall will, of course, be interpreted in a sense unfavourable to his reputation. But Mr. OTORI, according to the best authorities, has not failed morally. He returns because the situation demands a greater exercise of independent authority and a more striking display of prestige than he was officially competent to employ or historically qualified to exhibit. It has been roundly charged against him by the Special Correspondent of *The Times* that he pushed diplomatic guile beyond all reasonable limits at the outset of the complication, inasmuch as he alleged that Japan's object in sending troops to Söul was the protection of her nationals' life and property. We fail to appreciate the justice of such an accusation.

Its force depends entirely upon the hypothesis that Japan from the very commencement entertained warlike designs against China, and upon the principle that she was under obligation to proclaim them. The former supposition is not warranted, and the latter contention is extravagant. An appeal to arms would never have been necessary had China agreed to cooperate with Japan in the reform of the Korean administration—a task the need of which has been further demonstrated by China's conspicuous inability to protect her corrupt and ill-governed "dependency"—and as for the pretence that Japan was bound by any recognised code of international morality to avow intentions which were still merely contingent, no fair critic will maintain it. On the last occasion when the two empires had troops stationed in Korea, the Japanese, a mere handful of men, found themselves assailed by twenty times their number of Chinese braves, and the Japanese Representative with his suite and all the inmates of his Legation, had to fly from a burning building and force their way from Söul through a mob instigated and abetted by the soldiers of the Middle Kingdom. It was within the limits of reasonable precaution that the Government in Tokyo should take measures to secure its Representative and nationals against similar disaster in the sequel of the complications that commenced last June; and if Mr. OTORI invited his colleagues to put that construction on the despatch of troops to Söul, he did what any Western diplomatist would have done under the circumstances. It is manifestly extravagant in one breath to denounce Oriental duplicity, and in the next to require that Oriental diplomacy should conform with a standard of morality never attained or aspired to in the Occident. Mr. OTORI has acquitted himself well under conditions of great difficulty, and his Government owes it to him to recognise his services in such a manner as shall guarantee them against unfair depreciation. He steps aside to make room not for an official of his own standing, but for a statesman of ripest experience, proved constructive capacity, and the highest reputation. Japan, in short, sends to Söul the very best man she has to send, thus not only offering conclusive proof of her own sincerity and earnestness in the matter of Korean reform, but also conveying to Korea an unmistakable intimation that political feuds and family intrigues will no longer be suffered for a moment to obstruct the path of national progress and regeneration. We note further that Count INOUE will be accompanied by Mr. SAITO SHUICHIRO, formerly Vice-Minister of State for Agriculture and Commerce. Mr. SAITO'S high qualities have often been referred to in these columns. During the last session of the Diet he was sacrificed to a miserable

party intrigue, his fall reflecting scarcely less discredit on those that suffered, than on those that contrived, it. Count INOUE'S invariably staunch recognition of merit is confirmed by his choice of Mr. SAITO to assist him in the difficult task of Korean reform, and the foreign public, as well as the Japanese, may feel confident in the success of an undertaking directed by two such men.

FREEDOM OF CONSCIENCE IN JAPAN.

THE Rev. J. L. ATKINSON, writing from Kobe to the *Independent*, asserts that freedom of conscience is not enjoyed by the Japanese to the extent guaranteed by the Constitution. He brings certain specific charges. For instance, he alleges that "a verbal command has recently gone forth from a Prince of the Blood, who is the commanding officer of the chief and related garrisons in a certain part of Japan, that all soldiers who are Christians must give up their Christianity," and he adds that, in consequence of the order, several soldiers have taken their names off the church register. We can not but think that Mr. ATKINSON is misinformed. The issue of such an order by a General Officer in Japan would be distinctly unconstitutional, and, if brought to the knowledge of the Minister of State for War, must entail immediate reprimand. Considering the great difficulty, if not impossibility, of ascertaining, without the aid of the military authorities themselves, the truth or falsehood of Mr. ATKINSON'S charge, the propriety of publicly preferring it seems exceedingly questionable. Mr. ATKINSON does not advance it as a rumour, but asserts positively that the order has been issued, and that several private soldiers and officers have ceased to be open adherents of Christianity in consequence. He further describes it as "the most flagrant act of tyranny I have heard of for some time," and adds that "acts of a kindred nature have been altogether too common since, as well as before, the promulgation of the Constitution." Now, in point of fact, liberty of conscience does exist in a very full degree in Japan. Christianity, in all its forms, Buddhism and Shinto are preached and propagated side by side. Christian Cathedrals or Churches figure conspicuously in the chief cities; Christian places of worship stand open to disciples in almost every part of the empire; the Christian faith is preached by the exponents of all its sects day after day and at a thousand different places; Christian believers are to be found in every rank of life, among soldiers, among politicians, among officials, in the Household of the SOVEREIGN himself; to be a Christian involves no sort of opprobrium or disability. What, then, are "the acts of tyranny" that have been "altogether too common since the promulgation of the Con-

stitution?" Mr. ATKINSON is evidently a zealous Christian. We believe that he works with the utmost earnestness to spread the knowledge of the creed he loves, and we offer every tribute to the courageous frankness that prompts him to publish his complaints over his own signature. But surely such a man can well understand that the zeal with which he is himself filled on behalf of Christianity may prompt disciples of Buddhism and Shinto to similar activity in the cause of their creeds. Passing, from the alleged unconstitutionality of an Imperial Prince to the sphere of secular education, he pens this complaint:—"As the case now stands, it seems that if the principal of a Government normal school happens to be a Christian, or friendly to Christianity, the students are at liberty to attend Christian services, or to become professing Christians; otherwise their liberty is taken away from them. The same is true of the common schools where there is a head and under-teachers. If the principal is opposed to Christianity, the under-teachers are given to understand that they are to have nothing to do with it. If they refuse to obey, their services are soon dispensed with, *but never because they are Christians!*" Has Mr. ATKINSON considered the true import of these vague accusations? Does he not see how idle it is, on the one hand, to accuse believers in Buddhism and Shinto of exercising their influence in the cause of their creed; and on the other, how unjust it is to imply, on the strength of such evidence, that the Government wittingly suffers an unconstitutional exercise of authority by its officials? We shall not pay Mr. ATKINSON'S zeal the bad compliment of supposing that were he himself principal of a school, he would not employ every legitimate means to turn his students from worshipping in temples and shrines, and to provide for them teachers of the Christian persuasion. The whole question is, are illegitimate means employed? Mr. ATKINSON leads us to believe that they are. He alleges that where the principal of a school is not friendly to Christianity, the students are deprived of liberty to attend Christian services or become professing Christians. How is that accomplished? How are students deprived of the liberty to become professing Christians? It is to be presumed that Mr. ATKINSON has not publicly preferred this charge without assuring himself that there are substantial grounds for it. We trust, therefore, that he will not hesitate to produce them, for nothing is more unjust than to invite a public verdict on the basis of vague complaints unsupported by specific evidence. He italicises the fact that under-teachers are *never dismissed because they are Christians*: some other pretext is found for dispensing with their services. Where, then, is the unconstitutionality? We do not desire to

be interpreted as denying that a bigoted and shrewd Buddhist, if placed in charge of a school, can throw innumerable obstacles in the path of students or teachers not sharing his own religious views, and may nevertheless avoid every transgression of the letter of the Constitution. But we do affirm that such things are inevitable, and that to cry out against them is undignified and fatuous, unless a constitutional remedy can be suggested. Is there such a remedy? Let us again quote Mr. ATKINSON:—

I am told that the chiefs of any and all departments, military, civil, legal, educational or what not, exercise at their discretion this arbitrary authority in allowing or forbidding a variety of things. The authority is said to be extra legal or lawless, yet it is exercised as though it were properly delegated and employed. It is not easy to imagine that the highest authorities are ignorant of this assumption and arbitrary use of power. It must be assumed that for reasons best known to themselves, they choose to wink at it. The Government of Japan may be said to tolerate Christianity, but it can hardly be said that it encourages it. A fair front is put on before the outside world, but behind this choice lacquer of appearance there is the silent allowance—or possibly worse—of the unfairness, injustice, and tyranny already mentioned.

Here we are told that "the Government of Japan may be said to tolerate Christianity, but it can hardly be said that it encourages it." Apparently Mr. ATKINSON thinks that the Government ought to "encourage Christianity," and that any less favourable attitude on the part of officialdom begets "unfairness, injustice, and tyranny." Mr. ATKINSON may be assured that the Government of Japan, so long as it is controlled by the statesmen of the *Meiji* era, will never "encourage" Christianity. It will never "encourage" any form of religious belief. Its avowed, and, we believe, sincere, policy is to preserve an absolutely impartial front to all creeds so long as they are not injurious to public morals or to the preservation of peace and good order. If the propagandists of Christianity wish to fatally exclude their creed from any place in the heart of the nation, their quickest device is to place it under the shadow of official encouragement. If they wish it to win public favour, their wisest plan is to stand entirely aloof from Governmental aid and to abstain from idle complaints against abuses which, if they exist at all, can be remedied only by such an exercise of Governmental interference as would amount to distinct favoritism. Christianity can fight and win its battle without any adventitious aid. Its final success can only be postponed, we venture to think, by protests in the nature of Mr. ATKINSON'S article.

FOREIGN VIEWS ABOUT THE WAR.

THE leading Shanghai journal has an article in reply to our comments on the attitude of the foreign press and the foreign community of this country toward Japan in the present crisis. The platform assigned to us by our contemporaries is that of deprecating all open

criticism even on the part of persons who consider Japan's conduct aggressive and unjustifiable. We have never wittingly laid down such a proposition. Fair criticism is within every man's right, and from fair criticism we are confident that the Japanese do not shrink. The criticism of which we have complained belongs to an entirely different order. It is plainly inspired by dislike. The gulf between DIVES and LAZARUS in their last state was not wider than the gulf that exists between the impartial summing up of a journalist who seeks only to discover the right, and the captious, ill-natured attacks to which Japan used to be habitually subjected, and is still occasionally subjected by the foreign press at the open ports. We have unhesitatingly denounced the attitude of those unfriendly journals as indecent and injudicious. The *North-China Daily News* itself furnishes an object lesson. It evidently thinks that the leading foreign paper published in China ought not to aggravate China's difficulties at a supreme moment of her national existence by seeking to excite foreign prejudice against her. Thus convinced, our Shanghai contemporary espouses the cause of the country of its adoption with considerable vigour and, as we think, with a good deal of partiality. We do not for an instant traverse the propriety of its motives, though its methods occasionally startle us. In its zeal to enlist sympathy with China it very seriously misrepresents Japan. Above all, it clings tenaciously to its fancy that this war was undertaken by Japan as the alternative to an inevitable revolution at home, and that her statesmen deliberately chose to fly at China's throat rather than "grant the genuinely representative and responsible government promised to their people." The Shanghai journal does not stand alone as an exponent of that mistake, but we, who have watched the Japanese closely for many years, and who may fairly claim to know something of their politics, do not hesitate to say that if any revolution was to be apprehended by the Cabinet in Tokyo, it was a revolution against an invertebrate policy toward China, not a revolution to exact from the EMPEROR concessions in excess of those already granted by the Constitution. To discuss that question in detail, however, would require more space than we can devote to it at the moment. We pass on to notice our contemporary's singular contention that Japan can not have been sincere in her desire to aid Korea since she never sought to induce the Foreign Powers to intervene on behalf of reform in the peninsula. It is truly astonishing to find such an argument gravely advanced. What had the Foreign Powers to do with Korean reform? It was precisely because Japan desired to finally remove all pretext for foreign interference that she adopted the programme for which she is now condemned. The

Korean question concerns the Japanese and Chinese Empires alone. It is in the vital interests of both countries that the peninsular kingdom should be independent, strong, and progressive. To pursue that purpose by inviting a Western syndicate headed, let us say, by Russia, to dictate terms of reform to the Sōul Government would have been a fatuous and self-stultifying policy. Japan invited China to coöperate for the regeneration of Korea. China preferred the risks of fighting to the troubles of reform. Wholly incapable herself of protecting Korea, as has now been amply demonstrated, she refused to assist in launching the little kingdom on a route that would have led to its capacity for self-protection. On China's shoulders rests the responsibility. She would not agree to the inauguration of an era of progress in a neighbouring kingdom, and she is now likely to be beaten into a very painful consciousness of her own uncivilized stagnation.

The article on which we are commenting ends with a paragraph couched in extremely violent terms. "Not only," we are told, "has the vernacular Press of Japan teemed with falsehoods unchecked by the rigid Press Censorate, but abroad by statements by Japanese officials of all degrees the painstaking and systematic circulation of untruths has been persistently carried on with the object of prejudicing public opinion in favour of Japan." There is a good deal more in the same strain of general denunciation. Now the fact is that the Japanese press, though it has not by any means been free from misstatements and misrepresentations, can not be fairly charged with sinning more conspicuously in that respect than the press of any Western country would have sinned under similar circumstances. If her journalists and her diplomatists denied that she had "ulterior or hostile designs" and asserted on her behalf "purely and honourably pacific intentions" they did precisely what British journalists and British diplomatists would have done and have frequently done under similar circumstances. Two wrongs do not make a right, but neither ought people in glass houses to throw stones. We have no hesitation in saying that were the columns of the *North-China Daily News* itself collated since the beginning of this war, they would furnish a catalogue of misrepresentations far more formidable than the corresponding list obtainable from the whole of the Japanese vernacular press. No MÜNCHHAUSEN figuring in the columns of Oriental journals begins to be "a circumstance" to the Korean correspondent of our Shanghai contemporary.

Lawyer: "What are your assets?" Client: "About \$15,000." Lawyer: "What are your liabilities?" Client: "Only \$5,000 and a dress-maker's bill that hasn't come in yet." Lawyer: "Better assign."

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE WAR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The *Fiji Shimpō* in a recent issue said:—"Suppose that a Russian paper, on hearing that an English army fighting against a certain enemy, had defeated them easily, accounted for the victory as follows:—'Since the English army routed them so easily, the enemy in question must have been a disorderly crowd of coolies. It is unlikely that for the purpose of fighting against an army like the English, the enemy would deem it necessary to employ regular soldiers whose training cost them time and money.' Would not Englishmen consider this comment an insult to the English army?" Now the *Japan Daily Advertiser* comes forward and answers "Certainly not." I should like to know whether all Englishmen are of the same opinion as the editor of the *Advertiser*.

I remain, respectfully, yours,

A JAPANESE.

Tokyo, October 12th, 1894.

[There can be no question that it would be a gross insult. A newspaper may, we think, with perfect propriety and without any breach of courtesy toward the victors, comment on the faulty tactics, the obvious unpreparedness, and the general lack of fighting power displayed by the vanquished. But to infer that because a Chinese army was beaten by Japanese troops it must have been "a disorderly crowd of coolies," and to conclude that the Chinese would not have thought it necessary to employ their regular soldiers against such an enemy as the Japanese, is unquestionably to insult the latter most flagrantly. We do not know whether the *Japan Daily Advertiser* used the language apparently attributed to it, nor are we aware what tone that journal has adopted throughout the war, but it seems to us exceedingly improbable that any American newspaper published in Yokohama would seek to minimize Japan's successes in the manner indicated by our correspondent.—Ed. J.M.]

THE RECENT EARTHQUAKE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In to-day's issue of the *Japan Mail* I find a letter over the signature of Mr. M. Seel, Architect, in which strictures are passed on a statement made in my report of the earthquake of the 7th instant. The writer refers in particular to a passage in that report stating that "part of the scaffolding (of the new Law Courts) had come in the ground and some of the ornamental brickwork was loosened." May I assure Mr. Seel that this was not written on my own personal responsibility and therefore, so far as I am concerned, was not "manufactured out of whole cloth." I did not, it is true, receive this particular item of information from police headquarters, but if Mr. Seel will kindly glance over the report again he will find that I made no assertion of the kind. When I reached the vicinity of the Hibiya Parade Ground, shortly after midnight, I met a police-constable on the street whom I questioned and who told me that a loud noise had been heard in the neighbourhood of the Law Courts which had been attributed to the falling of some scaffolding, as the walls appeared otherwise intact. He volunteered, moreover, the statement that a part of the ornamental brickwork was believed to have become loose and fallen, but that the darkness of the night had prevented any thorough investigation. Trusting that Mr. Seel will be satisfied with this explanation,

I am yours, etc.,

THE REPORTER.

Tokyo, October 12th, 1894.

Mr. Seel's communication to this journal was couched in terms that would have excluded it from the columns of any newspaper in Europe. But in the East it is forbidden to be exacting in such matters, and, for the rest, we believe that they alone suffer by discourtesy who show themselves discourteous.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to express my special satisfaction with your reporter's remarks in reply to my strictures on his report about the recent earthquake's doings with the new Law Courts—remarks which fully explain and apologize for his error. The appended remarks of the *Ed. J.M.* seem hardly called for as they are mere assertion of an opinion, and an intelligent reading public may be trusted to draw its own inferences notwithstanding.

A mere statement of fact would hardly be excluded from a respectable European paper, nor does it deserve the epithet "discourteous." This at least is your correspondent's humble opinion, until the facts are shown to be different from what is the essential contention of my letter. The seriousness of the tone assumed in my letter is natural for an architect whose special effort in this country is to counteract these inimical forces of

nature—feelings which others may not be able to realize.

Thanking you for inserting these remarks, I am, yours respectfully,

R. M. SEEL.

Tokyo, October 5th, 1894.

["A mere statement of facts" would certainly not be excluded from a newspaper. Had Mr. Seel's letter been "a mere statement of facts," our comment on its tone would never have been penned.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There evidently is a misunderstanding on the part of the "Ed. J. M." with respect to Mr. Seel's recent communications. That Mr. Seel has so seriously offended all newspaper proprietors is assumed rather than pointed out. Having read carefully all that has so far appeared, and having also consulted with others, I have not been able to find the ground of the "Ed. J. M.'s" strictures. That the reporter's remarks on the Law Courts were without foundation, Mr. Seel, seem to have been very careful to ascertain. I have also ascertained the same at first hand, i.e. from the night watchman, who says that he immediately ran in the direction of the building and heard no noise of falling bricks or timbers, nor with a policeman could find any trace of damages. Besides, the reporter has in effect acknowledged and apologized for the error.

Mr. Seel being a German, uses in characterizing the error the English equivalent of "aus dem vollen zeng arbeiten," a figurative expression which is capable of various constructions, meaning in German "to take a big mouthful," "to put on thick," to exaggerate strongly and not necessarily to prevaricate, nor does it seem to me that it necessarily has a discourteous sense even in the mouth of an Englishman,—at any rate, not where statements are entirely baseless.

As to the criticism of professional reporters at the close of the article (the only other remark that might be objected to), surely no one in Europe or America would care to deny that this criticism also has at its foundation "a mere statement of facts" in perhaps the major part of the work of professional reporters in these countries. Being an American who is not ignorant of Europe, you will pardon me for holding these opinions.

That Mr. Seel's remarks are essentially "a mere statement of facts" even where he draws inferences seems still the only proper construction to be put on them. Moreover, explaining in his second letter the reason for the tone of severity assumed (and here the professional man is entitled to all respect, while he speaks of his specialty), you will pardon me for also thinking that the "Ed. J. M.'s" remarks "seem hardly called for," as also the further remark on the second letter.

But if they are still claimed to be in place, what inferences shall the reader draw from such expressions as are found in an editorial of the 16th inst., under the heading "Further Theft?" In both cases the facts seem undeniable; as for severity the letter is not couched in figurative expressions which are possible of various degrees and even kinds of interpretation, but calls a *spade* a *spade*,—no doubt properly so.

That many words should be spent on such small matters is not my desire, but it does seem as if men should try to understand each other before judging each other so severely.

Enclosing my card, I am, yours, respectfully,

EPSILON.

[That is precisely what we think. Had Mr. Seel "endeavored to understand our reporter before judging him so harshly" this trouble would have been avoided.—Ed. J.M.]

POSTAL IRREGULARITIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I think a point has been reached, with regard to irregular deliveries of mail matter in Tokyo, at which patience would be the reverse of a virtue. For the last two months, at least, the letters and parcels brought by the several steamship lines from America have not reached their destination in Tsukiji until ten or twelve hours after their arrival at Yokohama. In almost every instance, long extracts from American papers have been published in the *Mail*, and circulated throughout Tsukiji, some hours before the reception of letters coming by the same ship. The most extraordinary detention of all occurred to-day. The *Oceanic* reached Yokohama at 6.57 p.m. on the 15th instant. Her mail was not distributed in Tsukiji until 5 o'clock this afternoon, a delay of nearly twenty-four hours.

No comment, I presume, is necessary. I trust, however, that this statement of the facts will receive due attention from the proper authorities.

Tokyo, October 16th, 1894.

H.

THE BISHOP OF JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In Thursday's *Mail* under the head of "The French Mail," is an interesting item of news concerning the Anglican Missionary Conference of May last. Could you secure the papers of both Professor Lloyd and Bishop Bickersteth and re-print them in the *Mail*? I am sure they would be of interest to a large number of your readers. I am especially curious to learn how Bishop Bickersteth establishes his second point, i.e.—"The successive arrangements which have been made have been submitted to, and been sanctioned by, the authorities of both Churches." In this connection the enclosed clipping from the missionary organ of the American Church may be of interest, especially the two marked resolutions of the Board of Managers claiming Tokyo, Osaka, and Kyoto for the American Church, and citing the ancient canon which provides that two Bishops should not exercise jurisdiction in the same city.

Resolved: That this Board will consider favourably a division leaving Tokyo, Osaka, and Kyoto in the care of the American Church, and otherwise dividing on lines to be agreed upon by the representatives of the Japan Church and all other parties concerned.

Resolved: That in the judgment of this Board the interests of missionary work in Japan require territorial division, and in making such division regard should be had to the ancient canon which provides that two Bishops should not exercise jurisdiction in the same city.

Yours sincerely, ANGLO-AMERICAN.

October 12th, 1894.

THE LATE GUN ACCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have to request you to be good enough to withdraw the statement you made in your issue of to-day with reference to a shooting accident which occurred at Matsuda on the 15th instant. Your account of the occurrence is not in accordance with the facts, which could have been ascertained from me had you so desired it.

The accident happened at 3 o'clock p.m., in consequence of the coolie who accompanied me having endeavoured to open the gun. At the time I was away, it being 5 o'clock before I arrived at the tea-house where the occurrence happened.

I at once proceeded to the Police Station, where the officers in charge informed me, in response to my offer of pecuniary compensation for the injury to the child, that all they considered it necessary to do was to detain the coolie who was the cause of the accident. This was done, the coolie not returning to Yokohama until the next morning.

I cannot believe that the Police Authorities have sent a report of the occurrence justifying your paragraph, and it is therefore a matter of great surprise to me that you should have failed to make any mention whatever of the Japanese to whose carelessness the accident was attributable.

I am, Sir, your obediently,

VICTOR FAGA.

Yokohama, October 17th, 1894.

[We have no statement to withdraw, but we willingly add Mr. Faga's explanation that the gun was in the hands of a coolie when it went off. Our report said that it was lying on a bench when the accident happened.—Ed. J.M.]

EXECUTION OF THE LAW OF SIEGE.

We, in virtue of Article XIV. of the Imperial Constitution and acting upon the advice of Our Privy Councillors, hereby give Our sanction to the present Ordinance relating to the execution of the Law of Siege, and order the same to be proclaimed.

(His Imperial Majesty's Sign Manual.)

(Privy Seal.)

Dated, October 5th, 27th year of Meiji.

Countersigned

COUNT ITO HIROBUMI,
Minister President of State.

COUNT OTAMA IWAO,
Minister of State for War.

IMPERIAL ORDINANCE No. CLXXIV.

The whole of the Cities of Hiroshima and Ujima in the Prefecture of Hiroshima shall be considered as being in an initiatory State of War, and the Law of Siege shall be enforced from the day on which the present Ordinance is issued.

The Acting Chief of the Fifth Military Division shall be appointed Commander for the purpose of executing the Law of Siege.

The Acting Chief of the Fifth Military Division has issued the following instructions to the Local Executive Officials, Judges, and Public Procura-

tors stationed within the limit defined in the Ordinance:—

Art. I.—Until further instructions be issued, the Local Executive Officials, Judges, and Public Procurators need not, in accordance with Art. IX. of the Law of Siege, apply for the direction of the Commanding Officer.

Art. II.—The Local Executive Officials have to carry out, within the limits of Art. XIV. of the Law of Siege and under the supervision of the Commanding Officer, the following provisions, but with the proviso that the rigidity or severity of the enforcement be regulated in accordance with the exigencies of the moment.

1. Matters relating to the suspension of assemblages deemed obnoxious to the State for the time being;
2. Matters relating to the search for and, according to circumstances, the seizure of fire-arms, weapons, sword-sticks, and other dangerous or lethal articles;
3. Matters relating to the inspection of outgoing or incoming ships, railway trains, or freight;
4. Matters relating to the establishment of offices of inspection at various important places, so as to prevent the passage of persons, either native or of foreign birth, deemed obnoxious to the State for the moment; and, according to circumstances, closing all highways or avenues of approach by land or sea.

MR. ADELSTEIN'S CONCERT AT THE PUBLIC HALL.

There can be but one opinion regarding the Concert given at the Public Hall on Saturday evening by Mr. Samuel Adelstein and several of our local amateurs. It was a great success. As a mandolin player Mr. Adelstein can hold his own with the best masters of the instrument, but he is incomparably a better musician, in the true sense of the term, when playing upon the lute. With this latter instrument he obtained the most delicate shades of expression mingled with broad almost cello-like effects when rendering some dainty pieces from the works of Schubert, Musso, and Mascagni. But not alone to Mr. Adelstein does the whole measure of success apply; he was most ably assisted in the concerted pieces, while Miss Bloxham's and Mr. Goldman's songs were very charming. Before passing on to a detailed account of the performance, we would like to note the improvements recently effected in the mural decoration of the Public Hall. The hitherto glaring blank walls have been distempered in two shades, and a Grecian key-pattern band of a warm brown colour now runs round the building, the whole producing a most pleasing effect upon the eye.

The concert opened with a piano duet by Mr. and Miss Griffin, which, as usual, was excellently well done. Miss Bloxham then gave a sweet little song, the composition of H.R.H. Princess Beatrice, entitled in the "Sunny Month of May." This was loudly encored and Miss Bloxham returned and bowed her thanks. Two mandolin solos by Mr. Samuel Adelstein formed the third number. The first, a fantasia from "Faust," the second a Serenade of Bellini's. Low and sweet were the dreamy cadences of this "Souvenir de Firenze," which came as a great surprise to many. Needless to say the performance aroused the audience to a high pitch of enthusiasm, which only an encore could allay. Mr. S. L. Goldman substituted "Dreams" for "Leonore," the song which appeared on the programme, and achieved success. An instrumental trio for mandolin, violin, and piano was the last item before the interval. Dr. Moore took the violin, Mr. Griffin the piano, and Mr. Adelstein the mandolin. The piece was a serenade from the "Rose di Maggio," a composition in which the mandolin was heard to perfection. We should have preferred the violin to have adopted a more prominent tone in this serenade, its subordination to the mandolin being at times too pronounced; but the general effect we must hold was very charming.

The second half commenced with a piano duet from the "Caliph of Bagdad." Seldom have we heard better orchestration than was displayed by Mr. and Miss Griffin in this selection, the *gawaf* of a full orchestra seeming to be called upon during its rendering. As the applause died away, Mr. Adelstein appeared to give for the first time in Yokohama two lute solos. Schubert's "Serenade," a dreamy composition of some merit, was the first of the bracketed pieces, and was beautifully executed; but surpassing it in daintiness was the "Elegia" of Musso. This was a veritable gem. Not less pleasing in another fashion was the next contribution of Miss Bloxham's, Goring Thomas' "Summer Night." Plaintive in melody as well as in words, this song is such an one as Miss Bloxham has taught us by her

exquisite handling to value highly. Last evening, too, her voice seemed more than usually charged with that suggestion of unshed tears, of patient heart-wrung yearning which casts such a spell upon all her hearers. At the conclusion of the song the audience were so insistent that Miss Bloxham returned to the platform and drawing off her gloves sat down to the piano. She then gave as an encore the Highland ballad of Lord Ronald McDonald and his Lowland bride "who killed her skirts of green satin" and hied to the northward in response to his frequent request to "gang to the Highlands." The instrumental quartette, the "Intermezzo Sinfonico" from the "Cavalleria Rusticana" was another number delightfully given and had to be repeated before the house would let the musicians go. Mr. Goldman next gave "Alla Stella Confidente" with lute obligato by Mr. Adelstein. This was a most finished performance and was loudly applauded. An instrumental sextette, comprising violin, viola, flute, cello, mandolin, and piano, concluded one of the most enjoyable concerts ever given in Yokohama. We hope Mr. Adelstein will see his way to give us another concert before long. The following was the programme:—

- 1.—Piano Duet....."Norma".....Bellini.
Miss Griffin and Mr. Griffin.
 - 2.—Vocal Solo....."The Bunnet Month of May"
H.R.H. Prince Beatrice.
 - 3.—Mandolin Solo.....
"Fantasie".....Verdi-Rovinnani.
"Souvenir de Firenze".....Bellini.
Mr. Samuel Adelstein.
 - 4.—Baritone Solo....."Dreams".....
Mr. S. L. Goldman.
 - 5.—Instrumental Trio....."Rose di Maggio".....Rossi.
Mandolin, Mr. Samuel Adelstein; Violin, Dr. Gordon Munro;
Piano, Mr. John Griffin.
 - 6.—Piano Duet....."Caliph of Haggad".....Boieldieu.
Miss Griffin and Mr. Griffin.
 - 7.—Lute Solo....."Serenade".....Schubert.
"Elegia".....Mussorgi.
Mr. Samuel Adelstein.
 - 8.—Vocal Solo....."Summer Night".....Goring Thomas.
Miss Bloxham.
 - 9.—Instrumental Quartette....."Intermezzo Sinfonico" from
"Cavalleria Rusticana".....Mascagni.
Lute, Mr. Samuel Adelstein; Violin, Dr. Gordon Munro; Cello,
Mr. W. A. Crane; Piano, Mr. John Griffin.

Graniani-Walter.
- Mandolin Solo, Mr. Samuel Adelstein; Violin, Dr. Gordon Munro; Flute, M. Lafaye de Micheaux; Viola, Mr. Dannenberg; Cello, Mr. W. A. Crane; Piano, Mr. John Griffin.

BASEBALL.

A Baseball Match was arranged on Saturday between teams from the U.S.S. *Charleston* and Yokohama, but rain fell before the game was concluded, only six innings being played. Both sides were out of practice, as will be seen by the scores. For Yokohama, Gibbs put out two men very neatly in the short time at his disposal, and both he and Tuska proved themselves good batters and runners, the former also running for Dr. Stokes. These teams, after a little practice, would probably give a much better exhibition of the game. Mr. W. S. Stone was the umpire, and his decisions—doubtless perfectly fair—were delivered with promptness, though they did not escape comment. When players question the decision of the umpire, they do not appear to see that they become self-constituted umpires, certainly an untenable position under any circumstances. Following are the scores:—

"CHARLESTON."			
	FOR.	RUNS.	OUTS.
Mr. Chipman	P.	4	1
Mr. Smith	C.	3	2
Mr. Mahoney	3 B.	3	2
Mr. Reamey	C.	3	2
Mr. Schuett	C.	3	2
Mr. Neimann	C.F.	0	3
Mr. Stevenson	L.F.	0	3
Mr. Magill	L.F.	0	3
Mr. Crosby	L.F.	0	3
18			
YOKOHAMA.			
	FOR.	RUNS.	OUTS.
Mr. Mortens, U.S.N.	C.	1	3
Mr. Stokes, U.S.N.	3 B.	0	3
Mr. Mortens	2 B.	0	3
Mr. Tilden	2 B.	0	3
Mr. Howard	P.	4	0
Mr. Tuska	P.	4	0
Mr. Gibbs	3 B.	4	0
Mr. Book	L.F.	1	3
Mr. Macdonald	C.F.	1	3
29			
INNINGS.			
"Charleston"	1	3	5
Yokohama	5	7	1
	0	4	3

Operas based upon English poems or English romances are growing common on the Continent. Verdi's latest operas are both founded on Shakespeare. A Danish composer has set a book adapted from Haggard's "Cleopatra," and a new opera, "Enoch Arden," drawn from Tennyson's poem, has been accepted at the Imperial Opera, Berlin. The music is by Victor Haussman, a young and untried composer.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, September 20th.

To-morrow Mr. Gustavus Goward's collection of works representing Japanese scenery will be on exhibition in the Art Institute of this city.

Capt. Wm. R. Bridgeman, late of the *Baltimore*, and Miss Mary K. Hesser, of Kanazawa, have recently died in this country.

Rev. Frederick J. Stanley, formerly of Tokyo, is now engaged in preaching and lecturing in this country. In his repertoire of lectures are found the following subjects:—"God's Footprints in the Orient," "The Three C's [Country, Customs and Characteristics] of the Land at the Root of the Sun," "Three S's and J's," or "Sights and Scenes of a Seven Thousand Miles' Journey from Japan to Jerusalem," "Pictorial Journey through Japan," and a "Parlour Lecture and Social Entertainment," in which Mr. and Mrs. Stanley appear in Japanese costume and illustrate Japanese customs.

The *Independent* of the 6th inst. contained an interesting article by Rev. W. E. Griffith, D.D., on "The Ecclesiastical Guillotine in Japan." Dr. Griffith will lecture this season, under the auspices of the Redpath Lyceum Bureau of Boston, on "The China-Japanese War in Korea," in which he will treat China, Japan, and Korea respectively as the "giant, athlete, and pigmy." "The Religions of Japan" by Dr. Griffith is announced by Chas. Scribner's Sons as "in the press," and will receive a hearty welcome by all scholars.

Lafcadio Hearn's "Glimpses of Unfamiliar Japan" will soon be issued in 2 vols., 800, at \$4.00 by Houghton, Mifflin and Co.

The War Department, accepting the invitation of the Japanese Government, has detailed Lieut. Michael J. O'Brien, of the Fifth Infantry, to accompany the Japanese forces during the war with China; Lieut. O'Brien bails from South Boston, and graduated from West Point in 1885.

The press of this country hailed with delight the news of the glorious Japanese victory at Pyongyang; and are pretty generally hoping for a speedy revision of the treaty between Japan and the United States. There is considerable chagrin felt because, on account of the unwarranted prejudice of the Pacific Coast Senators against Japanese immigration, England was enabled to get in ahead of us.

Gen. Ezeta, of San Salvador, has thus far escaped extradition at San Francisco.

Lieut. Peary's party, except Lieut. Peary and two companions, have reached St. Johns, N.F., in safety, and tell tales of hardships and mishaps. A tidal wave carried away a stock of petroleum which was to be used for fuel, so that they were compelled to burn their houses and quarter with the natives. They were also compelled to eke out their rations with walrus. On September 12th, 1893, a baby was born to Lieut. and Mrs. Peary in Greenland. Lieut. Peary and companions remain at Bowdoin Bay to continue the explorations for another year.

The westward record on the Atlantic is now held by the American liner *New York*, which recently made the trip in 6 days, 7 hours and 7 minutes from Southampton to New York City. The bicycle mile record has also been pulled down a little by Tyler, of Springfield, Mass., and stands now at 2.03½. And yesterday at Galesburg, Ill., Alix dethroned Nancy Hanks by trotting a mile in 2.03½. It is interesting to note how closely together a horse and a man on a wheel can make a mile.

Two very prominent "old-timers" died on the 1st inst. One was Samuel J. Kirkwood, Iowa's "War Governor," ex-Senator and ex-Secretary of the Interior; the other was Gen. Nathaniel P. Banks, ex-Congressman, ex-Governor of Massachusetts, and an able officer in the Civil War. He was the first Republican Speaker of the House of Representatives.

Recent important nominations are as follows: State-Senator Coffin (Rep.) for Governor of Connecticut; and Ex-Vice-Pres. Levi P. Morton (Rep.) for Governor of New York. For the latter position Gov. Flower (Dem.) declines to be a candidate for re-election.

The Republican victory in Maine (with the immense plurality of 38,424) is not so much of a gain as is claimed. The Republican vote is not much larger than in 1892, but the Democratic vote was greatly reduced. The Democrats in large numbers stayed at home; that is all.

The Sugar-planters of Louisiana are organizing a movement in the interests of the Republican party. It is to be hoped that they will succeed in "Solid South." It seems quite likely that

that the Republicans will make large gains all over the country; and it is not improbable that they will regain control of the House of Representatives. They will also fight hard for the Senate.

The annual encampment of the Grand Army of the Republic was held this year in Pittsburgh. Col. Thos. G. Lawler, of Rockford, Ill., was elected Commander-in-Chief.

The evidence is all in on both sides in the case against Debs *et al* for contempt of court before Judge Woods. After the counsel have furnished an abstract of evidence and printed briefs of their arguments, and have had a chance next Tuesday for oral argument, the court will take the matter under advisement.

The Civil Federation of this city has entered upon an active warfare against gambling. Several raids have been made with more or less success; but in one case the gamblers were ready with writs against the raiding officers for "riotous behaviour" displayed in the act of breaking up the gambling paraphernalia. There is a very strong suspicion that the gamblers are privately "protected" by the city authorities.

On the 15th inst. the wreck of a freight train near Hammond, Wis., set fire to two oil-tanks which exploded and scattered their blazing contents over a crowd of spectators. Many were badly burned; but no one was killed.

The frequent rains of this month have been generally too late to do much good to the crops; but to some extent in certain localities they have improved corn and have revived the dried up pastures.

From all parts of the country come reports of slight improvement in general trade. The gold reserve in the U.S. Treasury is gradually increasing.

The Chicago schools have opened this fall with largely increased attendance, which in some instance has outrun the largely increased facilities. The colleges and universities also report gains.

There is a plan under consideration for re-organizing Harvard University by splitting it up into several colleges, somewhat after the Oxford plan, with about 500 students in each.

Mrs. Stanford has generous plans for improvements in Stanford University. That institution will receive \$3,000,000 at the distribution of the estate. This sum will be used for a library building (\$150,000), a memorial chapel, a girls' dormitory (\$250,000) and a chemical building (\$50,000.)

The Board of Regents of the University of Wisconsin have exonerated Prof. R. T. Ely from the charges brought against him by State Superintendent Wells.

The "missionary extension course" of the J.P.S.C.E. began here on last Sunday. Speakers are to go about to the large centres, and even to smaller places where they may be called, and are to address mass meetings on missionary subjects (home and foreign). It is hoped that \$1,000,000 may be raised by the Christian Endeavour Societies before January 1st, 1895, to pay the debts of the denominational missionary societies.

THE QUESTION OF KOREA.

I venture to think, for reasons which will be found below, and at greater length in my forthcoming book on the Far East, that British opinion is being led on the wrong tack with regard to the question of Korea. And, moreover, that the Government, by taking no step to stem this ill-directed current, is preparing an unpleasant and wholly unnecessary situation for itself in the immediate future. Its silence was happily broken a few days ago by Sir Edward Grey's answer to Sir Thomas Sutherland, and as I am writing thirty miles from a railway, in the remote north of Scotland, it may well be that further steps of which I am ignorant have already been taken in the same direction. There are, however, many considerations and facts which should be present in the minds of British readers, in view of the possible wide extension of the existing imbroglio, and these I shall attempt to state, only justifying my position by the remark that for more than three years I studied the Far Eastern problem in all the countries concerned, that I have visited all the treaty ports in Korea, ridden across the peninsula, and spent some time in Seoul.

Korea seems a very poor place to fight for. Its people are plunged in the most miserable poverty of any in the poverty-stricken East. Even the Siamese peasant, the most elaborately taxed person in creation, is rich in comparison with his Korean brother. The latter dare not save a single cash to be invested in any visible form, for the omnipresent *nyang pan*, under which name every official is known, from pounce upon it under some excuse or other. A five-pound note would be simply snatched from my hand if I saw, with

the possible exception of an animal or two, in a week's journey in the interior. From the King down to the lowest hanger-on of the palace, the sole interest in life of the whole *nyang-pan* tribe is to take from the hewers of wood and drawers of water everything except what is absolutely necessary to the preservation of life. Hence the total stagnation of commerce among the natives. There is no city in the Far East except Seoul where the traveller cannot find some object of art or manufacture to bring home as a specimen of native work. There I went into the street of the cabinet-makers for this purpose, but the most costly cabinet I could find was offered for two dollars, and it was not worth bringing away. Again, Korean money is marvellous among the currencies of the world for its worthlessness. Three thousand *sapek*, or cash, go to the debased Mexican dollar. They are made, so far as I could find out, of an alloy of zinc and dirt, and you can snap them between finger and thumb like a biscuit. Needless to add, they bear a grandiloquent inscription, declaring them to be the treasure of the world, and commanding that no one debase them. He would be an ingenious person who should attempt it. Again, in Korea the women are the beasts of burden—shocking in appearance beyond description. Its king is the worst type of ruler to be found in the whole East, and an interview with him and his son is a suggestion of the society of Gomorrah. The country has been believed by every traveller to possess considerable natural resources, but every attempt to develop these has come to utter failure. Mint, post-office, match factory, sericulture, mining—all of these have been introduced with a flourish of trumpets, to collapse miserably within a short time. If it had not been for the Japanese, Korea would still be the Hermit Kingdom, without a trace of trade, or the possibility of improvement. One thing only has saved it from being annexed by anybody who chose—the fact that it stands at the focus of the geography of the Far Eastern question, too important to Great Britain, Russia, Japan, and China for one of these to encroach upon it without arousing the instant opposition of the other three. The Korean navy consists of half a dozen "admirals," who know no more about a ship than a Hindu knows about skates—indeed, how should they since there is no Korean ship for them to know? And the Korean army is almost equally non-existent. There are a thousand soldiers or so, but no account need be taken of them. Two regiments of them were drilled for my inspection, and a very amusing sight it was—a sort of cross between Swedish gymnastics and the soldiers of Drury Lane pantomime. An eye-witness has just written in *The Times* that a number of newly-raised "naval soldiers" were armed with muskets without locks! So much for Korea itself. It is little, but it is all.

Five years ago the Englishman who knows more of that inscrutable entity, the Chinese mind, than any man living, told me that of all her "vassals," there were only two for which China would fight—Thibet and Korea. Personally, I do not believe that anything which could happen, short of an advance upon Peking itself, would cause China to declare war against any European power. The rôle of sleeping leviathan suits her perfectly, but she well knows that the first step she might take would destroy the illusion upon which her security is based. What she likes is to remain perfectly quiescent, while the world trembles to think what she might do if aroused—to lie still in her Confucian savagery, while such utterances as that mass of rubbish called "China: the Sleep and the Awakening," which the Marquis Tseng signed in the *Asiatic Quarterly* a few years ago, and represent her as advancing with a cautious but irresistible march. The strangest thing is that the civilised world has been deceived by these tactics, and even such keen analysts of national characteristics as the late Mr. Charles Pearson have painted a future in which China, having prepared herself by long training, should put forth her gigantic strength and overrun the world. This ethereal fable of "Jack and the Beanstalk" is amusing enough to anybody who really knows the first truths about China, but it is safe to conjecture that nobody has been moved by it to such hearty laughter as the great Viceroy of Pechili himself. China has long been destined to be the prey of the first armed comer. Fortunately for herself, but unfortunately for the interest of other countries, this has been Japan. She has no illusions about China, and she is engaged in pricking the bubble. But the Beanstalk is hard to cut down. A news agency solemnly announces that each province of China has been called upon to furnish 20,000 men; nineteen multiplied by 20,000 is 380,000, and the astounded reader is invited to believe that this enormous force is gathering and marching to Peking like Lars Porsena's men to Rome. The newspaper reader may perhaps be

be expected to know that the Emperor of China could as easily raise 20,000 men in Mars as in some of his provinces; that it would not be difficult to enlist a considerable force in one part of China to attack another part; that absolutely no organisation exists in China for the handling of such masses; that the men would find themselves without uniforms, without arms, without food, without the most rudimentary knowledge of war, without leaders of any description whatever; or that a huge army of the kind in the neighbourhood of the capital would be almost certain to seize the opportunity to upset the present alien Government. But it is hardly making too high a demand upon any reader that he should glance at the map of China, make a rough multiplication of the degrees of longitude he sees before him, and ask himself how 20,000 men are to march a thousand miles through a country which is always on the verge of famine. However, when one of our leading statesmen is of opinion that China must inevitably win in the end, "because of her enormous armed strength," other people may be excused for going astray. One expression of opinion has puzzled me extremely. Captain Lang, R.N., to whose great administrative skill and absolute devotion to her interests China owes most of whatever naval strength she may possess to-day—and whom, it may be added, she characteristically rewarded by dismissing him by intrigue and with insult—has recently been reported as saying to an interviewer, among many other rather startling tributes to Chinese naval prowess, that "with an officer like Admiral Ting, whom I would not hesitate to follow anywhere, the Chinese navy would prove a splendid force." Unless my memory is very much at fault, this worthy "Admiral" has had no education whatever as a seaman, owing his appointment to the ordinary routine of competitive examination in the Chinese classics, and being merely the nominal superior of Admiral—as he then was—Lang, to "save the face" of the Chinese. In fact, I believe he was previously a cavalry General, a branch of the service in which he would be equally unprejudiced by any information. Until I read this interview, moreover, I was under the impression that Admiral Ting Ju-chang was the hero of the story of the Chinese Admiral whom Captain Lang found one day playing pitch and toss, or what corresponds to it in China, with the sentry at his door, both of them seated on the floor of the Admiral's cabin.

The news at the present moment is that the Chinese fleet has disappeared, and that the Japanese ships are anxiously looking for it, while Li Hung-chang has explained that he knows very well where it is, but that for reasons of policy its whereabouts must be kept secret. The truth is, that if the Japanese do not sweep the Chinese from the sea, then study, skill, devotion, and experience go for nothing, and there is no need for us to train our naval officers at all. One thing only could save the Chinese on the sea—the enlistment by large promises of money of European naval officers, in whose hands complete and unfettered control should be placed. The Chinese seamen are not wanting in courage, but naturally enough they have no confidence whatever in their leaders, and they would probably fight well enough to give their undoubtedly fine ships a chance if they were well commanded. Even in this case, however, the fear would be that the ships have been allowed to deteriorate to such an extent that nothing like their best could be got out of them. I remember once being shown by a Chinese naval officer over one of their biggest ironclads, which was on a cruise at the time, and therefore presumably in first-rate condition. I noticed a gun carefully protected in a canvas cover. As we passed it, I asked casually what it was. The officer explained with pride that it was a new quick-firing gun, and called a quartermaster to remove the covering. The order was obeyed with evident reluctance, and when the gun was at length exposed it proved to be used by one of the watches as a receptacle for their "chow," and was filled with chop-sticks and littered with rice and pickles. Of course I promptly looked the other way, but it required no knowledge of Chinese to interpret the remarks of the officer to the quartermaster. No doubt the whole watch went thorough the process of "eating bamboo" the moment I was off the ship; but the Chinese are incorrigible. It would be discouraging to a European engineer who should be appointed to a Chinese ship to find that if there were any subordinate boiler small enough for the purpose, it had probably been used for stewing dog.

Another example of Chinese administration which came to my knowledge may be interesting at this moment. Some years ago the Chinese Government ordered a magnificent set of Hotchkiss cartridge-making machinery. In due time this arrived, but two mandarins claimed it for their respective districts, and, failing to agree,

each seized such portions of the machinery as he could secure and carried them off to his own place. When I was there, half the machine was in one arsenal and half in another several hundred miles away. Unfortunately, Europeans are not always above taking advantage of Chinese supineness. A cargo of cocoa powder was ordered from well-known manufacturers and landed at Port Arthur for use in the big guns there. By-and-by it was tried and found not to ignite, and finally the whole of it was thrown into the sea. But both Europeans and Chinese had pocketed a good "squeeze" out of the transaction. Stories of this kind could be told by the hundred. Two items of news which have recently been telegraphed may be recalled in this connection. The first is that on the march from Pechili to the Yalu River a large number of deserters fell out on the first day. They were probably wretched coolies fainting for want of food, but they were promptly beheaded. The second is that the Governor of Formosa has offered rewards for the heads of Japanese officers and men. When his coast is blockaded, as it may soon be to stop the supply of coal, his "braves" will have their chance. The Franco-Chinese war was marked by horrible atrocities, first on the Chinese side, and later, by a natural process of retaliation, on the French also. I have stood on the spot where a Frenchman was skinned alive by Chinese, and when Frenchmen had witnessed the unspeakable mutilations and tortures to which their captured comrades were subjected, it was not surprising that any Chinaman who fell into their hands received a very short shrift indeed. "*Fusilles-le moi!*" was a familiar order in those days. It may be well to remember by-and-by in defence of the Japanese that they are civilised troops fighting an enemy as cruel and unscrupulous as an Apache Indian. "When under arms," said Captain Lang in the interview I have quoted, "one-half of the Chinese army is made up of savages." I would suggest to any war correspondents who may be about to leave for the front that they will do well to attach themselves to the Chinese forces. If they then fall into the hands of the Japanese they will be treated with decency, whereas if they accompanied the Japanese they would be wise to adopt the method of men who fight the American Indians, and keep one cartridge to blow out their brains when capture became certain. At the risk of giving offence, I will express one more opinion—that any white man who allows himself to be bribed into fighting on the Chinese side should henceforward be treated as a pariah by his fellows. Some of the reasons for this view will be found below.

In spite of all that has been written about Japan, and of the thousands of people who have visited the country, Europe has not yet learned to take her seriously. The war with China and the treaty with England will at last force foreigners to see Japan as she is. The Japanese are a martial and a proud race, with marvellous intelligence, and untiring energy and enthusiasm. When Western civilisation was thrust upon them at the cannon's mouth they were quick to perceive the material and intellectual superiorities of their unwelcome visitors, and they set themselves to adopt these as rapidly as possible. They have been laughed at for sending a Commission to Europe to decide upon the best religion, but this was really on a par with the multitude of investigations they have set on foot in other directions. They did not find the religion, but they found an army and a navy, equal, so far as they go, to those of any of the great Powers; in scientific studies, in medicine, in photography, in many kinds of manufactures, they are astonishing the few observers who watch them, and the world will soon be equally astonished at this new competitor for markets. As soon as Japanese statesmen realised what was meant by the comity of nations they desired to enter it, and their political ideal was at once placed in view. It is both a simple and a natural one—to hold the balance of power in the Far East. What England was supposed to be in Europe for a long period, that Japan determined to be in her own part of Asia. To this end she has followed twin paths. On the one hand she has sought to advance herself in social organisation, in learning, in law, in political institutions. On the other hand, she has built up an armed strength with which to protect these things, and compel other nations, when the time came, to recognise them. It is no exaggeration at all to say that in the future, when distinguishing between the nations of Europe and those of Asia, Japan must be classed for all practical purposes with the former. As will be seen in a few months, Great Britain has taken the lead—and none too soon—in admitting this. It follows from the above that as China is the enemy, at all times and under all circumstances, of civilisation and of Europe, so is she the enemy of Japan. The Japanese regard

the Chinese with equal hatred and contempt. To the Chinese the Japanese are traitors to Asia. Japan has long held toward Chinese immigrants the attitude which Australia and the United States have at length adopted. Outside the Treaty Ports there is not a Chinaman in Japan. And they would not be in the Treaty Ports if Japan were not prevented by the treaties which Western nations have forced upon her from keeping them out. She believes that there is nothing whatever either to be hoped or feared from China, a belief which we, too, shall probably share some day. Her first collision with China came in 1874, when China abandoned the Loo-choo Islands to her. Then came the several collisions in Korea, in all of which Japan came off successful in the end. She will never give way to China at any point. Her view of China as a power is fairly expressed by a humorous article which appeared the other day in one of the Tokyo papers. There are two things, said the writer, which are indispensable to every Chinese soldier in the field—an umbrella to keep the sun and rain from him by day, and a lantern to enable him to find his way at night. What an opportunity, therefore, for Japanese merchants! Let them instantly send large cargoes of umbrellas and lanterns to Korea, and they will be sure of immense sales and profits.

Unless a great change has recently come over the diplomacy of Japan, it is Russia that she fears. The status of all the other European Powers in the Far East is fixed. Spain and Portugal count for nothing. Japan could wipe out either of them. France has no temptation extend north and east of Tongking. Germany is making great progress with her trade, but she has no territorial advantages to seek. Great Britain has reached her limit, with the exception of the Malay Peninsula, which will certainly be hers sooner or later, and of Siam, in which developments are possible; and Japan is not interested in either of these directions. But for Russia the Far East lies in the direct line of immediate expansion. The Tsar, as all European diplomatists are thankful to know, is at the present moment a great power for peace. In all relations, with this country at any rate, he has maintained an attitude which has made the path of international politics as easy and a pleasant one to tread. He has been firm but friendly, reasonable beyond the wont of monarchs, a devoted and straightforward ally to all preservers of peace, a terror to all who were tempted to imperil it. But Japan has learned that nations have to reckon with the inevitable *Drang* of other nations, and that the cannot count for security upon the desires of any individual. Japan has suffered once in a little transaction with Russia, when she exchanged Saghalien for the Kurile Islands. She has seen illegitimate European-directed sealing expeditions which sailed secretly from her shores, fired upon murderously by armed parties in Russian waters, and no redress or even information has been obtainable. She has watched the Russian fleet come for its manœuvres year after year to the Korean bay in which lies Port Lazareff; only the other day a Russian cruiser, the *Vitus*, was lost there. She knows that the Russian Minister at Sôul has tried—as one of his own colleagues expressed it to me—to *jouer un grand rôle dans un petit trou*. She has applied to the Russian Minister and the Chinese Resident there the proverb that "two foxes cannot live in the same sack." She remembers when a Russian man-of-war—I think it was the *Vladimir Monomach*—beat to quarters in Yokohama harbour and trained her guns upon an approaching British ship, and when she telegraphed down the coast for a little gunboat of her own which carried a 35-ton gun, and anchored it alongside the Russian before sending on board to exact an apology for so gross a breach of neutrality. The time for Russian action in the Far East may not be ripe yet, for it will be long before the trans-Siberian railway will be of any service. But sooner or later Russia will desire a winter harbour in those waters, and that harbour would be a serious matter for Japan if it were secured in Korea. China, it is true, has received from Russia, and passed on to England, an assurance that Russia will not impair the integrity of Korea; but Japan believes, whatever England may think, that this is not worth the paper on which it is written, more than any other engagements to which China is a party. Thus this question of Korea stands in the direct line of Japanese political interests.

According to modern views, however, Japanese commercial interests still seem to present a more cogent argument than her political ones. These must be briefly summarised at this point. Virtually the greater part of Korea's modern trade has been created by Japan, and is in the hands of her merchants. Except with China and Japan, Korea has little trade worth mentioning, and the interest of the latter is exactly twice that of the

former. The net value of Korean direct foreign trade for 1892 and 1893 together was \$4,240,498 with China, and \$8,306,571 with Japan. In tonnage of shipping the proportion is vastly greater in favour of Japan. Her tonnage in 1893 was over twenty times that of China, and the number of vessels entered and cleared was over twenty-five times. The exact figures are: tonnage—China, 14,376; Japan, 304,224; number of vessels—China, 37; Japan, 956. In fact, the tonnage of Japan's shipping trade with Korea last year was more than seven times that all other nations put together, including China! There is, therefore, abundant ground for Japan to be keenly concerned with what goes on in Korea. Many a Western war has been fought to preserve a smaller actual and prospective commercial preponderance.

The present war is the last link in a perfectly straight chain of circumstances. Korea remained sealed against foreigners of all nations until 1876. In 1866 an American trading schooner called the *General Sherman* had been destroyed by the Koreans, and her crew and passengers murdered. A man-of-war, the *Wachusett*, was sent to obtain satisfaction, but failed to do so. In 1870 a small American expedition again appeared, and while negotiations were in progress the Koreans fired upon a surveying party. Thereupon the American commander landed his troops upon the island of Kiang Hwa, destroyed five Korean forts, routed the army, killing three hundred men, and then retired, with the result that Korea was more firmly closed against foreigners than ever. The young King came of age in 1873, and succeeded his cruel and conservative father. In 1875 some sailors from a Japanese man-of-war were fired upon while drawing water at Kiang Hwa. The Japanese captain also destroyed a fort and killed a number of Koreans, but his Government followed up the incident by sending a fleet under General Kuroda to demand satisfaction, and offer the Koreans the alternative of a treaty of commerce or a war. The former was chosen, China, on being appealed to by the Koreans, refusing—as she has done on several similar occasions—to have anything to do with the action of her nominal vassal. A treaty was therefore signed on February 26, 1876, between Korea and Japan, and from this moment dates the opening of Korea to foreign intercourse. On this occasion, too, the suzerainty of China was formally set aside, without any protests on her part—indeed, with her express recognition, since she refused to interfere. Article I. of this treaty reads as follows:—"Chosen being an independent State enjoys the same Sovereign rights as Japan." Chemulpo, Fusan, and Wonsan were opened by this treaty to Japanese trade.

The King himself was in favour of extending the same privileges to other nations at their request, but the conservative party prevented him. In 1882 fresh overtures were made by foreign nations, and the reactionaries took alarm. Led by a "scholar" named Pe Lo-kuan, an insurrection broke out in Sôul, directed chiefly against the Japanese, as the promoters of foreign intercourse. Several members of the Japanese, legation were murdered in the streets, the legation itself was attacked, and Consul Hanabusa and his staff were at last compelled to cut their way through the mob and make for the palace, where they hoped to find refuge. Here, however, the gates were shut against them, so they fought their way out of the city with the greatest pluck, and walked all night to Chemulpo, where, to escape violence, they put to sea in a native boat. Fortunately the British surveying vessel, *Flying Fish*, saw them, and conveyed them to Nagasaki. This happened in July, 1882. Of course the Japanese Government took instant action, but with great moderation began by merely sending Mr. Hanabusa back to Sôul with a strong escort, to demand reparation. This was abjectly offered, and a Chinese force which arrived with marvellous promptitude suppressed the rebellion, execute a number of the leaders, and caused their mangled bodies to be publicly exposed. A sum of \$500,000 was accepted by the Japanese as indemnity; but was subsequently forgiven to Korea in consequence of her inability to pay it. Next year, other nations once more following in the steps of Japan, treaties with Korea were concluded by the United States, France, England, and Germany.

In 1885 the whole incident was repeated, with this difference, that the instigators of the outbreak were a few students who had imbibed progressive notions in Japan, and who imagined that, if they began by assassination, foreign nations would support them. During a dinner-party to celebrate the opening of the new post-office, an attempt was made to murder Ming Yong-ik, an influential nobleman, who, though he had visited the United States, was bitterly opposed to the party of progress, and was known to have expostulated with the King for having conferred office on the students who had been educated in Japan. The

revolutionary leaders proceeded to the palace, secured the person and to some extent the sympathy of the King, and in his name, and no doubt with his assent, despatched messengers, and finally an autograph letter from himself, to Mr. Takezoye, the Japanese Minister, begging him to come instantly and safeguard the royal person. Mr. Takezoye, accompanied by the legation guard of 130 Japanese soldiers, complied, and guarded the palace for days. In the meantime, the revolutionists executed five of the conservative Ministers. By this time the Chinese troops in Sôul had decided to assert themselves: two thousand proceeded to the palace, and without allowing any opportunity for negotiation or explanation, fired upon the Japanese guard. Although outnumbered by almost ten to one, the latter had no difficulty in holding their own, but at length the King decided, to prevent further bloodshed, to place himself in the hands of Chinese, and therefore he proceeded alone, with the consent of Mr. Takezoye, to the Chinese commander. Having no further reason for remaining, the Japanese left the palace, fought their way to the legation, but finding it surrounded by an armed mob of Chinese and Koreans, and without any provisions for a siege, they quitted it again, and it was immediately burned behind them. Then for the second time the Japanese representative and a small band of his countrymen fought their way through the streets of Sôul, and walked twenty-six miles to Chemulpo, where they chartered a steamer and returned to Japan. Again the Japanese Government demanded satisfaction, but this time from China, on account of the action of the Chinese soldiers. The negotiations between Count Ito and Li Hung-chang, at Tientsin, in 1885, followed, and after long delays, and finally a distinct hint from the former that if a result satisfactory to Japan was not arrived at, war would be declared, the Convention of Tientsin was concluded. China agreed to withdraw her troops from Korea, ■ punish her officers who had commanded the troops in Sôul on the occasion of the attack on the Japanese there on December 6th of the preceding year, and to investigate the outrages committed by her troops on the following day. The clauses of the Convention, which has unfortunately never been published officially, were two. The first declared that the King of Korea should be invited to form a force sufficient to preserve order in future, to be trained by officers of some nation other than China or Japan, and that certain internal reforms should be instituted by him; and the second, that either China or Japan should have the right to dispatch troops to Korea, ■ necessary to preserve order and protect their nationals, on giving notice each to the other, and that when order was restored both forces should be withdrawn simultaneously. Thus China at last formally recognised the equality of Japan with herself so far as Korea was concerned. This Convention shows one other important thing—that Japan put forward only the most moderate claims, that she sought no advantages for herself in Korea, but accepted in full satisfaction of her demands conditions which merely guaranteed the future peace and prosperity of Korea. These facts should be borne in mind when charges of intemperance are made against Japan at the present moment.

For the third time history has sought to repeat itself. Another rebellion broke out, which the King of Korea was wholly unable to suppress. This time Japan did not wait for the burning of her legation and the expulsion of her representative by the forces of Korean reaction. But let it be remembered that while landing troops in perfect accordance with her treaty rights, she again contented herself with proposing to China the joint occupation of the country until reforms should have been definitely carried out to render future disturbances impossible. Not one sign has she ever given, but quite the reverse, of the slightest intention to secure territorial advantages for herself in Korea. Upon China must rest the responsibility of refusing these terms. So far as my knowledge of the situation goes, I am unable to see how Japan could have acted up to this point with greater moderation, or could have been satisfied to propose any other conditions.

Whether Japan was well advised to plunge into war without making more prolonged attempt to gain her ends by peaceful means is another question. I am well aware that European diplomatists are generally of opinion that she was not well advised to do so. It must be remembered, however, that Japan knows China far better than we do; and that she may have had information which is not in the hands of spectators of her action, such, for example, as that China was preparing to place herself in a position of military supremacy in Korea before demanding her own terms for the future. At any rate, Japan has abundant evidence, as Great

Britain will be found to have recognised as soon as the new treaty is published, of her right to take her fate in her own hands, and so long as the interests of other nations are not threatened it is difficult to understand by what right they would interfere. So far, let me once more repeat, Japan has demanded nothing but an assurance of the integrity of Korea and the reform of her abominable institutions. If European nations step in on the mere plea of preventing the horrors of war, one does not need to be much of a cynic to suggest that they would do well to begin nearer home. Japan, in the opinion of those who know her best, may be trusted to conduct her hostilities in what is called a civilised manner. With regard to the affair of the *Kowshing*, it would be presumptuous in any one not an expert to express an opinion, even if the facts were not in process of sifting at this moment. But it should not be forgotten that two eminent professors of international law have written to *The Times* asserting that Japan was well within her rights in the action she took.

I come finally to the question of British public opinion and the British Government. For some inscrutable reason British opinion has from the beginning of the dispute been strongly anti-Japanese. *The Times* has within the last few days thrown the great weight of its authority a little more in the direction of sympathy with the Japanese, but otherwise, with the exception of the *Daily Chronicle* and the *Pall Mall Gazette*, every London paper, as far as I have seen, has pinned its faith to the justice of the Chinese side, and declared its belief in ultimate Chinese victory. And the Government, with the single exception of Sir Edward Grey's answer to Sir Thomas Sutherland, has spoken no word to enlighten the community. Yet it has concluded a treaty, in the negotiation of which both Liberal and Conservative Administrations have taken part, recognising Japan as an equal footing with every civilised Power, and conferring upon Japan the right of civil and criminal judicial control over British subjects. At last Japan will also be able to make her own Customs regulations, and will escape from the lordship of States of the overwhelming importance of Hawaii, Spain, Belgium, and Peru. The result of this silence, it may be feared, will be that the Government will produce its treaty at the very moment when public opinion in Great Britain has committed itself beyond recall to the opposite side. The situation will be an unpleasant one, and might conceivably have far-reaching consequences.

To the conscience of England the matter should take a slightly different form. Japan, in spite of all her mistakes, stands for light and civilisation; her institutions are enlightened; her laws, drawn up by European jurists, are equal to the best we know, and they are justly administered; her punishments are humane; her scientific and sociological ideals are our own. China stands for darkness and savagery. Her science is ludicrous superstition, her law is barbarous, her punishments are awful, her politics are corruption, her ideals are isolation and stagnation. In thousands of Yamen throughout China men are tortured every day, hung up by the thumbs, forced to kneel upon chains, beaten with heavy bamboos, their ankles cracked, their limbs broken. Every week men are publicly crucified and hacked to death by the "thousand cuts." How is anybody to desire the extension of the sway of the latter rather than that of the former, without avowing himself a partisan of savagery?—HENRY NORMAN in the *Contemporary Review*.

THE EFFECT OF FIRING BIG GUNS.

In an article on the Naval Manœuvres, a correspondent of the *Pall Mall Gazette* gives the following description of the internal effects of the firing of two guns on board the *Barfleur*. The *Barfleur* steamed in a circle, of which the centre was the target. When the range was 1,500 yards Lieutenant Horne was given a chance to show what the fore turret 10-inch guns could do. As we were steaming with the wind it seemed as if the men in the turret would have to wait for some time before their opportunity came. To fill in time I leaned in an easy pose against the brass rail of the fore-bridge, which is close to the turret. While I was so leaning the two 10-inch guns were fired simultaneously. For several moments I wondered what hit me and where I was hit. I had been regularly lifted by the concussion, but came down quite whole. Not so with the glass that protects the helmsman from the weather, or the windows in the chart-house. The glass in them is a third of an inch thick, nevertheless the windows were smashed to atoms. An ink bottle that stood on the table in the chart-house jumped about six inches. Every drop of ink sprang out, but the bottle dropped back to the spot from which it had jumped. Still, so far as noise is concerned, the sort of noise that penetrates and hurts, I would rather listen to 10-inch guns all day than to 3 and 6-pounders for an hour. The smoking-room of the ward-room is just forward of the after turret and on the main deck. One of the skylights in the smoking-room was open when the after-turret guns were fired. There were three water-bottles on the table at the time. There were also three tumblers. Both the bottles and the tumblers were full—full of water. When the guns were fired the bottles and the tumblers jumped into the air. Three gentlemen who were in the room also left their seats. The bottles and tumblers fell back into their old places, but every drop of water had been spilled upon the table. Nothing had been broken. Dr. Willis was in the sick bay when the after-turret guns were fired. The sick bay is on the lower deck. He was about to extract a tooth from a patient. The latter was seated. The doctor had just got the forceps in the right place, and had taken a firm hold when the double explosion occurred. Both he and the patient were lifted, and when they came down again the tooth was out. The doctor said he had not pulled, and the patient said he had not felt the tooth coming out. As a tooth extractor, without pain, it would perhaps, be difficult to beat a 10-inch gun.

to the spot from which it had jumped. Still, so far as noise is concerned, the sort of noise that penetrates and hurts, I would rather listen to 10-inch guns all day than to 3 and 6-pounders for an hour. LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, October 12.

According to the opinion of the Imperial physicians, the malady of the Emperor of Russia is incurable, though he will probably live several months. The Grand Duke Alexander will attend the Emperor to Corfu, after which he will proceed to Darmstadt to escort the Princess Alix to Russia, where the wedding will take place in November.

London, October 14.

The United States have declined to have anything to do with the Korean affair.

Her Majesty's ships *Spartan* and *Edgar* will shortly be ordered to Singapore.

The news about the Russian wedding is incorrect.

[The *Spartan* (8), is a twin-screw cruiser of the second class, 3,600 tons and 7,000 nominal horse-power; the *Edgar* (12), is a first-class twin-screw cruiser, of 7,350 tons and 10,000 nominal horse-power. The latter is at present attached to the Mediterranean Fleet, but the former is not yet in commission.—Ed. J.M.]

London, October 18.

Six steamers of the Volunteer fleet are to leave Vladivostok equipped as war cruisers.

London, October 19.

The Grand Duke Vladimir, the Grand Duke Sergins, and the Grand Duke Paul, escorting the Princess Alix, have started for Russia.

The *Journal de St. Petersburg* announces that the condition of the Emperor of Russia is worse. Prayers for his recovery are said in the churches of St. Petersburg.

[“SPECIAL” TELEGRAM TO “JAPAN MAIL.”]

Nagasaki, October 15.

The rumoured suicide of Li Hung-chang has been confirmed on good authority. He took poison, and died on Saturday.

[We doubt this.—Ed. J.M.]

Nagasaki, October 16.

The reported suicide of Li Hung-chang has not been officially confirmed, and is open to doubt.

Kobe, October 20.

Mr. Hussey, while piloting the *Wadena* through the Inland Sea, fell dead on the bridge at 8 a.m. yesterday. The yacht has returned to this port with the body.

[FROM THE “N.C. DAILY NEWS.”]

Hongkong, October 9.

Lady Robinson, who was confined on the 3rd instant, died on Monday. The child is also dead.

[FROM JAPANESE PAPERS.]

Hiroshima, October 16.

H.I.H. Prince Kanin Kotohito arrived at Chhon-ju on the 9th inst. from Phyoŋ-yang. He will command a division of troops at the approaching fight.

The Imperial Ordinance authorising the opening of the present session of the Diet on the 18th inst., was promulgated to-day.

Shimonoseki, October 16.

Count Inouye arrived here this morning. He will leave for Korea in two or three days.

Otsu, October 16.

Mr. Nukino Jo, of the 30th National Bank, Osaka, was relieved of yen 58,000 by pick-pockets last night while returning with that sum from the Nagoya Branch of the Bank. The affair happened in a train between Yawata and Hikone.

Hiroshima, October 16.

The House of Peers did not meet to-day.

The House of Representatives opened at 9 a.m. Mr. Mizuno, Chief Secretary of the House, first introduced Mr. Kusumoto, the new President, who gave a short address.

Mr. Shimada, Vice-President of the House, was next introduced. The latter returned thanks for his appointment.

Mr. Terata Hikotaro, the oldest member in the House, replied to the President and Vice-President on behalf of the other representatives.

Seats were then appropriated by lot, after which the eldest and the youngest members in each section was appointed its Chief and Manager respectively. The following is a list of the Chiefs and Managers:—

Section.	Chief.	Manager.
First	Okamura Mitsugu	Hiyama Tomio.
Second	Sugiyoshi Tadaharu	Kondo Shinsaku.
Third	Hanaki Jinemou	Yamamoto Ryutarō.
Fourth	Awaya Shinaro	Kanaka Matayemon.
Fifth	Nakano Chihō	Rai Toshinō.
Sixth	Hara Zenzaburō	Naohara Morijiro.
Seventh	Tomioke Kanichi	Minamishima Masaku.
Eighth	Terata Hikotaro	Kawakita Kanshiichi.
Ninth	Muro Kojiro	Nishimura Keiraku.

The House rose at 10 a.m.

Hiroshima, October 17.

Prince Wi-hwa, the Korean Ambassador, arrived here to-day.

The Radical representatives in the Lower House held a meeting to-day, and decided to introduce the following Representation into the House:—Our Empire is now passing through a crisis of great import, necessitating the rapid pushing forward of all measures relating to the extension of the Army and Navy. It is therefore desirable that the construction of the new war-ships approved of by the Diet in its Fourth Session should be expedited, so that they may the more speedily be added to the fleet. It is also necessary to complete the construction of fortifications in charge of the First Division, and to manufacture arms and ammunition with greater speed, while experiments with the newly invented powder should proceed more rapidly. The establishment of a steel factory is also necessary. Plans and estimates relating to these matters should be laid by the Government before the present session of the Diet, and if any of these projects do not come within the present intentions of the Government, then the authorities should not fail to ask the consent of the Diet to them in the next session. No negotiations with other parties in connection with this Representation will be made by the *Jiyu-to*.

Shanghai October 17.

Prince Kyo has sealed the residence of the Viceroy Li. So Kei has been released from his position.

Fusan, October 17.

Mr. Otori, Japanese Minister, leaves Soul to-morrow for home.

Izulara, Tsushima, October 18.

The *Sonyu Maru*, with Prince Wi-hwa on board, put into this port to-day owing to bad weather. Her departure has not yet been announced.

Fusan, October 18.

The military telegraph line has been carried as far as Wi-ju.

Shimonoseki, October 18.

A Korean despatch states that a Japanese resident in Soul, named Kobayashi, was assaulted by Koreans outside the Southern Gate while proceeding to Man-ri-so. Kobayashi drew a sword and slightly injured two of his opponents, one of whom was a Korean soldier, the other a Tong-bak partisan.

Hiroshima, October 17.

A report from Fusan received at Headquarters states that a number of disorderly Korean natives, calling themselves the Shogi army, created a riot in Chhol-la-do. The rebels are dominated by an anti-Japanese spirit. Korean and Japanese soldiers have been despatched to the spot. The report of a reconnoitering party sent to Ha-long has not yet been received, but rumour says that the rebels of that district have withdrawn from Ha-long. It is said that another mob is collecting in Chin-ju.

Shimonoseki, October 19.

A Ninsen correspondent, under date the 16th inst., states that seven Chinese residents have been arrested by the Japanese on suspicion of being spies. Three of them were handed over to the British Consul, who has since certified that they are not doubtful characters. These three Chinamen are to be sent back to China by a British man-of-war in two or three days. Of the remaining four, one has proved to be a spy, while the other three are under examination. Twenty-six Russian seamen entered Sôul on the 11th inst. for the protection of the Russian Legation.

Hiroshima, October 19.

Anti-foreign feeling in the interior of China has greatly increased since the beginning of the China-Japan war, and as the Chinese Government appears to be unable to restrain it or prevent an outbreak of violence, the British Government, considering that the lives and property of the British residents of Peking, Tientsin, and the Chinese treaty ports are in imminent peril, has decided to dispatch some troops from India, to afford necessary protection. The troops are said to be on their way to China.

Hiroshima, October 19.

The House of Peers met at 10.15 a.m. to-day. The President first reported that he had presented the Peers' reply to the Imperial Speech, at Headquarters. Count Ito, accompanied by Count Saigo, Mr. Yoshikawa, Viscount Nomura, and Marquis Satonji, then delivered a speech. During the afternoon sitting, the House passed the reports of the Special Committees nominated by the President during the forenoon for the purpose of investigating subjects connected with military and postal matters and the discontinuance of leave to visit Korea. The Committees advocated giving *ex post facto* consent to these matters. The resolutions were at once sent down to the House of Representatives.

The House of Representatives met at 9.25 a.m. The election of a Chairman of the Whole House resulted in the return of Mr. Suyehiro Shigeyasu (Extremist), who obtained 144 votes against Mr. Tanikawa Naotada's 124. The President next reported that he had presented the House's reply to the Imperial Speech, after which the House proceeded to elect the Standing Committees.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Oriental Hotel, 87, Main Street, on Mondays and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

Correct solutions received from Omega, J.D., and W.H.S.

PROBLEM No. 145.

By S. LUDW.

White to play and mate in three moves.

The following original position contributed by one of our readers (13 years of age), is given for the benefit of similar youthful aspirants for Chess fame. It shows considerable constructive ability. Solutions will be acknowledged.

PROBLEM No. 146.

By P. (Tokyo).

White to play and mate in two moves.

GAME No. 174.

This game is one of the recognised masterpieces of chess. Some years ago Herr Steinitz fully analysed the game, and we give his notes almost complete.

(EVANS GAMBIT.)

| 23—B to Q 7 ch. | 23—K to B sq. |
| 24—B takes Kt mate. | |

(a) Several defences intended to stop White's attack in the Evans. Like most others, it has not stood the test of analysis. It does no more than tide Black over the early difficulties without breaking finally the superiority of White's position.

(b) Q to K 5 at this stage has also been tried, but is considered inferior on account of the reply R to Q R 3, followed in answer by P to Q 3 by R to K sq. threatening P to K 5.

(c) This is the key move to the chief counter attack in the compromised defence after the third pawn has been taken on Black's seventh move, and evidently the discovery of its force due to M. Dufresne. The sacrifice of the P in this variation is bold and ingenious, but untrue; for thereby Black virtually abandons his surplus of pawns, since the pawn at Q 6 must fall, and the forces will, therefore, be even, with the position manifestly in the first player's favour.

(d) He is bound to seek protection for his B if he wishes to castle on the K side, for otherwise a piece would be lost, as White would capture K Kt with Q B.

(e) There was no time for this. Castling should not have been delayed. 24..... Castles; 25—Kt to K 4, K to R sq.; 26—B takes Q P, P to K B 3; 27—Q R to Q sq., Q to K sq., and the opponent exchanging it for the K B P, the diagonal of White's Q B will be closed by P to Q 3 with a satisfactory result.

(f) Feeble, but he was exposed to some loss. Castling was still best, but involved the loss of the exchange—25..... Castles; 26—B takes Q P, K to R sq.; 27—Kt to Q B 3, P to K B 4; 28—Kt takes Q P, Kt to Q 5; 29—P takes Kt, B takes Kt; 30—P to K Kt 3; and as the B can come back to K B sq. in case of need, White is in no danger, and Black gains nothing by Q to R 6.

(g) Kt to K B 3 or Kt to Q 6 ch. was threatened, and he had apparently nothing better. K to Q sq. was of no use either.

(h) This is the point to which attention should be directed. The merit of this great sacrifice is that it was then new.

(i) An evergreen in the laurel crown of the departed chess hero. This introduction would excite admiration in a problem which had involved weeks of labour. Yet here it is in actual play, and for depth and brilliancy united, the combination of which it is pregnant has hardly its equal in the records of hand-to-hand contests.

(j) Mr. Steinitz gives here the following pretty variation, apparently not noticed at the time:—29..... R takes P ch.; 30—K takes R (best), Kt to K 4; 31—Q takes Q P ch., K to B sq. (if K takes Q, then White wins by R to Kt 6 dis. ch.); 32—Q takes Kt ch., K to Kt sq.; 33—B to K 4 and wins. If at..... Kt takes Q; 34—R takes Kt ch., K to Q sq.; 35—R takes Kt ch., K to K sq. (to capture the R obviously loses the Q); 36—R to Q B ch., K takes R; 37—B to B 5 double ch. and mates in three more moves.

(k) Here, again, he might have been ungenerous enough to make White's main variation disappear for the discovery of the analyst, by 21..... K to Q sq.; 22—R takes P ch., K to B sq. (best); 23—R to Q 8 ch., K takes R; 24—Q to Q 7 ch., K takes Q; 25—B to B 5 double ch. and mates next move.

(l) How many players would have conceived such a wonderful termination, six moves deep, in actual play? The preparation of White's 18th move evidently foretold this extraordinary brilliant sacrifice, and its beautiful sequence. Andersen's grand "coup" must have been the result of accurate calculation, for White was menaced with mate in a few moves, which could not be avoided in any other way.

Lasker has been invited by the West Australian Chess Association to visit the West Australian chess centres. He has intimated in reply that he will arrive in the colony about November, and that his stay will extend to a fortnight.

A CHESS CAPRICE.

(FROM THE ITALIAN.)

Oh, to express,	And I confess
With real success,	That no address,
And worthy stress,	No dire distress,
The heartiness	Can well repress
With which I bless	The eagerness
The manliness	With which I press
Of pensive Chess.	To play at Chess.
For who can guess	No pitiless
The broad excess	Fair sorceress
Of thoughtfulness	Could dispossess
And steadiness	By soft caress
One must possess	By mien or dress
For full success	Th' obsequiousness
In playing Chess?	I owe to Chess.

As we anticipated last week, Tarrasch has won the Leipsic tournament which was played last month. We have not the exact score; but the following was the position of the prize-winners at the close of the contest:—

Tarrasch.....	first prize.
Lipke	second prize.
Teichmann.....	third prize.
Blackburne	fourth prize
Walbrodt	fifth prize
Janowsky } sixth prize.
Marco }	

Lipke, the winner of the second prize, is undoubtedly a great player. He earned his master title at Dresden in 1892 and won the chief prize the following year at Magdeburg. Teichmann is a member of the English contingent who but recently came into prominence by beating Baird and some of the lesser lights in England. Marco is a young player from Vienna, who divided second and third prize with Makovitz at Dresden recently. Janowsky is a Parisian. The remainder of the prize-winners have already won their spurs, and their names are familiar to most chess-players.

LATEST COMMERCIAL.

IMPORTS.

The general market continues in the same state as last reported, and all round business is not at all so lively as merchants could wish. Yarns continue dull, while there is still some demand for Grey Shirtings at or near late quotations. Fancies generally dull, but there should soon be a demand for Cloth and Blankets as winter approaches.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½ yds. 34 inches	\$2.25 to 2.75
Grey Shirtings—9½ yds. 45 inches	3.60 to 3.25

Iron Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

Market remains as last advised, and the outlook appears fairly good. No fresh arrivals of late from New York, and the stock of American Oil continues to decrease. The *Volute* is in from Batum with a full cargo of Russian oil in bulk.

Chester	\$1.75 to 1.77
Comet	1.72 to 1.75
Devoe	—
Russian Anchor	1.72 to 1.75
Russian Moon	1.70 to 1.72

SUGAR.

Brown—Not so much doing, as buyers appear to be digesting their former purchases. White—No change.

	PER POUND.
Brown Takao	\$4.20 to 4.40
Brown Manila	5.10 to 5.15
Brown Daitong	3.40 to 3.30
Brown Canton	3.70 to 4.40
White Java and Penang	7.10 to 7.20
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Much less doing, and the daily settlements have sunk to small proportions. Dealers talk of lower prices with a view to getting buyers interested once more. But there is at present no real fall, especially in sorts that are of current sale and well known cloths.

Mail*, No. 53, Main Street.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the JOURNAL for Investors, Speculators, and business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by an financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

THAMES ELECTRIC & STEAM LAUNCH CO⁹

ELECTRIC LAUNCH "GLOW-WORM," 537, by T. St.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal or Composite, either with Steam or Electric Power—Speed from 6 to 20 miles per hour;—also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.
Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.

A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E.,
Manager.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID BRAND
CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

September 8th, 1894.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 27TH, 1894.

BIRTH.

At No. 5, Kata Hira-cho, Sendai, on Monday, October 15th, at 4.30 a.m., to MARY ELEANOR BEERS, wife of HENRY SCOTT JEFFERYS, a son. Net weight 1280 grammes, i.e. 10½ lb. Both mother and child doing well.

MARRIAGE.

At San Francisco, October 18th, 1894, Mr. CHARLES HEYMANN, of Paris, and Miss ROSE HART, of San Francisco. (By Telegram.)

SUMMARY OF NEWS.

A SCHEME is on foot for building a dock at Uraga.

THE Race Ball takes place on Monday, November 5th.

THE Diet has voted a War Budget of one hundred and fifty million yen.

THE chrysanthemum shows at Dango-zaka are now open.

MR. KATO MASUO, was appointed on the 22nd inst. Japanese Consul at Fusan, Korea.

THE establishment of the Yokohama Rice Exchange was officially sanctioned on the 19th inst.

THE thanks of the Diet have been formally tendered to the Army and Navy engaged in the China war.

KAWAKAMI OTOJIRO, the *soshi* actor, has left for

Korea to gather material on the battle-fields of A-san and Phyong-yang for his next melodrama of the war.

KOBZ has been again defeated at cricket on its own ground by Yokohama—this time by eight wickets.

MR. OTORI, ex-Japanese Minister to Korea, who is now on his way home, will be appointed a Privy Councillor.

HANCOCK, the professional walker, has been out-paced by eight Kobe amateurs by 108 yards in a four mile match.

It is stated that some three hundred selected Japanese police constables will shortly be sent from Tokyo to Korea.

THE Korean Ambassador, Prince Wi-hwa, has been received in audience by the Emperor. He is now visiting the capital.

THE Korean Export Company, a commercial association composed of Osaka merchants, will have a capital of yen 500,000.

MR. IMAIZUMI YUSAKU, Instructor in the Tokyo Fine Art Academy, has been promoted President of the Kyoto Fine Art School.

THE First Army crossed the Yalu on the 24th instant, and the Second Army landed on the Lian-tong peninsula on the 23rd.

MR. FURUKAWA ICHIBI, the great mine owner, will have to contest his claim to the Mizusawa copper-mine in the Tokyo Local Court.

It is stated that the Cabinet has resolved to appoint Mr. Kitagaki, Governor of Hokkaido, as successor to the late Mr. Nakai, Governor of Kyoto.

ARRANGEMENTS have been made by the Red Cross Society of Japan to send a party of six physicians and twelve nurses with each military transport.

THE English Rothschilds have offered their services to Japan in floating a foreign loan whenever the Japanese Government considers that step necessary.

THE new yacht *Mary*, raced for the first time on Saturday, and proved herself a speedy boat. She won Messrs. Lane, Crawford, and Co.'s Cup with the greatest ease.

A HUNDRED Japanese fishing boats, each carrying a crew of four men, left Shimomoseki on the 11th inst. for the Tai-dong-kiang. Nothing is known of the object of their departure.

JUDGE NAGASHIMA IWAHO, of the Hiroshima Court of Appeal, has been promoted President of the Naha Local Court, Okinawa Prefecture—the position refused by the late Judge Chitani.

THE shock of the great earthquake of Monday was slightly felt at Nagoya, Hikone, Hakodate, Ishinomaki, Nagano, Fukushima, and Miyako. The shake was more strongly felt at Niigata, where clocks were stopped.

COUNT ARIMA RAIMAN has contributed yen 5,000 each to the War and Naval Departments. The Count also presented yen 3,000 towards the relief of families of his retainers who have proceeded to the seat of War.

DESPITE the unsuitability of the weather the Yokohama Autumn Regatta took place on Saturday afternoon. Only one mishap occurred, a boat engaged in the Junior Pairs being swamped in the heavy seas.

THE Aome and Kawagoye Railways having approached completion will be subjected to Government inspection before the close of this month. The lines are expected to be opened to traffic about the beginning of November.

REUTER telegraphs:—It is affirmed in Tokyo that Japan will not sheath the sword until she has exacted guarantees that in the future the Chinese will not meddle with Korea, and until an ample indemnity has been paid. It is reported that the Chinese are holding the Northern bank of the Yalu with a strong force, and that the Japanese have entered Yichou (Wiju). The *Novosti* urges Russian intervention and the annexation of Korea and Manchuria, thus enabling Russia to extend the Siberian railway to Söul, and to strengthen her footing on the Pacific. A Russian physician has informed the Czar that his disease is incurable, but that he may live some months. The United States have declined to join in any meddling with regard to Korean affairs. Germany has also declined to intervene at the present juncture, and it is believed that the project will collapse. The Chinese Legation repudiates a rumour from Shanghai that the Chinese have made overtures for peace, and states that peace is out of the question for a very long time. The Amir of Afghanistan is suffering from hemorrhage of the kidneys. Germany has expressed herself willing to co-operate with the other Powers with a view to protect European interests in the East. The Russian troops on the Amoor have been ordered to hold themselves in readiness in case of any internal troubles in China making intervention necessary. On the 20th instant, the British Government was informed by China that she was prepared to negotiate for peace. Overtures were accordingly made by the British Government to the various Powers with the object of arranging a collective representation to Japan, who also was asked whether the terms offered by China were likely to prove a satisfactory basis of negotiation. No definite reply has been received by Japan, but it is believed that a basis acceptable to her and China can be evolved. The majority of the Powers are in accord with Great Britain, and it is hoped that the others also will assent. James Anthony Froude, the historian, is dead.

THERE is very little change in the Import trade. Yarns are not much inquired for, and quotations are more or less nominal, while Shirtings only move slowly at late rates, and the stock being heavy there is no immediate prospect of any improvement in values. Fancy Articles are dull, but deals have been effected in Turkey Reds where buyers have been current. There have been small sales of Lawns, Velvets, and Satins. Woollens are dull, the expected activity not having yet commenced. Metals generally are not much looked after. Bar Iron has been taken at a fraction better money, but Plates are weak, and the only movement in Nails is delivery of previous contracts. Kerosene is steady at late rates with a fairly good business. The Sugar trade is healthy, most of the bargains being in Brown sorts, and stocks are being reduced. White Sugars are quiet, but prices for all kinds are fully maintained. The Silk trade has seen a considerable spurt during the week, and fully 2,000 piculs have passed the scales, sellers, as usual, trying, on the strength of this business, to put up prices, in which they will probably succeed so far as certain favourite chops are concerned. A moderate business has been done in Waste, at recent rates, and outgoing steamers are taking considerable cargo, largely previous purchases. A small trade continues to be done in Tea, but the finer grades of leaf are entirely absent from the market, and as probably there is but little more to come in from the country, the season may be said to be drawing to a close. Exchange has again fluctuated, though rates are now about the same as those of a week ago.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The special session of the Diet is referred to by the vernacular press as being as harmonious as its proceedings were unanimous. We proceed to collect some of the papers' comments:—Party spirit, so violent in preceding sessions of the Lower House that severe criticisms were pronounced on that body by both Japanese and foreign critics, did not obtrude even its shadow into the record of this last session. All parties received the Premier's address with applause and passed the War Budget without a dissentient voice. The task the House had been asked to achieve in seven days, it accomplished in three, a striking contrast to its custom on previous occasions. In short, it proved itself in every way a worthy legislature, fully appreciating the occasion, but not blinded by it, as witness its refusal to give *post facto* consent to the Edict relating to the travel to Korea, against which the popular voice had been loudly raised. The House has acquitted itself so well, there will be less disposition to assert that the Japanese are unfit for constitutional government. It is not indeed an exaggeration to say that even England, justly proud of the perfection of her constitutional institutions, might be pleased to call such a House her own. The Representation to the Government unanimously presented by the Lower House, and the letters of thanks and eulogy sent to the forces abroad through the Head-quarters by both Houses, will serve to the Army as a reinforcement of a million men and to the navy as an increase of a thousand ships of the line. The *Nichi Nichi*, rejoicing that the so-called popular parties have been awakened by the war to the importance of spending public money on coast defences and other military populations, says:—Let them not return to their old fallacy of considering that their sole duty in the House is to publicly announce their client's poverty and advocate administrative steps to lessen its rigour.

The *Yiji* heads one of its leaders "England and Japan," and advises English journalists in general not to unscrupulously assert their country's rights against Japan in small matters, such as the *Kowshing* affair, the pretended insult of Mr. and Mrs. Gardner by Japanese soldiers, and so forth. The goodwill shown to Japan by their government, much to the satisfaction of all Japanese, in revising the old Treaty, foremost among Western Powers, may fail to produce any beneficial results because of the recklessness of their petty attacks.

The *Mainichi* reads the recent issues of *The Times* as doing justice to Japan in calling her a rising Power in the East. Believing that the London paper has commenced to sympathize more with Japan rather than China, the Progressionist organ praises its English contemporary's wisdom. At the same time, it condemns *The Times* as somewhat shortsighted in its estimate of the tendencies of the time. "The London King of journals finds nothing better calculated to further British interests in Asia than that Russia should be prevented from obtaining in the North Pacific a harbour open all the year round. Japan is not fighting for mere lust of conquest. She has no selfish political ambition to achieve in the present war. Therefore, should she succeed in her aims, her gains will be shared equally by all other countries, including China herself. The flourishing trade which Europe, and especially England now enjoys with China, and the benefits and advantages accruing from it, are doubtless due to the twenty-five trading ports that England and France forced the Peking Government to open, by virtue of their superior military strength in the battles at Canton and Peking. Were the whole of China thrown open as it would probably be in the sequel of Japan's victory, the gain accruing to English merchants and traders would be immense, to say nothing of the benefit likely to be reaped by men of other countries. The *Mainichi* reminds Eng-

lishmen of the purpose that inspired them when they stood before the Congress of Powers, urging the necessity of reforms in the Turkish Government, which then looked in their eyes as barbarous and unhuman as the Chinese now appears in the eyes of the Japanese. That noble purpose no less than commercial interest should induce Englishmen to pray for Japan's success, rather than to think of their selfish Indian policy, and a paper of *The Times'* worth should entertain broader and more exalted views than those now found in its columns."

The *Nippon* has now finished the long article to which we alluded in our last summary. We give its spirit here. The Orient is the Orient of Orientals. Occidentals have only a partial interest in it. It follows therefore that an event might any day occur in which Japan has a mixed interest with one or more Western countries. Situated as Japan is, if she desires to rise as a new Power of the world, she must seek a close political friend or friends among the Powers of Europe. In the sphere of politics, love and smiles all round are forbidden. The present war, however victorious Japan be, may prove nothing or worse than nothing to her should her diplomatists fail to find, at an early date a true European friend, whose aim is to prevent other European Powers from carrying out their ambitious projects in the East and to confer the benefits of peace and civilization upon the barbarous or half-civilized nations of Asia. As to Korea, Japan has two things to accomplish, namely, to ensure its independence and to lead it into the route of proper administrative reforms. In order to attain the first of these objects, it will not suffice to humiliate China. The completion of the Siberian railway a few years hence will lead Russia to turn her eyes more keenly than ever upon the little peninsular Kingdom. In view of a prospect so obvious and so important, as well for Korean independence as for the fulfilment of Japan's mission to maintain the peace of the East, a child in politics can see how Japan should behave toward the great Northern Power. For the accomplishment of Korean reform Japan's friendly interference need not be carried beyond the following:—

- 1.—To induce the Korean Cabinet to engage a Japanese adviser.
- 2.—To see that the Provincial Governors are well selected.
- 3.—To cause an efficient police system to be established under each Provincial Government.
- 4.—To show how to reorganize the Army so as to make it strong enough to subdue a rebellion.
- 5.—To make the new Korean Government employ Japanese police and army officers.

As regards China, the *Nippon* considers it indispensable to make her agree that a Japanese military force sufficient to protect the Japanese residents, shall be stationed in an important town in the South. Without that peace should never be concluded with China, however strong her pledge to abandon her suzerainty over Korea or however large the war indemnity offered by her. The *Nippon* dwells long upon this question, since it regards Southern China as a very hopeful field of commercial success for Japanese.

The loan problem continues to torment metropolitan journalists. The *Yiji*, which has always most to say upon a question of such a nature, exclaims that the money market cannot but suffer when such a large sum as 150,000,000 *yen* is withdrawn from the usual channels of circulation. The war must run its course. The loan must be raised. The question now remaining to be answered is not whether it shall be raised but how. The Bank of Japan should not be allowed to issue convertible notes on the security of loan bonds. That might be considered by some a very good method of tidying over the present crisis without disturbing the monetary balance of the country. But in the *Yiji's* opinion, it would entail the troubles incidental to an over-issue of paper currency. No other policy is safe than to raise the necessary sum after the usual method of floating a loan. It is impossible to find lenders at 5

or 6 %, why not offer 7 %, or give a 100 *yen* bond for 70 or 80 *yen*? The *Yiju* advocates a foreign loan as the easiest and safest means of meeting the difficulty. It speaks of an increased issue of Nippon Ginko convertible notes as a right method of supplying the industrial and commercial classes with the capital that they will inevitably find lacking when the proposed loan has been floated, and it laughs to scorn the *Yiji's* fear of an over-issue of paper, since convertible notes can never be over-issued. The *Hochi* sees no great difficulties in the way of the proposed loan. Let the people, both high and low, carry patriotism, prudence, frugality, and industry to the uttermost. Money will flow into the Central Treasury as fast as necessary, without entailing any perceptible inconvenience either in the money market or in industrial circles. The Progressionist organ urges the Government to lower the denominations of the new bonds to the utmost practical extent. In this connection it may interest our readers to quote the *Yiji's* opinion that the amount of money circulating in the whole empire under ordinary circumstances is from 150,000,000 to 160,000,000 *yen*, and that the daily war-expenses are about *yen* 200,000.

Taking it for granted that, in semi-civilized society, nothing is more fruitful of domestic disturbance than differences of religious faith, the *Mainichi* discerns in China seeds of trouble ready to germinate. In addition to Buddhism, Christianity, Lamaism, and Mohammedanism, there are in the interior of China several other forms of creed, among which those known as the Haku-ren-kyo, the Taisei-mon, and the Koro-kwai are most prominent. All these different forms of faith are bitterly hostile to one another. The Haku-ren and the Koro fanatics are rancorous foes of the reigning dynasty, and the dearest wish of their heart is the restoration of the Ming line. Now that the former is waging a foreign war, their bows are bent against the Peking Government, and nothing but an ambitious and intrepid chief is wanting to precipitate rebellion.

The work of the Red Cross Society is spoken of almost unanimously by the vernacular papers as promising to effect even more than the war itself in reforming Chinese hearts and giving China an object lesson in the benefits of civilization and general progress. Seen in this grand light, the charitable institution is held to be entitled to more attention and aid than it now receives from either Japanese or foreigners.

EDITORIAL NOTES.

THE NIPPON SEA-WEED COMPANY.

The Nippon Sea-weed (*kombu*) Company is on the verge of bankruptcy. Its disaster, observes the *Yiji Shimpō*, is entirely due to want of foresight on the part of the managers. With the object of out-doing the Chinese merchants who had previously monopolized the trade, and in order to increase further the export of sea-weed, the Company endeavoured to facilitate matters for producers and to enhance the price of the article, with the result that production was extraordinarily increased and stocks accumulated in the warehouses of the Company entirely out of proportion to the demand. The Company at last gave way under the strain. Several influential business men interested in the Company are endeavouring to persuade the creditors to consent to a compromise, and there is still hope of the Company's being put on its legs again. The creditors would do well to agree to a compromise and save the Company, as the business is very profitable provided it be carefully managed. The chief places to which the sea-weed is exported are Shanghai, Tientsin, and Newchwang, where the average yearly demand ranges from 120,000 to 130,000 *koku*, and as the amount consumed in Japan is about 40,000 *koku*, the total demand for the weed may be estimated at 170,000 *koku* yearly. The amount

produced last year was about a quarter of a million *koku*, besides which there was a considerable quantity over from the previous year, consequently the supply was greatly in excess of the demand. The shrewd Chinese merchants, many of whom acted as agents of the Company by depositing a certain security, quickly discerned this state of affairs and gave up their contracts, although forfeiting their securities. The Company was at once placed in a very difficult position, but tried to hush up its failures and thus to bear through the crisis. But the mischievous machinations of some shareholders who endeavoured to make a profit by exposing the actual condition of the Company, combined with the outbreak of the war were too much for it. The failure of the Company has injured the sea-weed trade greatly, for Chinese merchants have begun to resume their original control of it. It is said that the market value of sea-weed, which at one time was as low as 200 *yen* per *koku* has somewhat improved, having risen to about 300 *yen*.

SWINDLING AGENTS.

It is undeniable that those re-called to serve in the army, no matter how strong the ties that bind them to their homes or the importance, from a business standpoint, of their stay in Japan, rarely show any hesitation in answering the summons promptly. The chief desire is not only to go to Hiroshima or Korea but to enter upon actual service; to have a brush with the enemy at the earliest possible opportunity. This laudable spirit of obedience to the Imperial mandate is everywhere visible. And yet there are equally undeniably those who must needs feel greatly disappointed, to say the least, at having to serve once more, particularly when that service is to mean nothing better than the routine of drilling raw recruits, mounting guard, or forming an insignificant part of the garrison of this or that city. The service in such cases is divested of glamour and cannot by any means be attractive to those who have settled down to other occupations which may, in many instances, be rendered hopeless for the future by reason of the interested person having to dissolve all ties connected with them. And here is just where the swindling fraternity have seen a fresh opportunity to trade on the credulity of other people. In the vicinity of nearly every barracks in Tokyo some of these men are ever loitering. As soon as they catch sight of some dusty pedestrian, with a bundle in his hand or hung across his shoulder, evidently approaching with the firm step of an ex-soldier and in consequence of the military summons which has brought him to the capital, they draw near and by dint of adroit questioning soon find out whether the man has any disinclination to serve or not. If he has, they throw out hints that they can get him free this time; they will not charge much for their service: three or five *yen* will be quite sufficient to do the trick, as they are "on intimate terms with the military authorities." A good many young men are so green, it is said, as to be gulled by these representations; the money is handed over or clothes in lieu of the necessary funds; the obliging friend bids the recalcitrant reservist wait where he is for half an hour and then goes quietly off with his booty, of course never to be seen again. It seems strange, but is none the less true that scores of similar cases have come to the notice of the authorities, and every Tokyo newspaper gives a place to warning re-enlisted men against the practices of such swindling agents. There is nothing novel in the idea: it is as old as the hills, having been practised everywhere in Europe. But it is strange how history repeats itself.

KOREAN CORRESPONDENCE.

THE Sŏul correspondents of several Tokyo papers have a number of anecdotes to tell of the unusual talents of Prince Wi-hwa, the new Korean ambassador to Japan. He is said to be a young man of remarkable abilities and with a decided taste for diplomacy. He is the son of one of the royal concubines, who for her beauty and the favour shown her by the King, was

posed to have been put to death by the Queen, who seems peculiarly given to unfortunate interference in a number of directions. The young prince was educated with unusual care, being his father's favourite from childhood, and the Koreans are delighted with the idea of his coming to this country and showing the Royal Family at its best.

Minister Otori is about, according to the correspondent of the *Miyako Shimbun*, to re-enter military service. He will, without returning to Japan, at once join the first *corps d'armée* under Lieut.-General Viscount Nozu. Another report states that he has offered to bring a volunteer regiment composed mainly of his old comrades into the field, and that this proposal will probably meet with the approval of the Authorities. We doubt the latter part of this rumour. It is true that nearly three hundred of his former companions-in-arms did once offer to go to Korea as his personal body-guard, just before the outbreak of hostilities. But a good many of these seasoned warriors have since been drafted into service, so that it is not clear where the material for the volunteer regiment would come from.

The price of necessities of every kind is reported to have gone up enormously in Korea, particularly in the north-western provinces. A metropolitan contemporary gives the following list of prices which speak for themselves:—

	Before the War.	Present Price.
Wine, per bottle	35 <i>sen</i>	1 <i>yen</i> 50 <i>sen</i>
Eggs, each	1 <i>sen</i>	3 <i>sen</i>
Salt, per <i>sho</i>	20-30 <i>sen</i>	1 <i>yen</i>
White sugar, per <i>lb.</i>	9 <i>sen</i>	45 <i>sen</i>
Chestnuts, per <i>sho</i>	5-7 <i>sen</i>	20 <i>sen</i>
Cheap native tobacco, per package	8 <i>sen</i>	10 <i>sen</i>
Native cigarettes, per 50 pieces	5 <i>sen</i>	80 <i>sen</i>
Wheat, per slice	5 <i>sen</i>	1 <i>sen</i>
Native underclothing, the piece	30-35 <i>sen</i>	1 <i>yen</i>

On the other hand, with the sole exception of rice, the value of cereals has not increased in proportion. Millet, maize, barley, and buckwheat and plentiful and not too dear. Vegetables or greens are exceedingly scarce and very high, particularly those raised from seeds imported from Japan.

MARQUIS MAEDA'S CONTRIBUTION TO THE WAR FUND.

MENTION has already been made in these columns of the very large sums contributed to the war-chest by several leading members of the nobility: 20,000 *yen* by the House of Satsuma, 15,000 *yen* from the House of Mito, and so forth. But by far the largest donation is that of Marquis Maeda, which is truly a nobly generous and patriotic gift. He hands first one hundred thousand *yen* to the Army and Navy Departments, for equal distribution; then six thousand *yen* to the poor families of re-enlisted men coming from the three provinces of Kaga, Echū, and Noto; moreover, in the case of any men of these three places being killed in battle, he promises to pay fifty *yen* to the family or surviving relatives if the deceased has been an officer; twenty *yen* if a petty officer; and five *yen* if a common soldier. Finally he gives two thousand seven hundred yards of good thick flannel, to be made up into underclothing, to the Navy; and four hundred and fifty yards of the same material to the Army. It goes without saying that the Japanese papers speak in the very highest terms of this most generously patriotic gift and pledge. Several journals slyly hint that this should be a lesson to less open-handed though much richer noblemen. But so far as things have gone at present it is remarkable with what zeal and generosity the titled classes have responded to the call: not merely investing large sums in the War Loan Bonds, but making also equally large donations of money to the War Fund and all sorts of comforts and luxuries to the men who are fighting for Japan's name and fame in a foreign and hostile land.

PATRIOTIC ADVERTISEMENTS.

WE notice in a number of metropolitan journals the appearance of patriotic devices in advertising columns, all of a nature well

calculated to attract the eye. Among others there is one representing a huge hand grasping a bayonet, on the end of which a painfully-impossible Chinaman is impaled in the manner of the professional beetle-sticker. In another instance the advertisement is surrounded by a border of the following novel description:—On the right is a vertical column of miniature Japanese soldiers running, gun in hand, their Chinese adversaries being depicted on the left, weaponless, with queues shaped like the letter S, and evidently in the panic of precipitate flight; the upper border is composed of small Japanese naval ensigns, while the lower border is made up of inverted Chinese standards. A third advertiser—a druggist, of all folks in the world—has as a centre-piece a Japanese soldier loaded down with heads of decapitated Chinese. Groups of the national flag are also very common advertising attractions, particularly in the case of book stores announcing the publication of some new work on China or Korea. But best of all is perhaps a quaint ornamental head-piece representing the Chinese Sovereign on his knees imploring his life at the hands of an irate Japanese soldier with uplifted sword.

SCIENCE IN JAPAN.

As illustrating the notice accorded to the progress of scientific research in Japan, we quote the following from *The Times*:—

A book especially devoted to water, but in peace rather than in war, is the large volume on *The Water Supply of Towns, and the Construction of Water Works*, by W. K. Burton, Professor of Sanitary Engineering in the Imperial University, Tokyo (Crosby, Lockwood and Co.). Of course, there are many other such works in existence; Mr. Burton refers to several of them in his preface and quotes others elsewhere. But his book is interesting in itself, not only in its text and in its excellent illustrations, but because it is one more proof among very many of the extraordinary scientific advance which has been taking place for several years in Japan. This is not the place for discussing the question whether that advance is likely to stand the strain now being put upon it by war; but the books that are being constantly produced, either by the Japanese themselves or by their European instructors, are enough to show that, so far as intelligence and materials are concerned, the Japanese must no longer be measured by Oriental standards. This is brought out to a certain extent by Mr. Burton's work, but still more by such a publication as the journal of the College of Science, Imperial University, Japan, of which two new parts have just reached us. A few of the articles are written by European professors, but some of them, on questions of minute embryology and on the constitution of glycerol and its derivatives, are written by Professors Mitukuri and Sakurai, and would do credit to any Fellow of the Royal Society. The observations made by the former upon the development of the young in the egg of the sea turtle are of high scientific interest. And yet it is only about 25 years since the Japanese awoke from the sleep of centuries and determined to learn all that the West could teach them! Where will they be a century hence? Is it from them that Lord Salisbury's "little oasis" is destined to receive its widest and most rapid extension?

MARUBASHI MITSU.

THE preliminary examination of Marubashi Mitsu, arrested some ten days ago at Nagasaki, as reported in these columns, on suspicion of being a Chinese spy, has now been concluded, with the result that the woman is proved beyond all doubt to be a Chinese emissary of some sort. Her case is a peculiar one. A native of Shizuoka, she chose the profession of a female physician of the *kampo* or Chinese medical style. Not doing well in her own province, she for some unexplained reason found her way to Shanghai, where she soon obtained a Chinese *clientelle* among the subordinate physicians of the native town. Being tolerably well-favoured, she is reported to have formed other *liaisons* of a less reputable nature, and at all events was admitted as an intimate into a number of Chinese families. Her own countrymen would have nothing to do with her. Shortly before the outbreak of the war she was noticed in constant and secret communication with a number of Chinese officials, so that upon her arrival at Nagasaki—the police having full cognizance of the facts beforehand—she at once became an object of suspicion. It was another link in the chain to find her making arrangements to rent a house at twenty *yen* a month, an unconscionable sum for a

woman in her station of life. Upon being arrested, a thorough search was made among her effects, which elicited the discovery of a number of compromising documents, among others several letters from the Taotai of Shanghai. These have since been deciphered, and it appears that the suspect has long been, and most probably still is, in the Chinese secret service employ. The woman is quite young yet—only twenty-four—and appears to be fully aware of the danger she is in.

THE LATE MR. MAGATA SEI.

Of recent years the two most prominent men in the field of typography in Japan have been Mr. Hirano Toniiji and Mr. Magata, the former one of the co-founders and the latter the sole Manager and Director of the great Tsukiji Type Foundry, Tokyo. Mr. Hirano, one of the most progressive and enlightened men of the Bakufu days, and entirely absorbed in encouraging the advance of printing in his native land, died, a little less than two years ago; and now we regret to have to record the sudden decease of his colleague, Mr. Magata Sei, who succumbed to a short and fatal disease at Himeji on the 15th inst. A native of the southern part of Japan, Mr. Magata was one of the patriots who, in the early sixties, did not fail to see that the introduction of Western art and science meant the sole possible salvation of Japan. The spread of knowledge he regarded as the best means to that end, and printing from movable types became with him and his fellow-thinker an absolute national necessity. The story of the introduction of Occidental typography into Japan reads like a romance, and has been ably set forth in a little pamphlet got out by the above-named foundry. It is written in English so that further reference here is unnecessary; we need only mention that the *Insatsu Kyoku*, the great Osaka Type Foundry and Printing House, as well as the Tsukiji Type Foundry, were all outcomes of the devoted labours of these men. Under Mr. Magata's direction the Tsukiji Foundry has flourished exceedingly, being not only on familiar terms with like institutions the world over, but also notable for the number of admirable and novel founts invented there. It is no little thing to say that the Tsukiji Type Foundry supplies every newspaper-office with type, machinery, and every other typographical appliance, throughout Japan. Moreover, the same establishment's excellent English type, representing a large variety of useful and ornamental founts, is sold to foreign journals not only in Japan but also in China, Siam, Batavia, and the Straits Settlements. It is also due to Mr. Magata's indefatigable efforts that lithography has made such unexampled progress in this country, as well as colour-printing, photo-lithography, and zincography. Personally Mr. Magata was a man of great magnetism; warm-hearted, generous, forgiving, thoroughly honest, and the soul of honour. The hundreds of employes in his great establishment knew that he was ever looking after their interests and hence placed the most unbounded confidence in his gentle rule. To those who knew him intimately he was the truest and best of friends. His funeral, which took place on Sunday, the 21st inst., from a temple in Shiba, was attended by thousands who mourned his loss; and we best echo the popular voice when we say that Japan could ill spare such a man. Mr. Magata leaves an only daughter and an adopted son.

THOROUGHLY SCARED.

THE *Asahi Shimbun* has an amusing story to tell of the Chinese captives now at Miyakomura in Ehime Prefecture. They are provisionally housed in the Choken-ji, a large and well-built temple, and every attention is paid to their reasonable wants. The other day a big funeral was celebrated at another temple in the immediate vicinity, drums and gongs making a great noise as the procession slowly approached. For some unknown reason the Chinese appeared, without exception, to take this as the signal of their own dissolution, believing nothing less than immediate decapitation to be in store for them.

With folded palms they beseeched their guards to have mercy, kowtowed repeatedly, while many burst into despairing tears. It cost considerable time and trouble to reassure the trembling Celestials, but when once the fact that their lives were to be spared "this time" was thoroughly understood, their joy knew no bounds. "What a cowardly lot they are, after all," remarks the *Asahi* scornfully.

LESSONS OF THE NAVAL MANOEUVRES.

Two interesting articles on the naval manoeuvres of July appear in the magazines for September: one, in the *Nineteenth Century*, by Mr. W. Laird Clowes, whose book "The Captain of the Mary Rose," attracted considerable attention last year; the other, purporting to be written by a foreigner, appears in the *Fortnightly Review* under the pseudonym of "Nauticus." Both are admonitory in tone: Mr. Clowes referring more especially to the lessons to be derived from a study of the manoeuvres; "Nauticus" insisting strongly on the fact that our Navy is undermanned.

Both writers agree in their interpretation of the scheme of the manoeuvres, but Mr. Clowes goes into this point more fully than "Nauticus." We have not space to explain fully the plan of operations, but we may briefly say that with the aid of an imaginary isthmus connecting Ireland with South America and the marking off of certain areas as neutral ground, the Irish Sea was transformed into a reproduction on a reduced scale, and as seen in a looking-glass, of the Mediterranean Sea, in which a naval contest was to take place between two rival navies supposed to be those of England and France respectively. The aim of the manoeuvres was to demonstrate what would happen if on the one hand French fleets at Toulon and Brest, and on the other English fleets at Plymouth and Malta, were, on the outbreak of war, simultaneously, to commence operations. Whichever combatant could succeed in joining its forces first might hope to attack and destroy the enemies' two fleets in detail. As one of the writers say, in such a situation strategy is practically impossible, any one with a map and a pair of compasses can foresee what the result must be, and all the fleets could do was to sail straight to the fate preordained for them. What actually happened was this: the Toulon Fleet steamed straight for Gibraltar, made a junction, near the fortress, with the Brest Fleet, and, steaming on into the Atlantic, encountered and defeated the Plymouth fleet, to which the combined forces were immensely superior. Two of the French ships were considered to be sunk by the fire from the Rock. Returning into the Mediterranean, the combined French fleets sought the Malta fleet and crushingly defeated it.

"Nauticus" ridicules the idea that the manoeuvres were necessary to teach what he considers to be self-evident truths, but in the main he agrees with Mr. Laird Clowes, who thus formulates the three leading strategical lessons of the campaign: first, to make certain of holding the Mediterranean we must, in addition to other measures, regularly maintain in that sea a naval force stronger than any foreign naval force in the same waters. We cannot rely on being able to reinforce our Mediterranean fleet from the Channel. Secondly, so long as Gibraltar remains without the means of repairing on a large scale any vessels that may go thither seriously damaged, it is almost useless as a naval base. Thirdly, when fleets are separated, the interior position still confers, as it has ever conferred, enormous advantages upon the combatant who holds it. Mr. Laird Clowes concludes his summary of the strategical lessons of the manoeuvres by saying: "If we permit ourselves to be any longer tempted to hazard the continuance of our Mediterranean supremacy upon the chances of luck, upon the stupidity of a hostile admiral, upon the slowness of foreign naval mobilisation, or indeed upon anything outside of our own force, foresight,

and full preparedness, we may as well simplify matters and shorten the agony of our national dissolution by clearing out of the Mediterranean to-morrow and never again venturing thither.

"Nauticus" criticises severely the whole scheme of the naval manoeuvres. The Admiralty has, he says, got into a rut in the matter. First of all, the manoeuvres are no real test of rapidity of mobilisation, for they always take place in July, are expected, and carefully prepared for. Let them be held at an unexpected time, and few of our ships would be able to put to sea. In preparation for the manoeuvres, which are confidently expected as the summer comes on, minor defects, which at other times of the year are but too apt to be neglected, are carefully corrected. But mobilisation without notice would find many reported defects still awaiting correction. Secondly, the navy is seriously undermanned. The ships that were actually mobilised on July 18th, excluding torpedo boats and miscellaneous craft, numbered 39. There remained mobilisable but unmobilised, 40. Yet the ships actually mobilised were undermanned. They were all, for example, obliged to carry much too large a proportion of second-class or inexperienced stokers—men not able to get the best speed out of a ship. Many vessels were so short of officers that the strain upon the staff proved almost insupportable. Commanders and captains were put to do lieutenants' work. On the day after the mobilisation the Admiralty was in the position of being absolutely unable to commission properly so much as one additional torpedo boat. There was material in plenty, but men were not forthcoming. According to "Nauticus," to enable all the ships of the British navy to be completely mobilised, Her Majesty would need no less than 15,120 additional servants, men and officers together. If war were declared to-morrow, where would these men be obtained? "You will get them, I suppose, by accepting veterans who have forgotten the service, merchantmen who never had more than the vaguest knowledge of it, and landmen to whom the sea is a mystery; but I do not believe that in these days of scientific warfare people of that stamp will materially assist you in the work of winning battles. It would undoubtedly be safer for you to have the necessary men ready and properly trained."

Again, says "Nauticus," the Admiralty has got into a rut in the matter of using the Irish Sea for the naval manoeuvres. Year after year they attempt in the same place the elucidation of strategical problems illustrative of possible naval operations on a great scale. The Irish Sea is much too small for the purpose. A fleet has hardly a chance of avoiding discovery for as much as eight or ten hours, and strategy is therefore almost impossible. The absurdity would be apparent if it were proposed to hold the manoeuvres in the Solent, yet it is just as absurd, for purposes of strategical exercise, to make the Irish Sea do duty for the Mediterranean as it would be to make the Solent do duty for the Irish Sea, or to make the pond in St. James's Park do duty for the Solent. Next year the Admiralty should choose a wider area and a broader plan for the manoeuvres.

One extraordinary incident of the campaign is alluded to in severe terms by both the critics. One of the fleets was lying in Belfast Lough expecting an attack by hostile torpedo boats. As a matter of fact there was no enemy within a hundred miles, but the fleet in the Lough could not know this. If had retired into harbour after an action which the Admiral had regarded as indecisive, but which the umpire subsequently gave as a defeat against him. After dark a few boats were sent out to patrol. A little after two in the morning one of these boats returning into the harbour was mistaken for one of the enemy's torpedo boats. She was fired at, and the result was as remarkable as that of the stone thrown by Cadmus among the children of the dragon's teeth. About fifty

search-lights were soon flashing in every direction, all the ships began firing at anything and everything, and for about twenty minutes the fleet was actively occupied in destroying itself. As *The Times*' correspondent wrote: "The truth of the matter is that the entire fleet was in a condition which in war-time would have been one of panic. . . . No one knew whether he was firing at friend or foe. . . . If it had been real warfare, and we had been anchored at Gibraltar, having gone thither after an action with the French fleet, the affair would have been as good as a French victory, for we should probably have disabled or sunk half our own ships." Next morning five ships reported to have seen one torpedo boat, five others to have seen two torpedo boats, one to have seen three torpedo boats. Yet one torpedo boat and one only was in motion that night, and she was only a vedette boat, as different from any of the enemy's torpedo boats as a gunboat is from a line-of-battle ship. From this Mr. Laird Clowes draws the lesson that some scheme for ensuring the prompt recognition of friendly boats should be quickly devised and put into operation. The bewildering effects of the search-lights in Belfast Lough confirms what Mr. Laird Clowes said of their use in "The Captain of the Mary Rose."

THE PROS AND CONS OF A FOREIGN LOAN.

We find in the columns of a Tokyo contemporary an short summary of the views advanced in favour of or against a foreign loan at the present juncture. The conclusion arrived at is one which our readers will already have drawn for themselves, viz., those in power are opposed to the raising of a loan otherwise than in Japan, whereas party politicians in general as well as the leading merchants prefer getting the necessary war-fund from European money markets. The leading papers of the metropolis are divided into three classes: (1) those that are in favour of a foreign loan; (2) those who are strongly opposed to such a step; and (3) those who write in a cautious manner and advocate neither measure with energy. The names of the journals belonging to the first two categories are as follow:—

FOR.	AGAINST.
<i>Niroku Shimbun.</i>	<i>Nichi Nichi Shimbun.</i>
<i>Mainichi Shimbun.</i>	<i>Yoji Shimpō.</i>
<i>Hochi Shimbun.</i>	<i>Kokumin Shimbun.</i>
<i>Fiyu.</i>	<i>Nippon.</i>
	<i>Miyako Shimbun.</i>
	<i>Yorozu Chōho.</i>
	<i>Mesamashi.</i>

So far as numerical strength is concerned, it will be seen that the advantage is with the opponents of a foreign loan, though it must not be forgotten that the last three on the list belong to the category of the *Ko Shimbunshi*, i.e., the press of less importance. The *Nichi Nichi*, being semi-official, of course takes the view held by the Cabinet Ministers; the *Fiyu*, on the contrary, is independent and supposed to have great weight in commercial circles, yet here we find the same views expressed; the *Kokumin* is also independent, but with strongly defined *Kaishin-to* tendencies, so that it is a surprise to find this paper holding opinions at variance with the policy it is supposed to advocate; the *Nippon* is the most independent—and generally the most recklessly uncompromising—of the lot. The *Mainichi* and *Hochi*, representing the other side, are the mouth-pieces of the *Kaishin-to*, as the *Fiyu* is that of the Ultra-Radicals. The *Niroku* is not partisan in its views.

Nearly every Chamber of Commerce throughout the country has expressed an opinion on the subject, and all follow the lead of the Osaka Chamber, as modified by that of Tokyo. Only the Bank of Japan, the most important institution of all, is unhesitatingly opposed to borrowing funds in Europe, certainly not at present. With regard to Counts Iiagaki and Okuma, the former is represented as not having distinctly thrown the weight of his influence in either balance, yet he is avowedly against repeated domestic loans, believing the economic equilibrium of the country thereby liable to serious disturbance. On the other hand, Count Okuma

is definitely in favour of a foreign loan and has expressed himself strongly on the subject. These two gentlemen reflect the view of their respective parties; but it will be remembered that the raising of a 150 million yen fund in Japan was unanimously acceded to by the members of those very parties whose leaders and organs are theoretically opposed to this step. The Tokyo brokers are represented as being, almost to a man, disinclined to abet the issue of other War Loan Bonds, alleging, as they do, that the withdrawal of large sums from circulation will cause great suffering in many directions. The manufacturing class are, on the other hand, said to be in favour of the measure approved by the Cabinet. The war has here given great impetus to a number of works, and the tightness of the market is not so much appreciated as elsewhere. Patriotically speaking, the mass of the people is decidedly against borrowing from England, Germany, the United States, or any other country—as much as it is opposed to foreign interference until China is compelled to sue for peace on terms dictated by Japan.

NEATLY CAUGHT.

SHORTLY before 7 o'clock in the evening of the 22nd inst. a masked burglar, armed with a short sword, made his way into the dwelling of a wealthy merchant residing in Fukagawa District, Tokyo. The owner had just dined and was peeling a persimmon preparatory to eating it by way of dessert when the unwelcome intruder presented himself. The robber at once demanded all the money there was in the house, threatening instant death in case of a refusal. The only reply of the merchant, a middle-aged man of great coolness of mind, was to spring upon the burglar and inflict a slight wound with the fruit-knife he held in his hand. An unequal combat ensued, the merchant being cut in a number of places. In the meantime the wife and one maid-servant ran out into the street shouting *dorobo!* and soon a posse of police were surrounding the house, from which, however, the burglar had just managed to slip out unobserved. Immediate search was instituted in the neighbourhood, but without success. Finally, nearly two hours later, a strange-looking object was observed to be approaching the brink of the shallow pond in a temple of Benten, not far from the merchant's dwelling where the police were still keeping watch. Shivering and dripping, the burglar emerged from the pond only to fall into his waiting captors' hands. He had spent nearly two hours in the cold mud, he said, and preferred any length of imprisonment to staying any longer there, slowly freezing to death. Upon being taken to the District Station, he was found to have been wounded in four places by the intrepid merchant, whom he had been unable to rob of anything. He was proved to be a peripatetic news-vendor, and stated that this was his first attempt in crime. He had been in great need of the sum of thirty yen, and this as well as an ancient grudge which he bore the merchant in question, had led him to play the robber. The merchant is, according to the *Miyako Shimbun*, in great danger, no less than twenty-six different sword-cuts having been found on his body.

THE EMPEROR AT HIROSHIMA.

A CORRESPONDENT of the *Mainichi* sends the following account of the Emperor from Hiroshima:—"Since the Imperial Standard was raised in Hiroshima the indefatigable diligence with which his Imperial Majesty has attended to matters connected with the war is extraordinary. The Emperor rises at six every morning, and dressing himself in uniform, takes his seat on his chair and attends to military and other important affairs till 11 o'clock at night. He has only one room of 20 mats in which he attends to business, takes his meals, and sleeps. There is only one chair in his room, and though advised by his chamberlains to make use of a more comfortable seat he continues to use the old one. At about 4 p.m. he takes a bath, undressing himself with his own hands, after which he again dons his uniform and resumes his duty. At supper he only takes

two cups of wine, and as he attends to many matters after supper, he does not retire to bed as a rule till past midnight. Since his Majesty has taken up his Head-quarters at Hiroshima he has only left his room three times, namely, when he visited Kure, when the prizes taken at the battle of Phōng-yang were arranged for his inspection near the corridor of his room, and when he personally conducted the opening ceremony of the extraordinary session of the Diet. The Court physicians frequently advise him to take exercise, but he disregards all such remonstrances. Fortunately his strong constitution stands this unusual strain well, and he is as healthy and hearty as ever. This information, says the *Mainichi's* correspondent, was obtained from one of the courtiers in attendance on His Majesty.

YOKOHAMA ST. ANDREW'S SOCIETY.

THE annual general meeting of the Yokohama St. Andrew's Society was held on Friday evening, Mr. J. D. Hutchison, President, in the Chair. The report, which was adopted, showed that the balance to the credit of the Society's current account with the H. & S. Bank is \$270.48, and the Society has still a claim on the new O. B. C. in Liquidation, of \$165.80. Sympathetic reference was made to the deaths of Mr. Henry Steele and Mr. R. Inglis during the year. The membership is now 84, of whom 35 are absent. The officers elected for the year were:—President, Mr. J. D. Hutchison; Vice-President, Mr. J. A. Fraser; Committee, Messrs. R. W. Borthwick, E. Coutts, J. Troup, D. McNeill, J. Stewart; hon. treasurer, Mr. G. Philip; hon. secretary, Mr. C. W. Ure. It was resolved to send round a list to members for signatures of those who are in favour of a ball on the 30th November, and another meeting will be held to consider and determine upon this matter.

SCULLING.

THE Single Sculls Handicap, originally arranged as the sixth race at the Autumn Regatta, but postponed owing to the rough water then prevailing, has again had to be put off. The three competitors went down towards the starting post on Thursday afternoon, but Hood's boat filled before the starter could get the men into line, and the race was abandoned for that day. It is to be hoped that some smooth water will be found shortly, for the race should be a very good one, as Mottu conceded 15 secs. to Hood and 35 secs. to W. Goddard.

"FAIR JAPAN."

MESSRS. KELLY AND WALSH have issued, by way of a Christmas Souvenir to send to friends in the old country, a beautiful little book containing six photographs and as many verselets. The poet is Mr. William Tod Helmut, the negatives are by Mr. O. A. Poole, and the colotypes by Mr. K. Ogawa. All are excellent, and so are the binding and general design of the book. Anybody should be delighted to receive such a Christmas card, and anyone might be satisfied to send it. It is called "Fair Japan."

AN EXPLANATION.

WE learn from correspondence that Mr. Faga is apprehensive lest his connection with the shooting accident on the 15th instant may be misapprehended by readers of this journal. To remove all ground of error we therefore state that Mr. Faga was not present when the accident occurred, and that the gun was in the hands of a Japanese servant, or coolie, when it went off.

ALTERATION IN RAILWAY SERVICE.

THE following trains will not run to-morrow (28th):—From Shimbashi to Yokohama, 8.20 p.m., 9.05 p.m., and 11.10 p.m.; from Shimbashi to Kobe, 9.55 p.m.; from Yokohama to Shimbashi, 9.05 p.m., 10 p.m., and 11.30 p.m.; from Kobe to Shimbashi, 9.40 p.m.

LONDON'S NEW LORD MAYOR.

SIR JOSEPH RENALS, Kt., Senior Alderman, representing the Ward of Aldersgate since 1888, who was Sheriff in 1892, is the new Lord Mayor of London.

WAR ITEMS.

There is a comparative lull in the receipt of intelligence from the seat of war. So far the general public knows the situation is that the Japanese Army in Korea has advanced to the southern bank of the Yalu river, and is there massing, preparatory to the invasion of Manchuria; while another army of considerable size is assembled at Hiroshima. On these hypotheses some impatience is founded. It is thought that things are marching too deliberately, and that the Japanese military authorities have no practical conception of the hardships inseparable from a winter campaign. Well, the plain truth is that the general public is insufficiently informed. This is the lull before the storm. We do not desire to be mysterious, but it is not permissible to publish information that might entail serious mischief. This much we may say, however, that if the army on the Yalu is waiting, and if the movements of the army in Hiroshima are not known to outsiders, hesitation or delay are not to be inferred.

The Shanghai papers contain rumours closely resembling the stories that were put into circulation with reference to Phyöng-yang. In the case of the latter city, two tales were gravely given to the world: one, that the Japanese army had delivered its assault against Phyöng-yang on the July 15th and had been repulsed with heavy loss; the other, that the Chinese entered Phyöng-yang on July 17th, driving out its Japanese garrison with much slaughter. So, on the 15th of July, the Japanese army assaulted a city garrisoned by itself, and on the 17th the Chinese army entered a city which, two days previously, it had successfully defended against an enemy's assault. The public has a marvellous capacity for swallowing "gup" at seasons like the present. The journals publishing the above stories did not appear to find them at all extraordinary, and we are now treated to tales of like character. Thus, it is alleged that on Oct. 6th, a large force of Japanese attacked Wi-ju, but the Chinese, anticipating the assault, had occupied "every point commanding the city at a distance," and the result was that the Japanese had to retreat with the loss of some 1,300 men in killed and wounded. Now even this story, as it stands, at once excites mistrust, for it is evidently manufactured by some one unacquainted with the topography of Wi-ju. That city stands on a low hill on the southern, or Korean, bank of the Yalu river, and is separated by a valley five miles wide from the nearest range of hills on the south. The river, which consists of three branches, their aggregate width about 1,200 yards, flows past the northern base of the hill on which the city is situated. It will, therefore, be at once apparent that to describe the Chinese garrison as occupying "every point commanding the city at a distance," is absurd. To do that the Chinese troops must have crossed a valley five miles wide and posted themselves on the hills at the other side. That, however, is not the most curious feature of the stories in circulation. For in the very next paragraph of the newspaper publishing the news we read the following:—"We learn by wire from Tientsin that the news of the skirmish in which the Japanese advance guard was *driven back across the Yalu* had reached that port." Observe the words we have italicized "*driven back across the Yalu*." If the Japanese were "*driven back across the Yalu*" they must have advanced through Manchuria to attack Wi-ju, and they must have carried troops across the river in boats to assault the north side of a town the defenders of which had marched across a valley on the opposite, or southern side, and had posted themselves on a mountain range five miles away. Were ever such absurdities solemnly published in newspaper columns?

Meanwhile, we remain without official intelligence of the forward movement of the army in Korea. A telegram published by the *Kokkai* says that one brigade of Japanese troops has already crossed the Yalu, and that the Chinese have retreated into the interior. But another telegram appearing in the columns of the

journal represents the Chinese as engaged constructing forts on the northern bank of the river opposite Wi-ju. If a Japanese battalion has crossed, it must either have made the passage at a point higher up stream than Wi-ju—in which case it may have obtained a footing on the northern bank without fighting—or, crossing at Wi-ju, it must have found Chiu-lien undefended. All accounts hitherto received agree in representing that Chiu-lien and Feng-hwang are strongly garrisoned, and that the Chinese have strengthened them with outworks of considerable resisting capacity. Chiu-lien is within sight from Wi-ju, looking across the river, and if it is held in force, a passage from Wi-ju and a lodgment on the opposite bank would scarcely be possible without fighting.

The latest intelligence on this subject is published by the *Chu-o Shimbun* in the form of a telegram sent from Hiroshima on the forenoon of the 21st instant. It says that the whole of the Japanese army (not merely the advance-guard, but also the main body under General Yamagata and the rear-guard under Lieut.-Colonel Fukushima) has reached the banks of the Yalu, and that the hostile forces are separated from each other only by the river. As for the Chinese Army, it is said by this authority to be twice as large as the force engaged in the defence of Phyöng-yang, and its efforts to construct fortifications on the northern bank of the river are represented as most earnest. It is therefore anticipated that the Chinese intend to exert all their strength in opposing the passage of the Yalu and that the battle now imminent will be much fiercer and bloodier than that at Phyöng-yang. The date of the conflict is of course uncertain, but the general impression appears to be that it will take place towards the close of the month. We do not vouch for the accuracy of the *Chu-o's* telegram, but if we were disposed to prophesy, we should say that before ten days have passed China will be beaten to her knees both on sea and on shore.

The *Nichi Nichi Shimbun* publishes a letter from its correspondent dated at An-ju on the 4th instant. It is scarcely necessary to refer in detail to the contents of this letter since they are for the most part antiquated. One thing we learn from it, however, namely, that the march of the Japanese army was slightly delayed by commissariat difficulties and that not until the 5th instant was it in a position to advance beyond An-ju.

The Tong-haks are still giving trouble in Korea. According to a telegram published by the *Nichi Nichi Shimbun* several hundreds of them assembled in Chöl-la-do with the intention of attacking the Japanese Army. Their proceedings created considerable alarm in Söul and 300 Korean soldiers were despatched to the scene on the 16th instant and were followed on the 17th by a small body of Japanese. Whether these forces failed to restore order or whether it was feared that they might prove insufficient, an additional body of 300 Korean troops marched from Söul on the 19th instant.

The Korean Ambassador who comes to Japan to convey his country's thanks to the Emperor, arrived at Ujina on the morning of the 20th instant in the *Soryo Maru*. He was received by a number of Imperial Household Officials and the party proceeded once to Hiroshima under escort of a force of gendarmes.

Here are two paragraphs which we re-produce with all reservations from the *Peking and Tientsin Times*:—

The authorities at Port Arthur, on the arrival of the fleet after the late naval battle, telegraphed to Tientsin for a doctor to be sent there. A surgeon was asked if he would go, who at once expressed his willingness to do so provided he was supplied with proper medical stores and surgical appliances, of which he made out a list. The list was probably submitted, after the Chinese manner, to some one quite incompetent to deal with such a matter, who thought the stores and appliances unnecessary, and as the doctor would not go unless properly equipped, the matter ended in his not being sent. This is the way the Chinese treat their own wounded. As to the medical stores on board their fighting ships, the Captain receives a

certain monthly sum to supply them. Of course he does not supply them, and when wanted they are not to be found. The men know that they are deprived of such necessities by the greed of their officers, but of what use is complaint? It is only part of the universal system of peculation to which every one pays the homage of his sincere hope to get into a position some day to be himself a peculator on a larger or smaller scale according to circumstances.

We have the following information from a reliable source. It is not a pleasant story, but it ought not to be suppressed. It reflects seriously on the Chinese commanders and the Chinese system:—Before the battle of Ping-yang, a council of war was held by the three generals commanding. The troops were discontented at not having been paid for some time. It was not proposed to pay them till after a big fight as there would then be fewer to pay. The only troops that had been regularly paid were those of General Tso. At the council General Yeh proposed that they should evacuate Ping-yang and retire. General Tso turned indignantly on him, exclaiming: "Retire! certainly not; give me your brevet and then you yourself can retire to hell!" Upon this General Yeh said: "Of course I did not mean it. I only said it to try your courage, and we all know now what a brave man General Tso is." When the attack was commenced General Tso mounted a rampart, though begged not to place himself in so exposed a situation. He replied that he at least would set a good example. At the first assault he fell wounded in several places. His own men crying out "The great man is dead," became panic stricken and fled, the other soldiers following. When the panic commenced the Japanese cried out "Throw down your arms and your lives are safe." Many did so. In fact the number that escaped was not more than 1,000. When hand to hand fighting took place the Japanese made deadly use of the bayonet, the Chinese, in spite of their superior size and strength, being utterly unable to cope with their skill in the use of the weapon. A troop of Chinese cavalry charged the Japanese infantry shouting wild war whoops. Not a sound was heard from the Japanese line till they were only 200 yards from their enemy when a whistle gave the signal for volley firing. The effect was instantaneous. The cavalry was riddled with balls, became utterly demoralised and those left alive turned and fled. The few soldiers that escaped said it was quite impossible for them to fight against the skill and courage of the Japanese.

The *North-China Daily News* has made a discovery. "It may be regarded as certain now," writes that journal, "confirmed as it is by the independent testimony of our Moukden correspondents, that there were only some four, to five thousand Chinese in Phyöng-yang, who held the Japanese army at bay until their General was killed, when a considerable proportion also succeeded in getting away." That is a very remarkable conclusion. The *North-China Daily News* itself has from time to time given detailed accounts of the transport of large bodies of troops from Takto Korea. The *North-China Daily News* itself told us, three months ago, that the Kirin army of 30,000 had been ordered to cross the Yalu and advance against Söul. And now suddenly the very same journal announces that "it may be regarded as certain that there were only some four or five thousand Chinese in Phyöng-yang." The quaintest part of the discovery, too, is that the Shanghai journal quotes the corroboratory authority of its Moukden correspondents. Yet the very day before it gave this discovery to the world, we find it publishing a letter from "our own Moukden correspondent," which contains the following:—

General Tso then had to push on into Korea with all haste and was called by telegraph to halt at Ping-yang. He is said to have had 4,000 men. An equal number of Manchu troops under General Feng joined him there; and probably all the Tientsin troops despatched before the declaration of war. On arrival they had no food; but steps were at once taken to forward grain which was soon plentifully supplied. The next we heard of him was a skirmish of some of his scouts with 50 Japanese soldiers out exploring. Then came a request to have winter clothing forwarded, which showed us he was not then taking any steps to push forward. We heard of slight engagements in which the Japanese troops were kept back. Lastly, came an urgent telegram for reinforcements as they were only 18,000 men all told and were faced by a Japanese army of 40,000, then said to be within 200 li. To some of us who knew of the

marching through of many thousands of men this telegram came as a surprise, till it was ascertained that far the greater number of troops had never crossed the Yaloo, but had taken up their post on the Chinese side of the river.

Thus the Moukden correspondent makes the Phyang-yang garrison consist of 4,000 men under Tso, 4,000 men under Feng, and probably all the Tientsin troops despatched before the declaration of war; quotes a telegram from Tso himself complaining that he had only 18,000 at Phyang-yang, and expresses surprise at the telegram as "many thousands of men had marched through." How on earth does the *North-China Daily News* interpret its Moukden correspondents as corroborating the discovery that only 4,000 Chinese were at Phyang-yang? Our Shanghai contemporary is the journal that lately preached to the Japanese a scathing homily about want of veracity.

H.B.M.'s Minister in Peking, writing to the Shanghai Branch of the Evangelical Alliance about the death of the Rev. J. Wylie, says:—

"Throughout the negotiations I have insisted upon the immediate carrying out of the sentences passed upon the criminals so as to connect in the popular mind the punishment with the crime. The chief criminal has already been executed; proclamations have been issued throughout the country and in all places indicated by Her Majesty's Consul, Mr. Bullock; and I am expecting daily to hear that the accomplices of the crime have received the severe punishment of exile with hard labour, and that the officers concerned have been cashiered in accordance with the sentence passed upon them.

"I am bound to admit, however, that the Chinese government have shown the most praiseworthy desire to take all the measures suggested to them for the prevention of similar outrages in the future, but in the ferment and popular excitement caused by war it is beyond doubt that foreigners, especially those who reside in the interior, will be exposed to unusual risks and dangers, and I consider that it is incumbent upon missionaries to exercise the greatest prudence during the continuance of hostilities, and above all not to expose their families to the dangers consequent upon the present state of things."

We have heard so many cries of "Wolf, wolf," from Shanghai that the latest rumour about a Japanese landing at Port Arthur has probably been received by the public with a smile of incredulity. But it is not unlikely that this last story contains an embryo of truth. A flotilla of some 50 transports carrying the Second Japanese Army is said to have left Hiroshima on the 18th instant. Its destination was of course kept secret, but the initiated believed that Port Arthur was the objective point. Its numbers also were not publicly known, but we believe the figure to be 22,000 combatants. The flotilla carried 500 flat-bottomed boats for the purpose of landing troops, and the utmost care had been exercised to render the equipment of the army complete in every respect. From Hiroshima to the rumoured place of disembarkation is 850 miles approximately, or say 4 days' steaming at the comparatively slow rate of a great flotilla's progress. It was not to be expected, therefore, that the ships could reach their destination before the 22nd instant, and for that reason we are inclined to scrutinize the Shanghai telegram with some doubt. On the other hand, Port Arthur is in overland telegraphic communication with Peking and Tientsin, and it is scarcely conceivable that the Chinese commanders in the Liau-tong Peninsula could fail to transmit intelligence of a Japanese landing before the cutting of the wires by an invading force. If they did succeed in sending a message, the news might reach Shanghai as well as Peking in a very few hours, and there would then be nothing extraordinary in the fact that Shanghai was informed on the 22nd. Of course not a moment would be lost in landing the troops so soon as the transports reached the indicated place, so that, from every point of view, the news of a disembarkation on the evening of the 21st, or the morning of the 22nd, is not incredible. We are now dependent on Shanghai for intelligence of the earliest doings of this Second Army, but so soon as the landing is effected, the telegraph from Port Arthur to Peking will at once be interrupted. The

quickest route for news will then be *via* Wi-ju. A line of telegraph crosses Korea from Wi-ju to Fusan, and the distance from Port Arthur to Wi-ju is a little over 300 miles, or a day's steaming for a fast boat. Thus, at the best, we shall have to possess our souls in considerable patience.

Port Arthur being now a cynosure of observation, our readers will find interest in the following extract from *The Times*:—

The mouth of the Gulf of Pechili, at the head of which lie Taku, Tientsin, and the short route to Peking, narrows to about 110 miles between Port Arthur and Wei-hai-wei. These ports seem thus marked by nature as the strategic outposts of the north-eastern coast line of China. A hostile force entering the Gulf of Pechili must leave them on its flanks and rear. According to popular fallacy, the possession of two strongly fortified harbours thus placed would confer upon China the command of the adjacent waters. Fortified ports are, however, strategically worthless apart from the service which fleets can render outside of them, and the value of Port Arthur and Wei-hai-wei depends entirely on the fighting capacity of the Chinese navy. The mere proximity of a fortified place of refuge is scarcely an element of victory; but, as history shows, it has frequently supplied counsels of inactivity. Such misgivings, which do not occur to our own publicists, are not likely to have troubled the Chinese mind, and both Port Arthur and Wei-hai-wei have been fortified in orthodox fashion. The former, which is the chief naval arsenal of northern China, lies at the head of a large inlet. The port, which is entered by a channel, little over 200 yards broad, affords no room for the anchorage of a considerable squadron; but a fine tidal basin has been constructed capable of accommodating about 14 large vessels. A large dry dock, much machinery, and coal stores stated to have been recently increased, complete the naval resources of Port Arthur. It is, apparently, a comfortable place in which to lay up a squadron, but somewhat ill-adapted to the needs of a force which desires to be able to get quickly to sea. The coast defences are spread over more than four miles of sea-board, and consist of about 12 batteries equally distributed on either side of the entrance of the port. The armament consists of more than 40 Krupp guns varying from 15 c. m. (6in.) to 24 c. m. (9 1/2 in.), including some rifled mortars. In addition there is a torpedo-boat station, and an elaborate system of submarine mines has been provided. Altogether the coast defences of Port Arthur, so far as mere material is concerned, seem to rise fully to modern standards of British fortifications. On the land front the shoaling of the harbour gives protection on the western side. On the east, encircling hills rise to heights of 350ft. to 650ft., and small fortified camps, redoubts, and miniature Chinese walls affect to guard this important arsenal. As usual, the back-door appears to be relatively weak, although, in accordance with all the teaching of history, this would necessarily be the way of approach selected by an enemy. Assuming the Chinese navy to be the incapable of action, the defence of Port Arthur must mainly depend upon the fighting power of its garrison in the field. The present strength and composition of that garrison are unknown, but the normal force appears to be about 4,000 men, well trained according to Chinese standards, and since the recent Japanese naval reconnaissance considerable reinforcements have unquestionably been forwarded from Taku, which is only 240 miles distant. Under these circumstances, Port Arthur should prove a hard nut to crack, and an expeditionary force of at least 15,000 men ought to be needed to achieve success. If caught in a trap the Chinese, in spite of their utter want of real preparations, may be expected to fight stubbornly. From the Japanese point of view the destruction of this Chinese arsenal would be a great triumph, intrinsically valuable only if their antagonist's navy is a serious force, morally important in any case. Success would imply that the Chinese navy as a fighting force may safely be neglected.

The question is, at what point would a Japanese landing be effected. The Shanghai telegram speaks of "Kim-ju." We believe the real place to be a bay about 12 miles distant from the walled city of Chin-chiu, and 37 miles from Port Arthur. If our supposition be correct, Chin-chiu would have to be taken by the troops *en route* for the port. Assuming the utmost reasonable celerity of movement, let us say that the landing was effected on the 22nd and 23rd and that the forward march commences on the 25th. Then the attack on Chin-chiu would probably take place on the 27th, and supposing that no very serious resistance were encountered there, the remaining 25 miles to Port Arthur might be covered by the 31st. We do not know the nature of the country in the Liau-tong peninsula, but it can scarcely present more formidable obstacles to the march of an army than does Korea, and the rate of progress here assumed is consistent with Korean precedent.

Thus the 1st or 2nd of November promises to be an important day in the annals of this war. Can it be that there is a deliberate intention to capture Port Arthur on the Emperor's birthday (November 3rd), just as Phyang-yang was captured on the day that his Majesty raised his Standard in Hiroshima?

Meanwhile, what of the Chinese fleet? The most contradictory rumours are circulated as to its condition. Some allege that it is completely incapacitated for the moment; others, that the two ironclads have already put to sea and were recently seen off Taku. Whatever be the truth, the fleet must now either attempt to prove itself a useful factor in the defence of the empire, or disappear from the arena. Evidently it has failed, or made no attempt, to intercept the Japanese flotilla of transports. Of course the transports are under convoy of powerful squadrons, but that should not deter Admiral Ting, for now, if ever, he has to justify the *raison d'être* of the celebrated Peiyang Fleet that he commands. Failing to intercept the flotilla, he might still essay to take an active part in the defence of Port Arthur by lying off the promontory and shelling the assaulting columns. But in attempting such a manoeuvre he would have to reckon with the Japanese men-of-war, which are doubtless sweeping the whole vicinity of the field. Whatever programme Admiral Ting adopts, it is scarcely conceivable that he can now avoid a battle for life or death. Beaten, his surviving ships would have to choose between alternatives which, at the moment, we are not free to discuss. We may here add that, according to the Tokyo News Agency, the Shanghai telegram is regarded as premature. Our readers can form their own conclusions from what we have written.

From the Yalu intelligence continues to be meagre. We still hear of strong preparations for defence at Chiu-lien. There the Chinese are said to have constructed numbers of forts, armed them heavily, and also mined the approaches. The Manchurian cavalry are also reported as being in great force. With regard to the strength of the Chinese army, no official estimate is published, but rumour continues to put it at from thirty to forty thousand.

The *Yomiuri Shimbun* publishes a telegram purporting to be from Shanghai, which says that the defences at Shan-hai-kwan are daily progressing toward completion, and that a large body of troops arrived there about a week ago. We do not know how much credence this deserves.

In the *Hochi* we find a telegram from Hiroshima, dated 3.10 p.m. on the 22nd, which says that the Tong-haks now number from four to five thousand, but that many of them have joined under intimidation. A company of Japanese numbering 150, together with a number of Korean police have been sent to deal with them. The Japanese evidently hold these insurgents in very low esteem.

We reproduce the following from the *China Gazette* with all reservations:—

A certain foreign steamer, which has quite lately been at Port Arthur with coal, etc., and is now in the river here, brings down reports which throw a lurid light upon the situation at that important place. The captain and officers saw the Chinese ships, which had been in the naval battle and a terrible sight even then they presented. The wounded were lying about on every side, recovering as best they could with the poor surgical resources at their command, while many of the dead were still unburied, being merely covered with mats, probably until their friends arranged to send coffins. Those badly wounded were lying where they fell, in many instances quite close to the dead bodies. As for the repairs to the vessels, what has been reported in the Chinese papers is simply bunkum. Many of the ships had scarcely been touched at all, and the marks of the shot and shell were plainly visible in their battered upper works. A couple of the ships that had not been in the thick of the fight, but on its outskirts, were better looking, but those that suffered heaviest, including all the ironclads, were still in a terrible plight. While the steamer was at Port Arthur, the panic of the Japanese approach commenced, and before she left every inch of her space was taken up with Chinese officers and men both from the fleet and from the forts, who went on board and insisted on being taken to Taku, whether the captain wished or not. Vice-admirals, post captains, lieutenants, engineers, and petty officers, and men from the fleet, hustled and jostled with generals, and colonels, majors and captains, and every grade of petty officer, and the rank and file of the land forces, for berths on the steamer, as they were taken away from the place, which they momentarily expected to be attacked. Many of the officers from the forts had their wives and

families with them, and paid for their passages with diamond rings and valuables. The naval heroes strenuously declared they would not go to sea again.

A telegram despatched from Hiroshima at 6.45 p.m. on the 25th instant and published by the News Agency says that the Second Army under General Oyama landed at Shang-ching on the 23rd instant. The telegram adds that one or two skirmishes have taken place, and that the enemy's force in Chin-chiu does not exceed from 7,000 to 8,000 men. At Chin-chiu the Lian-tang peninsula is only some three or four miles wide, and it is possible that the Chinese will make a stand there. Moreover, the troops at Chin-chiu can not be the sole defenders of the peninsula and Port Arthur. It may be assumed that the latter place is garrisoned by at least an equal number. Its garrison in time of peace is four thousand, and unless the Chinese have been singularly remiss, they must have poured a much greater force into the place long ago. The combat now impending differs in one important respect from those hitherto waged, for the Chinese will be caught in a cul-de-sac. At A-san and at Phyoŋ-yang a route of escape was open to them if defeated, and they showed considerable alacrity in availing themselves of it. But at Port Arthur they must fight to the death, surrender, or jump into the sea. It is not likely that any provision of ships has been made to take them off in the event of disaster. Of course, if men want to run away, there is always a means of doing so, especially when the attack is spread over a front of four miles and directed against 12 batteries. But fugitives will not be able to retreat in large masses as they could do after the two battles in Korea. We strongly suspect that the fact, though apparently making for thoroughness of victory, is not particularly agreeable to the Japanese Commanders. They do not want prisoners—that is plain. Why should they indeed? The only uses of prisoners are to reduce the number of an enemy's fighting men and to serve for ransoming captives taken by him. But certainly the loss of a few thousand "braves" does not weigh a feather in the scale of Chinese calculations, and an exchange of live prisoners is out of the question with such a foe, though a barter of lopped-off ears or noses might be on the tapis. The worst possible policy on the part of the Japanese would be to burden themselves with a multitude of Chinese whom they must treat handsomely, thereby incurring heavy expense and provoking only laughter on China's side. These considerations seem to have been realized and acted on throughout, though they do not appear to have presented themselves to foreign critics of Japan's "want of thoroughness." It is Port Arthur that General Oyama wants, not a mob of hungry beings like those now enjoying Japan's hospitality in Tokyo, Osaka, and elsewhere.

There has been some talk of the landing being delayed by rough water in the Gulf of Pechili or the Yellow Sea, but if our readers recall what we wrote on Wednesday they will see that everything must have proceeded without hitch. The last of the transports is said to have left Hiroshima on the 18th instant, and the flotilla doubtless sailed from Shimonsaki on the 19th. Eight hundred miles had then to be traversed, a distance requiring fully four days under the circumstances. Hence the flotilla can not have reached the little bay chosen for disembarkation before the evening of the 22nd. Shang-ching is not marked on any ordinary map, but it lies at the head of a gulf separated from Talien Bay by the promontory of Takoo-shan. It is said to be some 25 miles from Chin-chiu, but the estimate requires verification.

As for the First Army, i.e. the Army in Korea, the following telegram from Field-Marshal Yamagata, dated Wi-ju, October 24th, reached Hiroshima at 1.15 p.m. on the 25th:—

Colonel Sato's brigade crossed the Yalu above Shai-ken-chan this morning, and attacked one of the enemy's forts on the northern bank of the river. The fort was garrisoned by about 100 infantry and 500 cavalry, who had two guns. It was captured at 1.30 p.m. The Chinese troops belong to a division distinguished by the ideograph signifying "Spring." Their loss was 20 killed, two field

pieces and ten rifles fell into the hands of our troops, who had no casualties. Colonel Sato's brigade is now marching against Li-tsz-yuen on the left bank of the river Ai, a tributary of the Yalu.

This telegram not only reached Tokyo by the ordinary means but was also forwarded to us direct from Hiroshima. Its authenticity is therefore beyond question. Shai-ken-chan, where the crossing was effected, lies to the north-east of Wi-ju at a distance of about 10 miles. Li-tsz-yuen is situated near the point where the Yalu river is joined, on the northern side, by its tributary the Ai, a stream that flows past Chiu-lien-cheng and enters the Yalu a little below Wi-ju. It is plain from the above that the Chinese troops are not disposed to offer any serious resistance. They allow their forts to be stormed and their artillery captured without inflicting any loss on the assailants. Field-Marshal Yamagata having now resumed his advance on the north of the Yalu, we may expect that events will move quickly.

A telegram from Hiroshima says that the British Fleet on the China-Japan station is to be increased to 23 ships.

The *Kokkai* publishes two telegrams from Shanghai. The first is to the effect that a powder magazine has burst in Chin-lien-cheng, causing considerable loss of life to the Chinese troops. The second says that the General Commanding the Kirin Army has despatched ten thousand picked troopers of the Manchurian cavalry to defend Feng-hwang, and that several thousand more will follow speedily.

Intelligence from the Field Marshal commanding-in-chief in Korea, dated at Hu-shan, on the northern bank of the Yalu, at 6.30 p.m. on the 25th instant, transmitted from Wi-ju at 9.30 p.m. the same day, and received at Hiroshima at 10.30 a.m. on the 26th, says that, according to the programme pre-arranged, the main body of the army crossed the Yalu at half past six on the morning of the 25th instant, and came into collision with the enemy shortly afterwards. By 10.30 the Chinese troops were all driven from the vicinity of Hu-shan, and the Japanese occupied the elevated ground on the west bank of the Ai river. According to the statement of a Chinese officer who was taken prisoner, the Chinese troops in the neighbourhood of Hu-shan consisted of eighteen regiments. The loss on the Japanese side was 70 killed and wounded. The enemy's casualties are not yet clearly ascertained, but the killed can not be less than 200. The attack on Chiu-lien-cheng was to be delivered on the morning of the 26th at dawn. Chiu-lien-cheng is said to be defended by the whole of the division distinguished by the ideograph "I" (我) under the command of Sung Ching from Port Arthur. Colonel Sato's battalion, which crossed the Yalu on the 24th in the vicinity of Shai-ken-chan, and which marched thence against Li-tsz-yuen, took part in the above fight at Hu-shan.

Another telegram despatched from Wi-ju by Colonel Tsuchiya at 11.50 a.m. on the 25th instant and received in Hiroshima at 11.30 p.m. the same day, says that the attack on the enemy at Hu-shan commenced at 6.40 a.m. that day, and that at a little after ten o'clock the enemy were completely routed. The message adds that their strength was 3,500.

The river Ai, as already mentioned, is a stream of considerable magnitude, flowing past Chiu-lien-cheng and entering the Yalu just below Wi-ju. Hu-shan is not marked on the maps, but is evidently near the Ai river between Chiu-lien-cheng and the Yalu. It will be observed that while Colonel Tsuchiya's telegram, despatched in the forenoon, puts the number of Chinese troops engaged at 3,500, Field-Marshal Yamagata, wiring at night, mentions 18 regiments on the authority of an officer who had been taken prisoner. A Chinese regiment consists nominally of 500 men, so that estimate gives a force of some 9,000. We must await further intelligence before determining this point. It is at all events evident that the capacity of the Chinese troops to resist the Japanese is not increasing. To-morrow will doubtless bring news of a big battle.

The *Nichi Nichi* publishes a telegram sent from Fusan at 10 p.m. on the 25th, which says that about a thousand of the Tong-haks marched against the commissariat station at Kafun, and got as far as the right bank of the Mokkei (?) river, when they were met and scattered by the Japanese guards of the station. One man, a gendarme, was killed on the Japanese side.

FIRE ON THE FRENCH MAIL STEAMER.

"Just as we go to press," says the *Kobe Chronicle* of the 22nd inst., "we learn that fire has broken out in the forehold of the *Saghalien*. The pumps are at work, and it is thought the fire will be got under in the course of an hour or two." On enquiry at the office of the Messageries Maritimes at this port, we learn that the fire was extinguished, and the vessel left Kobe at seven o'clock this morning for her destination. The cause of the fire is still unknown, but the Yokohama Agent states that no matches were included in the vessel's cargo.

THE CONCERT IN TOKYO.

Despite numerous difficulties to be overcome, the Concert in aid of the Red Cross Association, to which brief allusion was made in these columns a few days ago, may now be said to have been fully arranged. The idea of this Concert, originating, we believe, with Mr. Braccialini, has speedily awakened echoes of sympathy. Owing to the always helpful and practical influence of Mrs. Sannomiya, whose life seems to be devoted to the cause of benevolence in its widest sense, and owing, above all, to the goodness of the cause, it has been found possible to secure the patronage of Her Imperial Highness the Princess Koinatsu, of the Corps Diplomatique, and of many of the nobility. We shall publish in due time the names of the ladies forming the Committee and other particulars.

No expert is ignorant of the difficulties connected with the *mise en scène* and instrumentation of an opera like *Faust*, difficulties formidable in any country and almost deterrent in Japan, where such an undertaking is unprecedented. With regard to the music, however, a *deus ex machina* has been found in the person of Professor Eckert, and we venture to say that the pianoforte part for the first act of *Faust* has been very skilfully arranged by the Professor. As for the orchestra under his guidance, well instructed and well led, it will certainly awaken memories of operas in the West. From the singers who have promised their aid we may anticipate commensurate results. *Faust*, which even to great artists presents difficulties of no common order, must be a most formidable undertaking to amateurs. Still, the result may be anticipated with confidence since *Faust's* rôle will be taken by that admirable tenor, Mr. Braccialini, and the part of Mephistopheles by a bass whose voice many of our readers have probably had the pleasure of hearing in the salons of Tokyo. Altogether a musical treat quite out of the common may be anticipated. The date of the representation has been fixed for the evening of November 10th, and the place will be the Musical Academy at Uyeno. In addition to the opera several amateurs of recognised talent have promised to perform at a concert which will precede the representation of *Faust*. Their contribution alone would be well worthy of public support.

Messrs. Amenomori Keijiro, Hiya Tetsu-saburo, and fifteen other promoters of the proposed electric railway between Tokyo and Yokohama have applied for certificates from the Governors of Tokyo and Kanagawa preparatory to petitioning the Central Government for permission to commence work. The line will start at Shinagawa and end at Oye Bridge, Yokohama, via Rokugo, Kawasaki, Koyasu, and Kanagawa from

LETTER FROM HIROSHIMA.

(FROM OUR CORRESPONDENT.)

Hiroshima, October 20th, 1894.

The long expected Korean Ambassador, Prince Wi-hwa, second son of the King, arrived here at half-past nine this morning. About 7.40 a.m. the steamer, *Chang Riong*, with the Ambassador and suite on board, entered the port of Ujina. The Prince is a young man of about twenty, with a gentle and intelligent face. The object of the mission, it is said, is to convey thanks to the Emperor for His Majesty's goodness in sending a special messenger, Marquis Salonji, to the King of Korea. Hence it possesses little political significance, except as a sign of the friendship that now exists between the two Courts. The Prince and his suite are staying at the residence of Mr. Asano Tetsukichi, a scion of the noble house of that name.

Shortly after the party had landed, I paid a visit to the Korean steamer *Chang Riong*. I thought that it was manned by Japanese, but I was entirely mistaken, for not a single Japanese is on board. She is a little steamer of 403 tons, built in Germany and bought from a German merchant by the Korean Government seven or eight years ago. Ordinarily she is employed for the transport of tribute rice. The Captain, Mr. F. Tessensohn, who received me very kindly and furnished me with these facts, is a German. The rest of the officers, three in all, are Europeans. The crew consists entirely of Koreans, and the boys and cooks are Chinese. In reply to my enquiry, the captain told me that the Koreans are very good sailors, obedient and hard-working. The steamer left In-chhön on Monday the 15th instant, and on account of bad weather entered the port of Izugahara in Tsushima on the night of the 17th. The young prince was so sea-sick that he particularly desired to have the steamer enter that place. She left there next day. To-day at 2 p.m. she sailed for Nagasaki, where she will go into dock and be thoroughly cleaned; after which she will return to Ujina to take the Ambassador back to Korea. Beside the *Chang Riong*, the Korean Government possesses two other small steamers, the *Hei Riong* (200 tons) and the *Hei Neck* (500 tons).

The particulars about the opening of the Diet and the subsequent proceedings in both Houses must be known to your readers by this time. The Speech from the Throne and Count Ito's speech in the House of Peers on the 19th instant had a most excellent effect upon the minds of politicians. The members of the Lower House had come here more or less suspicious that the Government was not determined to go as far as they wished. They evidently thought that the Ministry would not be disinclined to open diplomatic communications with China when winter came. But after their arrival here, they learned enough about the intentions and plans of the Government to convince them that the Cabinet would be satisfied with no half-hearted programme. To remove their doubts completely, they were assured by the Emperor himself that the present war is to be prosecuted until its objects shall have been satisfactorily attained. Before the opening of the Diet, there was a project among the Radicals to make a Representation to the Government recommending it to introduce in the present and the next session various measures relating to the military defence of the country. On finding that these measures were already under contemplation by the Cabinet, the Radicals gave up the idea of making a Representation. Among the so-called allied parties, the extreme section, the Progressionists, have been, and still are, bent on placing on record some kind of vote clearly indicating their want of confidence in the Cabinet. But their project has no chance of obtaining much support in the present session. Something, however, must be done, and they introduced to-day a Representation to the Government recommending the latter to push the war to its last stage. The Representation has been handed over to a Committee, and will be brought up for discussion to-

morrow. If passed, it will signify little. To tell the truth, the Houses of the Diet are in an excellent mood. How thoroughly the Opposition politicians appreciate the necessity of united action at the present juncture was shown to-day in a most significant manner in the House of Representatives. The War Budget, authorizing the expenditure of 150 million yen, was voted unanimously, without any formality of debate. I say unanimously, not in its figurative but in its literal sense: not a single member remained sitting when the Budget was put to the vote. Its passage was the signal for an extraordinary outburst of enthusiasm; cheers and clapping of hands resounded throughout the hall. It is not the Government that leads the nation in the present crisis: the people themselves are the leaders.

LETTER FROM KOREA.

(FROM OUR CORRESPONDENT.)

Söul, October 11th.

The battle of Ph्योंg-yang has gone into history. Reports are coming in showing that there was heavy fighting on both sides. The cavalry engagement outside the north gate between 450 Japanese and 1,200 Chinese was fightful in losses. In a space, say, two hundred yards square, there were found in killed and wounded 310 men and 270 horses. This comes so straight that it may be accepted as correct. The attack around the south gate was also heavy, and it is said the Chinese, when hearing the firing behind them from the hills at the back of the Governor's Palace in the north of the city, were panic stricken, and throwing away their arms, rushed through the South gate and made good their escape. There is a very general impression here that in Ph्योंg-yang, as at A-San, the Japanese must have allowed the Chinese braves who had thrown away their arms to escape.

The retreating, fleeing, unarmed, and desperate Chinese braves seemed to inspire more fear in the Koreans than their coming did two months previously. The Court Gazette yesterday reported no less than eight magistrates, whose districts are to the north of Ph्योंg-yang as "missing." "Did they go with the Chinese?" "No." "Where are they?" Where most Koreans are at such a time—in the bush.

The Tong-hak excitement continues. The followers of this "doctrine" have degenerated into marauding bands. Two provinces are overrun by them. The local authorities are powerless, and in not a few cases have joined the "Tonghaks. Levies of rice are made on the rich, and, when not paid, are collected by force and their houses set on fire. They prevent tribute rice going to Söul, alleging that it is needed where it is raised. Men in the country have commenced to flee to the capital for protection. Yesterday the Tai Wön-kun ordered the insurgents to disperse and return to peaceful occupations. In a very respectful note in reply they promise to obey. If they carry out their promise, much relief will be experienced immediately.

Two foreigners were hunting a week or so ago on Nam San, the mountain in the southern part of the city. The Japanese Legation is on one of the spurs, and their soldiers likewise are encamped there. One of the Nimrods let fly at a bird in a tree. Soon they found themselves surrounded by very polite Japanese soldiers. The Nimrods could not speak Japanese and the soldiers were equally proficient in the use of English. Having finished their day's hunt, they were returning home, and as the spur by the Legation happened to be their nearest way, they followed it. The soldiers very politely escorted them. Coming to the guardhouse, an invitation was motioned to enter, but courteously declined. Then by various gesticulations known but to those who find themselves under necessity of speaking in an unknown tongue, the Nimrods and the braves succeeded in getting into the Legation, being unable to agree on any other place. After some parleying one of the hunters managed to get his card to the Minister, though he had to get a Korean standing by to take it for

him. The Minister came out promptly, "explained," then the soldiers bowed apologetically, and the hunters sought their homes in the western part of the city. This little incident, thoroughly enjoyed by all, coupled with the explanation of the Minister, who said that strict orders were given to arrest anybody found with guns or swords, shows conclusively that Japan has made herself responsible for the peace of the Capital.

EARTHQUAKE IN YAMAGATA AND AKITA PREFECTURES.

Telegrams received on Tuesday in Tokyo announce a very severe earthquake in Yamagata Prefecture at 5.35 p.m. on the 22nd instant. The two Districts most disturbed were Akumi and Tagawa. In the west Division of the latter many houses were overthrown, eighty were destroyed by fire, and forty persons were killed or wounded. Conflagrations were said to be still raging at the time of the despatch of the telegram (9.25 a.m. on the 23rd). In the eastern Division of the same District, a hundred houses were overthrown and 20 people were killed. In Akumi District the disasters are supposed to have been still greater, but the telegraph being interrupted, information has not been procured. The principal shock is said to have lasted 36 minutes and 20 seconds, but that sounds scarcely credible, unless a succession of shocks is referred to. Elsewhere in the telegram 47 shocks are spoken of, and it is added that the people fled from all the buildings into the open air. Yamagata Prefecture lies to the north-east of Tokyo, from which the town of Yamagata is 240 miles distant. The same shock was felt in Tokyo, though not severely. Yamagata is situated about midway between the two seas.

The great earthquake was equally severely felt in Akita Prefecture. The shock commenced at 5.30 p.m. on the 22nd inst., and the ground vibrated for 36 minutes and 20 seconds. The shock was most most strongly felt at Honjo, where all the residents ran out into the open air. Some 47 shocks were experienced, and a rumour is current that the Chokai-zai is in a state of eruption. A telegram despatched from Akita on the 23rd at 10.07 a.m. announces that flames were seen in the southern face of Honjo. Seven violent shocks, says the message, were felt there since 5.30 p.m. yesterday, but no damage was done to buildings. The message adds that three severe and eight slight earthquakes occurred at Yuzawa, with several after shocks. Omagari was visited by three big shocks.

A Sakata telegram, despatched on the 23rd inst. at 11 a.m., says that the great earthquake was felt there at 5.45 p.m. yesterday, and a considerable number of houses were overthrown. Several violent shocks followed, and fires subsequently broke out in various places. Nearly all the town of Sakata was destroyed. The Post Office was destroyed by fire.

THE PROBABLE CENTRE OF THE RECENT EARTHQUAKE IN YAMAGATA AND AKITA.

Prof. Amori, of the College of Science of the Imperial University, has started for Yamagata and Akita to investigate the recent disastrous seismic shocks that caused such havoc in those districts. His opinion is that, judging by the extent of the area over which the disturbance was felt—the shock having been sensible at Tokyo, Hikone, and Hakodate—the origin can not be referred to an eruption of Chokai or any action of the kind; and as the districts bordering the Sea of Japan suffered most, the centre of the disturbance must be somewhere in the bed of that Sea not far from the coast. The cause was most probably non-volcanic, but rather the subsidence of an extensive tract of sea-bed. An expert of the Geological Bureau suggests another explanation. His opinion is that from the news thus far telegraphed to Tokyo, he can not but fix the vicinity of Chokai-san as the centre of disturbance. It is true that that volcano has been reported as not presenting any change,

but it does not follow that because no change has been observed in the mountain itself, the earthquake could not have originated in its vicinity. Seismic disturbances are liable to happen at points of least resistance, and as volcanic ranges are generally lines of least resistance, the shock probably originated in the vicinity of Chokai even though that volcano presents no change. In the present earthquake the districts lying along the coast, as Sakata, Honjyo, and so forth, suffered conspicuously; but so also did Nozawa which is situated at a considerable distance from the sea. All those districts lie around Chokai, and the hypothesis propounded by the above expert is not inconsistent with the facts thus far reported. The volcano was active in former times, as old chronicles show, and, owing to the presence of a volcanic chain, the O-u districts, particularly those washed by the Japan Sea, have been visited by severe earthquakes from ancient eras.

THE EARTHQUAKE.

Returns thus far published give the casualties caused by the earthquake on the 23rd inst. as follow:—

	Nishi-taga-wa.	Higashi-taga-wa.	Sakata and suburbs.
Houses overthrown ..	110	53	484
Houses damaged	—	68	—
Houses burned	70	52	1,233
Persons killed	60	96	203
Persons wounded	—	99	—

It is possible, of course, that these figures are exaggerated. If they be accurate, the record is very formidable—359 lives lost, 1,355 houses burned, and 647 houses overthrown. Sakata, which suffered most, is a town of some 19,000 inhabitants lying on the north-west coast at a distance of about 20 miles from Chokai-zan, the volcano which some suppose to have been the centre of disturbance. Concerning this mountain "Murray's Hand Book" says:—

Scarcely any other peak in Japan, Yari-gatake perhaps excepted, affords so extensive a prospect. Sunrise is the best time for the view, for which reason the traveller should arrange so as to spend the night on the top. It is, however, possible to make the ascent and to descend again to Fukura in one long day. The distance to the summit, which is considered to be 971, is divided into three equal stages, of which the first 324 may be performed on horseback. The second takes one to the shed at Kawara-ishi, 4,800 ft. above the sea, where water and poor native food can be obtained, and where even in summer patches of snow may be seen. The third stage leads past the rim of an old crater, and over snow and volcanic scoriae to the present peak. Near the top are some sheds for pilgrims, and a small temple little better than a hut. The actual summit rises 800 ft. above this point, and is reached by clambering over a wilderness of broken rocks and stones, the effect of some ancient eruption.

The first recorded eruption took place in A.D. 865, and the last in 1865. Traces of its action may still be seen in the solfatara on the W. side of the mountain; but the upheaval was an insignificant one, and the volcanic force of Chokai-san is evidently becoming extinct.

From the summit the eye wanders over the entire range of mountains dividing Ugo from Rikuchu, and over those of Nambu beyond. Looking W. is the sea, with to the S. the long headland of Ofjika. Opposite lies Hishima, and to the E. Awajima and Sado. To the S. is the plain of the lower Mugami-gawa, bounded by the mountains of Uzen and Echigo, with the long slope of Gwassan in the centre. Most curious of all, as the first rays of light break through the darkness, is the conical shadow of Chokai-zan itself, projected on the sea, and rapidly diminishing in size as the sun ascends.

During the week ended the 21st inst., there were 134 dysentery cases and 46 deaths and 33 typhoid fever cases and 9 deaths in Osaka, 26 typhoid fever cases and 6 deaths and 378 dysentery cases and 119 deaths in Hyogo, 35 typhoid fever cases and 6 deaths in Gumma, 28 typhoid fever cases and 6 deaths in Aomori, and 27 typhoid fever cases and 7 deaths in Yamagata, while 74 dysentery cases and 28 deaths were reported in Tottori and 92 dysentery cases and 24 deaths in Kochi during the five days ended the 20th. Kanagawa reported 29 typhoid fever cases and 9 deaths and 30 dysentery cases and 11 deaths during the week ended the 16th.—*Official Gazette.*

THE SHOOTING ACCIDENT.

The comments evoked in connection with our account of the shooting accident on the 15th instant afford a startling illustration of the temper of a section of the Yokohama community. The accident was a deplorable affair. It resulted in the wounding of a little girl of seven. In considering such a catastrophe no person of ordinary humanity would be visited by any sentiment except pity for the little child. Recognising absolutely that the thing was a pure accident, sympathy with the suffering child would be the only feeling excited. Our report of the incident was such as carefully to exclude every suggestion of blame to the owner of the gun. We stated that, according to the accounts received by us, the gun had been put at half-cock and laid on a bench in a tea-house; that its owner was resting in the tea-house; that a group of children assembled to watch the foreigner, and that the gun had suddenly gone off, wounding one of the children. If any inference were deducible from this statement, it was that the children themselves had brushed against the gun, or disturbed the bench, and thus brought about the catastrophe. Not the remotest suggestion of blame to the foreigner was implied. With considerable astonishment, therefore, did we subsequently receive a strongly worded letter from the owner of the gun, calling upon us to "withdraw our statement," declaring conviction that the Police Authorities "could not have sent a report justifying our paragraph," and expressing surprise that we should have published such an account. Now what was the statement that this gentleman desired to have substituted? This—that he himself had not been present when the accident occurred; that he had left the gun loaded in charge of a coolie; that the latter, fiddling with the weapon, had accidentally discharged it, wounding a child, and that the owner had remained ignorant of the catastrophe for two hours. Which of the two accounts would any of our readers prefer to have circulated were he himself involved—our original account, according to which a gun that its owner had laid, half-cocked, on a bench, remaining himself near it, was discharged by the crowding of a group of children, to the injury of one of them; or the owner's account, that he left a loaded gun for at least two hours in charge of a common coolie, went away himself, and on returning found that the ignorant coolie, by fiddling with a weapon which, in its loaded state, ought never to have been entrusted to him, had wounded a child? The former story showed the owner blameless except, perhaps, to the extent of an infinitesimal lack of forethought; the latter showed him guilty of very considerable carelessness. Observe what ensued. Because we had not originally published the latter version, and did not immediately give prominence to its worst feature when the owner's account reached us, we were accused of having sought to imply that the accident was caused by the foreigner, and were charged with a "dirty and despicable trick of misrepresentation." Such extraordinary rancour, such utterly blind suspicion, is almost beyond credence. Why should an international character be imparted to the simplest accident by local mischief-makers? Surely there cannot be the slenderest shadow of internationalism in the wounding of a little Japanese girl of seven by a gun that a European has laid upon a bench in a tea-house! Unfortunately, there are a class of men among us who make it their *métier* to put a malevolent construction on everything. They are men of such fine honour and courage that their favourite device is to write to the press anonymous letters, teeming with personal abuse and gross insults—letters the contents of which they dare not for an instant publish over their own signatures. Unfortunately, also, there are in this Settlement newspapers so faithful to the canons of moral decency and journalistic respectability that they greedily receive and unhesitatingly publish such letters. Therefore it seems probable that the spirit of rancour must be for ever kept alive. But we do not recall any more striking instance of its excesses than that quoted above.

HONGKONG NEWS.

The ratifications were exchanged on 23rd August of the Commercial Convention signed on 1st March between England and China for the settlement of questions of frontier and trade arising out of the British annexation of Upper Burmah. A telegram in Australian papers states that under the Burmah Convention British subjects will be allowed to trade with Yunnan.

The lesson of the Hongkong plague has not been lost on Singapore, says a Hongkong paper, where a general compulsory cleansing has been going on for some time past. The other day there were sixty-nine whitewashing summonses before the Magistrate, and in most cases small fines were imposed.

In view of the reported decision to increase the Hongkong garrison, remarks the *Daily Press*, it is considered not improbable that the Shropshires may be detained on the station for some time longer. It would be a disappointment to the Regiment not to leave at the time appointed, but the Colony would welcome their longer stay.

The absconding shroff of Messrs. Jardine, Matheson & Co. has been arrested in Hongkong. The amount of his defalcation is set down at \$7,598.62.

It is stated that the typhoon which swept over Hongkong on October 5th was as severe as the memorable disaster in 1874. The Observatory, however, gave ample warning, and the shipping in harbour escaped to places of refuge. At an early hour, says the *Daily Press*, the corner of the Hongkong Hotel on the Praya was thronged with spectators of one of the grandest bits of storm water which could be seen. All the hongs and stores closed their doors before tiffin, business being hopeless, and most of the residents on the lower levels devoted themselves to watching the progress of events. The harbour at 9 o'clock was a seething froth of foaming waters, and the wind then was from the N.E. the waves broke in masses over the wharves and Praya sending sheets of spray many feet into the air. It was, at tiffin time, a scene not to be forgotten. The "white horses" spread themselves across the broken sea and dashed furiously against any obstacle in their mad career. Driving rain helped in a measure to keep the water down but added to the obscurity which generally enwrapped the harbour and through which only occasionally could be seen the funnel of a steamer or the bare poles of a sailing vessel. During the afternoon the wind increased in force as the barometer gradually dropped. Although in the opinion of many "experts" the glass was not likely to fall below 29.40 (it being presumed that the typhoon would pass to the westward) at 3.10 p.m. it was 29.29 and at 4 p.m. had sunk to 29.20. The barometer still continued to fall and by 5 o'clock the typhoon was blowing at its worst. The lowest reading of the barometer was 29.15, between five and six o'clock. After seven o'clock the wind began to abate and by ten o'clock the weather was comparatively calm, but the barometer rose very slowly. The damage done on shore was very extensive, and several lives were lost among the junk population.

The following paragraph from the *China Mail* of October 9th requires a little explanation in view of the recent report as to the giving out of the *Undaunted's* piston-rods:—H.M.S. *Undaunted*, which is under orders to sail for the north, goes into Kowloon Dock for repairs at 10.30 o'clock to-morrow morning. She will probably leave Hongkong on Sunday (Oct. 14) with stores, ammunition, &c., for the Squadron at present in Korean waters. The *Wivern* goes into Dock immediately after the *Undaunted* comes out.

In the typhoon experienced at Manila on the 25th ultimo, the British steamer *Parthian*, the *Comercio* says, did not get steam up, and the result was that she dragged her anchors and came into collision with the American ship *R.R. Thomas*, causing considerable damage.

Dr. Yersin has gone to Mengtsz, in Yünnan, presumably to continue his studies in connection with the bubonic plague.

The sudden and unexpected death of Lady Robinson, wife of the Governor, Sir William Robinson, cast a gloom over the whole Colony. The actual cause of death was chronic intestinal catarrh. The *Daily Press* thus refers to the deceased lady:—Lady Robinson, during her sojourn, so untimely ended, in Hongkong had endeared herself to the whole community. Her good heart and generous nature, her many unrecorded acts of philanthropy and benevolence, will erect a monument in the memories of many more lasting and valuable than any external evidence of respect. At prize distributions, bazaars, and on manifold occasions when her presence was useful, Lady Robinson accompanied His Excellency, lending the inherent grace and attraction of the lady of Government House to the influence of her husband's words. The colony, on which this year "disaster on disaster has followed fast and followed faster," may well deplore this crowning loss. It will surely miss, for many a day, the lady who has been called away, and the pleasures of the season will be sadly damped by the absence of one who so heartily co-operated in the enjoyment of life in Hongkong.

The Singapore amateurs have "The Pirates of Penzance" in preparation for Christmas. At Colombo the "Gondoliers" will be the Christmas show. Hongkong reverts to pantomime—"Robinson Crusoe." The cast for the pantomime is now complete, says the *China Mail*, the libretto (so-called) has been in the hands of the principals for some time, and the score arrived by a recent mail. From all we can hear, the pantomime promises to be one of the funniest yet presented to a Hongkong audience.

The American ship *Richard Parsons*, bound from Australia to Manila with coals, was wrecked in Paluan Bay, on the north-east of Mindoro, last month, being caught in a typhoon. One of the mates, the steward, and four sailors were drowned, but the captain and the remainder of the crew reached the shore by means of the floating wreckage, and on the 4th inst. arrived at Manila in the steamer *Balayan*.

ENGLISH NEWS.

On August 27th, Lord Tweedmouth wrote to Mr. Justin McCarthy to the following effect:—"I have a note from Mr. Gladstone enclosing a cheque for £100 to aid your Parliamentary fund, which I have great pleasure in sending on to you together with one of like amount from myself. I hope contributions will come freely in response to your circular of the 22nd."

By the *Freeman's Journal* Mr. Gladstone's gift was thankfully acknowledged as a "touching and significant proof that his interest in the cause is as keen and practical as ever," but it has proved a veritable apple of discord in the Parnellite party. The Parnellites, whose excuses for keeping aloof from the rest of the Irish party were wearing somewhat thin, have now a fine text on which to hang diatribes accusing the Anti-Parnellites of having sold themselves body and soul to the Government. But by many of the Anti-Parnellites themselves Mr. Gladstone's gift is regarded as little short of a disaster. Mr. T. D. Sullivan, M.P., writes that for the Irish members to be accorded financial support by their own country and their own race is honourable both to the givers and the receivers; but that to ask for help from English politicians, good friends though they be, is, in his judgment, not to be tolerated for a moment. Mr. Molloy, M.P., writes to Mr. Healy asking, "Are we to endanger our independence? It may be our duty to fight this Government in the near future and—even if that be not, as we hope, in the faintest degree probable—shall we commit any act now which may in the future hamper our freedom of action or lessen our independence." To this Mr. Healy replies, "In my opinion, instead of asking Mr. Gladstone for subscriptions, the thanks of the party, accompanied by a solid memorial for his services

should have been voted to him out of our funds. The ingratitude with which he has been treated is fully capped by appealing to him now for subscriptions to support our men. . . . A bad blunder has been committed, but we have steered through whole monsoons of previous blunders."

At a Unionist meeting at Liverpool on September 5th, Mr. Chamberlain denied that during the Session just expired the Government had had any reason to complain of obstruction. By the exclusion of debates on important foreign questions, and by taking up the whole time of the Session, Ministers had been able to work their wicked will and degrade the House of Commons. For doing its duty the Upper House had been threatened with extinction. When in past times the Peers had opposed the will of the people, he had never been their defender, and if they again acted in the same way he should denounce them as strenuously as before. Mr. Chamberlain proceeded to condemn the Ministerial neglect of social problems that were pressing for solution, and justified his own scheme of old-age pensions as a substitute for Poor Law relief.

Englishmen who dread any change in the existing social order used to congratulate themselves that there was a "stable common sense about English workmen which would prevent them from ever being carried away into advocacy of the socialistic schemes of their feather-headed continental brethren." This confidence must have been rudely shaken by the gradual change in tone in successive Trade Union Congresses. A few years ago, when the master spirits of the Trade Unions were representatives of what is already known as the "Old Trade Unionism," all that was asked for by the men was freedom of combination: any legislative interference in labour problems, unless it should be some slight extension of the Factory Acts, was strongly deprecated. Year after year, however, English workmen seem to have been growing as "feather-headed" as those of the Continent, until finally this year at the Trade Union Congress at Norwich, the representatives of the "New Trade Unionism," who are socialists almost to a man, were completely masters of the situation. Not merely were resolutions in favour of a universal legislative eight hours' day, old age pensions, and similar measures of a socialistic tendency carried by overwhelming majorities, but when Mr. Rudge moved "That in the opinion of this congress it is essential to the maintenance of British industries to nationalize the land, mines, minerals, and royalty rents, and that the Parliamentary Committee be instructed to promote and support legislation with the above objects," and Mr. Keir Hardie moved as an amendment to delete the words "mines, minerals, and royalty rents," and insert "and the whole of the means of production, distribution, and exchange," the amended resolution, which was supported also by Mr. Burns, M.P., and Mr. Havelock Wilson, M.P., was carried by 219 votes to 61.

At a meeting held at Greenwich on September 7th to consider the aims and prospects of the Independent Labour Party, Mr. Keir Hardie, M.P., said that if its members acted upon the advice tendered by the Liberal party they might have the honour of lying in a ditch to enable the Liberals to march on to victory, but their usefulness would be gone. Liberals were fond of saying that more Labour men might get into Parliament "if they were decent fellows, and not like Keir Hardie." Such attacks were made on him with the object of bringing discredit and disgrace on the party, and therefore he felt bound to take notice of them. It was true that he at present stood alone in the House, and he would probably be alone in that position until the next general election. But after that all would be changed, and he would have others with him. That he should be singled out by the Liberal party for abuse in no way annoyed him; he regarded it as a compliment. Notwithstanding the abuse and the misrepresentation to which it was subject, the Independent Labour party was growing rapidly. If it was not growing in favour in the House of Commons, it was gaining supporters among the makers of the

House of Commons, and that was the only thing of importance.

The Scotch coal strike was still unsettled when the mail left. The men were firm, and several of the large owners had given way. At a meeting of the Scottish Miners' Federation held in Glasgow on September 4th, it was resolved that no terms of settlement other than those recognized by the English Federation should be recognized; and it was agreed that miners resuming work on those terms should pay a levy of 2s. 6d. per week for the support of the men still on strike.

It has been settled that members of the rank and file of the Volunteer force will be eligible to receive the Queen's decoration for efficient service extending from 20 to 34 years, and the number of recipients is likely to exceed 20,000.

Mr. G. Mitchell, assistant-editor of the great English dictionary now in course of publication by the Clarendon Press, Oxford, lost his life on Snowdon on September 6th. Like so many keen climbers, he was particularly fond of difficult and dangerous ascents. On this occasion the rest of the party found the climb too difficult, and paused, but Mr. Mitchell went on. In about an hour, when he was at a height at which he could not be seen distinctly without the aid of a field-glass, he was seen to slip and to fall head-foremost for a distance of 150 or 200 feet, where his head struck a rock, and his body was arrested. The corpse was recovered after many hours with the aid of some Snowdon miners and some policemen from Llanberis. At the inquest a verdict of accidental death was returned.

An extraordinary accident happened at Aldershot on September 5th, at the School of Military Ballooning. A new balloon was to have been "christened" by the Duke and Duchess of Connaught. In honour of the occasion the smallest military balloon, the "Flo," containing 4,700 cubic feet of gas, was sent up into the air, bearing the royal standard. Lieutenant Blakey had intended to ascend in this balloon, but as it began to rain the balloon was sent up without anyone in the car. It was held by a wire cable about 200 feet long, fixed to the drum on the balloon waggon. At the moment when three sappers were about to haul the balloon down by winding on the winch, the handles of which were covered with brass, the balloon was seen to be struck by lightning. A blue light surrounded the lower part of the balloon for some seconds, and then a flame shot up from the ignited gas, and the balloon fell precipitately to the earth, amid a loud peal of thunder. The three men that were holding the winch were hurled to the ground, and shortly afterwards two of them had to be removed to the hospital. It seems astounding that they escaped with their lives. No similar accident has ever happened before to an English war balloon, though something of the kind occurred some years ago in Italy.

The report of the Commissioners of Customs for the last financial year says the year's figures indicate that the consumption of coffee and cocoa is decreasing, and the taste for rum is diminishing, but there has been a substantial advance in the amount of tea consumed. The tobacco duties have decreased a little, while the receipt from wine continues its downward tendency.

The steamship *Islam*, which was detained at Glasgow by order of the British Foreign Office, left the Clyde on the afternoon of September 5th, the Japanese Minister having given the necessary security that she will not be used as an armed cruiser in the war between China and Japan.

Lawyer—I'm afraid the case will go against you, Uncle 'Rastus. The owner of the woodpile says you left incriminating indications behind you. Uncle 'Rastus—Dat's jest my luck! Ef I'd a know'd dey was dere I'd a took dem too!

Conan Doyle's aptitude for telling stories began to show itself when he was very young, and his schoolboy friends used to offer him rewards in the way of tarts to relate romances. The author is a very fine specimen of manhood. He is big and blonde, 6 feet tall, athletic, and weighs 255 pounds. He is only 35 years old.

THE ORIGIN OF THE WAR.

WE publish to-day authorized copies of the despatches that passed between the Governments in Peking and Tokyo immediately before the breaking out of the present war, and that were laid by Count ITO before the House of Peers on the 19th instant. The despatches cover the period from June 7th to July 14th. The gist of their contents has already been made known to the public, but will now, doubtless, receive credence not hitherto extended to it. So short and succinct is the correspondence that we might, perhaps, be content to submit it for our readers' perusal without any comment. A synopsis, however, may be found convenient.

On June 7th we find each empire notifying the other, through their respective diplomatic representative in Peking and Tokyo, that a despatch of troops to the peninsula is contemplated. The precise synchronism of the notice shows that one side, at least, must have been aware of the other's purpose, and must have timed its own procedure accordingly. Japan possessed such knowledge. She knew that China had been asked to give armed aid to the Korean Government (or rather to the faction then holding administrative sway in the peninsular Kingdom); she knew that China was about to comply, and she resolved that the occasion had come for applying some final remedy to Korea's perpetual disturbances with all their dangerous contingencies. China's motive for sending troops was to quell the insurrection of the Tong-haks, to re-affirm her own domination in the peninsula, and to re-seat firmly in the administrative saddle men under whose guidance the country was losing all capacity for independence. Japan's motive was to secure such a position as would enable her to insist upon the radically curative treatment of Korea's malady. She had a vital interest in the question. It concerned her own safety in particular and the peace of the Orient in general.

Up to this point, the two empires were strictly within their conventional rights. Each was by treaty entitled to send troops to the peninsula provided that notice was given to the other.

China, in giving notice, described Korea as her "tributary State." She thus thrust into the forefront of the discussion a contention that Japan, from conciliatory motives, would have shrunk from approaching. Once formally advanced, however, the claim had to be challenged. In the treaty of amity and commerce concluded many years previously between Japan and Korea, the two high contracting parties were explicitly declared to possess the same national status. Japan could not agree that a Power which for two decades she had acknowledged and treated

as her equal, should be openly classed as a tributary of China.

The Chinese statesmen took no notice of Japan's protest, but continued to apply the disputed appellation to Korea. In their next despatch that country again figured as a "tributary State." They further asserted their assumption of sovereignty in the peninsula by seeking to set limits to the number of troops sent by Japan, as well as to the sphere of their employment. In fact, they made it unmistakably plain that they intended to assume complete sway in the settlement of Korean affairs, and to relegate Japan to the position of a mere outsider.

Japan replied by again protesting against the use of the term "tributary State," and by denying China's right to raise any question as to the number, destination, or object of Japanese troops sent to Korea.

The next stage of the complication was a proposal from Japan that the two empires should unite their efforts, first, for the suppression of the disturbance in Korea, and secondly, for the subsequent improvement of that Kingdom's administration, the latter purpose to be pursued by the despatch of a joint commission of investigation. That was an important point in the affair. It rested then with China to avert all immediate prospect of war by agreeing to join hands with Japan for the regeneration of a nation in the prosperity and independence of which the two empires were equally interested. But China categorically refused everything. She was ready at all times to interfere by force of arms between the Korean people and the dominant political faction. But when there was question of reform, she declined to interfere in any way. She was ready at all times to crush the little Kingdom into submission to the most corrupt and demoralizing administration in the world, but she would never aid it to emerge from the suffering and enervation entailed by the sway of such an evil oligarchy. Moreover, her attitude toward Japan's friendly proposal was insultingly supercilious. She wondered how Japan, while asserting Korea's independence, could suggest the idea of peremptorily reforming its administration! For Chinese purposes, she openly declared Korea a "tributary State" and denied Japan's assertion of its independence. For Japanese purposes she insisted that it should be held independent, and that Japan should strictly abide by her assertion of its independence.

The Cabinet in Tokyo must now have recognised the very dangerous, if not hopeless, phase upon which the negotiation had entered. Their next despatch (No. 8 of the series) indicated their sense of the gravity of the situation. They set forth in quiet but firm language the imperative reason that forbade them to look on idly while Korea drifted deeper and deeper

into the mud of corruption, confusion, and intrigue, and they declared that they could not withdraw the troops without "some understanding that would guarantee the future peace, order, and good government of the country."

China still continued obdurate. The rest is pretty well known. The last despatch of the series carries us to within 11 days of the first belligerent act and 17 of the declaration of war. China persisting in her refusal to coöperate, Japan undertook the work of reform single-handed. Thereupon China not only began to re-inforce her troops in the peninsula—troops that could now have no function other than armed resistance to Japan's programme—but also covertly employed all the means at her command to defeat Japan's purpose. She was therefore warned that the despatch of any more troops would be regarded as a belligerent act. She neglected the warning, one of her transports was sunk on its way to Korea, and a state of war was inaugurated.

THE DIET.

THE Extraordinary Session of the Diet came to an end on the 22nd instant. It was marked throughout by an absence of party friction and a degree of unanimity unprecedented in Japan's parliamentary records. Such a result had been anticipated. The people being absolutely a unit with regard to this war, their representatives were not likely to differ. Japan is animated by one sentiment at present—a determination to beat China to her knees or to perish in the effort. Not a solitary voice is anywhere raised in favour of hesitation or half measures. The nation is fighting in Korea, not the army alone. That the Diet would cheer on the Government, and gladly vote whatever supplies were demanded, was therefore a foregone conclusion. Yet the story of the three days' session at Hiroshima is even more striking than could reasonably have been anticipated. The programme of the Cabinet was simple. The Minister President laid before the Houses a succinct statement of the causes of the war, together with copies of the despatches that had passed between the Governments of Peking and Tientsin. The Minister of State for Finance introduced the War Budget. On Count ITO's statement we have already commented. It established clearly that Japan acted loyally toward China throughout; that she frankly invited the Middle Kingdom to coöperate for the regeneration of Korea, declaring her conviction that such a union of effort was best calculated to develop the essential elements of responsible independence in the little Kingdom; that had China agreed to the very simple project of a joint commission, the sword need never have been drawn, and that the statesmen in Peking treated Japan's

proposals with supercilious indifference throughout. The despatches bear conclusive testimony to these facts, and the despatches, we presume, will scarcely be queried even by the most biassed partisan. It is significant that not a single question was asked in either House with reference to the negotiations. No questions were needed. The documentary evidence showed plainly what had been the temper of each Government and what the course pursued.

The Houses having been thus instructed as to the origin of the war, were invited to consider a military budget providing for an expenditure of 150 million *yen*. That is an immense sum for Japan. Nearly the double of her annual income, it signifies as much to her as would an appropriation of 40 or 50 millions sterling to the legislators at Westminster. In asking for such a credit the Minister of Finance might have been expected to offer some assurance of its probable sufficiency or some recognition of the magnitude of the national effort involved. He did nothing of the kind. On the contrary, he adopted a tone of lofty confidence. He did not even think of limiting his hearers' patriotism by suggesting that the sacrifice now demanded of them would be final. What he said was that, however great might be the outlays required for the prosecution of the war, the Diet, he knew well, would grant every appropriation asked for. That was doubtless the kind of speech best suited to the temper of the nation. The House of Representatives voted the war budget without debate, without a dissentient voice, and amid immense enthusiasm.

Let us pass, for a moment, from this decidedly dramatic scene into the realm of sober arithmetic. The total sum voted was 150 million *yen*. Of that amount 26 millions are to be taken from the Reserves in the Treasury, and 124 millions are to be obtained by a domestic loan. Further, since a loan of 30 millions has already been floated, it results that the people are to be invited to put up only 94 millions more. The details of the transaction have still to be determined by the Minister of Finance, but it is plain that, if the war continue, the Government will have immediate need of funds, and the sale of Public Loan Bonds must therefore proceed apace. The expenditures that have already been sanctioned are said to be as follows:—

	<i>Yen</i> .
For Military Operations	19,150,319
For Naval Operations	3,888,507
Total	23,038,826

It is not to be concluded that this total represents the whole of the outlays thus far incurred. Expenditures on account of the campaign may be said to have commenced early in June, since the first batch of troops was embarked in the second week of that month. Warlike operations have therefore been already in progress for nearly

five months, and it is scarcely credible that the money spent during all that time, has not exceeded 25 million *yen*, or, say, 2½ millions sterling. Still we are justified in accepting the figure as a fair approximation, and in concluding from it that the war is not involving any such expenditure as Western experience had taught us to expect. But whatever the expenditure involved, Japan is determined, to fight her battle single-handed. She will not have recourse to foreign aid in any form. We admire her spirit, but we understand very well that just at present she has no real sense of the magnitude and consequences of her efforts.

THE NAVAL BATTLE.

WE appear to be now competent to form a tolerably clear idea of the manœuvring of the two fleets in the naval battle on the 17th of September.

Vice-Admiral ITO, who commanded on the Japanese side, had with him twelve ships. But three of these, the *Hiyei*, the *Akagi*, and the *Saikyo Maru*, were either too slow, too small, or too weak to take an active part in the fight. The Admiral therefore decided to work with nine vessels, which he divided into two Squadrons, the division being based chiefly on the question of speed. The Squadrons were composed as follows:—

FLYING SQUADRON.

	Tons.	Knots.
<i>Yoshino</i> (steel cruiser)	4,216	23
<i>Takachihō</i> (steel cruiser)	3,709	18.7
<i>Akizushima</i> (steel cruiser)	3,150	19
<i>Naninwa</i> (steel cruiser)	3,209	18.7

PRINCIPAL SQUADRON.

<i>Matsushima</i> Flag-ship (steel coast-defence)	4,278	17.5
<i>Chiyoda</i> (steel cruiser)	2,439	19
<i>Itsukushima</i> (steel coast-defence)	4,278	17.5
<i>Hashidate</i> (steel coast-defence) ..	4,278	17.5
<i>Fuso</i> (armour-clad corvette)	3,777	13

It will be seen from the above that the slowest vessels in the Flying Squadron had a speed of nearly 19 knots. These four ships consequently formed a splendid little fleet, capable of the most rapid manœuvring and carrying powerful guns of the most modern construction. The Principal Squadron, on the contrary, included one vessel—the *Fuso*—of only 13 knots, whereas none of the other four ships composing the Squadron had a less speed than 17½ knots. The *Fuso* was therefore a little out of place in such company, but her great superiority to her consorts in point of protection gave her some title to work with them. The Principal Squadron carried the heaviest guns, namely three 67-ton Canets in the *Matsushima*, *Itsukushima*, and *Hashidate*.

On sighting the enemy, the two Japanese Squadrons, the Flying Squadron in advance, with the ships in single file, steered toward the centre of the Chinese Fleet, and the Chinese, on their side, formed line. Admiral TING had only ten ships with him at the moment, the four

others with six torpedo-boats that formed his fleet, being at a considerable distance in the rear, where they had remained to complete the landing of the re-inforcements at the mouth of the Yalu river. These ten ships the Admiral marshalled in line, or, according to some accounts, in the shape of a V. He placed the two ironclads, *Chen-yuen* and *Ting-yuen*, in the centre, and flanked them with the other most powerful vessels in descending order, so that his weakest ships were at the wings. It would seem from this that he looked to receive the Japanese attack at his centre, but it is also possible that his tactics were influenced by the project of holding tenaciously to his route toward the Gulf of Pechili.

The Japanese, having made as though they purposed delivering their assault at the centre of the enemy's line, suddenly sheered off, so as to head diagonally toward his right wing. In performing this manœuvre the two Japanese Squadrons seem to have preserved a certain independence of action. It was their common programme to circle round the enemy's right, but in order to avoid displaying unanimity of purpose, the Principal Squadron held on toward the Chinese centre until some time had elapsed after the Flying Squadron's change of direction. Hence to the Chinese it appeared that they were about to be attacked at the centre and on the right simultaneously. They had already opened fire at a range of from 5,000 to 6,000 metres, but the Japanese did not immediately reply.

The relative positions of the fleets at this period of the action seem to have been thus:—

The Japanese Flying Squadron, steaming at high speed, now began to circle round the enemy's right wing, and at the same time commenced its cannonade. The range, 3,000 metres at first, was quickly reduced to 2,000, and from that comparatively small distance the Squadron

concentrated its fire against the ships on the Chinese right wing, namely, the *Yang-wei*, the *Chao-yung*, and the *Ching-yuen*. Exposed to this heavy cannonade, the *Yang-wei* caught fire and ceased to take part in the fight. The ships were now disposed thus :—

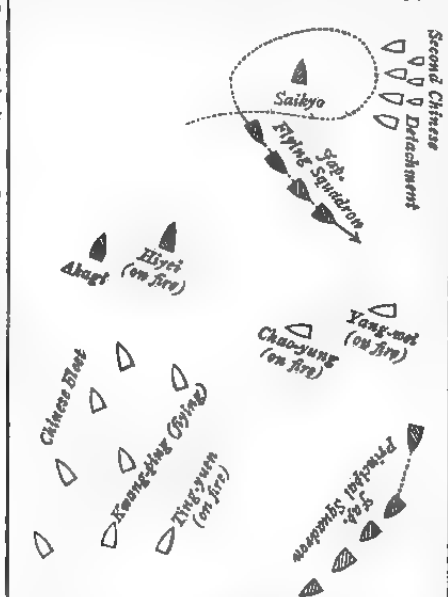

The Japanese Principal Squadron had by this time altered its course so as to follow in the path of the Flying Squadron. Sweeping round the Chinese right at short range, it poured in a fire that reduced the *Chao-yung* to a sinking condition.

Had the two Japanese Squadrons been able to pursue their programme exactly, they would now have steered along the enemy's rear, the Flying Squadron still in advance. But just as the Flying Squadron came round the enemy's right, it sighted a second detachment of his fleet—four ships and six torpedo boats—coming up from the direction of the Yalu river. This detachment was making to join the body of the Fleet, but finding its course intercepted by a powerful Japanese squadron, it sheered off and the Japanese Flying Squadron went in pursuit. Admiral ITO thereupon signalled the Flying Squadron to return, and himself held on his original course round the right and down the rear of the Chinese. The relative positions of the fleets were now about thus :—

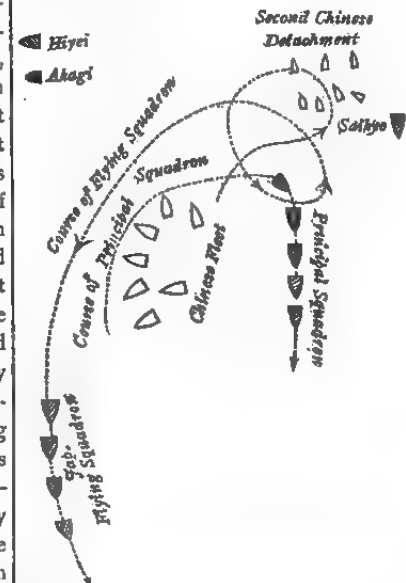

The Flying Squadron, owing to its divergence in pursuit of the Yalu Detachment, now found itself behind the Principal Squadron, and proceeded in that order to steam down the rear of the enemy's

line. But at this stage it was again diverted from its course by an incident to understand which we must refer to the original arrangement of the ships. If the reader looks at the second of our diagrams, he will see that the *Hiyei*, owing to her inferior speed, had fallen considerably behind the Principal Squadron. In fact, she now found herself in such a position that to hold on in the wake of that Squadron would bring her into imminent danger of being rammed by the enemy's ships, so close must she pass in front of them. She had then to choose between one of two proceedings: either to head southward and get out of the fight altogether, which she might easily have done supposing that Admiral TING did not detach ships to pursue her; or to try and re-establish connection with the Principal Japanese Squadron by steering along the chord of the arc which the latter was describing. She chose this second alternative, though it involved steaming by the rear of the enemy's left wing at close range, and passing between the vessels in his right wing. It was a singularly bold feat, running the gauntlet, in fact, of eight powerful Chinese ships. The *Hiyei* emerged without vital injury, but in flames. The *Akagi*, which had hitherto managed to keep out of fatal range of the Chinese big guns, and which happened to be now at some distance from the enemy on his right front, went to the assistance of the *Hiyei*, and these two ships at once became the objects of an attack by three of the Chinese vessels. It was at this stage that the Flying Squadron, re-called from its diversion against the enemy's Yalu Detachment, had just commenced to steer after the Principal Squadron down the rear of the Chinese lines :—

Seeing the *Hiyei*'s signal that she was on fire, and observing the imminent peril of the *Akagi* also, the Flying Squadron now circled round once more, repassed the enemy's right wing, and intervening between the two threatened

ships and the enemy, enabled them to draw out of range. After this, the Flying Squadron headed along the front of the Chinese Fleet, and the position presently became thus :—

The two Japanese Squadrons were now working in opposite directions. Exactly what ensued it is not easy to discover without further information. Apparently the most powerful of the Chinese ships directed their attack against the Principal Squadron, while the Flying Squadron devoted itself to the vessels that were trying to escape. The accounts from the Chinese side seem to indicate that, after having separated the two ironclads and engaged them for some time, the Principal Squadron drew off to effect a junction with the Flying Squadron, and during that interval the remaining Chinese ships were put again on their course for Pechili Gulf. That view is not inconsistent with the Japanese report.

It will be seen from the above diagrams (vide 4 and 5) that the *Saikyo Maru*'s moment of extreme peril was when she found herself within short range of the enemy's Yalu detachment with its torpedo boats. Her steam steering apparatus had already been disabled, and it was apparently necessary for her to run the gauntlet of the ships forming the Yalu Detachment before she could shape a southerly course and get out of the fight.

GREAT BRITAIN AND THE WAR.

IF implicit credence is to be placed in all the telegraphic intelligence sent eastward from London, the position of the Cabinet in Downing Street is open to criticism. There are times and seasons for everything; above all for the intervention of a great Power like England in quarrels between foreign States. On the eve of the war there certainly was an opportunity for mediation, and the effort then made by Great Britain deserved the

gratitude of both the Eastern empires. Unhappily it did not succeed. Perhaps it is still too early to analyse exactly the causes of failure. Speaking broadly, however, we are disposed to think that the nature of the task was not thoroughly appreciated. Too much thought was taken for China; too little for Japan. From the moment of the Japanese troops' despatch to Korea, it ought to have been understood that Japan had assumed a position from which she could not recede without accomplishing something substantial. The Korean problem had been growing larger and larger in her eyes for many years. Its solution had become a necessity of her existence. The nation was thoroughly bent upon seeing it solved, and so soon as the Cabinet in Tokyo translated the people's long latent desire into action, there could be no stopping short of at least partial achievement. Was that fact fully comprehended? We doubt it. Yet there were legible guides. Had Japan sent to Korea only a few hundred men, they might have played the part of a Legation guard and been taken off the stage subsequently without any extraordinary contrivance. But when she sent five thousand, to have withdrawn them *re infecta* would have been to cover herself with ridicule. Such farcical statesmanship must have thrown the whole country into a tumult of angry excitement. Nevertheless the withdrawal of the Japanese troops by way of preliminary to negotiation was the condition upon which China insisted throughout, and her insistence was endorsed by the mediator. It is easy, of course, to appreciate a diplomatic attitude dictated by the policy that England has espoused since she discovered the homogeneity of British and Chinese interests in Central Asia. But Japan has never been an indifferent quantity in the Orient, and when the Korean question became a source of friction between the two empires, she deserved more consideration than she received. Not upon her alone should pressure have been exercised: China had to yield something. Unfortunately this idea of mutuality did not present itself sufficiently early to the framers of concessions, and Japanese statesmen were offered no bridge of retreat that would bear the weight of their country's disappointment. It would seem, too, as though the windings of the political labyrinth in China were not wisely threaded. If a *modus vivendi* could be found at all, Tientsin, not Peking, was the place to seek it; for not only did the Viceroy Li hold chief control of Korean affairs, but also little possibility existed of moulding into negotiable shape the evasive conservatism of the Tsung-li Yamén. At all events England did not succeed, and it might at least have been hoped that she would not again lightly risk failure. But the telegraph does not confirm that hope. She is represented as putting herself once

more in the breach under circumstances even less promising than before. We hesitate to credit anything of the kind. China has been well beaten thus far, and is on the eve of being still better beaten. In the encounters immediately impending between her and Japan, the latter is about to reap the fruits of success hitherto partial in the sense of being preliminary. China's situation may be compared to that of a swordsman whose weapon has been struck from his hand. If she wishes to avert the blade of the victor from her throat, it is for her to assume a suppliant attitude, not for another to step in and shield her. We do not say that mediation is impossible, but we do say that it must be mediation of a nature different from that reported by the telegraph. The brief session of the Diet just closed demonstrated with unmistakable clearness that the Japanese nation will not brook any interference the chief motive of which is to save China. If the vanquished has claims upon our sympathy, the victor has also titles to our consideration. Another abortive attempt on England's part would greatly disqualify her for future efforts, and certainly she ought to assist at any settlement that may be made.

MERETRICIOUS PROSE.

IN the *Fortnightly Review*, Mr. LIONEL JOHNSON writes on the work of Mr. PATER. It is unfortunate that an article devoted chiefly to a eulogy of Mr. PATER's style should itself be written in a style that is almost unendurable. We might doubt whether the praise of one so little able to exercise self-criticism is much of a tribute to Mr. PATER's genius; but it would be unfair to judge an author by the demerits of his admirers. We have here nothing to do with Mr. PATER; we wish to speak of his panegyrist. "Most of our writers," says Mr. JOHNSON, "have written prose, as M. JOURDAIN spoke it, unconsciously." We are surprised, in so fastidious a stylist, to find a reference to so very old a friend as M. JOURDAIN; but letting that pass, let us ask if it be not better to write bad prose unconsciously than to write bad prose with infinite labour and pain. It is assuredly better to have no art at all, than to have an artificiality that stares defiantly at the reader from every sentence, every phrase, every word.

We have not space to discuss Mr. JOHNSON's faults in detail, but some of them are so glaring, and are so commonly found in would-be fine writers, that we think them worth a little attention by those who set any value on English prose. Take the following sentences as examples:—

"At the outset, it is clear that we have here an artist of the severest kind, one enamoured of patient waiting upon per-

fection and content with any toil so he may attain it: and perfection is not popular, unless in works of an unexact character. Persistence in perfection, a vigilance never relaxed, an ascetic austerity of carefulness, cannot fail to vex many: the puritan and precision of art can become no less irksome than his fellow in life." Again, "a golden grace upon the delicate sentences; and a charm that is strangely strong." Again, "much elegant erudition pleasantly presented." Again, "In these finely wrought miniatures of romance he works with a loving learning, which leads him to no abstract theory, but to a delicate definition of what is characteristic in his chosen studies through a dexterous arrangement of their choice contents."

Shades of our Saxon ancestors! Surely we hear once more the war songs of the sixth century, "Wigu Wintrum geong Wordum maelde." "Warrior of winters young with words spake." Or nestling in the nursery on our mother's knee we listen once more with palpitating hearts to the piteous lament of our old friend Peter Piper for the peck of pickled pepper that he picked. In these writers who rarely let us have a noun unattended by an adjective, an adjective unattended by an adverb, and who with a doubly dexterous discernment carefully choose alliterative but adscititious articulatory adjuncts, absurdity assuredly sits enthroned.

Let us take another example, this time to show how Mr. JOHNSON's affectation of classicism leads him into grossnesses of expression that would jar upon the crudest taste. "It is possible that to his congenital distaste for what has no colour, form, warmth, play of life, is due a certain misconstruction of his philosophy!" Mr. JOHNSON has a distaste, not congenital but acquired, for the use of the vulgar tongue; his refined senses are offended by a such plain, coarse English words as "inborn;" he prefers the synonym of Latin origin, "congenital." But the preference in this case is unfortunate: he has forgotten the connotation of "congenital" that is to most persons irresistible. The use of the term is almost confined to medicine and the allied sciences. We speak of a congenital idiot, a congenital tumour, a congenital bodily deformity. But of agreeable possessions like genius and good taste, we are accustomed to say that they are inborn. The distinction may seem trivial, but it is in such apparently trivial distinctions that the art of literary style, on examination, is found largely to consist. In the work of the great masters of style we are never roughly jarred in our consideration of the matter by irresistible digressions of our mind to consider the imperfections of the manner.

Mr. JOHNSON sins throughout by an irritating assumption of superior learning, which he may, indeed, possess, but which a more polished writer would refrain

from thus obtruding on the reader. As we are limiting ourselves here chiefly to linguistic criticism, we shall give an example of this fault as displayed, not in his thought, but in his verbiage:—"His rare work, given to the world from time to time, quietly reminded a new generation of certain palmary and indispensable virtues, not easy of attainment, which are in danger of becoming old-fashioned or forgotten."

Palmary virtues! We were at first inclined leniently to suppose that this was a misprint for "primary," which though ineffective would have been accordant with the canons of good use. But a short reflection convinced us that this suggestion must already have been made to the author by the printer's reader, and contemptuously rejected. Now there are occasions on which the use of new or forgotten words is a necessary if distasteful act; there are occasions on which it is a master-stroke of genius. But there are also occasions, and this is one of them, on which it is a literary crime. As a general rule, the writer, and especially the young writer, should content himself with the words that may be found in the smaller dictionaries, and of these he should with a wise discernment reject words that are likely to be unfamiliar to the class of readers he is addressing. And to use words that are so unfamiliar that even the most educated of readers must pause to consider seriously what the writer can possibly mean, is an affectation of learning that amounts, as we said, to a literary crime. What does Mr. JOHNSON mean by a "palmary virtue?" We suppose, a virtue that takes the palm, the prize of victory. In effect, he doubtless means nothing more than "pre-eminent." And since this thoroughly naturalized word lies apt to express his meaning, what excuse can be offered for the employment of such a barbarism as "palmary?"

One last example and we have done with Mr. JOHNSON. The sentence immediately follows that which we have last quoted. "Emphatically the scholar and the man of letters, there was in his life and work a perfect expression of that single-hearted devotion to fine literature, yet without a shadow of pedantry, which is ceasing to flourish in the ancient academic places." Now we can understand this sentence; a fifth standard schoolboy could analyse and parse it without serious difficulty. But Mr. JOHNSON will not thank us for this damnation; he aims higher than the intelligence of the youthful disciple of LINDLEY MURRAY. Yet how lamentably deficient is the sentence, which is but the type of many in his essay, in force, in unity, and in ease. Mr. JOHNSON and his fellows, for he is but the most typical exponent of a school of young writers, seem to have the following recipe for writing English prose:—Take of English words a small handful, of Latin words a large infusion, of

familiarity with the lesser known authors of the Renaissance; add qualifying words out of all proportion to the actual need as tested by the meaning (which may indeed be neglected) but with a keen ear for their alliterative effect and for other niceties of sound; add a large number of Latin quotations, and a few words with which the reader is not likely to be familiar; season with pedantry and affectation; arrange with regard to sound rather than sense; any obscurity due to a disregard of the logical relations of phrases and clauses may then be obviated by a free sprinkling from the comma-pot. If the pains taken in the preparation be obvious to the most cursory reader, the writer may hope in due time to become one of the masters of English prose. Or at least, if he fail to achieve so much as this, he may become, like the Euphuist Amado in "Love's labour lost," "one whom the music of his own vain tongue doth ravish like enchanting harmony."

If in Mr. JOHNSON we have an exemplar of those palmary and indispensable virtues of which Mr. PATER quietly reminded a new generation, we cannot regret that they are difficult of attainment, we may even say we rejoice that they are in danger of becoming old-fashioned or forgotten.

IMPERIAL DIET.

FRIDAY, OCTOBER 19TH.

HOUSE OF PEERS.

The House met at 10.25 a.m.

The President announced that the Address of the House to the Sovereign had been presented, and that His Majesty's reply has been received. The documents were as follow:—

May it please Your Majesty:—

We, Your Majesty's Humble Servants, members of the House of Peers, approach Your August and Enlightened Majesty with all respect. Your Majesty has been pleased to raise the Imperial Standard at Hiroshima and to undertake in person the control of the Expeditionary Army's operations against China. Your Majesty has moreover convoked a special session of the Diet at the place where the Imperial Headquarters are established, and has honoured us with Your Majesty's presence at the opening ceremony of the present session, graciously also addressing to us words of august benevolence. Since War was declared by Your Majesty, reports of victories both by land and by sea have come in quick succession, so that the prestige of the Empire has already been greatly enhanced throughout the world. These fortunate results we most reverentially ascribe entirely to the august wisdom of Your Majesty. We, Your Majesty's servants, obeying with all respect Your Majesty's wise command, will seek to discharge our function of deliberations and consent, and by realizing the cordial union of all classes, will endeavour to promote Your Majesty's enlightened policy. Most worshipfully do we, Your Majesty's servants, venture to present this, our humble reply to Your Majesty's gracious Speech.

The Emperor's reply was:—

We have received with approval the respectful Address of Our House of Peers.

Count Ito, Minister President of State, then addressed as follow:—

GENTLEMEN,—The Korean affair having developed into a war between this country and China, His Majesty the Emperor was pleased to remove the Imperial military headquarters to this place, and to assume in person the general control over the expeditionary forces. His Imperial Majesty has further been pleased to convene here an extraordinary session of the Diet, so that you may take part in the deliberation of military measures of great importance. I have now the honour, in

the discharge of my official duties, to avail myself of this opportunity for laying before you a general account of the circumstances that led to the present war between Japan and China.

It was Japan that took the lead in concluding with Korea a treaty recognizing her independence and in thus introducing her to the rest of the world. Subsequently, in the course of a few years, other countries also opened communications with Korea, recognizing her independence and concluding treaties with her on that basis. From the close proximity of Korea to our shores, it follows that her tranquillity or disorder, her prosperity or decline, have most important bearings upon this country's welfare. Unfortunately Korea is not only weak and enervated, but is also afflicted with the curse of maladministration. Internal disorders are frequent, and, what is worse, the Government is so helpless to restore order that such disorders very often constitute dangers to the foreign residents of the country. Since Korea is thus daily declining, Japan has to consider her case seriously. If Japan chooses to leave her to her fate, well and good. But if, on the contrary, by way of completing the original programme of this empire when we recognised Korean independence in anticipation of any other nation, Japan, be desirous, as she undoubtedly is, of protecting her rights and interests in Korea, then it is imperatively necessary for her to secure the consolidation of Korea's independence as the basis of general peace in the East. Since the Restoration, in pursuance of the Grand Imperial Policy, it has been Japan's aim at home to promote civilization, and abroad to develop foreign intercourse. Valuing, as she does, the general peace of the East, it has ever been her desire to advance in her career of civilization hand in hand with her neighbours. Such, consequently, has always been the policy pursued by this country toward Korea, whenever trouble occurred in the peninsula, and similarly in her intercourse with China, Japan has always been frank and just, highly appreciating the Middle Kingdom's friendship and good will. For instance, at the outset of the present trouble, Japan desired, in accordance with the spirit of the Tientsin Treaty, to divide equally with China the responsibility of rendering assistance to Korea, and maintaining the peace of the East. China, on the other hand, wantonly rejected Japan's proposals on vain pretexts. Thereupon Japan had single-handed to advise Korea about the reform of her Administration. Korea was prompt in complying with Japan's friendly counsels, but China secretly and openly tried all means to thwart the work of reform, thereby creating a state of affairs that ultimately made war inevitable. At this point I shall lay before you correspondence that passed between the Governments of the two countries, as an assistance to the right understanding of the situation. (Here follow various documents, of which translations will be published in our next issue.) What has thus far been read will show you how haughty and insulting has been China's attitude in this matter. On the one hand, she insisted on Korea's being her dependency; while, on the other, she pretended to recognize the autonomy of that Kingdom. In other words, China, while herself all the while interfering with Korea's affairs, tried to prevent the intervention of any other State, thus placing Korea under her sole management. China's object was evidently to utilize Korea's internal disorders for the purpose of increasing her own prestige there, and instead of helping the peninsula Kingdom to renovate its strength and preserve its independence, she sought to destroy its very existence and annex its territory. In pursuance of that policy, China tried, on the one hand, to obtain the withdrawal of the Japanese troops, on the false pretext that the *Togaku-to* had been subdued, thereby to gain time to send reinforcements to Korea by way of intimidation. On the other, in utter disregard of the Tientsin Treaty, she attempted to instigate Korea to reject Japan's friendly advice. There are abundant proofs to establish this point, but I do not think it necessary to dwell upon them at any length. At this stage of the affair, certain Powers took the friendly office of mediation, and approached the Governments of the two countries. But their well meant advice was rejected by China. Thereupon His Majesty Government instructed its *Chargé d'Affaires* in Peking to declare to the Chinese Government that, since China was bent upon aggravating the complication, she alone must be held responsible for any emergency that might thereafter arise. China not only rejected Japan's friendly counsel and sought to disturb the peace of the East, but she even committed acts of warfare against this Empire. Under such circumstances, the only course left for Japan was to accept the challenge. Since the issue of the Imperial Rescript relating to the declaration of war, our Army and Navy have been able, by virtue

of His Majesty's glory, as well as by the devotion and skill of the officers and men, to achieve repeated victories. You will heartily join with me in congratulating the country upon such an auspicious state of things. You, gentlemen, have already listened to the Speech from the Throne, and I have no doubt that you are prepared to perform your important legislative functions, so that the ultimate object of the present war may be attained by hearty co-operation between the Government and the people.

The first item on the Order of the Day, namely, a Bill seeking the House's approval of Imperial Ordinance No. 67 (relating to military postal matter) was entrusted to a special committee nominated by the President, the committee, on the motion of Baron Ozawa, being instructed to present its report at 1 p.m. the same day.

The second item, a Bill seeking approval of Imperial Ordinance No. 135 (relating to maritime communication with Korea), was entrusted to a Special Committee nominated by the President.

The House took a recess and re-assembled at 1.07 p.m.

The two Special Committees nominated in the forenoon reported in favour of the Bills entrusted to them, and the House passed the measures unanimously.

The House rose at 1.15 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 9.25 p.m.

The President having proceeded to the Palace with the House's address to the Sovereign, the chair was taken by the Vice-President.

The House proceeded to the election of a Chairman of the Whole. The election resulted in 144 votes being cast for Mr. Suyehiro Shigeyasu (*Kaishin-to*) out of a total of 281.

The President having resumed his seat, reported that he had presented the House's Address to the Sovereign and received His Majesty's reply. The documents were as follow:—

May it please Your Majesty:—

Your Majesty's servant, the President of the House of Representatives, Kusumoto Masataka, submits with profound reverence this reply to Your Majesty's Speech, in accordance with a resolution of the House of Representatives. Your Enlightened Majesty, succeeding to the throne of Your Majesty's Ancestors, has achieved the glorious task of reviving the prosperity of the realm. For years China has showed herself rude and perverse, infringing the rules of neighbourly hospitality and disturbing the tranquility of the Orient, to such an extent that the patience of Your Majesty has been exhausted. Justly incensed by these proceedings, Your Majesty has put into the field the naval and military forces of the empire, and has raised the Imperial standard at Hiroshima, also convoking there a special session of the Imperial Diet. Your Majesty has moreover condescended to open the Session in person, and had been pleased to address us in gracious and benevolent language. We are unable sufficiently to express the sentiments of profound reverence inspired by Your Majesty's virtue. The organization and extension of this military and naval equipment are now matters of pressing national necessity, and we venture to assure Your Majesty that in compliance with Your Majesty's august commands, we shall spare no pains to discharge our duties to the state by duly performing our functions of deliberation and consent, with regard to all matters bearing upon the national defences. It is our firm resolve to attain the complete triumph of the empire's arms, to restore the tranquillity of the East, to augment the prestige of the State, and to realise, at whatever cost, the objects for the achievement of which this War has been undertaken. We venture to swear to Your Majesty that Your august commands shall be most faithfully and loyally obeyed. Your Majesty's servant, Kusumoto Masataka, most humbly submits this address.

The Emperor's Reply:—

We have received with approval the respectful address of Our House of Representatives.

The House then rose (11.30 a.m.), the Budget Committee alone remaining in session.

SATURDAY, 20TH OCTOBER.

HOUSE OF PEERS.

The House did not meet.

HOUSE OF REPRESENTATIVES.

The House met at 1 p.m.

The Minister President of State addressed as follow:—

GENTLEMEN,—Since the outbreak of the present war between Japan and China, His Majesty the Emperor has assumed in person the general control of military affairs, and has been pleased to remove the military headquarters to this place. Further, in order to carry out some legislative work of urgent importance, His Majesty has been pleased, in the midst of the general commotion incidental to military preparations, to assemble here an extraordinary session of the Diet. The Imperial army, as you know, after undergoing great hardships, has won victories at Songhwan and Phuyong-yang, while the navy has achieved equally splendid success at Phung-do and in the Yellow Sea. The country is to be heartily congratulated upon the success that has thus far attended its arms, but at the same time we must bear in mind that before attaining our object we have still to encounter more or less hardship and difficulty. As to military measures of urgent importance, they have been introduced to your House by Imperial Order, and I observe that they are already on your desks. Now that you have listened to the Speech from the Throne, I have no doubt that, in view of the necessity of the present juncture, you will be united and of one accord in giving your support to these important measures of State, and that you will thus enable the Military and Civil Authorities to take prompt and decisive steps in accordance with the need of the moment in obedience to the Imperial guidance and without being subjected to any external restraint.

Mr. Suyehiro Shigeyasu said that as there were many questions to be addressed to the Minister President, he moved that the House go into secret session.

Mr. Kono Hironaka opposed the motion on the ground that matters of grave national importance ought not to be concealed from the people at large.

Mr. Yamada Toji thought that the session should be public until questions were put of such a nature that the Minister deemed an open reply unwise.

Mr. Suyehiro having expressed a desire to consult the Minister President, Count Ito re-ascended the rostrum, and explained that, while he desired to afford all information likely to be desired by the people, he apprehended that it would not be possible to publicly answer in detail any great number of questions without divulging matters that ought, in the interests of the State, to be kept private.

Mr. Suyehiro pressed his motion, and several members supported him.

The Minister President pointed out that the more advisable course would be to embody matters of moment in the form of written questions.

The motion having been put to the vote with closed doors, was rejected.

The Minister of State for Finance then ascended the rostrum, and said:—

GENTLEMEN,—In accordance with the Sovereign's commands, I have had the honour to submit to you a Budget of Military Expenditures together with some correlated Bills. Undoubtedly, gentlemen, you are firmly persuaded that the present war between our country and China touches the very foundations of the peace of the Orient, and that its prosecution is a duty inevitably devolving upon this empire. Therefore, however great may be the outlays henceforth involved, not only are you absolutely determined never to recede so much as one pace until the honour of the empire is fully vindicated, its interests thoroughly secured and the object of the war attained; but also among the forty millions of our fellow-countrymen there is not so much as one man that entertains a different opinion. The nation is absolutely a unit on the subject. Such being the case, I deem it superfluous to enter into any exposition of reasons for the appropriations you are now invited to vote. I content myself with asking you to discharge your function of approval in the most expeditious and unanimous manner possible, so that the world may clearly appreciate the zeal by which the entire nation is animated.

Mr. Koizuka Ryo said that the case of Shanghai demanded some information. It had been agreed that Shanghai should be treated as a neutral port. China, however, was understood to have violated the conditions of neutral-

ity, and to have used the port as a basis of military operations. He desired to know what steps the Government had taken on that account, and, further, whether any measures had been adopted with regard to the fact that subjects of neutral Powers were serving in Chinese men-of-war. These things had been noted and discussed in the columns of the press and had formed the topic of a question in the British House of Commons. It did not appear, therefore, that they need be treated as secret.

The Minister President of State said that it did not seem in order to answer such a question that day.

This reply evoked some signs of dissatisfaction.

Mr. Komuro Shigehiro wished to be informed what policy the Government intended to pursue in the matter of Korean reforms. Secondly, to what point it was proposed to carry the chastisement of China. Thirdly, what course would be pursued in the event of foreign intervention. Fourthly, what plan would be followed if victory were obtained.

The Minister President repeated his opinion that this was not the time to answer such queries.

The Order of the Day was then proceeded with.

The Bills seeking approval of Imperial Ordinance No. 143, and for Extraordinary Expenditures on account of special military operations were then entrusted to Special Committees.

The Budget Committee's report on the Bill providing for aggregating 150 million yen on account of War Expenditures was then presented by Mr. Abe. The Committee approved the Bill and recommended its unanimous approval, in accordance with the undoubted wish of the nation and the will of the Sovereign.

The House passed the Bill without a dissentient voice amid loud applause.

After a recess, the Bill seeking approval for Imperial Ordinance No. 140 and the Bill for raising a war loan by issuing public bonds, were reported upon favourably by the Committees charged with their examination, and were passed by the House unanimously.

The House rose at 4.40 p.m.

SUNDAY, OCTOBER 21ST.

HOUSE OF PEERS.

The House met at 9.15 a.m.

The President announced the receipt of the War Budget and other Financial Bills from the Lower House.

On the motion of Viscount Tani, the Budget and Special Committees were instructed to report on these measures by 1 p.m.

The House took a recess at 9.45 a.m. and re-assembled at 1.15 p.m., when the War Budget and all the other Financial Bills were passed without dissent or discussion, amid loud applause.

The President asked the House whether, in the event of an enquiry from the Emperor, he should be justified in saying that all the financial measures had passed without one dissentient voice. The House replied by a burst of cheering, and rose at 1.40 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 9 a.m.

The President said that the Government Delegate had asked the House to dispense with the Second and Third Readings of the Bill seeking *post-facto* approval of Imperial Ordinance No. 144, and to vote it at once. The House agreed and passed the Bill unanimously.

The Bills seeking *post-facto* approval of Imperial Ordinances No. 67 and No. 135 were entrusted to Special Committees nominated by the President.

The following Representation was then read:—

The Imperial Rescript declaring war against China, and carrying the countersignatures of the Ministers of State, is exhaustive and just. Such an exercise of the Sovereign Prerogative was demanded by the exigencies of the time and dictated by a far-reaching policy. There is not a subject of the realm that lacks faithful and loyal zeal to obey the Imperial command, or to strive to the limit of his capacity to discharge with patriotic sincerity

the duty he owes to his country. At this juncture what the House of Representatives, as deputies of public opinion, expect from the Ministers of State who occupy the responsible position of rendering assistance to the Emperor, is that they will implicitly obey the Imperial dictate with reference to the war against China, that they will labour to secure complete success for the country's arms, that they will endeavour to restore lasting tranquillity to the Orient, and that by these means they will vindicate the majesty of the Empire. China must be chastised so that she shall repent of her past errors; so that she shall essay improvement, and so that she shall finally abandon vicious procedure tending to disturb the peace of the East. No foreign interference must be suffered to obstruct the attainment of these great objects. The Ministers of the Crown, mindful of the dignity and interests of the Empire, should aim at establishing a high national policy and at securing such pledges as shall guarantee permanent quiet to the Orient. Such is the significance of the Speech that His Illustrious and Enlightened Majesty has been pleased to make to the Imperial Diet, and such is the ardent and unchanging desire of every man in the nation. The House of Representatives therefore ventures to make this Representation, and to declare its expectation that the Ministers of State, who stand in positions of the highest responsibility to the Emperor, will realize the above aims. The House, by cordially supporting the Government, will do what in it lies to contribute to the result, and will be prepared to give favourable consideration to any financial demands dictated by the needs of the war. Our Illustrious and Enlightened Sovereign by virtue of the glory bequeathed from His Majesty's ancestors and in pursuance of the great policy of State that inspired the glorious work of the Restoration, having raised the Imperial standard and assumed in person the function of directing the operations of the War, His Majesty's subjects, throughout the length and breadth of the realm, faithfully and loyally, with most cordial and earnest co-operation, strive to fulfill the Imperial commands, and are only apprehensive lest the achievement of complete triumph and the attainment of the grand object in view should be deferred by so much as a day. These are the reasons that prompt the House of Representatives, animated by feelings of loyal and patriotic sincerity, to brush aside all the differences hitherto existing between the Government and itself, and to submit to the Ministers of State this Representation embodying its most ardent desires. Up to the present every battle fought by the country's forces, on land or on the sea, has been won, and wherever the flag of the empire has been unfurled, victory has waited upon it. Nevertheless, as the operations of the war are pushed on with increasing vigour, their sphere will necessarily become enlarged and incidents now unforeseen may well occur. Should any unanticipated obstacle be suffered to frustrate the object for which the war has been undertaken; should partial success be held sufficient and thorough triumph be dispensed with, the nation will have suffered a serious disaster.

Therefore this House submits this Resolution to the end that the Ministers of State, who occupy positions of high responsibility toward the Sovereign, may devise such measures as the occasions demand; may so manage international affairs that the end shall be consistent with the beginning, and by fully carrying out the injunctions of the Imperial Declaration of War, may respond to the august will of the Emperor and satisfy the desire of the people.

Mr. Tsuto Tokiichiro, on behalf of the Special Committee to which the examination of the Representation had been entrusted, reported in favour of it, and asked the House to pass it unanimously.

The House passed the Representation without dissent or debate.

The Chairman of the Petitions Committee reported the receipt of 16 petitions, all relating to the War. The Committee did not see any occasion for the House to debate them, but recommended that they be forwarded at once to the Government.

The House took a recess at 9.50 a.m. and re-assembled at 10.35 a.m., when the Special Committees having reported unanimously in favour of the Bill seeking *post-facto* approval of Imperial Ordinances No. 67, the House passed the Bill without dissent or discussion.

In the case of the Bill seeking *post-facto* approval of Imperial Ordinance No. 135 (*i.e.* the Ordinance providing for special control of persons proceeding to Korea), the majority of the

Special Committee reported in favour of the measure, but a minority report was also presented, urging that, as every vestige of Chinese troops had now been cleared out of the peninsula, no occasion existed any longer for imposing restrictions on travel to and from the Korean Kingdom.

The House took a recess at noon and re-assembled at 1.25 p.m., when,

Mr. Taguchi Ukichi spoke in support of the minority report.

H.E. Viscount Nomura spoke in favour of the Bill. He admitted that the necessity of obtaining official permission to visit Korea might entail more or less inconvenience, but he affirmed that in the present unquiet condition of the peninsula, the Government must be invested with power to check the ingress of adventurers and persons bent upon disturbing the public peace.

The closure having been put and carried, the House voted against the Bill.

Mr. Suzuki Shigetoshi asked permission to introduce the following Address to the Throne as an urgency measure:—

May it please Your Majesty:—

Your Majesty's servant Kusumoto Masataka, President of the House of Representatives, with the utmost reverence, ventures to approach the Throne with a Resolution of the House:—

Your August and Enlightened Majesty, incensed by the wrong-doing of China, has made war to punish that country, and, endowed with the strength bequeathed by the Imperial Ancestors, has raised the Imperial Standard, and assuming control in person of warlike affairs, has undertaken a daily and nightly toil, thereby stirring the heart of the nation to ever increasing zeal, rousing the military spirit of the people and making the empire's shine throughout the world. At home or abroad there is none that does not reverently extol the Imperial virtue. Your Majesty's servants, the members of the House of Representatives, are profoundly and boundlessly grateful.

Most worshipfully does Your Majesty's servant present this Address.

The House gave its assent and voted the Address *nem. con.* amid loud cheering.

Mr. Suyehiro Shigeyasu introduced the following Resolution:—

The hardships endured by the brave and loyal Military and Naval Forces of the Empire on a distant campaign, the great victories won by them at Pyongyang and in the Yellow Sea, and the part they have played in asserting the strength of the country, evoke the people's profound admiration. The House of Representatives hereby emphatically declares the nation's sentiment.

The House voted the Resolution unanimously.

The President said that there were no more Bills to be discussed. The session had been announced to last for one week. He therefore inquired whether the members had no private Bills to introduce.

The members having replied in the negative, the House rose at 1.50 p.m.

On the 22nd instant the official ceremony of closing the Diet was performed. Count Ito read the Speech as follows:—

My Lords and Gentlemen,—We to-day declare the Extraordinary Session of the Imperial Diet closed. We take the opportunity of expressing Our appreciation of the promptitude that you have shown in dismissing and consenting to the Bills of urgent military importance which Our Ministers submitted to you in accordance with Our instructions.

At 4 p.m. the same day, the members of both Houses and the high officials now in Hiroshima had the honour of dining with His Majesty at the Izumi-tei.

The following are translations of the despatches laid by Count Ito before the House of Peers on the 19th inst.:—

No. 1.

Chinese Legation, Tokyo, the 3rd day, the 5th month, the 20th year of Kwang-sü. (The 7th day, the 6th month, the 27th year of Meiji.)

MONSIEUR LE MINISTRE,—I have the honour to inform Your Excellency that I am in receipt of a telegram from His Excellency Li, Superintendent of Commerce of the Pei-yang, to the effect that in the Convention of the 11th year of Kwang-sü (the

18th year of Meiji) between China and Japan it is provided that should there arise in future the necessity on the part of China to despatch troops to Korea owing to the existence of any disturbance in that country, the fact shall be previously communicated to Japan and that the troops shall be withdrawn at once on the cessation of the disturbance and none shall be left behind, and the telegram adds that a communication has been received from the Korean Government containing the following statement:—

The people in Zenu-do, who are vicious in habit, having, under the leaders of the Togaku-to, attacked and taken several towns and villages, proceeded northward, and took possession of Zenshu. The Government troops which were despatched to suppress the revolt, have not been successful. If this disturbance continues to spread and is allowed to exist for a long time, much trouble may be given to China. When in the years 1882 and 1884 we suffered from internal commotions, the uprisings were in each case suppressed by the troops of China on our behalf. In accordance with those precedents we hereby present an earnest application for despatch of some troops to speedily suppress the disturbance. As soon as the revolt is quelled, we will request the withdrawal of the troops and shall not ask for their longer detention so that they may not suffer the hardships of being abroad for a long period.

The telegram further states that the application upon examination is found to be urgent both in words and in fact, and that it is in harmony with our constant practice to protect our tributary states by sending our troops to assist them. These circumstances were accordingly submitted to His Imperial Majesty, and in obedience to his will, General Yeh, Commander of troops in Chili has been ordered to proceed at once to Zenu and Chinsei in Korea with selected troops, and to speedily suppress the disturbance in such manner as he may deem most convenient in order to the restore peace of our tributary state and to dispel the anxiety of the subjects of every nation residing in Korea for commercial purposes, and at the same time the general is commanded to return with the troops as soon as the desired object is attained.

The telegram finally declares that His Excellency the Minister to Japan is required to make communication in pursuance of the said Convention and is telegraphed to that effect and is accordingly instructed to at once communicate the matter to the Japanese Foreign Office.

In making therefore the foregoing communication to Your Excellency, I avail myself to renew to you the assurances of my highest consideration.

(Signed)

WANG.

His Excellency Monsieur MUTSU, H.I.M.'s Minister for Foreign Affairs.

No. 2.

Department of Foreign Affairs, Tokyo, the 7th day, the 6th month, the 27th year of Meiji.

MONSIEUR LE MINISTRE,—I have the honour to acknowledge the receipt of Your Excellency's note of to-day acquainting me, in accordance with the provision of the Convention of the 18th day of the 4th month of the 18th year of Meiji between our two Governments that Your Government have despatched troops to Korea.

In reply, I beg to declare that although the words "tributary state" appear in your note, the Imperial Government have never recognized Korea as a tributary state of China.

I avail myself, &c., &c., &c.,

(Signed)

MUTSU MUNEMITSU,

Minister for Foreign Affairs.

His Excellency Monsieur WANG, H.I.C.M.'s E.E. and M.P.

No. 3.

Japanese Legation, Peking, the 7th day, the 6th month, the 27th year of Meiji.

MESSIEURS LE PRINCE et LES MINISTRES,—In pursuance of instructions which I have just received from His Imperial Majesty's Government, I have the honour, in accordance with the provision of the Convention of the 18th day of the 4th month of the 18th year of Meiji between our two Governments to acquaint Your Highness and Your Excellencies that owing to the existence of a disturbance of a grave nature in Korea necessitating the presence of Japanese troops there, it is intention of the Imperial Government to send a body of Japanese troops to that country.

I avail myself, &c.,

(Signed)

KOMURA YUTARO,

H.I.J.M.'s Chargé d'Affaires.

His Highness and Their Excellencies of the Taung-li Yamén.

No. 4.

Tsungi Yamèn, the 6th day, the 5th month, the 20th year of Kwang-sû, (the 9th day, the 6th month, the 27th year of Meiji.)

MONSIEUR LE CHARGÉ D'AFFAIRES.—We have the honour to acknowledge the receipt of your note under date of the 4th instant (the 7th day, the 6th month of the Japanese Calendar) informing us that you have been instructed by your Government to acquaint us, in accordance with the provision of the Convention between the two countries, that owing to the existence of a disturbance of a grave nature in Korea Japanese troops will be despatched to that country.

Our country has despatched troops to Korea in compliance with an application from that country, for the purpose of assisting her to suppress the insurgents, and the measure is in accordance with the practice hitherto pursued by our country in protecting tributary states. Besides the sole object being the suppression of the insurgents in the interior, the troops are to be withdrawn as soon as that object is attained. Although the condition of Jinsen and Fusan is at present quiet and peaceful, our war-vessels will be for a while stationed there for the protection of commerce carried on at those ports.

The sole object of your country in sending troops is evidently to protect the Legation, Consulates, and commercial people in Korea, and consequently it may not be necessary on the part of your country to despatch a great number of troops and besides, as no application therefore has been made by Korea, it is requested that no troops shall proceed to the interior of Korea so that they may not cause alarm to her people. And moreover, since it is feared that in the event the soldiers of the two nations, should meet on the way, cases of unexpected accident might occur, owing to the difference of language and military etiquette, we beg to request in addition that you will be good enough to telegraph the purport of this communication to the Government of Japan.

Accept, Sir, the renewed assurances, &c., &c., &c.
PRESIDENT AND MEMBERS OF TSUNG-LI YAMÈN.

KOMURA, Esq.,
H.I.J.M.'s Chargé d'Affaires.

No. 5.

Japanese Legation, Peking, the 12th day, the 6th month, the 27th year of Meiji.

MESSIEURS LE PRINCE ET LES MINISTRES.—Having received your note under date of the 9th instant acquainting me that the despatching of troops to Korea is in accordance with the practice hitherto pursued by China in protecting her tributary states and that no necessity exists on the part of Japan to send a large number of troops there and requesting that those troops shall not be sent to the interior of Korea, I did not fail to at once communicate by telegram the purport of that note to my Government, and I have now the honour to inform Your Highness and Excellencies that I am in receipt of a reply by telegram to the following effect.

The Imperial Japanese Government have never recognized Korea as a tributary state of China. Japan dispatched her troops in virtue of the Chemulpo Convention and in so doing she has followed the procedure laid down in the Treaty of Tientsin. As to the number of troops the Japanese Government are compelled to exercise their own judgment. Although no restriction is placed upon the movement of the Japanese troops in Korea, they will not be sent where their presence is not deemed necessary. The Japanese troops are under strict discipline, and the Japanese Government are confident that they will not precipitate a collision with the Chinese forces. It is hoped that China has adopted similar precautions.

I avail myself, &c., &c., &c.,

KOMURA,

H.I.J.M.'s Chargé d'Affaires.

His Highness and Their Excellencies of the Tsung-li Yamèn.

No. 6.

Department of Foreign Affairs, Tokyo, the 17th day, the 6th month, 27th year of Meiji.

MONSIEUR LE MINISTRE.—I have the honour to inform Your Excellency that the following is a résumé of the proposals made in my interview with you yesterday to your government on behalf of the Imperial Government in respect of the present events in Korea as well as with a view to the adjustment of her affairs in future:—

As to the present events, Japan and China to unite their efforts for the speedy suppression of the disturbance of her insurgent people. After the suppression of the disturbance, Japan

and China, with a view to the improvement of the internal administration of Korea, to respectively send a number of Commissioners charged with the duty of investigating measures of improvement, in the first place on the following general points:—

- (a.) Examination of the financial administration.
- (b.) Selection of the Central and Local Officials.
- (c.) Establishment of an army necessary for national defence in order to preserve the peace of the land.

In making the foregoing communication, I avail myself, &c., &c., &c.

(Signed)

MUTSU MUNEMITSU,

Minister for Foreign Affairs.

His Excellency Monsieur WANG H.I.C.M.'s, E.E. and M.P.

No. 7.

Chinese Legation, Tokyo, the 18th day, the 5th month, the 20th year of Kwang-sû, (the 22nd day, the 6th month of the 27th year of Meiji.)

MONSIEUR LE MINISTRE.—I have the honour to inform Your Excellency that I am in receipt of a telegram from my Government to the effect that having carefully considered the proposal made by your Government in respect to the events in Korea and the adjustment of her affairs in future, the Chinese Government would reply as follows:—

As the disturbance in Korea has already been suppressed, it is no longer essential to trouble the Chinese forces on Korea's behalf, and therefore no necessity exists to consider the proposition that our two countries shall co-operate in suppressing the disturbance.

In regard to the adjustment of Korean affairs in future, the idea may be excellent, but the measures of improvement must be left to Korea herself. Even China herself would not interfere with the internal administration of Korea, and Japan having from the very first recognized the independence of Korea, can not have the right to interfere with the same.

As to the withdrawal of troops from Korea after the suppression of the disturbance, provision on that subject exists in the Treaty of 1885, concluded between the two countries, and therefore it is not required to discuss the matter over again on this occasion.

The above has already been communicated to Your Excellency in our interview and in now repeating it for your further consideration, I avail myself, &c., &c., &c.

(Signed)

WANG,

H.I.C.M.'s E.E. and M.P.

His Excellency Monsieur MUTSU, H.I.J.M.'s Minister for Foreign Affairs.

No. 8.

Department of Foreign Affairs, Tokyo, the 22nd day, the 6th month, the 27th year of Meiji.

MONSIEUR LE MINISTRE.—I have the honour to acknowledge the receipt of Your Excellency's note of the 22nd instant, in which Your Excellency, in pursuance of instructions from the Imperial Chinese Government, rejects the proposals advanced by His Imperial Majesty's Government for the tranquillization and amelioration of Korea.

The Imperial Government, much to their regret, find it impossible to share the hopeful views entertained by Your Excellency's Government regarding the actual situation in Korea at the present time.

Sad experience teaches us that the Peninsular Kingdom is the theatre of political intrigues and civil revolts and disturbances of such frequent recurrence as to justify the conclusion that the Government of that country is lacking in some of the elements which are essential to responsible independence.

The interests of Japan in Korea, arising from proximity as well as commerce, are too important and far-reaching to allow her to view with indifference the deplorable condition of affairs in that Kingdom.

In this situation an attitude of unconcern on the part of Japan would not only be a denial of the sentiments of friendship and good correspondence which the Imperial Government entertain for Korea, but it would be a censurable disregard of the law of self-preservation.

The necessity for the adoption of measures looking to the peace and tranquillity of Korea is for the reasons already given, a demand which the Imperial Government cannot permit to pass unheeded, for so long as those measures are delayed so long will the cause of the disorder exist.

In the estimation of the Imperial Government therefore the withdrawal of their forces should be consequent upon the establishment of some under-

standing that will serve to guarantee the future peace, order, and good government of the country. That course of action is, moreover, it seems to His Imperial Majesty's Government, not only in perfect harmony with the spirit of the Tientsin Convention, but it accords with the dictates of reasonable precaution.

Should the Government of China continue to hold views antagonistic to those which I have frankly and in good faith presented to Your Excellency it cannot be expected that the Imperial Government will, under the circumstances, feel at liberty to sanction the present retirement of their troops from Korea.

I avail myself, &c., &c., &c.

(Signed)

MUTSU MUNEMITSU,

Minister for Foreign Affairs.

His Excellency Monsieur WANG H.I.C.M.'s, E.E. and M.P.

No. 9.

Japanese Legation, Peking, the 14th day, the 7th month, the 27th year of Meiji.

MESSIEURS LE PRINCE ET LES MINISTRES.—Having communicated to H.I.J.M.'s Minister for Foreign Affairs on the same day, the particulars of the statement made by Your Highness and Excellencies on my interview with you at the Tsung-li Yamèn on the 9th day, the 7th month, the 27th year of Meiji, I have the honour to inform you that I am just in receipt of a telegram from the Minister to the following effect:—

The disturbances which are of frequent occurrence in Korea have their source in the derangement of internal administration of that country. Consequently, the Imperial Government believe it best to encourage the Korean Government to eradicate the cause of disturbance by introducing internal administrative reforms and the Imperial Government considered that for the purpose of enabling Korea to accomplish the desired reforms, nothing would be better than the conjoint assistance of the Governments of Japan and China which have in common a vital interest in that country. Accordingly the Imperial Government proposed to the Imperial Chinese Government that such assistance be given to Korea, but to their surprise, the Imperial Chinese Government definitely rejected the proposal of Japan and limited themselves solely to a request for the withdrawal of the Japanese troops from Korea. Recently Her Britannic Majesty's Minister at Peking, animated by friendship and goodwill towards Japan and China, tendered his good offices and endeavoured to reconcile the differences existing between the two countries, but the Imperial Chinese Government still continued solely to insist upon the retirement of the Japanese forces and manifested no disposition to acquiesce in the view of the Imperial Japanese Government. The only conclusion deducible from these circumstances is that the Chinese Government are disposed to precipitate complications; and in this juncture the Imperial Japanese Government find themselves relieved of all responsibility for any eventuality that may, in future, arise out of the situation.

In enclosing herewith the translation of the above telegram, I avail myself, &c., &c., &c.

KOMURA,

H.I.J.M.'s Chargé d'Affaires.

His Highness and Their Excellencies of the Tsung-li Yamèn.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

MISS MCRAE'S SCHOOL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Foreign residents of Tokyo are exceedingly fortunate in having such a superior school as that established by Miss McRae in the Foreign Concession of Tsukiji. There is abundant testimony that the work done in this school is of a very high grade, and those of us whose children are studying under Miss McRae are very highly pleased as we note the rapid progress which our children are making. While to us no further testimony is needed, yet it may interest others to know how a lad, leaving Miss McRae's School for England, finds himself placed among other boys of his own age when he enters school at home.

A letter from a friend who has just returned to England and whose son attended Miss McRae's school says: "H. entered the upper school of the Liverpool College from the middle of last term. The school is divided into Senior and Junior divisions. He took his place in the (A) division

of the lowest form in the Senior division, the average age of the boys in his division is 14 (H. was 14 in August). His report shows that H. is quite up to boys of his own age in England."

Thanking you in advance for the use of your columns in the publication of this letter.

I am Sir, yours truly,
W. JNO. WHITE.
No. 6, Tsukiji, Tokyo.

THE BISHOP OF JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The question of jurisdiction between the English and American Bishops in Japan is at rest. Why does "Anglo-American" wish to resurrect it? A special synod of the *Nihon Sei Kō Kwai* which met at Tokyo in May last passed an *ekenikon* which was accepted by both Bishops. It is not probable that the "authorities" in England and America will disapprove of a *modus operandi* which has commended itself to those immediately concerned. The resolutions quoted by "Anglo-American" were passed by the American Society before it had heard of the action of the Church in Japan.

Sincerely yours,
JOHN McKIM.

JOHN BROWN AND THE NEGRO CHILD.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a sermon of mine printed in your columns October 6th, the very commonly repeated and accepted story of John Brown's kissing the Negro child when on his way to the scaffold, was introduced by way of illustration. It is only fair to your readers to say that the historicity of that story has been denied by a gentleman now residing in Japan on the ground of explicit testimony from one of Brown's military escort.

While I am unwilling to accept the testimony of this unknown witness as final, in the absence of counter evidence I simply hold my mind in a state of suspense. Possibly some of your readers can throw light on the historical question. In the meantime, it is well to remember that, having been used only as an illustration, the truth illustrated is not affected by the question of the historicity of the incident.

Yours truly,
M. L. GORDON.
October 23rd, 1894.

THE MAILS.

Imperial Post and Telegraph Office,
Foreign Mail Section,
Tokyo, 22nd October, 1894.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reference to the correspondence entitled "Postal Irregularities," which appears in your esteemed paper issued on the 18th inst., I beg to state that the S.S. *Oceanic* did not arrive at Yokohama at 6.57 p.m. on the 15th inst., as stated by your correspondent. She was not in the port until 7.40 a.m. on the 16th. The part of her mail sent from Europe and America in closed bags directly for this office was forwarded from Yokohama by the 6th train, and the remainder, which came in Yokohama bags, was received by the 8th train. As the former train arrived 40 minutes later than usual, it was a little before noon on the 16th when we received the first mail bag at this office.

The translation of addresses of many thousand mail matters into Japanese and their sorting, as well as other processes necessitated by the Postal Regulations, took about three and a half hours, and the mails were ready for delivery at 3.30 p.m. The nearest delivery was the 8th, for which the letter carriers were sent out at 4.05 p.m.

In other cases, there was not a single instance in which mail matter was left lying idle or delayed longer than the time taken for the processes necessitated by the Postal Regulations.

I am Sir, yours very truly,
B. SAUTA.
Clerk in charge of Foreign Mail.

"FREEDOM OF CONSCIENCE IN JAPAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have just read and re-read with some little care your editorial in the *Japan Weekly Mail* of October 10th, 1894, which has for its title "Freedom of Conscience in Japan." I do not think that I quite understand its animus, yet your criticism of my article in *The Independent* is a very belated affair. On referring to my file, I see that the article appeared in the issue of April the 26th of this year. Your criticism appears six months later. Why the delay?

I cannot say that you begin your criticism in

way that commends itself to my kindest feelings. You say:—"We cannot but think that Mr. Atkinson is misinformed;" yet, later on, you call on me to produce proofs of my general statements! I cannot see that any benefit is likely to result from a statement in detail of the incidents out of which my article grew. My proofs could be nothing more than a series of "misinformation," and, therefore, of no more value than the statements which appear in my article in *The Independent*.

You are quite right when you say that "It is to be presumed that Mr. Atkinson has not publicly preferred this charge without assuring himself that there are substantial grounds for it." I certainly have a reasonable amount of confidence in the sincerity and veracity of the persons who have narrated specific incidents of unfair dealing that some Christian Japanese have experienced in some of the Departments of Government activity. I cannot at the present moment, however, think it my duty to expose those persons by giving to the public through your columns, either their specific statements or their names.

It is very kind of you to speak of me as "evidently a zealous Christian." I do not quite understand what you mean, but I will take it as meaning friendliness rather than the reverse. I may perhaps be allowed to say that if I am a zealous Christian, I can hardly be spoken of as a youthful one. My years of life and work in Japan have not been quite so many as those of the Editor of the *Japan Mail*; still, as I am now in the twenty-second year of my residence here, it must be evident that youthful zeal cannot well be attributed to me. I wish also to say that I do not regard myself as being one single step behind any Englishman or American in Japan in my friendliness towards and my interest in the people here, and in my desire for their substantial progress on every line of a high and prosperous civilization.

The best years of my life have gone in work for the people, and I wish to see them enjoying without let or hindrance from any source the fullest of freedom—"within the limits of law"—for the exercise of all their rights and liberties. As a Christian Missionary, I desire no aid from the Government in carrying on Christian work. I do, however, ask for fair play: nothing more and nothing less.

The facts that have been brought to my attention by several persons go to show that the Christians in some departments of life have not the fair dealing shown them that they ought to receive; and other facts go to show that some are deterred from allying themselves with Christianity because of intimations from those in power of loss to themselves if they should do so. A case of this sort was recently brought to my attention, and I felt constrained by it to consult in a friendly and informal way with my Consul about it.

I do not say in my article that there is no religious liberty in Japan, and you do me a gross injustice by your heated statement of the places in which Christians and their buildings are to be found. The whole trend of my article goes to show that there is religious liberty here, but that it is less full than it ought to be. What I said was that in some departments of the National Service there is—if I am to believe my informants, which I certainly do—some unfairness indulged in by some persons who are in authority. In some cases Christians are discriminated against; and in others some are deterred from allying themselves with Christianity because of intimations made to them that they would bring loss on themselves if they should do so.

I do not quite understand the positive tone with which your Editorial speaks of the Government of Japan, and its attitude towards Buddhism, Shintoism, and Christianity. I am not sufficiently within the charmed circle to be able to speak for it myself: I can only draw inferences about its supposed attitude from facts that are brought to my attention. If you will be so kind as to show that Christianity is exactly on the same footing with the Government, and with all its departments, general and prefectural, as Shintoism and Buddhism are, I am sure that you would confer a great favour on a large number of people both in and out of Japan. If you enquire, I think you will learn that Christianity is not officially recognized as a religion at all; and of course I need not tell you that Buddhism and Shintoism receive both recognition and very substantial aid from the Government.

It may be and doubtless is "inevitable," as you say, that the discriminations we are considering should be made; yet I cannot agree with you that "to cry out against them is undignified and fatuous unless a constitutional remedy can be suggested." If you conducted the *Japan Mail* on that line, I think that you would find yourself sorely pressed for material with which to fill your columns and instruct and entertain your readers. The

Constitution of Japan is well enough on the point of religious liberty: all that is needed is an unprejudiced and impartial administration throughout all the Departments and Grades of Government life and activity of the liberties it bestows. Agitation against unfairness and adverse discrimination, whether Governmental or otherwise, is a thing that I should suppose that any editor of an enlightened Journal would regard with favour. I am surprised to find myself mistaken.

If you have sent a copy of the *Japan Mail* that contains the Editorial I have been referring to to the office of *The Independent*, New York, please send also a copy of the issue in which this letter may appear.

Sincerely yours,
J. L. ATKINSON.

Kobe, October 23rd, 1894.

[The delay in noticing the article was due to the fact that it had not come our notice.—Ed. J.M.]

THE STATUS OF JAPAN AMONG THE NATIONS AND HER POSITION IN REGARD TO KOREA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Although for many years past Japan has been demanding a place among the civilized and enlightened nations of the earth, it has been denied to her by Christian countries, and consequently instead of the friendly and confiding spirit of former years there has arisen a feeling of bitterness and mistrust in the minds of many Japanese, which seemed likely to continue, and perhaps increase.

But a treaty has recently been made with England which grants to Japan what has been desired; and it is quite certain that other nations will soon follow in the same line.

And now, to the surprise of many and the gratification of every friend of Japan, she is proving to the world that her demand for a higher place than hitherto accorded her is not unreasonable but fitting and just; and that the progress made is not to be measured by her material improvements alone, or the recently demonstrated strength and efficiency of her army and navy, as manifest in the struggle now going on with China.

To show how the Japan of to-day has changed from that of the past, we need but refer to the fact that 300 years ago the armies of Japan swept over Korea in a war that was instituted without just cause and prosecuted without mercy. The spirit of carnage and plunder was unrestrained; and besides a heritage of poverty and suffering to those who were left, the ears of 3,600 victims, slaughtered in a single battle, were brought back and exhibited as trophies of the cruel and bloody conflict.

Contrast the origin and conduct of the present conflict with China. For years past Japan has been watching with intense interest and anxiety the sad and hopeless state of the poor Koreans who were being crushed and impoverished to the lowest degree. As the result of the policy the Korean government was controlled to such an extent that every measure looking towards progress was defeated. Again and again did the King and his friends attempt to institute reforms, but always without success. Judge Denny published the statement that a plot was formed by the Chinese to assassinate the Korean King in order to prevent his interference with their plans. China has also taken the money of the Koreans for her own use, and left the country bankrupt and wretched to the last degree.

When a revolt took place in one of the Southern provinces against the cruelties and exactions of unscrupulous officials, and the few and inefficient Korean soldiers were unable to suppress it, a request was sent by the authorities in Seoul, who were in league with China, for the assistance of Chinese soldiers.

The sending of such troops was the signal and cause of such an uprising among the Japanese that it was impossible to prevent a war. It was felt that the time had come to demand that Korea should be left to govern herself, and go forward in the same path of progress that has been followed so successfully in Japan, and to secure this object the Japanese were ready, and eager, to make every needed sacrifice.

It seemed at first to some minds that to secure the independence and advancement of Korea was not Japan's only motive in sending an army to that country. And so it has been frequently stated and believed by many, that this war was undertaken for conquest.

But it is a pleasure to say that the course of Japan in Korea, so far as it has been made known, has been considerate and honourable to the highest degree; and apparently an honest attempt is being made to secure to the Koreans their just rights. To accomplish this, efforts have been made to secure a new and more competent, as well as

honest, class of officials, who will labour for the highest and best interests of the people.

It is not true that the King has been made a prisoner by the Japanese Authorities. On the contrary, he has called the soldiers of Japan to protect the palace and his person. There was a feeble resistance on the part of some of those who were in sympathy with China, but the result has been that the officials who were in league with China, have been removed and new and progressive men appointed to fill their places. There is also a High Commission of seventeen persons who are appointed to arrange the programme for the inauguration of a new and better state of affairs. The King has published a decree announcing that Korea is henceforth to be an independent Power, and a compact has been formed with Japan in the prosecution of the war against China.

But what is of special interest to the world at large is the immense change that has taken place in Japan in the conduct of both the Government and the army and navy in time of war. The coming of the Japanese soldier into Korea was regarded with intense horror by the people who had never forgotten the inhumanities of former years, and feared lest they should be called to suffer in a similar way.

To the surprise and gratification of all, the soldiers of Japan have shown a spirit of restraint and a measure of discipline that has changed their enemies into friends, and won for them the highest praise. From many and various sources come reports of the care that has been exercised to prevent any harm or inconvenience to the people, and so severe has been the punishment for even the smallest breach of propriety that it is evident that the Authorities are determined to prevent everything of the kind in the future. A countryman in Korea recently made the remark, "The Japanese pay for everything, even their water carriers." And more than this, the Japanese Minister at Seoul has recently made a liberal donation on behalf of his country to the poor and suffering residents of that city. The Japanese army has a well equipped Commissary and Medical Department.

One of the best steamers of the recently imported and English-built commercial fleet (the *Yokohama Maru*) has been devoted to the special use of the Red Cross Society; and thus in every particular are the wants of the soldiers being provided for. Not only do the Japanese provide for their own, but it is reported that they have ministered in a similar way to the wants of the Chinese who have been wounded in battle and left without any care. At the same time the prisoners taken in battle have been treated in the same way as is customary with civilized and Christian nations.

The Emperor of Japan also issued an edict to the purport that Chinese residents of the country, who were here for commercial purposes, should not be disturbed in their business; and, as far as is known, this has been faithfully observed.

A missionary from China, who recently came to Japan for his health, told me a few days ago that although he wore the Chinese costume, and was everywhere taken for a Chinaman, he had suffered no rudeness on the part of the Japanese, but had travelled freely and safely wherever he wished.

In keeping with the avowed policy of Japan to aid Korea in promoting the best interests of the people, it has been announced that the Reforms Committee at Seoul have elaborated a number of changes which are certainly commendable, and if once carried out will greatly benefit the country. Among the proposed reforms are the substitution of the modern method of reckoning time in place of the old Chinese style; the appointment of men to office on account of fitness and merit, and not as heretofore on account of rank; criminal punishments are to be limited to the perpetrators of the crime, and are not to include the relatives; abolition of early marriages, and fixing the age of both parties at a proper period, as well as leaving them free in their choice; abolition of service for a fixed period, and all sale of human beings; abolition of the law forbidding priests and nuns entering the capital; determination of the number and salary of all officials. It is understood also that there is to be a system of general education, similar to that in Japan; and that all laws that interfere with religious freedom are to be abolished. These are some of the most important changes; but are sufficient to give a good idea of the tendency and scope of the reforms proposed.

The news has just been received that already a police system has been established in Seoul, and a new silver coinage is taking the place of the cumbersome cash which have been such a serious hindrance to every business, and a burden to all.

The following extracts are from a notification which has just been issued by Count Oyama, Minister of State for War:—

"Belligerent operations being properly conducted

to the military and naval forces actually engaged, and there being no reason whatever for enmity between individuals because their countries are at war, the common principles of humanity dictate that succour and rescue should be extended even to those enemies who are disabled by wounds or disease."

"The Japanese troops must never forget that however cruel and vindictive the foe may show himself, he must nevertheless be treated in accordance with the acknowledged rules of civilization, his disabled succoured, his captured kindly and considerately protected. Even the body of a dead enemy should be treated with respect. Japanese soldiers should always bear in mind the gracious benevolence of their august Sovereign, and should not be more anxious to display courage than charity."

It seems plain that when this is all taken together it is an indisputable evidence that Japan is actuated by a high and noble purpose in this conflict with an enemy that is the foe of progress and the embodiment of conservatism. What she seeks is in the interest of humanity and civilization. Is she not worthy therefore of the respect, confidence, and sympathy of other and Christian nations, and entitled to a place among the civilized and enlightened Governments of the earth?

H. LOOMIS, Agent A.B.S.

Yokohama, October 20th, 1894.

THE YOKOHAMA JUVENILE TONIC SOL-FA CHORAL SOCIETY.

The Annual Meeting of this Society was held on Thursday afternoon last in the vestibule of the Public Hall, and was numerously attended. Mrs. Patton, as President of the Society, occupied the chair.

The SECRETARY reported the loss of seven old members and the accession of eleven new members during the past year, making, with seventeen of the original choir, a total of twenty-eight. There had been one Concert given since the last annual meeting, for the benefit of the Musical Director, which had been pronounced by all who were present, to be a musical, as well as a financial, success. The Society had been in a position to make a donation of \$25 to Mr. Bramhall's fund for the relief of the sufferers by the late fire and earthquake, and the donation had been suitably acknowledged.

The TREASURER reported a balance in hand of \$25.6, after deducting the donation above referred to, which would be supplemented by \$28 more, being the subscription fees of the members for the next year, and these, he trusted, would be forwarded to him more promptly than they were last year.

The PRESIDENT congratulated the Society upon the progress it had made during the three years of its existence, of which they were then assembled to celebrate the anniversary, and said that although from various causes the choir was numerically smaller, it had greatly increased in vocal development, not only because the members had grown to a much better knowledge of music generally, but also because they had had the great privilege and advantage of Miss Bloxham's voice-training, the result of which had been clearly perceptible at the last concert given, and the President was not only sure that the members were fully conscious of the benefit they were receiving in this respect, but she was certain they would be much gratified at learning that it was the cultivated style in which the children's voices were produced at the last concert that was one of the reasons for the authorities of the Tokyo Academy of Music having resolved on introducing the Tonic Sol-fa system into that institution. Some teachers from Ueno were present on that occasion, and were so much struck with the children's singing, that they came to the conclusion that the system by which they were being trained was worthy of adoption into the Japanese Schools. This was something for the members to be proud of, and it was to be hoped would tend to cultivate a feeling of *esprit de corps* among the members, and that they would feel a pride in belonging to a tonic sol-fa choir. The next concert for which they were now rehearsing, would be for the benefit of the Society, in order that they should not only have ample funds in hand for new music, but also have a surplus to spare for occasions like the late fire and earthquake, so that they would always be able to contribute something towards the relief of poor sufferers around them. The President thought that for the future this would be a fairer and more popular way of disposing of their surplus funds than by giving a concert for any special charity, although their efforts on the occasion of the benefit for the

Jizen-kai Hospital had been the means of alleviating much suffering, as she could say from cases personally brought under her notice; and she hoped that the members would always bear in mind that the object of their singing in public once a year was not for the purpose of display or to gratify their vanity, but primarily to develop their musical education, and secondly as a means to an end, in order that they might be able to give aid to the distressed, whenever any urgent occasion should arise, as was unfortunately too often the case amongst the poor of this country. The President also stated that she was anxious to raise the standard of the Certificate of Qualification for membership from "Junior" to "Elementary."

The reasons advanced for doing so met with the unanimous approval of the members, and the proposition was adopted. The necessity for strictly enforcing the rule that non-attendance at choir practice for more than three consecutive weeks without any adequate reason or apology being sent, should disqualify from membership, was also pointed out, and the President stated that both Miss Bloxham and herself had more than once last year been subjected to the incivility of members dropping out of the society without a word of notice of withdrawal or of acknowledgment or thanks for the benefits they had received by their training. As all the members were able to write, and their parents were supposed to understand the usages of polite society, it was surely not too much to require that proper notice of retiring from the membership of the Society should be sent to the Secretary or President previous to the withdrawal of a member, no matter from what cause, and she trusted that the members would always uphold her in carrying out this, one of the original rules of the Society.

A vote of thanks having been accorded to Messrs. N. Sargent and C. Moss for their services during the past year as Hon. Sec. and Treasurer respectively, they were proposed and seconded for reelection, and the proposition were carried unanimously.

Miss Diack was proposed and elected as Librarian, in place of Miss Johnstone, who had left Yokohama.

Mrs. PATTON proposed a vote of thanks to Miss Bloxham, and Master LINDSEY proposed a vote of thanks to Mrs. Patton, and both propositions were very heartily responded to.

After singing in parts and with great spirit McBurney's Choral March, "Forward gaily together," the meeting terminated.

ASIATIC SOCIETY OF JAPAN.

An interesting paper was read on the Daikoku Mai Ballads at the regular general meeting of the Asiatic Society held at No. 17, Tsukiji on Wednesday afternoon at 4 p.m. The Vice-President the Rev. D. C. Green occupied the chair. In the absence of the author, Lefcadio Hearn, Esq., the paper was read by Dr. Augustus Wood.

The paper consisted of four parts, an Introduction and three ballads. Inasmuch as the whole was too long to be read during the time appointed, the reader selected the introduction and the first ballad, the two selections giving an excellent idea of the scope of the paper. The introduction was devoted to an explanation of the origin of the ballads. The writer once visited an obscure village inhabited by Eta, in a remote district of Japan. Though these people have been freed from all the legal disabilities from which they suffered in the Tokugawa Era, yet custom has proved too strong to permit them to mingle with the rest of their countrymen. Hence they still live apart in this village, unable to share the advantages of education and labour which are legally within their reach. They get a livelihood by collecting all sorts of refuse articles and picking rags. While visiting these strange people, thus separated by a wall of prejudice from their fellows, the author of the paper was kindly entertained by the recitation of some ballads sung to a kind of music not at all unpleasant to the Western ear. He gave three specimens of the ballads which he had collected, thinking that they might afford some insight into the folk-songs of Japan. The translation, while not literal, adhered as closely as possible to the spirit of the original.

After the introduction Dr. Wood read the first ballad. It gave a history of the trials of a Japanese youth and maiden who had loved each other for years and finally after many sorrows were happily united. The villain of the ballad is a step-mother, who to get the property of her husband for her own children, contrived to lay a curse upon her step-son in the temple of Kyomizu at Kyoto. The young man as he is travelling to Kyoto meets a young girl with whom he falls

deeply in love, and she reciprocates his affection. He returns home only to find that, on account of the malediction of his step-mother, he has become blind and diseased. Thus he is urged to leave his home, and he becomes a pilgrim, begging alms from door to door. On one occasion he stops at the house of his former sweetheart, who recognizes him, and is so struck by his misery that she falls sick. She confesses her secret to her mother, who permits her to go out in search of her lover, and she after many wanderings, finds him in the temple of Kyomizu. A dream reveals to him the cause of his blindness, and the maiden by interceding with the goddess Amida, restores his eyesight. They then return to his home, where the step-mother's perfidy is disclosed and she becomes a leper and is forced in turn to wander about as a pilgrim, begging alms.

At the close of the paper, the Chairman thanked Dr. Wood for his reading. A discussion arose as to the meaning of the words *Daikoku Mai*. The probable explanation was that they were intended to signify the dance, *Mai*, of *Daikoku*, as the latter entered on the scene with *Ebisu* to recite the story of the ballads.

Mr. Mason remarked upon the great similarity of nearly all Japanese ballads. The *Daikoku* ballads seemed to have the essential motive of the ordinary *Gidayu*. Their enormous length was one thing. There was also another resemblance in the poverty of invention—they generally treated of misfortune, leprosy, and blindness.

The Chairman spoke of the novelty of the subject of the paper. In late years no paper had been contributed to the Society's Transactions concerning ballads or folk-lore, and he hoped that the present paper would be followed by others in the same field.

The meeting adjourned at 5 o'clock.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, September 30th.

Rev. W. E. Griffith, D.D., has had articles in recent numbers of *The Golden Rule*, the organ of the Young People's Society of Christian Endeavour, and of the *Chautauquan*, in explanation of the Korean imbroglio. His "Korea, the Hermit Nation," furnishes most of the material used now-a-days in Editorials and descriptions of Korea. His "Brave Little Holland" has been revised and corrected, and is now in its second edition.

Rev. Edward Warren Clark, formerly of Tokyo and Shizuoka, and author of "Life and Adventure in Japan," is conducting a party of Gaze's tourists around the world. He has his home now in Rockford, Ill.

The October *Forum* contains an article by Michitaro Hira on "The Significance of the Japan-China War."

Captain John Ingles, having been interviewed in London concerning the naval battle off the mouth of the Yalu River, gave expression to the following opinion:—

The first point which is attracting naval attention is the great mistake the Chinese committed in not following Captain Mahan's fundamental rule not to hug the shore.

At once, after sighting the Japanese, it was Admiral Ting's business to bring his ships into action, knowing that if he engaged in a serious battle there was no fear that the landing of the troops would be interfered with.

The U.S. Navy Department has decided not to send a naval attaché to Japan or China to study the war, as "the risk assumed would be too great."

Mr. Kurino, the new Japanese Minister to the United States, is reported to be making progress in his negotiation of a new treaty of trade and commerce.

It is stated, on seemingly good authority, that Mr. W. A. Wideman, of Honolulu, is in this country for the purpose of commencing a suit for damages against the United States on behalf of ex-Queen Liliuokalani. The amount of damage is said to be \$200,000.

Lieut.-Colonel Juan Cienfuegos, the young San Salvadoran refugee, whose extradition on a charge of attempted murder was ordered by Judge Morrow, declares that he will commit suicide before he will submit to extradition. General Ezeta and others are in Washington, and will intercede on his behalf to the President.

It is now reported that President Diaz of Mexico will aid Gen. Ezeta to regain his prestige in San Salvador, and that the two will cooperate in the organization of all the Central American States into one republic. Whether it will include Mexico or not is not stated.

Dr. Rafael Nunez, President of the United States of Colombia, died Sept. 18th.

From Brazil comes news of continued rioting in Rio de Janeiro and of outrages on Portuguese

merchants. President Peixoto is suspected of inciting the riots in order that he may have a pretext for declaring martial law, and may delay the inauguration of President-elect Moraes. The British legation is crowded with refugees; and aid from foreign warships may be necessary.

The Brazilian Government has given official notice through Minister Mendonca to the U.S. Government that the reciprocity treaty now existing between the United States and Brazil will be abrogated on Jan. 1st, 1895.

On the other hand, Spain is now desirous of negotiating a reciprocity treaty with the United States under terms that will admit Cuban sugar into the United States and American farm products into Spanish territories.

American exhibitors at the Antwerp Exhibition have taken seven grand prizes, ten diplomas of honour, twenty-eight gold medals, fifty-eight silver medals, five bronze medals, and two honourable mentions. As the American exhibits were all private, the result is quite creditable.

President Cleveland has appointed Gen. W. W. Duffield, of Detroit, as Superintendent of the Coast and Geodetic Survey. Gen. Duffield has an excellent record as a surveyor and engineer.

The political campaign has now begun in earnest in all parts of the country. On the 25th inst., ex-Pres. Harrison and Gov. McKinley addressed an immense Republican rally at Indianapolis. Ex-Speaker Reed is also in great demand.

There is really no great issue in this year's campaign. The Republicans dare not fight for the restoration of the McKinley tariff, and simply say that they wish to "stop further tariff tinkering;" in short, they have only a negative platform. The Democrats are embarrassed by their recent factional fights in Congress, but are shrewdly using the "no change" and general tariff reform arguments; they also have mainly a negation platform. It is difficult to predict the result, except so far as to say that there will be large Democratic losses and Republican and Populist gains. Both the Senate and the House of Representatives will be close with the balance of power in the hands of the Populists.

And really the Populists and the Prohibitionists alone have fighting principles, and in many localities are enabled to cooperate. The Populists will undoubtedly draw largely from the disaffected of both parties, but especially from the Democrats; while the Prohibitionists will probably draw more from the Republicans. It is not unlikely that the silver question will have more power in the campaign than the tariff question, and will also be the important matter in the next session of Congress. In fact, the political situation is decidedly mixed; and the independent voters are uncertain which way to turn. Local issues will probably influence their decision, as this is an "off year."

In Connecticut the Democrats have put up Ernest Cady for Governor; and in Nebraska they have endorsed five Populist candidates (including Judge Holcomb for Governor), and have named Congressman Bryan for U.S. Senator. In the New York Democratic Convention there was a stampede to Senator Hill, who, in spite of his remonstrances, was unanimously nominated for Governor, and finally accepted; while Daniel Lockwood, a Cleveland man, was named for Lieutenant-Governor. "Politics makes strange bed-fellows."

The Labour Commission investigating the Pullman strike, transferred its sessions to Washington, and on the 26th inst. held its final hearing. Its report, undoubtedly voluminous, will be awaited with great interest.

In the Debs contempt case before Judge Woods the arguments of counsel have all been delivered; and the judge in taking the case under advisement.

Captain Henry Howgate, who was once head of the Weather Bureau and embezzled \$360,000 of the Government's money, was recently captured in New York City after a search of 13 years by Secret Service officers.

The list of casualties this time includes a terrific cyclone in Southern Minnesota and Northern Iowa, with great loss of life; a big fire in Portland, Oregon, in the dock of the Pacific Coast Elevator Company, with a loss of \$1,500,000; and a severe storm on the lakes with loss of shipping and lives.

The baseball championship goes this season to the Baltimore Orioles.

Agents of the Field Columbian Museum have started on a journey around the world for the purpose of collecting suitable exhibits. Japan and Korea are among the countries to be visited.

The Northwestern University is rejoicing in a new library building, erected by Orrington Lunt.

Miss Frances E. Willard, in celebration of her fifty-fifth birthday, yesterday unveiled the "Chautauqua Fountain" of pure water in front of the Woman's Temple in this city, and enjoyed two immense receptions, afternoon and evening.

The Cunarder *Lucania* has just made the trip from Queenstown to Sandy Hook in 5 days 7 hours and 48 minutes; and the Hamburg-American *Fuerst-Bismarck* has made a trip from Southampton to New York City in 6 days, 10 hours and 32 minutes.

The trade reports out to-day indicate a check to business in the South, together with damage to the rice and orange crops, but activity, specially in the West. A particularly large trade is noted in the necessities of life.

The New York Constitutional Convention has finished its labours.

THE INTERPORT CRICKET MATCH.

THE FIRST DAY'S PLAY.

Although unpleasantly chilly for spectators, the weather on Monday was favourable to the cricketers and a good day's sport was the result. It was feared that Kobe sharing in the misfortune that has robbed Yokohama of some three or four of its best players was to lose the services of Stephens, as during the close of last week and again yesterday his condition of health was far from promising. Lias too was crippled in one hand. But fortunately both representatives were able to take their places. The early hour of half-past ten was fixed for a start, and by that time nearly all the players were present on or about the field. The opposing Club colours were flying on the staff, the visitors' flag being given the uppermost position by way of courtesy and not of prophecy. "Captain" Pakenham won the toss and elected to take first innings on a wicket that had been very carefully prepared. Messrs. Walford and Groom as Umpires discussed and fixed all questions of boundaries and so forth, and Messrs. Carew and Gibbens, as scorers, sharpened their pencils and prepared for business in the space enclosed for them in the "Grand Stand." A press-box had also been thoughtfully provided and railed off in their immediate vicinity.

The Yokohama men took their places in the field in good time. Edwards, the redoubtable, and White were prepared to bowl. Dickinson kept wicket, Crawford stood at point, with Kenyon to cover him. Parlett and Tyng did duty as long-off and long-leg; Braess and Healing as long-on and long-slip. Mair was at square-leg, and Kenny officiated as long-stop and in the deep field. It may be remarked here that throughout the innings the fielders were conspicuously well placed, and that with few exceptions their work was well done.

A start was made at ten minutes to eleven, Edwards bowled from the Club end to Tate; the second ball was prettily put to cover-point and smartly returned. Off the fourth, Tate was tamely caught by White in the slips. Duff came in. White bowled from the north end; Marshall scored a single off the first delivery and Duff then got one square to the boundary, a hit repeated by Marshall off the following ball. A three through the slips by Marshall was the only event in Edward's second over. Braess took the ball from White for one over to enable the bowlers to change ends. Another boundary was scored by Marshall, and Duff hit one of White's prettily to long-leg. But immediately after the last-named was clean bowled by Edwards, the telegraph showing 21—1—10. Lucas appeared and had a rather narrow escape at the wicket off his first ball from which, however, he took a single. By the next ball Marshall was bowled, the ball falling on to the wicket after striking him in the side, a piece of hard luck that was very deplorable for Kobe. He had scored 11. Stephens was clean bowled, middle-stump, by the first ball he received, and 22—4—0 was signalled after only seven overs. A couple of maiden overs followed when Lucas and Wilkinson were associated. Lucas scored a single and Wilkinson was then out leg-before to White. Pakenham followed, and after Mair smartly fielding his first hit he got a couple at long-off. Another maiden was sent down by Edwards; Pakenham cut the first of White's next over to the boundary, and Lucas made a good hit to the scoring-box which at length brought up 30. Braess then relieved White at the southern wicket; off the third ball Lucas had a distinct let-off by Edwards at short slip, but by the last of the over he was clean bowled with only 6 runs to his credit, and six wickets were down for 32. Pakenham snicked one of the fast bowler's to the boundary, and followed with a single off Braess. E. B. S. Edwards secured a couple and an overthrow through three distinct pieces of misfielding. He placed another through the slips and a fourth was telegraphed. Pakenham cut

Edwards to the boundary, but appeared uncomfortable at first with Braess who put another maiden to his credit. Another 3 to Pakenham preceded Edwards's downfall, leg before wicket, to his brother—49—7—5. With Lightfoot in and running his hardest two singles were scored by Pakenham off Braess, and the fifty was fairly passed. Lightfoot opened his account with a single and continued playing Edwards carefully and well. The latter was howling with increased pace, but not quite such consistently good length as at the outset; very few runs could be scored from him. Both batsmen got Braess to the boundary—60 was telegraphed, and the aspect of affairs improved for a time. Edwards apparently let Pakenham off in the slips himself falling back in his endeavour to hold the ball. White then went on again in place of the ex-Kobeian bowler. Lightfoot made a very pretty cut to the boundary off Edwards, who then got more on the leg-stump also on the Kobe Captain's own leg. In his next over he accordingly changed over to the left of the wicket and almost immediately he caught and bowled the last-named batsman who had done really well for 28—76—8—28. The wicket had put on 27 runs. There was some smart fielding at this point, but Lightfoot and Lias were not to be denied, some two or three runs were stolen and the latter in particular hit hard. He lost his bat to one ball of Edwards and most luckily nicked the next which went to the boundary. As the run-getting continued steadily, Crawford took the ball from Edwards while Braess fielded at point and Edwards crossed back to his original wicket. Two singles and a well-hit boundary by Lias off a full-pitch brought up the hundred amid applause at 12.25. A few more runs were scored and then Lias was clean-bowled for a hard hit 15, and W. Braess whipped in but only to be bowled first ball. Lightfoot deserves every credit for a well-played innings, and the Kobe total was a great deal better than at once time appeared probable. The following is the score and analysis:—

Kobe, 1st Innings.

Mr. I. Marshall, b. Edwards	33

Mr. Crawford

The tiffin interval was then taken. When all the players and a number of others were assembled in the Gymnasium, where Mrs. D'Arcey had spread a capital repast, Dr. Thornicroft took his seat at the head as President. Full justice was done to the meal, the Band's performances, which were continued at intervals throughout the afternoon, possibly assisting the efforts made. No toasts were proposed, speech-making being reserved for the later function.

Before resuming play the two elevens were photographed according to the usual precedent. Mr. Ichida expressing himself convinced that good pictures would result. At a very few minutes past two all was in readiness for a resumption of the game. Tate opened the bowling from the southern end to Crawford who was accompanied to the wicket by Tyng. Duff kept wicket, and the field was placed as follows: Braess and Wilkinson point and cover-point; Lias slip; Stephens mid-on; Pakenham and Lightfoot long-on and long-slip; Marshall square-leg; Edwards and Lucas long-off and long-leg. The scoring was opened mostly with singles, till Crawford managed a few hits. His partner played a rather curious blocking game. But with the score at nineteen Crawford was clean bowled by Lias, 12 of the runs being to his credit. The Kobe fielding in several instances was smart. White stayed only long enough to make one cut for three when he fell to a good ball from Tate, and loud applause greeted the retirement of a batsman that local bowlers have had cause to dread. Edwards opened with a magnificent drive into the Club compound for 6, but then singles only resulted for a time until 30 appeared, Tyng having a narrow-escape from being run out. In Tate's next over, with the second ball, he displaced Edwards's middle stump and the applause rang out more heartily than ever. The telegraph board registered 30—3—7. Another formidable opponent, Dickinson, filled the vacancy. Only five balls later—the second of Lias's over—Tyng was clean bowled without an addition to the score, and it was naturally felt that a capital start had

been made. Kenyon prettily cut the second ball he received for 3, and showed good form. Dickinson was lucky in converting a single into a four from an overthrow, Lightfoot returning the ball quickly but too wide of the wicket. Very little later, however, Kenyon was caught off Tate, having scored only 4. With Healing in several short runs were made, but nothing of note occurred for several overs, the bowling continuing very much on the spot. But then both batsmen made "boundaries," and Pakenham took Lias's place in the slips with a view to relieving him as bowler. With the last ball of Tate's intervening over Healing was disposed of—53—6—7—and Kenny came in. Pakenham's first ball was cut by Dickinson to the boundary, and the run-getting was considerably enlivened. But he had his revenge, Stephens bringing off a good catch from a high hit after a run of some distance—68—7—6. Parlett was ninth on the list; after a few singles and a hit or two by Dickinson, who played very correct cricket, the last-comer got one of Tate's square to the boundary. As the scoring became unpleasantly rapid, another change of bowling was tried, Stephens replacing Tate, after a maiden by Pakenham, though some thought the latter the more expensive. But the next wicket also fell to the Captain, Lias making a smart catch in the slips, and Mair took Parlett's place. Braess came in for applause for his fielding, and there was some sharp work in several places, marked only once or twice by rather loose returns. Stephens saw one of his just touched by Dickinson travel to the boundary, but his next clean bowled Mair. Braess brought up the rear, but was almost immediately caught and bowled. The innings closed at 3.45 for the total of 87, sixteen runs only behind the Kobe record. The following is the full score and analysis:—

YOKOHAMA, 1st INNINGS.

Mr. Stephens

It should be mentioned that Ralston scored for Kobe during the afternoon.

During the interval the players and spectators resorted to the tea-pavilion where Mrs. Pakenham and Mrs. Mellish very kindly supplied tea and a variety of light refreshments.

Kobe commenced the second innings at 4.20, Edwards bowling from the northern wicket to Wilkinson. A 3 bye was the first thing scored, and then Marshall got a couple for a cut over point's head. Braess bowled at the other end and was hit square by Wilkinson. Three maiden overs followed, then Wilkinson got a single off Braess, and Edwards continued the series. Marshall nicked a single off Braess, and hit one off Edwards. But in the former's next over he was easily caught at point—14—1—5. Very little was done for some time beyond an occasional single, but Lucas then brought up 20 with a 3 hit that had to be run out. The same batsman got one to the boundary through the slips off the fast bowler, and then cut Braess cleanly to long-off for a like number. White took the ball from Edwards and was hit hard for 3 by Lucas off a full-pitched delivery. Wilkinson got a single and Lucas a single off the third and fourth balls of the same over. Edwards went on in place of Braess and Lucas cut his third ball square to the boundary. He repeated the stroke in White's succeeding over, and in the one following he drove him for the same amount. Time was then called with the score standing:—

Kobe, 2nd Innings.

Mr. Marshall, c. White, b. Braess	5
Mr. Wilkinson, not out	7
Mr. Lucas, not out	35
Byes 4, leg-byes 1	5

(2 wkt.)

Lucas had hit seven threes in his total.

SECOND DAY'S PLAY.

A start was made at a quarter to eleven on Tuesday morning, the air being chilly but the unpleasant wind of the previous day being happily absent. The "not-outs" Lucas (25) and Wilkinson (7) took up the Kobe second innings. Edwards bowled to the former from the southern wicket, and his fourth ball was nicely cut to the boundary. Braess took the ball at the other end, a single resulted, and then Lucas was bowled by

Edwards with the first ball of his second over—46—2—29. Tate came in and opened with a 3 to the "on." Wilkinson got a single off the next ball and the 50 was hoisted. The latter's next stroke was off Edwards a snick for 3. Braess sent down a "maiden," and Tate scored a couple from the last ball of the succeeding over. Another single from Braess preceded a maiden over by Edwards, and Tate then got one square to the boundary and brought up 60. The Yokohama fielding was very good, and the bowling much too true to be lightly treated. This was unfortunately shown by Wilkinson's downfall, cleanly taken by Braess—60—3—13. Duff made a very short stay, being caught by Mair at near square-leg after only a leg-bye had been added to the total. Lightfoot cut Braess to the boundary in the first over he received, and he played Edwards well. Tate also got Braess to leg for 3, and the 70 was telegraphed. Immediately after Tate was caught, the ball going off his hand, being tried at by the wicket-keeper, and then held in the slips. This was very unfortunate as the retiring batsman appeared well set and was playing strongly. Pakenham filled the vacancy, and Edwards completed his fifth successive maiden over. After a single to Lightfoot, which was tried at by point, the last-comer cut Braess for 3, and was directly bowled by Edwards. The total was now 76 runs for 6 wickets. This brought in Stephens, resolved to atone for his wretched experience the previous day. Singles resulted slowly, but the last-named then cut Braess square to the boundary and Lightfoot repeated the stroke off the next ball. In consequence of this rather heavy punishment White relieved him, while Edwards continued his series of maidens, eight in succession at this stage for 3 wickets. Lightfoot hit White for 2, and 90 was signalled; he received a life from Parlett, a quite possible catch going a little high and to his left. He followed this, however, with a 3 cut, and then played Edwards through a ninth "maiden." Stephens hit White for 3 at long-off, Lightfoot scored a single, and a boundary by the former—a hard hit to long-on—brought up the hundred amidst applause. Braess took the ball from Edwards, who changed ends. Stephens at once sent him again over the line, but ere the over was done he was unfortunate enough to play on the ball, only just disturbing the bail. The wicket had put on 28 runs and carried the total to 104. Lias opened with a cut for 3, and Lightfoot was then clean bowled by Braess after a very praiseworthy innings. Edwards was snapped at the wicket off his first ball, and W. Braess brought up the rear. Lias scored two off the fast bowler, spoiling a remarkably long series of "maidens," and followed this with a drive to the boundary. He cut Braess for a like number (3) in the next over, and W. Braess scored a single. He improved this to a couple off Edwards, but was then caught in the slips by White, and the innings closed at 12 o'clock with the score as follows:—

Kobe and Innings.

Mr. I. Marshall, c. White, b. Braess	5
Mr. E. F. Crawford, b. Braess	13
Mr. C. Lucas, b. Edwards	29
Mr. E. W. Tate, c. Braess, b. Edwards	13

Mr. Edwards
Mr. Braess
Mr. White

After some delay it was decided to postpone the commencement of Yokohama's second innings until tiffin was over.

Sharp at half-past one, Crawford and Dickinson opened the Yokohama second innings, the latter receiving the first ball from Lias: 135 were wanted for a victory. Three singles only and a bye resulted from the first six overs, the fielding being as smart as the batting was careful. But Dickinson then got a three at long leg, placing the ball beautifully between Marshall and Lucas, and to was signalled. He also got Lias square to the boundary, and then put Tate again to leg. Pakenham took the ball from the last-named at 19 and opened with a "maiden." Scoring continued steadily, Dickinson proving a particularly dangerous batsman, and Stephens was deputed to bowl in place of Lias. He was fortunate in clean bowling Dickinson in his first over—38—1—20, with the last ball, and White followed in. He got one of Pakenham's to leg for 3, and then Stephens through the slips for a couple. Singles kept coming and 50 was hoisted with still only one wicket down. White sent another to the boundary through the slips, and several runs were almost stolen. Stephens

bowled a wide and Crawford got one off Pakenham's square, so 60 was passed. White repeated the stroke, and then Braess took the ball from Stephens at 65. One boundary hit was scored off his first over. Marshall replaced Pakenham at the northern end; 70 was reached without misadventure and both bats continued the scoring, some very pretty hits being made, especially by White whose cuts were clean and hard. Lias then resumed in place of Braess and saved a hard return with his foot in a way that astonished the onlookers and almost secured a wicket by the running out. Tate also went on again instead of Pakenham, and the scoring was distinctly checked for a short time. But both batsmen were well set and no loose ball was allowed to pass. White made several boundary hits, Crawford cut one square, and 90 was signalled. Edwards then relieved Tate and apparently bowled well, although the last ball of his first over was slipped for 3. In the next over Crawford was caught, after a capital innings, from one of a favourite hit of his to leg—94—2—36. Edwards joined White and commenced with a single. The younger Edwards sent down a maiden over to his brother, then the latter hit one to the scoring-box for 5, bringing up the hundred amidst applause. Lias was rather badly punished and Lucas accordingly took the ball from him at 108. White brought up the 110 with a square cut, and the Kobe hopes were finally dissipated. Pakenham went on at the southern wicket instead of Lucas and was hit into the Gymnasium corner by Edwards. White sent the first of his next over to the boundary and 120 was called. Edwards got a couple more and then made a fine drive for 5 in one over; he also scored a boundary off his brother and was then nearly caught by Lightfoot at "third man," a rather hard chance being offered and well tried for. A single a few minutes later, at 3.25, enabled Yokohama to pass the Kobe total and the game was at an end—Kobe defeated by 8 wickets. The score was:—

* Stephens bowled one wide.

Seeing that entertainment was to be provided in the shape of a walking-match it was decided to close cricket altogether. During the interval Mrs. Pakenham's and Mrs. Melluish's tea-tables were largely patronised.

It is probable that the distance was not fully a four miles' walk, but as it was sixteen times round the Recreation Ground the difference can have been nothing very considerable, except in the matter of comparing times with the Champion's performances in Yokohama or elsewhere. Mr. Whittall acted as Clerk of the Course, and brought the amateurs up to the post in time for their proper turns. Each of them had two laps to cover and some very quick times were made. Mr. Brent served as a sort of combined pacemaker and judge of the local representatives. We may say at once that the walking all round was exceedingly fair, the very exceptional break into a run being instantly checked.

Thwaites started the race and held his own remarkably well. Lias picked him up at the second round and forced the pace hotly. Taverner came in with about three yards to the bad and lost ground all through. Lucas picked up a lot of the distance and gave Rothwell a penalty of some five yards, roughly, to carry forward. After the latter's first lap only 1 sec. separated the walkers, and with another half-lap over Rothwell was actually leading so that Stitt sprang on to the course twenty-five yards ahead of the professional. He increased the advantage all round and was greeted with especial applause at this finish, when Sim took up the going. Hancock maintained his pace splendidly but the trial began to tell, and he had two hard men still to deal with. He was 20 secs. behind when Robinson left the starting-post to complete the match. The last-named walked in better style than any of his predecessors and leading all the way, so that he was never forced as he might have been, he did the distance twice round in 4 min. 12½ secs.

The following table shows the individual times, and Hancock's times for the succeeding half-miles.

KOBÉ'S TIME.		
Mr. Thwaites	...	4.31
Mr. Lias	...	4.24
Mr. Taverner	...	5.00
Mr. Lucas	...	4.16
Mr. Rothwell	...	4.17
Mr. Stitt	...	4.15
Mr. Sim	...	4.45
Mr. Robinson	...	4.13
Totals	...	35.44

It will thus be apparent that Hancock led at each half mile during the first half of the match, but was never ahead from this time. The times for the half-miles, i.e. the leader's time in each case—were: 4.30½, 8.55½, 13.37½, 18.02, 22.30½, 26.45½, 31.31½, and 35.44. Hancock was beaten by a little over 100 yards. A purse was subscribed by members of the K.R. & A.C. to the extent of some \$85 and presented to him at the finish.—Hyogo News.

THE STUDY OF COMPARATIVE RELIGION IN OUR THEOLOGICAL SEMINARIES.

BY WILLIAM ELLIOT GRIFFIS, D.D., ITHACA, N.Y.

To the Parliament of Religions neither the Sultan of Turkey nor the Archbishop of Canterbury sent any official delegate. The Nichirenites, the most fanatical of all the Japanese heretical Buddhist sects, sent a letter denouncing their coreligionists from Japan as misrepresenting the teachings of Gautama.

The mental attitude of these men does not seem to us to be that of our Lord, or of His great apostle, Paul. Yet the example of these politico-religious dignitaries of Canterbury and Constantinople is too often that of certain theological teachers. The trainers of our Christian young men who are to be pastors and missionaries are perhaps too apt to proscribe, if not to outlaw, any other religion than that of Christendom; or, possibly, it may be nearer the truth to say, than some fragment or phase of it which is national, denominational, or sectarian.

We pass over what is past and turn to the needs of the present. Is it not true, that there is a real demand that our theological seminaries should be teaching something about religion in its broadest sense, as well as about religions? Among the multiplying "ologies" in our day, should not the oldest of all the phenomena of human history be collected, classified, and made into a science? Should not the term "hierology" be extended out from mere reference to or association with Egyptian writings and inscriptions, and in our speech and to our minds suggest the science of things sacred? Is it not a fair subject of inquiry, whether the attitude of exclusiveness as represented by the Primate of Canterbury is inherently different from that of the propagators of Islam? They offered but one alternative to the scimitar in the Koran. The alleged burner of the library of Alexandria considered the absolute all of "the treasures of wisdom and knowledge" to be hidden in the Mohammed's monograph. Is such an example like that of Paul, who certainly made himself familiar with the moulds of thought in the minds of those whom he addressed? Every one of his epistles shows that the Apostle to the nations was familiar with non-Christian systems of religion. His diction sparkles with immediate and remote allusions to the moulds of thought of his readers as well as to their habits, manners, and customs.

The writer has enjoyed four years of actual experience of life on a great mission-field in an Asiatic country, and nearly twenty-five years of fairly close acquaintance with missionaries both green and seasoned. He has studied their methods, failures, triumphs, and varying measures of success. To his mind, the need of theological students receiving instruction in the science of comparative religion is imperative. Acquaintance with intellectual movements in non-Christian countries, with the state of public opinion in the chosen mission-field, and with the methods of thought and emotional habits of his hearers, will greatly increase the immediate usefulness of the missionary. In the end, it will mean vast economy of intellectual and spiritual force. The waste of missionary health, strength, and life is something appalling to consider, but the waste of time and efforts is even greater. To secure harmony with one's environment and wise expenditure of effort is as worthy of consideration as hygiene.

To-day, as shown by the Students' Volunteer Movement, and especially in their recent convention at Detroit, there are thousands of consecrated young men and women who wish to be heralds of

* After writing this sentence, we turned to the Standard Dictionary, and were glad to find this definition given: "The scientific study and comparison of religions."

Christ. Doubtless many, if not most of them, would like to go immediately to their work, and speak at once to their brethren out of Christ face to face. Like the Christians who stay at home, they bewail the long time that must be spent in mastery of a strange language. They look on it, perhaps, as a mysterious dispensation of Providence that they cannot immediately, with their eloquence, assault the strongholds of Satan and teach or preach to the "natives" in their own "uncouth" tongue.

On the contrary, and in reality (as even the seasoned veteran missionary will tell you), it is a kind provision of Providence that forbids the Yankee or the Scotsman to assault at once, with devastation, the emotional and intellectual furniture in the soul of the Japanese or the Hindu. Rare is the man or the woman who can be trusted in the picked army of the Captain of our Salvation to carry the heavenly treasure without also the earthen vessel. It is not time to break the pitcher, and let the lamp shine, until thorough drill and preparation reveal the situation and the supreme moment. In the end, he is the most successful missionary who knows how his hearers think and feel. We heartily believe that those theological seminaries which found chairs of Comparative Religion, and put in them men who have a vital as well as an academic interest in their subject, will, other things considered, send forth the most successful missionaries.

We ought to teach Comparative Religion, because this science is Christianity's own child; it is of herself, and has come out of her own body. There are sciences which have no necessary relation to Christian faith or ritual. There are others which, perhaps, could only have grown up in Christian lands, which have no absolutely necessary relation to Christ's religion; but the science of Comparative Religion knows no other parents than Christ and the Church. It was Christian scholars, largely missionaries obeying the direct command of Jesus, who collected the material, formulated the methods, and called into being this grandest of the growing sciences. We do not exaggerate, nor deal in unmeaning superlatives. Some devout men and earnest thinkers believe that the teacher who knows but one religion knows none. Certainly he who ignores the ways of the Spirit and the Providence of God in the nations beyond Christendom, goes against the spirit of both the Old and the New Testament.

So far as we know, there is no theological seminary in the United States which has yet founded a full chair of Comparative Religion, though there are professorships in six universities—Yale, Cornell, the University of the City of New York, Boston, Brown, and the University of Chicago. Special courses of lectures have also been given at Harvard and the University of Pennsylvania. Beginnings have also been made at Princeton, Union, and Bangor Theological Seminaries. The time seems now approaching when, in accordance with the need of the times, our theological seminaries should provide for permanent instruction in this discipline. A vast mass of missionary biography, description, translation, and general literature has already been accumulated. The library of "The Sacred Books of the East," edited by Max Müller, has reached its fortieth volume, and others are to come. In the various Asiatic and Oriental societies, there is a rich collection of monographs upon which to base induction. Already in several of our cities there are museums of objects used in the service of religion, while missionaries are annually bringing home richer spoil for the student, as well as trophies for the curious or cultured.

I.—The general plan to be followed in the study of Comparative Religion is probably one and the same wherever pursued, though the method of imparting instruction to students must vary according to the time allowed in the curriculum for this new discipline. Indubitably, the first procedure as to study must be to gather the facts in order to know the history. History that is worth anything must be founded upon ethnology. We must know who and what the man whom we are studying is and has been. Especially if we want to convert him must we know how he thinks, and what his view of the universe, of its inhabitants, and of the Power that informs it is. For example, it may be safely affirmed that very much of that vast body of European literature treating of Spanish-American exploration, and of the North and South American aborigines, has been nearly emptied of its value as real history by the researches upon the soil and among the living men by our own students of texts and men. The fanciful narratives of Spanish "historians," and of Irving and Prescott, will no doubt always be interesting; but after the work of Baudelier, Cushing, and Powell they change places, stepping down from the high ground of romance. Indeed, the science of ethno-

logy has played "puss in a corner" with many a ponderous and dignified work, and "Prescottized" history is no longer in demand.

So, also, the time-honoured but now antiquated method of blackening the character of non-Christian peoples somehow or other, associating degrees of morality with the colour of one's skin, is hopelessly antiquated. The Revised Version has made awful devastation with some of our un-Christlike and un-Pauline prejudices. The more we know about other seekers after God besides those who know Him in Christ Jesus, the more is our Anglo-Saxon pride humbled. The word "heathen" is no longer in the latest English Bible, for the very simple reason that it never was in the Hebrew or Greek originals. "Nations" and "gentiles" (which mean tribes or nations) are still on the page of inspiration, but heathen-men, as a name, can no longer be applied to the polished gentleman in the Japanese cities, nor can the term "pagan" be with any truth given to the devout and cultured men of Delhi or Benares. Even yet, however, the stern monotheists of Islam are popularly called "heathen," and too often associated with "idolaters."

A knowledge of ethnology—that is, a knowledge of how man actually is, as the result of heredity and environment, rather than as Roman dogmatic doctors picture him—is necessary in order properly to interpret that line of record and alleged fact which constitutes his "history," real or so-called. A study of his own books and writings, and of his implements of culture and religion, must be made in order to get anything like truth, and thus obtain what we call facts. These facts, properly classified and related, will inform us as to the story of the man whom we hope to convert, and of his religion, which we expect to change. Thus shall we have the raw material for the making of the philosophy of that religion. Certainly those religions which are older and much more widespread than Christianity, as well as that faith which displaced Christianity over large portions of Asia, Africa, and Europe, and even now possesses its ancestral home, birthplace, and cradle, deserve our respect and examination.

II.—The philosophy of religion must next be constructed out of the facts of history. This, when properly expressed, focalizes—gives us the face and features of—the whole body in short space; enables us at a glance to take in the whole. It shortens labour and enlarges time, by enabling us from a bone to construct the whole beast, from a petal to know the whole flower. By a sufficiently wide induction of facts and the application of right methods, we can know the philosophy of any one religion. If we know one religion thoroughly, we are the better prepared to study both the history and the philosophy of other religions.

For our own part, we cannot understand the entire propriety of the would-be missionary who offers to "go wherever the Lord [as represented by the Society] sends him"—to Bechuanaland, to Kyoto, or to Arcot. Judging from actual living examples, we doubt the full wisdom of such an offer. We would not be mistaken. We can understand thoroughly the consecration, the selflessness, the abandon of faith. These traits we admire, and we believe that with such a spirit God is well pleased. If this were all, it would be unlovely, or even wicked, to criticize or complain.

Nevertheless, we write as a pastor, part of whose business it is to collect missionary money and to keep alive enthusiasm in givers. There is more to be considered than one's own consecration. We are to remember how costly is missionary work, and how short and uncertain is human life, and we are bound in this warfare of Christ to make the most of ourselves as good soldiers. If we study the principle of adaptation of the preacher to his pulpit, and the man to his duty at home, how much more in the difficult and delicate work of the foreign missionary ought we to think and hesitate before putting "the round peg into the square hole?" War is a science; why should not the saving of men's souls be made scientific, wisely economical? No army on earth more than the German abhors waste and practices rigid economy. Surely, if we study the lives of the Apostles, we can see how each one was fitted both by his gifts and limitations for his special work. He who commanded the disciples to "gather up the fragments, that nothing be lost," does not wish us to waste either time or life.

The would-be missionary should know his field, study it carefully, and by being forewarned, be forearmed. The indiscriminate willingness to go anywhere, as ordered, is good as illustrating discipline, whether Jesuit, Protestant, or Christian. Yet even Celtic savages against Romans, as well as Peruvians against Spaniards, and Koreans against United States marines and Dahlgren howitzers, learn by bitter experience that rushing en masse on the enemy is the wrong way to fight.

Discipline is better than brute strength. Consecrated wisdom is better than consecrated enthusiasm. To know something about the enemy and to learn from him is the axiom of the bravest, wisest, and the most successful generals. Hence some acquaintance with the philosophy of non-Christian religions is wise as well as instantly and permanently valuable. Serious consideration of the question as to the particular field to be chosen is becoming, and may save lifelong mistakes. One need not—must not—be too fastidious. Selfishness has no place here. We argue the question simply on that same principle of adaptation which, under the dictates both of common-sense and of the Word of God, we use at home. The many-sided man of ability may offer himself to be sent to any field. The average man, counting his talents rather than consulting his pleasure, had better choose his field.

Some knowledge of the philosophy of religions will enable the young missionary to enter upon his work with the greatest of all Christian graces—charity. It will fill him with sympathy. It will enable him to do what all great orators, preachers, and those who influence men by their words, consider a prime necessity—to find quickly the common ground on which he, the alien teacher, and his possibly hostile auditor can stand. It will enable him to enlarge that ground. It will equip him to disarm native prejudices and mistakes. Naturally, men see differently; they insult each other ignorantly without intending to do so. The true Christian who knows what a precious thing religion is will be slow to call any religion "false." As Doctor James Legge, the veteran missionary to China (who baptized six hundred Chinese converts, besides translating Confucius) says:—"The more that a man possesses the Christian spirit and is governed by Christian principle, the more anxious will he be to do justice to every other system of religion, and to hold his own without taint or letter of bigotry." He will not lightly touch upon his brother's symbols of faith or methods of worship.

Unlike the infidel who wantonly destroys Christian faith, he will not lightly make jest or caricature of his Buddhist or Hindu brother's religion. Like his Master, he will not "come to destroy, but to fulfil."

He will be able also to correct misunderstandings of Christian truth or symbols. We remember once, while walking along a street in Tokyo, seeing what we supposed to be the Christian monogram I.H.S. stenciled on the curtains of a Japanese tobacco-shop. Out of curiosity, and supposing the "heathen" inside was caricaturing Christianity, we went in and asked him why he had those letters on his curtains. He answered that his name was Shi-mada, and that he had seen the monogram on an English book (presumably a prayer-book); and, naturally, reading the letters as Japanese do, from right to left, he had taken these letters for the Japanese syllable Shi, and his name being Shi-ma-da, he was innocent of any purpose to caricature. The illustration will suffice to show the mutual need of the philosophy of religion. Some of our mercantile misuse of the sacred symbols of the Orientals is shocking.

As yet, however, we have for the teacher of the philosophy of religion very few works which set forth, in brief compass, the secret of life in the great religions of Asia. The stock, branches, and leaves are pictured, but the roots are hidden. It is only in recent years that even the thoughtful men of Europe and America have ceased to imagine that these religions were founded by "impostors" and were "false." Instead of imitating the spirit of Paul, we have in the past too often imitated the spirit and method of Mr. Thomas Paine.

III.—"The end crowns the work"; and the end of study in the science of Comparative Religion is to make true and fair comparison between the different religions of the world. To attempt to do this without the previous work in history and philosophy is worse than useless; it is misleading. The good books that have thus far been written on Comparative Religion are very few and very far between. Such works as James Freeman Clark's "Ten Great Religions"; Samuel Johnson's compilation on Chinese, Indian, and Persian faiths; George Matheson's "The Distinctive Messages of the Old Religion," are good enough as introductions to the subject, and are edifying to the general reader. As yet, however, neither from De Saussure nor from Müller, nor from Edkins, have we any first-rate manual, while the masterpiece in this field of achievement is yet far off. As for missionary literature, the general criticism is in order, that they tell us too much about the outside of the man and not enough of his thoughts, the way he feels, the springs of his action, and the reasons for his view of the universe. Yet the subordinate facts are rapidly multiplying, and there is good

reason to believe that the day is not far distant when a work in this department, worthy of all acceptance throughout all the world as scientific, will be produced. Already, to the honest, and intelligent teacher of Comparative Religion, there is enough material upon which to formulate strong, inspiring and helpful teachings for the young men who are to go out as our substitutes to the front, of the battle.

Apart from the benefits to the intending missionary, the benefits of instruction in this science of Comparative Religion to the preacher who is to remain at home will be great. Unless we utterly mistake, it will give him a Christ-like enthusiasm for humanity, a sympathy with all his brother men. He may have pity for some, but for none will he feel contempt. He will understand that even a dark-skinned man who does not wear a hat or leather boots may be intellectual, spiritual, and an earnest seeker after God. He will be kept from that shamefully narrow outlook in religion characteristic of too many who profess to teach Christianity. He will be saved from the equally shameful habit of utterly ignoring the ethnic faiths because he is afraid of them. The study will enable both the preacher and the Church at home to progress unto more essential conformity with the Word of God, and to advance into truth not explicitly declared in it. "The enlarged study of religion will be useful in offsetting the undoubtedly strong trend of the currents of religious thought toward mere ethics." It will bring to his mind, as nothing else can, that man cannot do without worship and communion with the Highest. And last of all, it will bring into greater clearness and fulness the absolute truth of the rightfully apprehended Word of God. Already does the comparative study of religion bear testimony to the uniqueness of Christianity to a sense of sin, to repentance, to prayers, to the fatherhood of God, to the person and work of Christ, to forgiveness, to the Christian service of mankind, to the future life, to the weekly day of rest, and to woman. —*The Homiletic Review.*

IN THE U.S. CONSULAR-GENERAL COURT.

Before N. W. McIVOR, Esq., Consul-General and Judge, sitting with Messrs. G. W. BRAMHALL and J. LINDSLEY, Assessors.
FRIDAY, October 26th.

TSUJIMURA SADA V. STUART ELDRIDGE AND T. M. LAYFIN, EXECUTORS OF THE ESTATE OF THE LATE J. E. COLLYER.

The parties in this case were both represented by Counsel, Messrs. G. H. Scidmore and Uchiyama Rossettsu appearing for the plaintiff, and Mr. Henry T. Terry for the defendants.

No objection being urged against Messrs. G. W. Bramhall and J. Lindsley, they were sworn in as Assessors and took their seats on the Bench.

Mr. Scidmore said that the case had come before the Court on two previous occasions, the first on the 19th July, 1893, and then again on the 22nd July, 1893. The pleadings of the plaintiff were then imperfect and the Court granted an adjournment subject to certain restrictions. The pleadings had since been amended and the amended petition he would proceed to read to the Court. The petition of Tsujimura Sada, the above plaintiff shows as follows:—(1) That John Edward Collyer was an American citizen, having his place of abode at Yokohama within the jurisdiction of the Court. (2) That on or about the 16th day of June, 1890, the said John Edward Collyer made his last will and testament appointing Stuart Eldridge and Thomas Melvin Laffin to be the executors thereof. (3) That the said Stuart Eldridge and Thomas Melvin Laffin are American citizens having their places of residence within the jurisdiction of the Court. (4) That on or about the 23rd day of June, 1890, the said John Edward Collyer died at Yokohama aforesaid, and that the Court granted probate of the said will on or about the 4th day of August, 1890, upon application to that effect by the said executors. (5) That by the said will John Edward Collyer bequeathed \$4,000 to the plaintiff. (6) That frequent application has been made for the payment of the said legacy of \$4,000, but that the same is still unpaid. (7) That the said executors have received assets out of the estate of the said testator, namely, the goodwill of the business carried on by said testator previous to his decease and for which they have not accounted but have wrongly appropriated the same to their own use. The Plaintiff therefore prays the Court:—(1) That the estate of the said testator may be administered by this Court. (11.) That the defendants may be ordered to file their accounts and that an account may be

taken of the estate of the testator and of the assets which have been received by the said defendants. (III.) That the legacy of \$4,000 aforesaid may be paid to the plaintiff. (IV.) That pending proceedings such sum of money may be granted for the maintenance of the plaintiff as this Court may direct. (V.) That the defendants may be ordered to pay the cost of these proceedings, and that the Plaintiff may have such further or other relief as the nature of the case may require and as to this Court seem proper. Upon that petition, said Mr. Scidmore the case for the plaintiff entirely rests. The answer is as follows:—(i) For a first defence, the defendants deny all the allegations in the seventh paragraph of said petition contained. For a second defence, the defendants say that the goodwill mentioned in the said petition is not and was never at any time after the death of the decedent of any value. For a third defence, the defendants say that they have fully administered all the assets and estate of the said decedent that have come into their hands, and have used due care and diligence to collect and get possession of such assets as could be collected and got possession of; that after paying the expenses of the administration said assets were insufficient to pay the debts justly due for said estate, and that debts to the amount of \$1,686.80, including \$198 due to executors from said decedent and his estate to creditors of said decedent still remain due and unpaid; that the defendants have not and never have had as executors of said decedent sufficient assets of said estate in their hands to pay the said debts, and on information and belief no such assets exist or will ever come into their hands; that they have not and never have had any assets in their hands available to pay the legacy to the plaintiff, mentioned in her petition herein; that the said goodwill is not and has not been at any time since the said decedent's death worth \$1,686.80, and that the defendants have fully accounted as said executors for all the assets of said estate that have come into their hands, and made a full and true account of the same, verified by them, and filed said account in this Court, on the 17th day of October, 1894, all which by reference to the said account now on file as aforesaid will fully and at large appear. Continuing, Mr. Scidmore said that for the purposes of that case plaintiff would not question the accuracy of the accounts which defendants had filed in Court. It would still be open to the plaintiff, however, when defendants should apply for relief to falsify or surcharge those accounts. In defendants' answer, it would be observed, they only denied the allegations contained in the seventh paragraph, and the inference to be drawn from that was that all the other statements contained in plaintiff's petition were admitted. The answer also admitted that there was a goodwill, and then denied that that goodwill was of any value. The only point at issue between the parties was with reference to the value of this goodwill. The law touching upon the question of goodwill was of recent origin. Under the old law, previous to the expansion of commerce, of science and invention, the principles of law were chiefly applied to the principal source of wealth—landed property. But with the expansion of commerce, personal property increased in value, and the law of goodwill grew up along with it, until at the present time it had attained a very important place indeed. He (counsel) had sent to London and had obtained a book upon the law of goodwill, perhaps the only good work dealing with the subject. It was stated to be the work of Mr. G. G. Allen, barrister of the Inner Temple, and was dated 1889. This work contained principally reports of cases which had occurred in England, but it also cited the law as it prevailed in Scotland and in the United States. The law of goodwill was principally based upon the common law and was therefore of universal application. There were several kinds of goodwill. The goodwill in the case before the Court rested upon a particular location, the reputation of the place, as well as the results of individual efforts extending over a period of some twenty years. In previous hearings of this case considerable stress had been laid upon a kind of goodwill involving the labour of one of the defendants, Mr. Laffin, and it was attempted to prove that the goodwill of this business was practically of no value without his personal connection. He proposed to prove the contrary. In corroboration of his contention, counsel read long extracts from the work just cited, and argued that a goodwill was attached to the location of the premises of No. 42, and the use of the name, "Exchange Market," the reputation and long services, labour, and exertions of the decedent, which extended over a period of 20 years, during which he had had connection with shipping extending all over the world. His Honour said he wished to know if any side issues were raised beside those mentioned by counsel for plaintiff.

Mr. Terry understood that there were only two issues—whether the defendants had converted to their own uses the alleged goodwill, and whether such a goodwill existed. The defendants contended that not only did no goodwill exist, but that the Court could see from the accounts that had been filed that some \$1,600 was still owing to creditors of the estate, and therefore until those creditors were paid the plaintiff had no right to the legacy which she claimed. The present case was practically an attempt to surcharge the accounts with an additional charge upon the estate. He thought that Mr. Scidmore was mistaken in saying that the answer to the petition acknowledged that there was a goodwill and then denied that it was of any value. The defendants denied the entire truth of the seventh paragraph of the petition. The first question before the Court was whether there was any goodwill at all, and then whether the executors had wrongfully appropriated the goodwill to themselves. The defendants alleged that not only is there no goodwill, but that the estate is still some \$1,600 in debt, and that there are no assets to meet those debts. They were therefore substantially agreed that the questions before the Court rested upon those two points.

Mr. Scidmore said the defendants' answer to the petition was very vague, it first acknowledged that there was a goodwill, and then denied that it was possessed of any value.

His Honour—They are pleading in the alternative.

Mr. Terry said there was nothing inconsistent in the answer.

His Honour understood that there were two issues before the Court, the first being whether there was any goodwill, and if such goodwill existed, then whether the same had been applied improperly by the executors. Admitting that there was a goodwill, then the second point was whether there were sufficient assets left to discharge outstanding debts upon the estate—which would always be a first charge—and to pay the legacy. If the Court found in the affirmative on the first point, that there had been a wrongful use made of the goodwill, even then the plaintiff would be entitled to no remedy unless it was shown that the value of the goodwill exceeded the debts of the estate.

The first witness for plaintiff was then called, but His Honour inquired whether the petition just read was filed as a substituted petition.

Mr. Scidmore—Yes, it is a substituted petition, although the only alteration between it and the previous petition is in the 7th paragraph, which refers to the goodwill of the business.

His Honour—Then I am to take this as the full and final petition in this case?

Mr. Scidmore—Yes, as the amended and substituted petition.

August Langfeldt, sworn, deposed—I have resided in Yokohama over 25 years. My business was that of a stevedore, compradore, and general merchant. I knew of a business carried on at No. 42 by the late Mr. J. E. Collyer. He supplied ships coming to the port of Yokohama, was contractor to the English Navy, had sole control of American ships coming here, and did business with Japanese ships. I knew exactly what kind of business Collyer carried on. I have done the same kind of business myself, and know the profits which are to be derived from it. I know of it personally. At the time of Mr. Collyer's death I know that the business was flourishing and extensive. I saw his bills at San Francisco relating to the Pacific Mail and O. & O. companies, and from them I gathered that his business was very good.

Mr. Scidmore—Was there any goodwill attached to the business at the time of Collyer's death?

Mr. Terry objected to the question, and the Court sustained the objection.

The question was repeated in another form, but Mr. Terry said that the question was really one asking for the opinion of an expert upon the value of a certain description of business.

Mr. Scidmore said that the witness had proved himself to be an expert in that kind of business.

Mr. Terry said that if that were so then he had to ask the Court to allow him to cross-examine the witness on the points regarding his expert knowledge.

His Honour said that the objection to the question would be sustained if it referred to Mr. Collyer's business alone, but if it aimed only at obtaining information of a general character regarding that kind of business, then it would not be allowed.

Mr. Scidmore then argued that the question was put to witness on the ground that his long residence, business experience, and general knowledge of what was going on in the ship provisioning business of Yokohama, would enable him to form an expert's opinion upon the matter before the Court.

The Court suggested that questions be put to witness on those lines.

Witness resuming—I was familiar with the kind of business which Mr. Collyer carried on at the time of his death. I know the number of ships which called here at that time, and I have a general idea of what proportion of the trade fell to his share. I should form that general idea from the amount of business which I did myself at that time.

Mr. Terry objected to this, but the Court overruled the objection.

Witness resuming—In Yokohama there are four businesses of the kind which Mr. Collyer carried on. We all had a share in supplying the ships here, and we all knew personally how much each ship was supplied with and who supplied the goods. It was a knowledge which we all possessed and could not be kept secret from either of us.

Mr. Terry said that the witness had not proved that he knew the amount of Mr. Collyer's business at the time of his death and therefore its value, he therefore claimed the right to cross-examine the witness now.

The Court allowed the right.

Cross-examination of the witness then proceeded. My knowledge of the business was gathered from personal experience. Whenever a ship came into port a runner would board her from a ship's compradore, who would afterwards return and say which of the four compradores had obtained the order to provision the vessel. I also would see the Captains of ships and they would tell me who had obtained the provisioning of their particular vessels. I have also seen Mr. Collyer's boats putting off with provisions for ships. From my 25 years' experience I know exactly what each ship would require, and I could calculate what the compradore would make on the transaction.

Mr. Terry then urged that the witness' knowledge was based chiefly on hearsay and guesswork.

The Court overruled the objection.

Witness resuming—At the time of Mr. Collyer's death the business was worth to him about \$6,000 a year—the minimum net profits. If the goodwill had been put up to sale by auction then it would have been worth to parties interested in the business \$6,000. Since Mr. Collyer's death I have noticed over the door a board bearing the sign "T. M. Laffin, successor to J. E. Collyer." I don't know when that appeared. I have made a remark that I would buy the goodwill of the business, but I never said that I would buy it if Mr. Laffin was a partner in it. I have made endeavours to secure the business. I do not know whether the business was ever sold.

Cross-examined by Mr. Terry—I said that Mr. Collyer had control of all the American ships which came here. I tried to get them, but did not succeed. There was no contract between Mr. Collyer and myself as to the supplying of these ships. I do not know whether there was any contract between him and the other compradores. I do not know the actual number of ships supplied by Mr. Collyer in the year before his death. I do not know whether there were 25, but I think there were more. The value of goods supplied to sailing ships ranges between \$200 to \$5,000. Trade in a small place like Yokohama goes very much by previous knowledge and acquaintance on the part of the ship master of the compradore. A good many ships come here but once, but Mr. Collyer supplied all the American ships which called. I tried very often to get one of those ships but could never succeed.

Maurice Russell, sworn, deposed—I am a general store-keeper residing in Yokohama. I am in the same style of business as Mr. Langfeldt. I supply ships with goods. I remember the business carried on by Mr. Collyer at or about the time of his death. I knew that he held the English naval contract, supplied the P. M. and O. & O. vessels, American sailing ships, and he was also interested in schooners. I do not know whether his profits exceeded his running expenses. I saw the sign after his death, "T. M. Laffin, successor to the late J. E. Collyer." I had a fair idea of the extent of the business, but as I have just said before, I cannot say whether it was remunerative or not.

Cross-examined—I only know from hearsay that he advanced money on schooners coming from China ports. I have been in business here about 21 years. Such a business as Mr. Collyer's if put up to auction would be worth its fixtures and contracts, assuming that there were contracts. Aside from the fixtures and contracts, such a business would be worth the value of its lease, should there be a lease. The chance of old customers coming back, the man's reputation and location would be of no use to me. But they might have formed a small sum in the auction market. The net profits of the last year of Mr.

Collyer's business I should not take as a fair estimate of its value. I should consider that his business ceased with his death, otherwise I should have applied to the executors to buy the business. In my opinion this kind of business is purely personal and can not be transferred. I should only have bought the business if Mr. Laffin had come with it. Apart from contracts the business's reputation would be worth nothing.

Paul August Helm, landing agent and stevedore, sworn, deposed to knowing the nature of Mr. Collyer's business. I have no knowledge of the value of the business. I only have personal knowledge of the stevedoring part of the business.

Mr. Terry asked leave to cross-examine witness on this point, and was granted leave.

Witness cross-examined by Mr. Terry—I should think that Collyer had about 20 or 25 ships a year to discharge. I know that he got all the American ships. I know this because I am always afloat. I don't know how much he got for each ship. I only know that he did get the ships to discharge.

The Court then overruled an objection that witness did not possess sufficient expert knowledge.

Witness resuming—My estimate of the value of Collyer's stevedoring business at the time of his death was \$1,500, not taking the profits into consideration, merely its valuation.

Cross-examined—I cannot give off-hand the names of the ships which he did stevedoring for. The Court then adjourned till 2 o'clock.

On resuming at 2 o'clock, Francis John William Palmer, sworn, said—I am living at No. 70, Yokohama, and am in the same line of business as formerly engaged in by Collyer & Co. I was employed by them from 1878 to 1885. I was for a short time owner of that business in 1883. I bought it from Mr. Collyer, as he wished to leave.

Mr. Uchiyama—What amount did he pay for it?

Mr. Terry objected to the question as it was irrelevant.

Question allowed.

Witness—I paid \$3,000 for it, and had a five year's lease of the premises. Only had the boats and a little furniture. The chattels, &c., were worth about \$300.

To the Court—I paid rent in addition to the above amount.

Mr. Uchiyama—When Mr. Collyer came back did he repurchase the business for the same price?—He did.

Mr. Terry objected as too long a period had elapsed for him to remember perfectly what took place.

Witness—The lease had gone on for six months when it was re-purchased. I stopped with Mr. Collyer. When I purchased the business from Mr. Collyer he had only to do with transient shipping, and only one steamer, the *Oceanic*; after this I went into the same business myself, and am carrying it on now. When Collyer died he had the English Navy, the P. M. S. S. Co., and O. and O. Company, beside the transient shipping.

Mr. Terry's objection as to whether witness would have paid more for the business at the time of Mr. Collyer's death was sustained.

Witness—I went home in 1884, stayed a year, and then returned to Mr. Collyer until I went into business for myself. I could not tell approximately what these steamers would be worth to the business; as a rule the business paid. I could not say just now what the steamers added to the proceeds. It was not a losing business.

Cross-examined—When I say the business was not a losing one, I mean during the period of my engagement.

Mr. Terry then asked that the petition be dismissed so far as concerned the defendant Stuart Eldridge. There had been no evidence to prove that he had in any way had anything to do with the conversion of the goodwill. There had been an allegation of wilful and wrongful misapplication of a goodwill. Now one executor was not proved to have anything to do with any such wilful conversion of that property.

His Honour—You must put that in a motion.

Mr. Terry—If that is the practice of the Court, I will at once comply.

Mr. Scidmore—I must oppose that motion. Failure or neglect to account for a goodwill on the part of one of the executors involves both. Defendants received the goodwill and still have it, if they have neglected to account for it, presuming that that should be what has happened, then they are both liable; they are jointly concerned; neither can act alone in the disposition of the property and neither person can act without the consent of the other.

Mr. Terry—A failure to account is one thing, conversion is another.

His Honour disallowed the motion. Thomas Melvin Laffin, sworn, deposed that

at No. 42, Yokohama. I was employed by Mr. Collyer at the time of his death. I had been in his employ about five years. He was engaged in stevedoring, ship chandlery, compradoring and attending to ships. I carried on a sail-making business for him too. At the time of his death he was supplying fresh provisions to the P. M. and O. & O. steamers. I do not know that he had a contract with them. He had at the time of his death a contract with the English Navy. This expired in December, six months after his death, and a new tender went round and I think Mr. Carnow obtained it. The business done from the time of Collyer's death to the expiry of the Naval contract is all entered in the accounts filed. After Palmer left, the business was principally done with sailing ships, Palmer taking all the steamers with him. There were between 30 or 40 ships a year supplied. I solicited all the business for Collyer. When a ship came in I went down the bay and solicited the contract. The stevedoring was worth \$300 a year. The ship-chandlery and provisioning was worth about \$1,000 or \$1,500. The sailmaking business is worth to me about \$300 or \$400 a year. I am a practical sailmaker, but Collyer did none of the work. Since Mr. Collyer died I have had the contract for the P. M. and O. & O. Companies' provisioning. It is worth about \$100 a month. The other sums mentioned are net profits. I set up business for myself a few days after Collyer's death. I set up on my own accord, being also asked to do so by some captains. I am doing the same kind of business as that done by Mr. Collyer. Mr. Collyer's lease ran on to September after his death; he died in June. I received letters of administration about a month after Collyer's death. I have the whole of Mr. Collyer's customers, save the British naval contract. After I joined Mr. Collyer he stayed ashore and did the office business; I did the soliciting in the Bay. I don't think Mr. Collyer kept any books. I never saw any.

Cross-examined by Mr. Scidmore—The profits on the English naval contract were worth about \$200. I obtained the P. M. and O. and O. contract from Mr. Center after Mr. Collyer's death. I occupied the premises at No. 42 after Mr. Collyer's death. I used the sign "T. M. Laffin, successor to J. E. Collyer." I knew no better at the time. I do not think I could have prevented any other persons using it. I do not think it affected the business in the least.

Re-examined by Mr. Uchiyama—I got most of the ships for Mr. Collyer. After I came no one got the American ships from Mr. Collyer. I consider that I obtained the ships through knowing their captains. I acknowledge that Palmer, the former runner, obtained a good many ships, but after I succeeded him I had to run against him and succeeded in doing good business. I did not take any steps to sell the goodwill, for it was something that I did not know anything about. I obtained the lease of the premises. I consulted with the other executor in the estate upon most matters, but I did not consult him about the sign-board. I had to pay a higher rent for the premises on the new lease. I do not know that the first lease was a building lease.

To Mr. Terry—If there had been any contracts running with the business the business might have been worth something, but as it was, it was worth nothing.

An adjournment of 15 minutes was then taken. Oscar Otto Keil, sworn, deposed—I have lived here since 1873 I am now Secretary of the Chamber of Commerce. I have been a teacher, but since 1882 I have held my present position. I am acquainted with business in Yokohama. I am acquainted to some extent with the value of businesses here. As Counsel for the defence has stated the case, I consider that the business mentioned is worth nothing.

Cross-examined by Mr. Scidmore—I know the meaning of the term goodwill. A business established for many years and run by a runner who is at perfect liberty to start in business for himself even with its reputation of fifteen or twenty years standing, seems to me to be a personal business and worth nothing without contracts. In a small place like Yokohama business is mostly done by personal acquaintance. If I, as an executor of an estate, found a lease still running, an old established ship chandlery, provisioning, and stevedoring business, a contract to supply the British Navy here, etc., I should try to obtain a value for it. I should not necessarily enter it as an asset; I should endeavour to obtain a value for it. This concluded the evidence.

Mr. Terry, in summing up for the defence, said that he should confine himself to the question of the goodwill. Now in questions of goodwill there are two points to be considered. Goodwill has legal rights. Necessarily one of these is that

goodwill should confer the right of succession to the business, and if there is a lease then another right conferred is that that lease goes with the goodwill. The right of goodwill also confers upon the successor to the business the use of the business name. Now the right of value rests upon the probability of the former customers continuing to do business with the place and for its reputation to attract new customers to come to it. It must then have a distinct value in fact. Counsel then reviewed the evidence of the various witnesses as to the value of the business, the probability of old customers going to the purchaser of the goodwill, and the possibility of the goodwill being of any value apart from the services of Mr. Laffin. He contended that the evidence of Mr. Langfeldt and Mr. Helm was based on hearsay and guesswork. Mr. Laffin, who alone knew the value of the business said that it was worth about \$2,500. Now Mr. Langfeldt's guess was very wide of the mark, and Mr. Helm's seven or eight times more. In estimating the value of the goodwill \$200 must be subtracted for the English contract, which, as had been demonstrated in Court was put up to open tender at the end of the term to the lowest bidder. In reference to the question of the lease, Counsel pointed out that Mr. Keil in his testimony had stated that the lease of the premises would be of no value unless somebody wanted to start business in that place. Counsel for the plaintiff had stated that in calculating the value of the goodwill the net profits of the past year might be taken as a basis; but it must be remembered that in forming an estimate of the value of a goodwill one must take into account the possibility of transferring the business. In this case, too, an executor selling the goodwill of this business was under no obligation to bind himself not to start a business in opposition. He could sell the goodwill without any restriction at all. In the next place, one must consider that this is a small community, and, as two witnesses have stated, a business of this sort is largely done by acquaintance, and unless this was present with the goodwill then that goodwill was worth nothing at all. They had heard in this case that the business of Mr. Collyer during the past four years was largely obtained by Mr. Laffin, in fact one might say that Laffin practically controlled the business. There was in fact no *clientele* to depend upon, and the transient business was all controlled by Mr. Laffin. Even if the goodwill had been sold, Mr. Laffin was under no obligation that could prevent him from setting up in a similar business the next day—this has been admitted by the other side. It must also be taken into consideration that Mr. Laffin did not obtain the letters of administration until over a month after Collyer's death, and he was therefore unable to sell the property until after a lapse of six weeks. But he started in business one or two days after Collyer's death, and as the other side have admitted he was entitled in law to do so. Even if the goodwill had a value on the day of Collyer's death, it is not possible that it could have been sold six weeks afterwards when all the value had been taken out of it. Other business had come to Laffin since the death of Collyer, through his personal solicitation while others had promised to support him if he started on his own account. There was therefore very little probability that the old customers would come to the person or persons who bought the goodwill—that had been demonstrated before the Court. The only possibility of the goodwill being of any value therefore rested upon the late Mr. Collyer's reputation being sufficient to attract new customers. Four years before Collyer died the business which came to the place was obtained for Collyer by Laffin's persistent drumming, this fact must not be disregarded. The value of the business therefore, he contended, was, before Collyer died, \$2,500; from this we must deduct \$200 derived from the English contract, making its net value \$2,300. If the goodwill could have been sold it would have been sold subject to no restriction upon Laffin not to start in opposition next day. In closing his argument, Counsel quoted a case which he said was relevant to the matter in hand, and continuing urged that there was no sign to prove that any act on the part of the executors had been improper, nor did it appear that the use of the sign, "T. M. Laffin, successor to J. E. Collyer," had been of any direct gain to them.

Mr. Scidmore, in reply, said that the facts being before the Court he did not intend to review them at length. The executors in this case were trustees and as such must be held to give strict and rigid account of their trust. As trustees they had no right to take, or appropriate, or make any profit out of, any part of the property entrusted to their care. In the present case there could be no doubt that the defendants had misappropriated the goodwill of the business. Laffin admitted that he had taken the premises and that he had set up in busi-

ness there on his own account two or three days after Collyer's death. Then he had put up the sign, "T. M. Laffin, successor to the late J. E. Collyer." The only inference that could be drawn from this was that the reputation of the place and firm name was of value to him. In fact, he had been using the sign until quite recently. Counsel for the defendants had contended that the evidence of Messrs. Langfeldt and Helm had been mere guesswork. He need not take up the time of the Court in demonstrating that the 25 years' experience of Mr. Langfeldt qualified him for giving expert evidence upon the extent and value of a business such as this. The very strong evidence given by Mr. Palmer was not guesswork, it was a statement of actual fact, coming from a former employé and owner of the business. The only evidence to rebut his statement of the value of the business was Mr. Laffin's and he need not point out to the Court that that gentleman had appraised himself very highly. In regard to the contract she contended that there was no evidence to support the contention that they would not continue with the business; indeed, the presumption was that they would remain. Having quoted a case in point, Mr. Scidmore said that there was ample evidence to prove that the statements contained in the petition were true, as evidence had proved that the defendants, as executors, had misappropriated to their own use the goodwill of the business.

The Court then retired to consider its finding.

Upon reassembling,

His Honour said—The Court and assessors have arrived at a conclusion in this case only after great difficulty. The difficulty arose from the evidence led before it being principally of an expert character. It was confined to experts who had not an internal and actual knowledge of the business in question. To this is owing the wide divergence of opinion regarding its estimated value. There was therefore little to guide the Court to form a definite conclusion as to the actual value of the goodwill of the business at the time of Collyer's death. I take it, from the pleadings, the statements of counsel, and the evidence led before us,—the basis upon which the Court must go in arriving at a conclusion—that the question which we have to decide is, what was the real value of the goodwill on the day of Collyer's death. Now we have not to decide what was the value of the goodwill to the man who took it over, or to those persons who would have liked to have taken it over, but its value if placed upon the market in Yokohama. That the goodwill had a value is an undoubted fact. From the evidence of Mr. Laffin, an executor and one of the defendants in the suit to-day, it appears that it had a value. There can not be a shadow of doubt in the minds of any one interested in the proceeding before this Court, that the goodwill had a value. We have had laid before us to-day estimates of the value of the business at the time of Collyer's death which vary so much, and have been so divergent that the Court has found it almost impossible to reach a conclusion upon such evidence. We have been compelled, in going over the evidence to try and find some statement definite enough to go upon, to reject most as of no value for such a purpose with the exception of one. Mr. Palmer told us that when he bought the business of Collyer in 1893, he paid \$3,000 for it. Of this total something is included some boats and furniture. Deducting from the \$3,000 for the boats and furniture some \$300, we arrive at a sum, which, according to witness calculation, we place at \$2,700. This then was the price paid for the goodwill in 1893. The testimony has shown us that the business was somewhat larger at the time of Mr. Collyer's death. This increase in the business was created by various contracts with the P.M. and O. & O. Steamship Companies, and a contract with the British navy. In all three cases the business was not one which would add to the value of the goodwill. It was not a direct or permanent increase in any way, because in one, the contract would be terminated at the end of a certain term, when it would be thrown open again, while the others were not even so permanent and could be terminated at any moment. We have not therefore added to the value of the goodwill in 1893 any of the business increase between that date and 1890, because that business was not such as, in our opinion, would add to the value of the goodwill in any way. The value of the goodwill stood then at \$2,700 in 1893, from which a certain sum has to be deducted in arriving at a correct value. We have therefore assessed the value of the goodwill at \$1,500, which the executors are required to account for, and we further order that the costs of the case will be assessed upon the defendants.

Mr. Terry said he had a question to ask.

make a motion, such as asking for a retrial, should it be decided to take further steps in the matter. It might not go any further, but as he was unacquainted with the rules of that court; he therefore asked in accordance with the New York rules for a certain time.

His Honour—The Court will allow you time. The Court then rose.

Correct solution of No. 123 received from O. Balk (Sydney).

PROBLEM No. 147.

By V. TUZAR.

BLACK.

White to play and mate in two moves.

We clip the following from our latest American exchanges. Steinitz has won a game in the cable match with Liverpool, the other is yet unfinished. We also give the last game in the late Tarrasch-Walbrodt match, in which the young player did not score a win of any kind, the final result being Tarrasch 7, Walbrodt 0, Drawn 1.

A match is now being played between Jackson W. Showalter and Adolph Albin at the Manhattan Chess Club, New York. The match is to be ten games up, but in case of the score being tied at nine games each, the winner of the first eleven games will be the victor. The time limit is fourteen moves an hour. Games will be played on Mondays, Wednesdays, and Fridays.

In the first game Albin won the toss and opened with a Ruy Lopez. Black defended with 3—P to Q R 3. Albin forced the pace and later on he proceeded with the attack, in the course of which he sacrificed another piece, the net upshot being that Showalter lost his queen for three pieces. Albin played very fine chess and secured the game after fifty-one moves.

In the second game Showalter selected a Ponziani opening and won the game in sixty-three moves.

Score of cable games now being played between Steinitz and the Liverpool Chess Club.

GAME A—MAX LANGE.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 22.

On the 20th instant, the British Government was informed by China that she was prepared to negotiate for peace. Overtures were accordingly made by the British Government to the various Powers with the object of arranging a collective representation to Japan, who also was asked whether the terms offered by China were likely to prove a satisfactory basis of negotiation. No definite reply has been received by Japan, but it is believed that a basis acceptable to her and China can be evolved. The majority of the Powers are in accord with Great Britain, and it is hoped that the others also will assent.

James Anthony Froude, the historian, is dead.

London, October 25.

The Earl of Rosebery, in a speech at Sheffield, confirmed the statement that China after her first defeat had offered terms of peace far exceeding the Japanese demands. His Lordship further stated that Great Britain had submitted these terms to the foreign Powers, but some thought that the time was not yet ripe for interference between the belligerents.

The Grand Duke Alexander of Russia is signing State papers.

[Froude, James Anthony, youngest son of the late Venerable R. H. Froude, archdeacon of Totnes, born at Dartington, Devonshire, April 23rd, 1818, was educated at Westminster and at Oriel College, Oxford, where he graduated in 1840, taking a second-class in classics, and he proceeded M.A. in due course. In 1843 he carried off the Chancellor's Prize for an English Essay on "The Influence of the Science of Political Economy on the Moral and Social Welfare of the Nation," and in the same year he became a Fellow of Exeter College. He was ordained a deacon in the Church of England in 1844. For some time he was connected with the High Church party under the Rev. J. M. Newman, and wrote in "The Lives of the English Saints." Under the pseudonym of "Zeta," he published, in 1847, a volume entitled "Shadows of the Clouds," which comprised two stories—"The Spirit's Trail," and "The Lieutenant's Daughter." His "Memories of Faith" appeared in 1848, and reached a second edition in the following year. It marked his defection from the teaching of the Church of England, against whose reverence for what he called the "Hebrew Mythology," it is, *inter alia*, a protest. Both these works were severely condemned by the University authorities. About this time Mr. Froude resigned his Fellowship, and he was obliged to give up an appointment which he had received to a teachership in Tasmania. For two or three years he wrote almost constantly for *Fraser's Magazine* and the *Westminster Review*. One of his articles in the latter on the Book of Job has been reprinted in a separate form (1854). In 1856 he published the first two volumes of his "History of England from the Fall of Wolsey to the Defeat of the Spanish Armada," which has been continued from time to time, vols. 11 and 12 having been published in 1870, concluding the work. The materials for this history are mainly derived from the public documents of the time, and the boldness and originality of the author's views have attracted much attention. One of the most marked features of the work is an elaborate attempt to vindicate the reputation of Henry VIII. His "Short Studies on Great Subjects" appeared in 1867, being reprints of essays which had appeared in various periodicals. Mr. Froude was installed Rector of the University of St. Andrews, March 23, 1869, on which occasion he delivered a lecture

was conferred upon him. For a short time he was editor of *Fraser's Magazine*, but he resigned that position in Aug. 1871. On Sept. 21, 1872, taking advantage of the Clerical Disabilities Act, he executed a deed of relinquishment of the office of deacon. In the autumn of 1872, Mr. Froude went to the United States, where he delivered a series of lectures on the relations between England and Ireland. The burden of his addresses was that Irishmen had themselves, to a large extent, caused their country's prostration by their own intestine jealousies and want of patriotism. An animated controversy ensued between him and Father Thomas Burke, the Dominican orator. At the close of the year 1874, Mr. Froude was sent by the Earl of Carnarvon, Secretary of State for the Colonies, to the Cape of Good Hope, to make inquiries respecting the late Caffre insurrection, and he returned to London in March, 1875. His later works are "The English in Ireland in the Eighteenth Century," 3 vols., 1877-79; "Cæsar: a Sketch," 1879; and "Reminiscences of the High Church Revival," a series of papers in *Good Words* (1881). Having been appointed executor to Thomas Carlyle, he published his "Reminiscences," 2 vols., 1881; and the first part of his biography, "Thomas Carlyle: a History of the first forty years of his life," 1882; and *Reminiscences of his Irish Journey in 1849*, London, 1883. Mr. Froude's latest volume is "Oceana" (1886), an account of a voyage to Australia and elsewhere.—*Men of the Time*.]

Hiroshima, October 23.

Count Ito, the Premier, visited the Korean Ambassador to-day, and dined with the Prince. Prince Wi-hwa leaves here to-morrow for Kobe, and thence goes on to Tokyo *via* Osaka and Kyoto.

The Korean Ambassador inspected the field hospital to-day, and contributed yen 100 as a donation. He expressed his regret at the large number of soldiers having been wounded here.

fighting for the independence of the Peninsular Kingdom. Count Ito and Marquis Tokugawa also visited the hospital, and contributed yen 50 each.

Kobe, October 23.

The fire which broke out on board the M.M. steamer *Saghalien* was extinguished by 4 p.m. yesterday. No postal matters were injured. The vessel left for her destination at 7.30 a.m. to-day.

Shimonoseki, October 23.

Count Inouye, Japanese Minister to Korea, escorted by the *Fayayama Kan*, left here at 10.20 a.m. to-day, for Korea.

Nagasaki, October 23.

The *Tsao-hiang*, formerly a Chinese vessel, arrived here from Sasebo to-day, and was at once put into dock. The U.S.S. *Baltimore* proceeded to Ninsen to-day. The *Sadokuni Maru* has been floated, and has come here for repairs.

Hiroshima, October 23.

The reported arrival of the Second Japanese Army at a China port (Kim-ju) has been found to be without foundation. The troops will land between to-night and to-morrow. The name of the place of debarkation will be telegraphed afterwards.

Hiroshima, October 23.

The English Rothschilds have intimated their willingness to float a foreign loan for Japan whenever this Government wishes to raise war funds from foreign sources. The Government has replied that it will request their assistance whenever it deems the occasion warrants the taking of such a step.

Yamagata, October 23.

Owing to the great earthquake 110 houses were overthrown in Nishi-tagawa District, where 70 houses were destroyed by fire. Some 60 persons were killed, a large number of persons being injured.

Akita, October 23.

It is thought that no eruption occurred on Chokai-zan, but slight oscillations are still felt at the foot of the mountain.

Akita, October 24.

Fissures have been discovered in the ground at Shiogoshi-mura, Yuri District, and water has been ejected. Somewhat severe damage to buildings, but no loss of life has been reported.

Hiroshima, October 24.

The Korean Ambassador left here for Kobe this morning.

Hiroshima, October 24.

Flames burst from a house at Sakanchō at 1.10 this afternoon, and over ten houses were destroyed. Ministers of State, high military officers, and peers at once proceeded to Headquarters to visit the Emperor.

Yamagata, October 24.

According to returns received up to the time of the dispatch of this message (9.50 a.m.) damage done in Higashi-tagawa and Sakata was as follows:—Higashi-tagawa, 53 houses overthrown, 68 houses partly ruined, 52 houses burnt, 96 lives lost, and 99 persons injured; Sakata, 1,208 houses destroyed by fire, 184 houses overthrown, and 133 lives lost. In the suburbs of Sakata 25 houses were burnt, and 300 houses overthrown, 70 lives being lost.

Otsu, October 24.

Yen 58,000, said to have been stolen from a Bank messenger who was travelling by train in this neighbourhood, was last night discovered in a ditch in the neighbourhood of Hikone Station.

Yamagata, October 24.

Further returns of damage have been received, and it is now (3.25 p.m.) known that Higashi-tagawa District suffered as follows:—524 houses overthrown, 894 houses partly collapsed, and 170 lives lost. The Sakata Prison was ruined, but all the prisoners are safe. The Sakata Law Court was destroyed, and a clerk killed. The Sakata Exchange was burnt.

Shanghai, October 24.

An explosion has taken place in a powder magazine in the neighbourhood of Chiu-lien-chen, and a number of Chinese soldiers have been killed.

Kobe, October 24.

The Korean Ambassador arrived here this evening.

Fusan, October 26.

Mr. Otori, ex-Japanese Minister to Korea, arrived here to-day on his way home.

Hiroshima, October 26.

Although no official report has yet been received, the Second Japanese Army is said to have commenced to land on the eastern coast of the Chin-chiu peninsula on the morning of the 24th inst., and the greater portion of the troops were disembarked there by the 26th. It is stated that some important places on the peninsula would have been occupied by the Japanese soldiers by now, and that Port Arthur, and Talien Bay are blockaded.

Yamagata, October 26.

Mr. Makino, an expert, and Mr. Tanaka, a police inspector in this Prefecture, have ascended Chokai-san, and have discovered that the mountain is quiescent, but the feeble shocks and rumbling sounds previously noticed have not stopped.

Kyoto, October 26.

The Korean Ambassador left here by the 8.30 train for Hamamatsu.

Hiroshima, October 26.

Colonel Tamura has been promoted Major-General, and appointed Commander-in-Chief of the Eighth Brigade at Himeji.

LATEST COMMERCIAL.

IMPORTS.

Dull and depressed market. Yarns in the dollars and quotations more or less nominal. Shirts move slowly at quotations, the heavy stock precluding all hope of better prices. Fancies—Chief trade is in T-Reds where sellers have met buyers in price. Small sales of Lawns, Velvets, and Satens. Woollens—No demand yet in spite of the cold weather.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—4 1/2 yds, 36 inches	\$2.25 to 2.75
Grey Shirtings—5 1/2 yds, 45 inches	2.60 to 3.25

KEROSENE.

Market steady at unchanged rates, but with a fair current business at quotations. Deliveries are good with few arrivals, and stocks moderate.

Chester	\$1.75 to 1.77 1/2
Comet	1.72 1/2 to 1.75
Devon	—
Russian Anchor	1.72 1/2 to 1.75
Russian Moon	1.70 to 1.72 1/2

SUGAR.

Brown—Arrivals small with fair sales and stock reduced accordingly. Prices of Manila sorts are firmer and the tone is healthy all round. Takao has sold to some extent at previous quotations, but there is no great trade in the article. White—Demand for Refined is quiet, but prices are well held.

	PER POUND.
Brown Takao	\$4.30 to 4.40
Brown Manila	5.20 to 5.35
Brown Daitong	3.20 to 3.30
Brown Canton	3.70 to 4.40
White Java and Penang	7.25 to 7.50
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Heavy settlements by the principal American buyer have put fresh life into the market, and about 2,000 piculs have been settled. Sellers are now trying for a rise in price and succeed in getting it upon some favourite brands.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1894.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is THE JOURNAL for Investors, Speculators, and business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by an financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPY POST FREE.

ATKINSON'S WHITE ROSE
The most refined of all Perfumes. Sweet as the Rose itself. Irritated the world over, but equalled by none.

ATKINSON'S EAU DE COLOGNE
is now universally pronounced to be the German kind. It is more fragrant, more lasting, and very much more refreshing. Use none but ATKINSON'S, which is the finest of all.

J. & E. ATKINSON,
24, Old Bond Street, London.

CAUTION! Only genuine with shield-shaped blue & yellow label & usual Trade Mark, a "White Rose," and address in full.

YOKOHAMA: SATURDAY, NOV. 3RD, 1894.

BIRTH.

At Wiesbaden, the wife of TH. HAKE of a son.
[By telegram.]

MARRIAGE.

On the 27th inst. at the U.S. Consulate, Yokohama, and St. Andrew's Church, Shiba, Tokyo, by the Rev. A. E. Webb, M.A., MARY ANNIE, eldest daughter of the late Robert Tatham Procter, Esq., Ingleton Hall, Yorkshire, Eng., to MILTON A. HOWE, D.D.S., Yokohama.

SUMMARY OF NEWS.

THE Aomori Railway opened for traffic on the 1st inst.

HORSE-BREEDING is said to be on the decline in Japan.

THE Kabuki Theatre, Kobikicho, Tokyo, opened on the 1st.

THE Tenryo Maru has been returned to Japan by the Chinese.

THE Autumn meeting of the Nippon Race Club passed off most successfully.

THE rainfall on Tuesday was very heavy over the whole eastern sea-board of Japan.

THE Meiji Fire Insurance Co. lost yen 4,630 by the recent conflagration at Aomori.

DR. KITAZATO has received a decoration of the Middle Class of the Order of the Rising Sun.

THE sendoes race on Saturday in the B division boats of the Sailing Club was a well contested affair.

A NUMBER of hot sulphur springs have been

discovered at the base of some hills in the district recently devastated by the big northern earthquake.

THE epidemics of dysentery and typhoid fever are decreasing in the south-western provinces.

THE grand review of troops at Hiroshima on the Emperor's Birthday has been abandoned.

SURGEON-GENERAL ISHIGURO is inspecting the Field Hospitals and ambulance corps in Korea.

THE loss sustained by Sakata residents through the earthquake is estimated at over ten million yen.

THE Concert announced for the 10th inst. at the Ueyeno Academy of Music promises to be a great success.

DON FRANCISCO DE SOLIVERES, first secretary in the Spanish Legation, Tokyo, has left for home on leave.

THE establishment of the Odawara Rice Exchange (capital yen 40,000) has been sanctioned by the Government.

THE Mitsui family and the Mitsui Bank have contributed a sum of yen 10,000 to the Red Cross Society of Japan.

A LITTLE four-year-old girl, only daughter of Mr. and Mrs. Colton of Yokohama, was fatally burned on Tuesday morning.

THE Government has granted yen 3,000,000 to the Nippon Yusen Kaisha towards the cost of purchasing foreign steamers.

A SUBSCRIPTION list has been opened among foreign residents for the relief of sufferers in the recent earthquake in Yamagata and Akita Prefectures.

LIEUTENANT-COLONEL NAKAOKA, Commander of the Military Forces in Tashima, has received the additional appointment of Administrator of that Island.

THE Sculling handicap of the Yokohama Amateur Rowing Club was won by W. Goddard, the limit man, who got home three seconds in front of scratch.

THE Governor of Kanagawa gives a banquet on the Emperor's birthday, to the Foreign Consuls, local officials, and leading foreign and Japanese merchants of Yokohama.

H.I.H. PRINCE KOMATSU AKIHITO gave a banquet on the 29th ult. at 6 p.m. at the Akasaka Detached Palace to Prince Wi-hwa, the Korean Ambassador, and party.

THE twentieth anniversary of the establishment of the Oji Paper Factory, Tokyo, was celebrated at the villa of Mr. Shibusawa on the 28th ult., and passed off very satisfactorily.

It is stated that the Government has decided to construct a railway between Yezaki and Saseho in Kyushu at an estimated cost of yen 1,300,000. The expenses are to be defrayed from the War Fund.

SILVER medals have been obtained at the Autumn Fine Art Exhibition by Messrs. Murase Gyokuden, Kubota Beisen, Noguchi Shohin, Satake Eiko, Araki Kwanpo, Nomura Bunkyo, and Suzuki Shonen.

SOME Japanese coal merchants in Chikubu Province have entered into an agreement to export coals to the amount of 6,000 tons from Moji to Hongkong, Shanghai, and Singapore next month.

It is stated that Lieutenant Gunji is intended to carry out his plan to colonize Chishima.

through thick and thin. He has been advised not to discontinue his work by Viscount Tani and other men of experience and high position.

THE Sanyo Railway Company will distribute yen 193,050 as dividend for the first half of this year, add yen 10,000 to the reserve, and carry forward yen 2,124,827 to the new account.

MR. GEO. HARMSTON has been made a special member of the Red Cross Society of Japan, in recognition of the benefit performance which he gave on behalf of the Society during the stay of his Circus in Yokohama.

MESSRS. SHIMAMURA HISASHI, Japanese Consul General in Mexico; Fuku Saburo, Japanese Consul General in Hawaii, and Chinda Sutemi, Japanese Consul at San Francisco, are now on the way home on leave.

REUTER Telegraphs:—Through differences that have arisen in connection with the Emperor of Germany's proposals against the Poles and Socialists, General Count von Caprivi, Imperial German Chancellor, and Count zu Eulenburg, Prime Minister of State and Interior of Prussia, have resigned. Prince Hohenlohe succeeds to both these offices. The Chinese Silver Loan in London, which is for 10,000,000 taels, at 7 per cent. interest and to run for a period of twenty years, has nearly been completed. The guarantee for the fulfillment of the obligation will be the Customs returns of the Treaty Ports. The Empire Theatre in London has been closed; it caused a great sensation. A modified licence has been applied for. The theatre was closed at the instance of the Purify Party. The Earl of Rosebery, in a speech at Bradford, said that he favoured the maintenance of a second Chamber, though the attitude of the present Tory Lords had undoubtedly been an incentive to revolution. The Government would ask the House of Commons to proceed by resolution in asserting the privileges of the Commons against the irresponsible House of Lords, and this would represent the joint demand of the Government and the House of Commons for the revision of the Constitution, which, if defeated, would be followed by an appeal for the verdict of the country. The Emperor of Russia is suffering from inflammation of the left lung, and is spitting blood, with a cough that has increased to a dangerous point. The Prince and Princess of Wales are about to start for Livadia. Count Caprivi has been decorated with the Order of the Black Eagle; the Prince Hohenlohe, who was appointed to succeed him as Chancellor, is the Governor of Alsace.

THE Cotton Piece Goods market is very stagnant, and the general outlook is by no means promising. The holidays are no doubt interfering with business, and the movement of troops from the northward is another faction tending towards depressing trade, the transit of merchandise being much interfered with. The Kerosene and Metal markets continue firm, with little on nothing doing. Brown Sugars from Manila have been moving off apace. Takaos have been almost entirely neglected. White Refined are quiet. Raw Silk is again moving slowly, and the comparative absence of demand is inducing sellers to lower their pretensions. A good current business has been done in Waste, many outgoing steamers for the States or Europe taking cargo. Tea is firmer, higher prices being paid for best parcels. Settlements for the season to date exceed those of last year by about 50-50 per cent. Exchange has been fairly steady during the interval.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

While not a few vernacular papers are at a loss how to account for the weakness shown by the Chinese forces in every land and naval battle hitherto fought, the *Hochi*, in its characteristic easy-going tone, declares that war, in the common acceptance of the term, has always been an unknown thing in China. "Look at the so-called weapons of war invented by Chinese genius. Upon trial not one of them is found destructive enough to kill a man at a single blow or thrust. In China from time immemorial arms seem to have been considered not as weapons of destruction, but as instruments of intimidation. The method of conducting war is analogous. Witness the tremendous number of flags and pennants, the thundering noise of gongs and drums, and the other awe-inspiring accompaniments of a Chinese army? War, as understood by the Chinaman, is little more than an exhibition of gorgeous flags and banners. Such being the case, there is nothing mysterious in the successes Japan has achieved. Port Arthur, too, will soon fall into Japanese hands. There is no reason to fear either Chinese weapons or Chinese methods of using them. The proverbially severe winter of Manchuria may prove a far stronger foe than the Chinese themselves."

The *Nippon* again discusses terms of peace, and declares that to obtain any large indemnity would be practically impossible. All things considered, China cannot pay more than 10 million *yen*, if Japan demands immediate settlement. Should payment by installments be resorted to, unquestionably she could find, or at least promise to find, a very much larger amount. But an endless series of difficulties would have to be encountered in elaborating and giving effect to any arrangement for partial payments where a country so prone to treachery and double dealing is concerned. Therefore, nothing short of the annexation of a portion of Chinese territory must be demanded. To such a proposal China would probably consent sooner than to the payment of any large sum of money. She is accustomed to lose a slice of territory at the close of every foreign war. Love of gold is her national passion. Moreover, her lack of ready money, as shown by her resorting to the London or Berlin market for a loan of 10 million Taels, incapacitates her for paying an indemnity large enough to cover the expenses incurred by Japan. For the sake of both Japan and China a little change in the geography of the Far East would be the easiest and wisest way of terminating the war.

From less practical points of view and on broader and more dignified grounds—as for example, the necessity of securing peace to the Orient and assuring the maintenance of Korean independence—the *Kokumin*, the *Hochi*, and a few other Tokyo journals declare the annexation of a portion of Chinese soil to be a condition without which the present war should never be brought to a conclusion.

Nothing short of blowing in the Gates of Peking, observes the *Hochi*, will suffice to arouse senile China from her long lethargy and lead her into the path of civilization and enlightenment, so that she may never again play the part of the great peace-disturber of the East. A light punishment would be powerless to make her recognise her error and learn the value of peace and civilization. During the last fifty years England and France more than once chastised her vice and ignorance, taking from her Hongkong and Annam and a great deal of treasure and blood. Those misfortunes made her even more vicious and barbarous than before toward Englishmen and Frenchmen. Her European experiences show that no half measures can do much to straighten the crooked hearts and soften the hard brains of the proud Celestials. Not the least of the reasons for

thirst for conquest, but for the sake of humanity and civilization, and most of all for China's sake, Japan should not listen to any foreign intervention, until the Four Hundred Provinces of the colossal Kingdom have been made to recognise the glory of the "Rising Sun."

The *Shin Choya* has a long leader not yet concluded about "the War Loan and the Money Market." We shall quote what our contemporary says, in its issues of the 27th and 28th ultimo, about the export and import trade of Japan during the first eight months of the current year. The foreign trade of the year has shown great progress as compared with 1892 and 1893. Awed by the war, people unadvisedly talk of it as though it had caused considerable retrogression. But the fact is quite the reverse. The following table shows the exports and imports of the first eight months of this year as compared with the corresponding period in the years immediately preceding:—

	Exports (in <i>yen</i> .)	Imports (in <i>yen</i> .)
1888 (1st 8 mo.)	39,323,687	44,487,972
1889 (1st 8 mo.)	41,609,720	40,944,231
1890 (1st 8 mo.)	35,692,428	57,967,217
1891 (1st 8 mo.)	51,556,542	40,074,921
1892 (1st 8 mo.)	52,046,424	45,574,310
1893 (1st 8 mo.)	55,021,255	55,886,990
1894 (1st 8 mo.)	69,590,694	77,314,524

This table indicates that foreign trade has made a great stride this year. It also indicates a very marked growth in the import trade. With regard to this latter point, our contemporary deems it as a natural consequence of the inflow of specie that took place in 1891 and 1892, and gives tables in support of that view:—

I.—EXCESS OF SPECIE IMPORTED OVER SPECIE EXPORTED.

1891	<i>Yen</i> 12,435,562
1892	13,154,004

Total *Yen* 25,589,566

II.—COMPARATIVE IMPORTS OF THE SEVEN PRINCIPAL STAPLES FROM JAN. TO MAY (IN *Yen*).

	1893.	1894.
Cotton Yarn	6,022,147.85	7,376,678.49
Brown Sugar	1,832,010.61	2,384,515.08
Keosene	2,050,234.78	2,143,905.82
Muslin	1,205,932.82	1,479,895.50
Rails	182,225.16	430,996.52
Peas	607,119.50	1,633,822.20
Rice	598,990.26	4,735,593.43

His Highness Prince Wi-hwa, Envoy from the Korean Court, is spoken of by all the Japanese journals in very high terms. Some papers introduce him to the public by means of a portrait and add an account of his career. In order that he may obtain an insight into Japanese society, the Tokyo people are advised to extend to him at least as much kindness as an African or South-Sea Island Chief or Prince is wont to receive in London, for it is plain that the impressions about Japan and the Japanese which his Highness carries home to Korea will have much to do with the future relations between this Island and the Peninsula Kingdom.

The Korean reforms are still discussed by the *Yomiuri*, the *Kokkai*, the *Mainichi*, and some other Metropolitan journals. The two first mentioned papers devote long articles to the subject, and assert in strong terms, the importance of introducing administrative, legislative, social, educational, and other reforms as numerous as those adopted by Japan during the *Meiji* era. The *Mainichi* does not go so far, but emphasises more salient points. Make the Koreans, it says, feel that they are governed, and the rest will come spontaneously. To attain that grand object two and only two ways must be adopted, namely, the establishment of a stout and trustworthy police force and the formation of a strong Cabinet. A firm Central Government aided by a stout police force could not fail to keep the people in peace and order and to introduce social, educational, and other improvements suitable to the condition of the country.

The *Hochi* urges the Government to display toward any European Powers that ventures to

interfere in the present war not less strength and courage than it has shown toward Korea. The nation is ready to dare everything for the country's sake. When the public spirit of the people is thus far roused, the Progressionist organ proceeds, the Government ought to take steps to retrench its expenditures. A desperate renewal of old attacks will be made upon the Sat-cho Cabinet if its Budget for the 28th fiscal year fail to show a decrease of less than 5,000,000 *yen* as compared with the Budget of the preceding year. Five million *yen* our contemporary thinks a light and perfectly practicable reduction. It would also serve conveniently to pay the interest on the greater portion of the proposed war loan.

The *Mainichi* and the *Nippon* protest against the comparative indifference with which the floods in Akita Prefecture and the earthquake in Yamagata Prefecture are regarded by the public. Both journals appeal to the wealthy throughout the whole country not to forget their duty toward their brethren, and both note how different was the public's mood on the occasion of the Gifu-Aichi earthquake. The war, important as it is, does not justify any neglect of such a duty. The *Nichi Nichi* advises the local Authorities, on the one hand, to do all in its power to relieve the poor sufferers and to repair the damaged roads and bridges, without seeking any aid from the National Treasury, and, on the other, tells the Central Government not to refuse State aid in cases where the local functionaries apply for it with sufficient reason.

Several Metropolitan journals, the *Niroku*, the *Nippon*, and the *Kokumin* among the rest, called upon the nation to celebrate the Emperor's Birthday with more rejoicing than ever. Japan, writes the *Niroku*, has been raised to the rank of a considerable Power through the virtues of H.M. the Emperor. Can anything be happier for a Japanese than to celebrate such a great Emperor's Birthday in such a great age? Let the national anthem be heard in every corner and nook of the Empire.

EDITORIAL NOTES.

COUNT OKUMA ON TOPICS OF THE DAY.

On the departure of Count Inouye as Ambassador to Seoul, the Count of Waseda, according to the *Asahi*, makes the following observations:—The reform of Korea cannot be accomplished without the interference of Japan. Should Korea refuse the kind and neighbourly assistance of this country, the latter must be prepared to exercise its strength as well as its benevolence in order to bring to submission an ignorant people like the Koreans. If Japan does not take this course promptly others will step in to her exclusion. Mr. Otori pursued that policy. When the Korean Court failed to comply with our friendly advice, it was followed up by radical measures. Unfortunately he did not adhere to this resolute policy, but latterly allowed the Korean Cabinet to exercise its own judgment. As a consequence, the Court, which ought by now to be thoroughly reformed had the original policy been continued, is in as distracted a state as it was at first. It is hardly just, however, to blame Mr. Otori for his subsequent conduct as his position was a very difficult one. It is encouraging to see that Count Inouye, the greatest power in the Japanese Cabinet, has decided to take Mr. Otori's place and undertake the task that the latter failed to accomplish. The Count is a statesman of rare spirit and is thus specially competent to cut the Gordian knot of Korean politics. The binding nature of the laws and regulations of the Home Office brought on the Count's brain trouble, but that will no doubt not disturb him when he has to settle the Korean question.

We are indebted to the same authority for Count Okuma's views on the redemption of the War Loan and new resources for the increase of

he national revenue. The former, a sum of 100 million *yen*, should, he thinks, be paid off by exacting an indemnity from China. That indemnity she would probably not be able to pay at once, but she should be made to fulfil the obligation by annual installments, and till the last *sen* was paid, Japanese troops should be stationed in China at the latter's expense. The Franco-Prussian War affords a good example which Japan should follow. Another grave question to be considered in connection with Japan's future welfare is how she would meet the enormous military outlay required for national defence against any European Power. It is needless to say that new sources of revenue, should be sought. Count Okuma thinks that the taxes on *saké* and tobacco should be increased. His views differ from those of Mr. Taguchi's little party in that he condemns any increase of land taxes, the burden the farmers have to bear being already very oppressive. The case is different with luxuries like *saké* and tobacco. It is thought that an addition to the revenue of 40 to 50 million *yen* from the tax on *saké* alone could be gained without difficulty. On foreign liquors too, the tax should be levied in the same way, so that, reckoning that a tax of 10 *sen* is assessed upon one *sho* of such liquors, another sum of 40 million *yen* or so would accrue from this item. The brewing of *saké* for home consumption should at the same time be forbidden. The Count does not enlighten us upon the subject of the other half of the new resources. His figures are altogether perplexing.

ANARCHISTS PAINTED BY AN ANARCHIST.

In the *Fortnightly Review* for September, Charles Malato, an anarchist, gives us some "Anarchist Portraits." He was intimate with three of the men recently executed in France, Ravachol, Vaillant, and Henri; with Cesario he was not personally acquainted. While his article cannot be said to add much to our knowledge of the philosophy of anarchism, it certainly goes far to establish one point, that anarchists are totally devoid of many of the ordinary moral sentiments on which our existence as a social organism is based; they are, in fact, criminal lunatics, and as such they should be treated. Moral insanity, be it observed, does not necessarily imply the co-existence of intellectual insanity. Far from it, for the men we have named were highly intellectual among their class, and Malato himself writes clearly and well. Anarchists display another form of that abnormality of mental constitution which sometimes exhibits itself as genius, sometimes as insanity. The existence of this partial moral insanity, both in the writer and in those whom he describes, may best be shown by a few quotations. Before he became a full-blooded anarchist, Ravachol lived in part by robbery, in part by ordinary work. The money he obtained by robbery he used for the relief of the unfortunate poor, and in the propaganda. On one occasion he went to rob a solitary miser. He expressly chose the hour of noon because he thought the miser would be from home, and that thus there would be no danger of his having to use violence. Unfortunately the old man was bed-ridden, and cried out when he saw the robber. "Ravachol gripped his neck—a little too hard . . . fate would have it that in spite of himself he should become an assassin. After this accidental murder, he was for a long time very taciturn—quite a different man." The ordinary moral sentiment against murder was not quite extinct in Ravachol; it was annoying that this little crime should have been thus forced on him against his will.

Of Vaillant, the man that threw the bomb in the Chamber of Deputies, Malato says: "He was a brave man, as his behaviour at the scaffold abundantly proved, but he was also profoundly human. He abhorred useless violence—a sentiment which appears even when, tired of struggles and sufferings, he prepared for the deed which cost him his head. At the last moment his

intention was not to kill but to warn, and, instead of bullets, he only put nails in his bomb."

Of Henry, he says: "A year and a half earlier he had struck a more successful blow, thanks to luck. A bomb which he had manufactured . . . was taken to the commissariat of police, where it exploded, killing the secretary and five police agents. . . . This notorious attempt excited no regret, except in high official circles and among the relations of the victims." A year after this explosion Henry said in allusion to it: "To-day is the anniversary of the dancing-lesson." The head of this youth of twenty-one was completely turned by his "success"; he came to regard himself as a destroying angel; and he planned and executed the bomb-throwing at the Café Terminus, which, not being directed against the constituted authorities, was deprecated even by many of the anarchists themselves as a needless waste of blood.

Such are the three great heroes of anarchism—whom the ordinary journalist, representing the current opinion of the well-to-do classes, reviles as the greatest malefactors and miscreants the world has ever seen. We agree, however, with Malato, in protesting against this short and simple condemnation of the men who are perhaps the most sincere idealists of the age, and who prove it by their willingness to die for an idea. Malato writes from within the anarchist circle: he cherishes the hope, which all who are not anarchists regard as delusive, that dynamite is to be the instrument of social regeneration. But let us endeavour shortly to put forward from without, the defence of anarchism that Malato somewhat lamely would offer from within. What are these anarchists? They are men whom the misery which, in our present social organization, pitilessly awaits the unsuccessful, has driven wild with despair. A violent overthrow of the present order of society will, they believe, lead to a state of general happiness in which the rich will no longer grind the faces of the poor. To these desperate men, the ordinary moral canons of the successful in society seem utterly unmeaning; and their murderous attacks on the existing order, as typified in its law-makers, its soldiers, and its police, are but the logical outcome of a creed in which despair and hope are so strangely mingled. These men to whom anarchism is a religion, the sacraments of which are blood and fire, are not miscreants and malefactors of the ordinary type—all criminals deserve our pity; but the anarchists deserve something more, our admiration. Let it, however, be an admiration tempered with a wise resolve to treat as criminal lunatics all who advocate or attempt the reconstruction of society by acts of private war.

IN SEARCH OF HER HUSBAND.

A MOST pitiful case of desertion and distress was recently brought to the notice of the metropolitan police. Towards dusk on the 20th ult. a constable going his rounds in Asakusa District noticed a most wan and wearied looking woman, carrying a young and apparently sleeping child on her shoulder. She was dressed in a single thin garment only (*hito-mono*), despite the chill evening, and seemed scarcely able to walk. Her face had an anxious, hopeless expression, and she was looking from side to side as if in search of something. Moved by the woman's evident poverty and fatigue, the constable accosted her and asked if she had no other clothing? No, she replied, she had sold all else to supply food for her child and herself. The policeman then touched the pallid cheek of the baby and was startled by the strange chill he felt. Looking closer he found the child was dead. The mother then stated that her little girl, not quite two years old, had died of want and cold three days before. She had no money and no friends, so could not bury the one dear thing left her; ever since its death she had walked the streets with the tiny corpse on her back, trying in vain to bring some warmth back to the stiffening limbs. The poor mother was of course promptly taken to the District Station,

where, after a plentiful meal, she deposed that she was the wife of a petty farmer in Saitama Prefecture, 32 years old, her name Okinu. In June of this year her husband had deserted her for another woman, with whom he had run off to Tokyo. After enduring the greatest privations for a while, she had set out for the capital, with very little clothing, her infant daughter strapped to her back. Since the early part of September she had wandered through the streets looking for her husband but without ever meeting with him or getting news of him; pressed by hunger she had gradually parted with everything but the one poor robe she stood in. The baby had been ailing and suffering from want of food, but she had not been able to buy medicines and the sleeping in the open air had only made matters worse. Finally the little girl had died, after days of suffering. She believed that her husband would be found; would they not assist her in the search. Poor woman! Inquiry soon elicited the fact that the renegade husband was both a gambler and a drunkard, his present whereabouts being unknown. The wife at all events is being kindly treated and will not have to suffer from hunger hereafter.

AN AUSPICIOUS INCIDENT.

At the naval battle on the 17th ult. when the two fleets fought till dusk and the Chinese fled in such a disgraceful way, a large hawk flew on to the mast of the *Takachisho* where it perched. Captain Nomura told a marine to climb up and catch the bird, which was done without any trouble. The crew were delighted, taking it as a good omen, and they resolved to feed the bird. Some sea-rats were given to it, and after the fleet returned to the Ta-tung it was fed on proper diet. When Commander Saito, one of the Chamberlains, was despatched with the Emperor's message to the fleet congratulating it on its signal victory, he heard of the strange appearance of the hawk and caused the bird to be carried to Headquarters and there shown to the Emperor. The hawk has been named "Takachiho," from the ship on which it was caught, and it is to be kept in the Imperial Garden in Tokyo. Mr. Ito Miyoji, Secretary-General of the Cabinet, has composed an essay on the subject which he has presented to the Emperor for perusal. Besides narrating the above incident, Mr. Ito Miyoji recalls the fact that in ancient times birds were frequently considered to be good omens to the Imperial troops. When the Emperor Jimmu invaded Nagasune-hiko, a golden-coloured kite perched upon the end of a bow carried by an Imperial soldier, and by dazzling the eyes of the rebels secured victory for the Imperial troops. (On the strength of this legend a Distinguished Service Order, that of the "Golden Kite" has been established.) The ship chosen by the bird was also considered very lucky, as Takachiho is a sacred name in Japan, it being the name of the place where the Divine Ancestor first set his feet on descending to Japan. Count Ito, who is a good Chinese scholar, has asked the *litterati* of his acquaintance to compose suitable pieces on the subject, which he intends to present to the Emperor.

THE ORIGIN OF THE JAPANESE LANGUAGE.

MR. HIRAI KINZO, layman though he be, is a most sincere propagandist of Buddhism, as well as a scholarly and well-read man. It was he who spoke so well of his creed at the Congress of Religions at Chicago, and being fluent in English, he was later on invited to speak on the subject in a variety of places: for novel religious ideas are always attractive to our American cousins, and that not only in Boston. Mr. Hirai has now returned to Japan, and recently had a lengthy conversation with the editor of the *Mei-kyo Shinshi*, one of the leading metropolitan Buddhist publications, old-fashioned in style and fervent in tone, being particularly opposed to the Neo-Buddhism of the day as represented by the *Bukkyo*, another doctrinal magazine of high standing. The subject of the talk was the origin of the Japanese language. A portion of the conversation is reproduced in the latest issue of the magazine, and from it we glean a number of very novel views. In the first place, Mr Hirai

declares that if words of avowedly Chinese origin are eliminated, Japanese will be found to be wholly Arian in etymology. This in itself will be a surprise to most etymologists who have hitherto held very different views. But Mr. Hirai proceeds to strengthen his position by making comparisons between certain old Japanese words and English—a very bold proceeding at the best of times. *Sumeragi*, an old-fashioned word meaning "Emperor," he derives from (or compares with) the English "superior"; *masurao*, a word denoting "valiant knight," is placed—of all things in the world—side by side with "muscle"; *uta* is made to be akin to "ode"; *aru*, in the sense of "some" or "certain," is supposed to have intimate connection with "or" or "other"; while *aru*, in its auxiliary verbal sense, is—of course—compared with "are." In other words, Mr. Hirai choose five at random from Modern English, three of Latin origin and two undoubtedly Teutonic, in order to show that the Arian tongue is the base of Japanese. This is a more than risky proceeding. Mr. Hirai must first show a close intimacy between Sanskrit and Japanese before he can positively assert that the latter is an Arian tongue. Its structure certainly is not. It is, as far as philologists have perceived at present, a member of the Altaic group. If verbal coincidences are to be taken as a proof of linguistic identity, what will Mr. Hirai say to the fact that a large number of unquestioned Japanese words are to all intents and purposes identical with Hebrew? Take, for example, the Hebrew root *harai*, in the sense of "to swell," "to be inflated," and compare the Japanese *hareru*, with the same meaning and *hara*, "abdomen." Or *anish* (Hebrew, "a ship") and *fune*; or *kat*, the hand or arm, and *kata* the shoulder. It would be easy to swell the list of such words. But what can Mr. Hirai say to the fact, as demonstrated by a gentleman resident in Yokohama, that nearly two hundred common Japanese words are absolutely identical with as many Hungarian expressions? In most instances these resemblances are accidental only; it is far too early yet to attempt any theorizing on such bases. And English is not a proper Arian tongue at all; it is a combination of dozens of tongues, but with an Arian base. Moreover, in the examples given in the *Meikyo Shinshi*, a mere tyro in philology would laugh at the derivation of *masurao* from "muscle." Where has the guttural sound gone to? And how about the guttural at the end of *sumeragi*, which has been forced to come from "superior"? It would be just as proper, and far more probable, to compare similar-sounding words in Fiji and Japan. The editor of the *Meikyo Shinshi* concludes by remarking that Mr. Hirai adduced a number of other examples and quoted German, Greek, and Latin words, but that he, the editor, had unfortunately forgotten the list. It is a thousand pities. Such a list would be hugely edifying.

Philology of that kind sounds very much like the theory of Dr. Abel, the well-known Coptic scholar and Egyptologist, who was enamoured of the idea that all words having exactly the same meaning must have had a common origin. At a dinner one evening he was asked how he reconciled his theory with the fact that there were in the Ancient Egyptian tongue, two words, *sebek* and *at*, which both meant "crocodile." "Nothing easier to explain than that," he immediately replied. "In the word *sebek* the *s* has evidently nothing to do with the base; for as everybody knows *s* was the causative verbal prefix in Egyptian. This leaves us *bek*. Now *b* is one of the most flighty (*flüchtig*) of the consonants. It is sometimes the same as *m*, sometimes takes the place of *v*, and often is nothing more than the Greek digamma, which in many words becomes a mere expulsion of the breath, like the *spiritus asper*. *B* therefore can be struck off. There remains *ek*. As for the vowel, that has nothing to do in this context, for the Egyptian vowels were extremely irregular in their employment. And that *k* and *t* are often mis-

taken for each other is proved even in our days, for the Polish Jews are given to saying *klein* for *klein* ("small"). Hence, *sebek* and *at* were originally identical." This is not unlike the schoolboy derivation of "fox" from the Greek *alōpex*; thus: *alōpex*, *lōpex*, *ōpex*, *pex*, *pox*, *fox*!

The philology of the *Meikyo Shinshi* is altogether phenomenal. In another paragraph we find the statement that Mr. Nanjo Fumio, in a recent address delivered in Goshu, spoke to his hearers in the same language as that used of yore by Sakyamuni Gautama, of blessed memory. Mr. Nanjo is known to be a pupil of Max Müller and a fair Sanskrit scholar; but that does not account for his acquaintance with a language unknown to all other mortals. Did he use Pahlavi, Sanskrit, Zend, or—what? It is believed that Sakyamuni spoke some sort of Sanskrit, probably a language very different from that of the Vedas, but we do not believe that Mr. Nanjo or any other scholar can tell exactly what that linguistic form was. That it was not the language of King Asoka's inscriptions goes without saying; nor was it that of the Sakuntala, Hitopadesa, or any of the Vedic Hymns. Mr. Nanjo would render a great kindness to philology in general if he could exactly determine what the tongue was. Or rather we may better infer that the editor of the *Meikyo Shinshi* has allowed himself to be carried away by his sectarian enthusiasm.

THE KOREAN AMBASSADOR.

PRINCE WI-HWA, the Korean Ambassador, proceeded to the Palace on the 29th inst. at 11 a.m. He was conveyed in a carriage sent by the Imperial Household, and escorted by a company of the Imperial Body Guards, the procession being led by three mounted police constables. At the Palace the Ambassador was first received by Mr. Sannomiya, who conducted him to a reception-room, where he was interviewed by Viscount Mutsu, Minister of Foreign Affairs; Marquis Nabeshima, Grand Master of Ceremonies, and Viscount Kagawa, Grand Master of Services to H.I.M. the Empress. Marquis Nabeshima then conducted the Prince to another apartment where he was received in audience by the Empress. He presented a costly gift to Her Majesty. His suite were also admitted to an Imperial audience, and were afterwards shown over the Palace.

THE BURMESE FRONTIER.

SINCE Theebaw was deposed and Burmah annexed to the English dominion, the delimitation of the frontier between Burmah and China has constantly occupied the attention of their respective Governments. In Eastern Burmah was a region that had been little visited by European explorers, and of which no accurate maps then existed. This region is inhabited by wild hill tribes, some of which give a nominal allegiance to Burmah, some to China, but which are practically independent. For the proper development of Eastern Burmah, and for the avoidance of possible complications with China, it became imperative that the sphere of British rule should be accurately defined. The first step in this direction was the conclusion of a Convention between Great Britain and China, signed in Peking in 1886. In order to carry out the provisions of Article III. of that Convention, a further Convention has been made and this was ratified on the 23rd August. It deals, not with the whole frontier between Burmah and China, but with that portion of the frontier to the south of 25° 35' N. lat., that is south of a point on the frontier not far from Bhamo on the Irrawady River. The frontier north of this is reserved for future consideration. With the exception of certain minor points subject to verification and demarcation by a joint boundary commission, the frontier now agreed upon is as follows. The northern part of the boundary follows without any serious deviation, save some concessions to China in Northern Theinni, the frontier line marked in ordinary maps. From 23° 41' N. lat. the frontier will follow the Salween River until it reaches the northern boundary of the circle of Kunlong. It will

then follow that boundary in an easterly direction, leaving the whole circle of Kunlong, and the ferry of that name, to England, and leaving to China the State of Kohang. Thence the frontier runs southwards to the Meikong River. In return for the concessions made by China of certain minor territories on the northern part of the frontier, Great Britain thus concedes to China a wider region to the south and east, comprising the States of Munglem and Kian Hung, two of the Eastern Shan States, "formerly possessed by the Kings of Ava concurrently with the Emperors of China;" but the significant statement is made that Great Britain renounces her rights to the territories in question with the sole proviso that his Majesty the Emperor of China shall not, without previously coming to an agreement with Her Britannic Majesty, cede either Munglem or Kian Hung, or any portion thereof, to any other nation. This definite determination of our rights and responsibilities in the disputed districts will make much easier the good Government and the commercial development of those regions that now fall to our share.

The further articles of the Convention deal with the regulation of commercial intercourse between Burmah and China. By Articles VIII., and IX., the contracting parties agree for a period of six years to allow the manufactures and produce of the two Empires to enter their respective territories by land, with certain exceptions, on favourable terms, while Chinese vessels carrying merchandise, ores, and minerals, and coming from or destined to China, obtain the privilege of navigating the Irrawady under Article XII. Provision is made for the appointment of a Chinese consul at Rangoon and of a British Consul at Manwyne, an important town a little way over the border of Yunnan. Passports are to be provided to the subjects of either party desiring to travel in the dominions of the other. Finally, the contracting parties undertake to connect the telegraphic systems of their respective countries as speedily as possible.

A new feature is to be noticed in the Convention, which, though of minor importance, may, thinks *The Times*, have an exaggerated significance attached to it in the East. For the first time in the history of our diplomatic relations with China the name of the Emperor and the signature of his plenipotentiary take precedence, in the English copy of a diplomatic instrument, of the name of the Queen-Empress and the signature of her representative, the Secretary of State for Foreign Affairs.

MEDICAL PROTECTION FOR THE COOLIES IN THE ARMY.

THE leading medical practitioners of the capital have conceived the idea of providing medical protection for the coolies employed by the army, and with a view to soliciting the support of the benevolent public, they have issued a manifesto embodying the following principles. Now that the Japanese forces have everywhere proved victorious, the only thing they have to apprehend for the future is disease. Disease has from time immemorial worked far greater ravages in armies than the weapons of the enemy in battle. In the Crimean War, in the Franco-Prussian War, and, to give an example in Japan, in the Civil War in Satsuma, disease proved far more disastrous than the sword or the gun. The care taken of the health of the Army and Navy by the respective Authorities and the exertions of the Red Cross Association leave nothing to be desired, but that is not the case with the coolies employed in the Army, the attention paid to them by the Medical Authorities being very meagre. Should any epidemic break out among them and extend to the troops, the disaster to the nation would be enormous. The work of the coolies is of great importance in a war, as it is through them that provisions and ammunition are supplied to the troops. In Lieut.-General Nozu's report difficulty in getting a supply of provisions is mentioned, while Major-General Oshima states that his division was obliged to suspend fire on account of lack of ammunition.

This should convince the Japanese of the necessity of caring for the health of the coolies. Owing to the want of facilities for transportation in Korea, tens of thousands of coolies have now been despatched in great haste, thus making it still more difficult to provide any medical arrangements for them. It is said that coolies who have fallen ill have not infrequently been seen groaning by the roadside, no one being at hand to render them medical aid. The projected undertaking is one of great magnitude and cannot be carried out without the assistance of the public.

The *Fiji Shimpō* speaks of the project in the highest terms and enjoins the public, who are of course aware of the important part played by the coolies, to give their support. The matter requires prompt attention, as already some cases of dysentery and other diseases are said to have appeared among the coolies.

According to the *Nippon*, Dr. Kitazato and two others are now in Hiroshima for the purpose of enlisting the support of Headquarters. It is not known whether the Headquarters will subscribe pecuniarily or will confine itself to sanctioning the scheme, but at all events the originators are determined to carry out the plan as soon as permission is obtained. The new organization is to be called the Military Coolies Protection Society, and part of the programme contemplated by it is, 1st, to vaccinate all the coolies before they join the army; 2nd, to tend wounded or sick coolies at the seats of war, and 3rd, to administer proper treatment to those discharged from service and sent home. The soldiers are all vaccinated, but that is not the case with the coolies that have been assembled for the needs of the occasion, many of them being still unvaccinated. Hence the first precaution. Then again, the coolies are generally separated from the soldiers, and it is therefore impossible for them to get the benefit of medical aid from the army surgeons, even if the latter had time to spare. A special corps of medical practitioners is thus needed for them. A coolie who, on account of a wound or some disease, is considered unable to undertake the work required of him, is simply sent back to Ujina and there discharged. There is therefore danger of his becoming a medium of spreading some bad epidemic. The above are some of the objects which the new Association hopes to attain.

THE YASHU KWAN.

To the right of the Yasukuni Shrine, on Kudan Hill, Tokyo, lies fine building known as the Yashu Kwan, in which are now exhibited a large variety of Chinese one-time belongings taken during the course of the present war. The exhibit is not particularly striking on account of the dirt and disorderliness connected with everything appertaining to the Chinese troops, yet it is on the whole a very interesting display. A small fee is charged for entrance—some two or three *sen* only—and this is handed over to the military and naval authorities. No less than ninety-eight thousand people had visited the exhibit up to the 20th instant, a large proportion of these voluntarily paying five and even ten times the entrance-price, so that several thousand *yen* have accrued from this source alone. The gate-keeper, or rather the man who looks after the wooden foot-gear and umbrellas of Japanese visitors, and who receives in each instance a minimum amount of 3 *rin* for clogs and 1 *rin* for an umbrella, has made a clear profit of over three hundred *yen* in a little over two months.

A HEROIC DEATH.

In a recent issue we reproduced in a few words, based on a narrative which had appeared in the *Fumiuri Shimbun*, the story of a brave seaman on board the *Itsukushima Kan*, who was shot to death while endeavouring to save the powder-magazine. The deed was so great an one, however, that it deserves more lasting mention. According to the majority of ac-

counts, the central figure was a marine who had been told to stand as sentry or guard at the entrance of the powder-magazine. During the hottest part of the naval engagement, that of Hai-yang, the *Itsukushima* was so steered that the shots of the enemy's small-arms seemed to concentrate in the vicinity of this vital point, and noticing this the sentry fearlessly endeavoured to cover the whole doorway with his body. In his attempt he was wholly successful, not a bullet reaching the interior of the magazine. When the affair was over, relief was sent to the faithful guardian, who was seen still standing at his post, with a somewhat troubled expression on his face. He was discovered to be stone-dead and literally honey-combed with bullets, of which no less than thirty-six had struck him. Of course death had ensued long before his wounds reached that terrible total, but even in death his body had continued to guard the post kept so fearlessly and so well in life.

HORSE BREEDING IN JAPAN.

THE breeding of horses whether for riding or other purposes is, we read in the vernacular press, entirely stationary in Japan, if not actually retrogressive. That is a very serious matter, especially at the present time when there is such an urgent demand for horses. It is true that they are not included among contraband of war and may be imported from abroad, but as there are great difficulties connected with importing horses, Japan is practically obliged to depend upon her home supply. The following table shows the total number of horses in Japan during seven years ending with 1892:—

	Native Breed.	Mixed Breed.	Foreign Breed.	Total.
1886.....	1,527,160...	2,332...	33...	1,529,525
1887.....	1,527,534...	2,555...	104...	1,530,193
1888.....	1,515,434...	4,875...	158...	1,520,467
1889.....	1,519,456...	11,900...	401...	1,531,757
1890.....	1,518,941...	12,394...	321...	1,531,656
1891.....	1,518,532...	14,806...	202...	1,533,540
1892.....	1,522,477...	14,970...	169...	1,537,616

It will be seen by the above that in 1892 there was a slight increase in the total number of horses in Japan, owing, it is said, to the encouragement of the Authorities. But that does not signify much, as the increase was chiefly in colts less than a year old, whilst there was a considerable diminution of colts over two years. As a horse is hardly fit for use until it has passed its third year, great attention should be paid to the rearing of the animal. In Japan horse breeding is most extensively carried on in the O-u and Kwanto districts. In Kwansei it shows a decrease, but in Kyushu again a slight increase is to be observed. The best breeding centre in Japan proper is Nambu, but even there the condition is not very satisfactory. It is said that, owing to the gradual development of sericulture in almost all the districts of the country, many pastures are to be converted into mulberry fields. The prevalence of the custom of using horse flesh for food has also much to do with the stationary condition of horse breeding. The scarcity of horses over two years old is attributed to the fact of their being slaughtered for meat.

STRAY WAR ITEMS.

A LARGE number of publications relating to the war and the stirring scenes thus far enacted have appeared in various parts of Japan, Tokyo in particular. Some of these are very roughly got up, with illustrations of an appalling type, being mere catch-pennies, in which a profusion of striking colours does duty for good text and careful engravings. There are, however, two excellent publications which deserve foreign patronage; for, apart from the very careful text—which most people will fail to appreciate—the cuts are really well done, the lithographic work being excellent. The first of these is published as a serial, the seventh number having recently appeared, under the title of *Nishin Senso Yikki*, or "A True Description of the Chino-Japanese War." This is brought out under the auspices of the Hakubunkwan, is compiled from authoritative sources, and is exceedingly cheap: six *sen* five *rin* the number. The other noteworthy publication is the "War

Supplement" of the *Fusoku Guho*, a magazine of archaeological tendencies, and the great authority on old-fashioned or obsolete Japanese customs and ceremonials. Two excellent supplementary volumes have been put out so far, bringing the story of the war down to the battle of Phyang-yang and the Hai-yang naval engagement. The volumes are profusely illustrated with no mean degree of artistic ability, most of the engravings being taken from sketches made *in situ*. The two issues cost 16 *sen*, and may be had of any *esoshiya*.

A Tokyo contemporary has a curious story to tell of the council held by the assembled Japanese commanders shortly before the battle of Phyang-yang. After various details had been discussed and an arrangement arrived at, some of those present began talking of the attitude of the Russian forces. It was finally concluded that there was little possibility of European interference either then or thereafter, whereupon one of the highest-rank officers present arose and said:—"Gentlemen, the Chinese are foemen unworthy of our steel. We have far too much skill and dash on our side to make the war with China pleasurable from a military standpoint. I, for one, should very much like to see our men face to face with any Power that dare intrude; I think we could give a good account of ourselves with the best European troops."

From the *Fusoku Guho* we learn of a very daring feat performed by a soldier of infantry just before the Phyang-yang battle. Boats were imperatively necessary, but every available craft in the neighbourhood had either been requisitioned by the Chinese or else moored on their side of the Tai-dong River. One of the Japanese volunteered to go across alone and fetch at least one of these boats, and on receiving permission to make the trial he swam across, mostly under water and in the face of a storm of bullets, unmoored one of the smaller junks and towed her back again to his starting-place. He escaped without a wound, much to the satisfaction of his regiment. The bold fellow is said to be the stoutest and most intrepid swimmer in the army.

A swift messenger was sent, just after the conclusion of the battle of Phyang-yang, to the mouth of the river where a Japanese transport lay. He had fought all day long and arrived at his destination in a very exhausted state. After delivering his message he had at once to set out again for the battle, despite his great fatigue. Noticing his wan, drawn features, one of the officers on the transport asked if he would like a cup of wine? He thanked his interrogator and replied affirmatively, but when the wine was brought begged that they would make it a glass of beer instead. Somewhat surprised, this request was complied with, but when the beer came he requested that he might be given the whole bottle, with cork undrawn. This aroused the curiosity of the officers and they asked him what he intended doing with the bottle? With some hesitation he replied that he did not want the beer for himself; he was going to carry it back to his Commander, Major-General Oshima, who had been wounded in the battle and who had nothing nice to drink.

SPEEDY PEDESTRIANISM.

SOME remarkable stories have recently appeared in the columns of the Tokyo press concerning the marvellous walking exploits of one Kanematsu, thirty-five years of age, who plies as a messenger between various parts of Ishikawa Prefecture. He is represented as being of slight build and apparently wholly unable to perform the remarkable feats accredited him. The distance from Terai-mura, where he is at home, to Tanazawa is seven *ri*. He is said to traverse road and back three times in the course of half a day, or say 105 miles in 7 hours. That is of course quite impossible. From Komatsu to Kyoto and back is a great distance, but it is claimed that he can do it with ease in one day. To go from Osaka to Tokyo he takes about two

days, or nearly two days and a quarter. It is reported that he takes no nourishment whatever during any long walk, and instantly falls asleep when the walk is over, sometimes sleeping as much as five days at a stretch,—which sounds like another wholly apocryphal statement. While on the road his gait is ungainly; it is not a fair heel-and-toe pace but rather a rapid trot, with very long strides. He has several times done the distance from Komatsu, in Ishikawa Prefecture, to Tokyo in considerably less than three days, and in doing this he frequently leaves the beaten track and takes to paths apparently known to none but himself. While making every allowance for exaggeration, the man is evidently phenomenally swift of foot.

MR. SONODA ON FOREIGN LOANS.

THE President of the Yokohama Specie Bank is said, according to the *Mainichi*, to have made the following remarks to a certain gentleman on the question of foreign loans:—The War Fund of 150 million *yen* will, it is generally believed, be raised in Japan. Some advocate the floating of a foreign loan for this purpose, but I am of opinion, as are the majority of the nation, that so long as the stability of the present financial system is not affected, it will be better to procure the supply from the Japanese money market. How much the Specie Reserves may be reduced with impunity, is a point not easily determined, but judging from the fact that though, in 1890, the Reserves dwindled down to 40 million, besides the balance of trade being against Japan by as much as 20 million *yen*, no particular demand was made upon the Nippon Ginko for convertible notes to be changed into silver, Mr. Sonoda thinks that the Reserves may now be reduced by more than 30 million *yen* with impunity. If, however, a larger amount of specie be required than the stability of the financial system permits, then recourse should be had to foreign capitalists. In London a large sum could, Mr. Sonoda thinks, be raised at low rates of interest. Should the interest be 4 per cent. the price of the bonds would perhaps be affected, but at 4½ per cent. it would be easy to raise the sum required at par. In conclusion, Mr. Sonoda says that he is not at all averse to a foreign loan, but he considers that it should only be had recourse to if the relative security of the Japanese financial system demands it.

THE UNITED STATES AND JAPAN.

"ELI PERKINS" writes to us from New York:—

You would be surprised to see the unanimity and depth of the sympathy in the U.S. for Japan. Your fight is our fight. Theatre orators, clergymen, and editors have but to mention Japan and the people respond with applause.

Last night some one at the theatre gallery called out:

"What's the matter with Japan?"
"She's all right," responded the pit.
"Who's all?"
"Japan."

This is borne out by articles like the following, which we take from American journals:—

The government of the United States owes it to itself, as well as Japan to accede to the latter's request for a treaty which will restore to that country the civil and criminal jurisdiction which we have exercised there for more than a third of a century.

It was in 1858 that the United States in common with Great Britain and other European Powers negotiated with Japan a treaty giving to the United States civil and criminal jurisdiction in cases wherein an American citizen is a party. Japan was then under feudal rule and the treaty was virtually forced from her. She was classed with the semi-barbarous nations of the East and the purpose of the treaty, as in the case of China and other countries with which similar treaties were made, was to rescue American citizens in those countries from the barbarity of Eastern law and procedure. To that end it was stipulated that Americans committing offences against the Japanese should be tried in American consular courts and if found guilty be punished according to American law, and that any native having a civil claim against an American should sue on it only in a consular court.

This, it will be noted, denies to Japan the sovereign right conceded to every civilized nation to exercise civil and criminal jurisdiction within its own borders—to hold foreigners as well as natives amenable to its own laws and courts. When this treaty was made with Japan there were reasons to justify it, but they have since disappeared. Japan is no longer to be classed with those Eastern countries with which such a treaty is just or necessary. She has made rapid strides in civilization and enlightenment. Her feudal rule has been superseded by constitutional monarchy. The

civilization of the West and wisely profited by it. Proofs of this and her progressive spirit are to be found in her government and military establishment, her schools and industries. She has, in short, won a place in the family of civilized nations. It is due to her as an act of justice and international comity to extend to her fully and freely the right of jurisdiction which belongs to a civilized nation within its own borders.

Of course Japan has the right to abrogate this treaty and to deny to the United States or any other foreign Power jurisdiction on her soil. But she is desirous of attaining this end by friendly and mutual agreement rather than by any summary resort. The treaty itself provides that either party may demand its revision after 1871 by giving the other a year's notice. Japan has repeatedly asked that a new treaty be agreed upon, but hitherto has asked in vain. It is now reported that Secretary Gresham realizes the justice and expediency of the request and will negotiate the treaty.

As we have said, this should be done in justice to this country as well as Japan. Our consular courts in the East have been the source of abuses discreditable to the United States. A few years ago an effort was made to get Congress to reform them by overhauling the whole system, but without success. Wherever and whenever we can get rid of them with safety it will be to the credit and advantage of the nation to do so. That they can be safely dispensed with in Japan under conditions and on assurances which that country is willing to make does not admit of doubt. England has recognized this fact in her own case, and we should lose no time in following her example.

It is reported that the only point of difference between Secretary Gresham and Minister Kuroki concerning the new treaty with Japan is as to the intention of a clause reserving to the United States the right to prohibit the immigration of Japanese coolies. Secretary Gresham, it is said, wants such a stipulation, and the Japanese Minister does not feel at liberty to concede it without first consulting his government.

This issue may delay but it is not likely to defeat the negotiation of the treaty. It is a difference on a point which either side might yield without giving up anything of substantial value. So far as the United States is concerned, we have never been threatened with an influx of Japanese coolies, and existing Alien Contract Labour law prohibits any from being brought here under contract. As for Japan, she will hardly object to the exclusion of her coolie emigrants, and this country has no reason or desire to keep out any other class of Japanese subjects.

The treaty will doubtless be concluded, and the sooner this is done the better for both countries.

H.M.S. "CRESCENT."

H.M.S. *Crescent*, which arrived in Hongkong on October 21st, is not a very prepossessing looking vessel, her tall funnels, which have been put in rather as an experiment to obtain better draught, giving her a rather awkward appearance. She is a first-class twin-screw cruiser of 7,700 tons and 12,000 h.p., and is undoubtedly a strong addition to the squadron out here. She was outward bound to the Australian station with reliefs for H.M.S. *Orlando*, *Lisard*, and *Rapid*, it being intended that the crew of the first named should take the *Crescent* home again. At Colombo these orders were countermanded by telegram, and the *Crescent* was instructed to join the China station for the time being. It is not anticipated that she will remain any length of time unless occurrences, which have been anticipated, should eventuate. Her officers are Captain Fred. W. W. Fisher, Commander M. Fraser, Lieut. A. L. Hughes-Hughes, Fleet Surgeon G. J. Irvine, Paymaster J. J. A. Sloan, Staff Engineer W. Cook, Engineer Hy. J. Turner, Gunner W. Jeffery, Boatswain S. H. Crouch, Carpenter M. Green.

MR. NOSE ON KOREAN TRADE.

MR. NOSE, who has lived for some years in Chemulpo as Japanese Consul, makes the following remarks on Korea's foreign trade:—The past history of Korea's foreign commerce does not reflect much credit on Japan, as more than half of the total exports and imports were in the hands of Chinese merchants. They imported into Korea every year about half a million *yen* worth of cotton alone, while the value of cotton shirtings sold last fall to Korea by them was 600,000 *yen*. The chief cause of this was the pro-Chinese sentiment which prevailed among the inhabitants of the Hermit Kingdom. Now, however, the tide has set in favour of Japanese merchants, as their rivals have gone away and left the market. The credit which the Japanese silver *ren* has gradually gained in Korea greatly facilitates the development of Japanese-Korean commerce. Mr. Nose considers the crop of the present year in Korea unprecedented since the opening of Chemulpo to foreign countries, the growth of beans and rice being double or treble the average yield, as is also the case with cotton and

tobacco. The future of Korean commerce is therefore particularly bright for Japanese merchants. In the two items of cotton and cotton shirting alone, the import exceeds over a million *yen* worth, while river-gold which used to be exported by the Chinese as well as the agricultural products are now waiting to be disposed of by Japanese merchants. There may be some difficulty about importing cotton shirtings from Japan, on account of the material not being abundant enough in this country, but Mr. Nose is of opinion that the ordinary Japanese cotton cloths would be quite good enough. It is high time for Japanese merchants to ship for Korea as it is the custom in that country to have a new suit made every Spring.

THE YOKOHAMA WATER-WORKS.

AT every regular session of the Diet, we read in the vernacular press, a subsidy of half a million *yen* for the extension of the Yokohama Water-works has been brought upon the *tapis*, but has not yet succeeded in gaining approval. As the works are of great importance, Mr. Hara Rokuro, Chief of the Standing Committee of the Water-works, has, with a view to guaranteeing the granting of the subsidy at the next regular session of the Diet, made enquiries as to the ideas entertained by the Government on the subject. He has ascertained that the Government does not intend to introduce any bill at the next ordinary session excepting those connected with the current expenses of Government offices and with extraordinary War Expenses which may have to be called for. Under these circumstances the Committee and City Council have decided only to undertake a portion of the original programme, namely, substituting the Doshigawa for the Sagami-gawa as the source of water supply. For this work a sum of 120,000 *yen* is required, to obtain which, it has been decided to apply to the Government for leave to defer the payment of the two years' instalments of the Water-works loan. The City Assembly is to be convoked to discuss that point.

AN EXPERT CAPTURED.

THE police made a notable haul on the 17th instant when they arrested a certain Koizumi Suzu, a woman of sixty-four years of age, who for nearly ten years has been engaged in burglary on a large scale. Tokyo was generally the scene of her depredations, and it is alleged that besides acting as a "fence," she has had a hand in all of the more noteworthy robberies that have occurred in the capital for quite a number of years. Her record is an ugly one, for it appears that at the age of eighteen she was imprisoned for three years for theft, and after her liberation associated with the lowest class of criminals. A domiciliary visit to her lodgings revealed no less than one thousand *yen* worth of stolen goods concealed in various out-of-the-way corners, the ownership of a large portion of which will, it is believed, be traceable. The woman was arrested in Yotsuya District, in broad daylight, while carrying a bundle of other people's belongings.

CONTRIBUTORS TO THE WAR FUND.

IT is both interesting and touching to read the list of contributors to the War Fund as their names appear in the columns of the vernacular press. Even the poorest contribute their mites: labourers, artisans, servants, coolies, and all those who earn their bread with the sweat of their brows. A Tokyo contemporary recently published a list of contributors taken from among the servants of the various foreign instructors in the Imperial University. The sum given was not a large one, but it plainly showed that every one had cheerfully contributed to the best of his or her ability. Among more noticeable instances of devotion to the nation's cause, a metropolitan journal cites that of a widow and her daughter, the pensioned survivors of a captain who fell in the Satsuma Rebellion. They are said to be denying themselves to an almost incredible extent in order to send the larger part of their pittance to the War Fund, and spend all their time in making warm winter mittens for the soldiers.

afield,—a particular species of hand-covering that comes well up the arm and is known as *tekko*. No one else has, it appears, thought of such a timely present, and the soldiers are delighted with the donation. Other than money gifts are continually pouring in: wadded clothing and under-garments; the *meibutsu*, an especial dainty, and famous products of a number of places, such as the really tasty salted or pickled giant radishes of Kyoto; the *manju*, or honey-cakes of Maebashi; the *sembei*, or sweet thin biscuits of Kanazawa and Kobe, both of which towns are celebrated for this species of confection; the *katsuobushi*, or dried bonito of Kagoshima; the tea of Uji; and the salted salmon (*shio-fake*) of Hakodate. Taking one consideration with another, the Japanese soldier's life afield is by no means as unhappy as it might be.

AN UNWILLING BRIDE.

THE *Yamato Shimbun* has a rather remarkable story to tell of the manner in which a wedding was recently brought to nought. A merchant in Aoyama, Tokyo, has for some time been boarding his younger sister, a widow with one child. He was fond of his sister and treated her kindly, but was possessed with the idea that she had better re-marry and thus be independent of him and the better rear her son. At this the young widow made no demur although her heart was buried in the grave of her first husband. An eligible suitor made his appearance some weeks ago, and the brother requested the young woman to give her consent, which she did, despite the repugnance she felt for the man who she must marry. On the evening of the 25th ult. the marriage ceremony was announced to take place, and on the same day the widow had visited the grave of her first and last love. Filled with bitter grief she donned her bridal costume and looked bewitchingly pretty despite her excessive pallor. But when it became her duty to place a brazier (*hibachi*) before her prospective husband, she suddenly, in an access of despair, seized one of the metal tongs and drove it with all her force into her right eye, thus completely blinding herself and destroying all her beauty. The wedding was naturally at once brought to an abrupt conclusion, and the brother was shocked and distressed at the rash deed of the young bride. She said she had nothing to complain of him and had doubtless acted very imprudently; but that she could never become the wife of another man. The right eye was utterly destroyed, and it is now feared that she may also lose the sight of the other.

SAD BURNING FATALITY.

A most pitiable fatal accident occurred at 217-c, Bluff, on Tuesday morning. Laura Helen, the only daughter of Mr. and Mrs. G. W. Colton, a pretty child of some four summers, was left in charge of an *amah* while the mother accompanied her son to school. The *amah*, disobeying her mistress's explicit instructions, left the child alone in an upstairs room, in which a fire was burning. Laura seems to have gone up to the fire and pulled down the fire-guard. In so doing her dress became ignited and she must speedily have been enveloped in flames. In her agony she crawled downstairs, instinctively seeking for help. Her parents were at once summoned and in response to a call for medical assistance, Drs. Stokes and Hall were quickly on the spot. Everything was done that could be done to save the little girl, and alleviate the pain of her terrible injuries; but the sufferer gradually sank, death releasing her from her agony about eight o'clock in the evening. The funeral took place on Thursday.

NO BAR FOR MUSIC.

THE *Yamato Shimbun*, a metropolitan *Ko Shimbunshi* of not particularly high grade and rather scandal-loving than otherwise, has a story to tell about a young married couple in Aoyama, Tokyo, that will bear repeating. In the spring of the present year a young naval lieutenant married a girl of unusual good looks and a remarkable skill in music. It is said that the

unfortunately, the young wife was exceptionally fond of Chinese music, "which has a sound like a clock out of order," parenthetically observes the *Yamato*, and since the beginning of the war the fond husband has done everything to persuade her to adopt some other musical style. But she is stubborn and refuses to follow his suggestion. So the other day, during her temporary absence, the husband quietly but effectually demolished every instrument in the house. On her return the musical lady was furious and immediately sent out for that particularly obnoxious instrument, the two stringed fiddle, with whose long piercing wails she at once began to regale the ears of her husband. That was enough. She was at once sent back to her parents with the marginal note that until she could play Japanese music, and the national anthem at that, her presence was undesirable.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for September showing the foreign trade of the empire for the month:—

	1893.	1894.
Exports	7,630,168.880	9,842,689.790
Imports	7,809,971.470	10,015,021.910

BRITISH PHARISES AND AMERICAN LYNCHING.

With reference to certain comments recently published in some of the American papers on the Anti-lynching Society, and especially on its

English branch, *Mr. Punch* has written the following poem:—

THE PIOUS LYNCHER'S CREED.
(Adapted from the *Biglow Papers* for the benefit of poetic defenders of the pious practice of Lynching.)

I do believe in righteous law—
Save when it hate embarrass—
But I do hate the holy law
Of them plump British Pharisees!
No White man ought untried to swing,
Be grilled, or sliced to jiggers;
But Lynch law is a kind of thing
That quite agrees with niggers!
I do believe "beans" I may give
To Pompey or to Caesar.
The dog has nary right to live
Save as I chance to please, Sir;
It aint no use to cant to me—
If you'd a cowhide whip shun—
Of conscience or humanity,
Or rot of that description.
I do believe the worst o' trash
Is talk o' Christian kindness;
The "coons" we'll hang, or roast, or thrash,
In wrath's red fits o' blindness.
We'll rule, if not with rope and ball,
Why then with stake and scorching.
Lynch law, to make it stick at all,
Must be backed up by—Torture!

The American Comic Paper, *Life*, comments sympathetically on the Anti-lynching movement, remarking:—"The wisest and best men of the south are down on lynching, and will doubtless welcome aid from any quarter in making it unpopular. Impatience with reputed negro ravishers is natural, but when it crystallises into a system of lawlessness it becomes too impolitic to be tolerated. When six negroes are hanged, as they were by a Tennessee mob the other day, on suspicion of having burned a barn, it indicates that matters are in the stage where impatience has ceased to be a virtue, and where missionary efforts to restrain it should be welcomed." On the next page is a picture of a negro hanged from the branch of a tree, at the foot of which sits a white man with a gun. A large placard is affixed to a neighbouring tree: "Notice, no meddling with my peculiar institution, Mr. Solid South." Beneath this picture *Life* has written, "Haven't we heard something like this before?"

THE CHINESE CAPTIVES IN TOKYO.

WITH regard to the wounded Chinese prisoners brought up to Tokyo and now under treatment in the Red Cross Hospital, the *Mesamashi* contemptuously remarks that they have, or appear to have, no more sense than so many infants. Not only do they seem unable to realize where they are, but they pass the time in a most puerile fashion. All are illiterate and unable to read; one or two can write a few of the most important ideographs, yet are barely able to make themselves understood. Their most absorbing occupation is the continual counting and recounting of the money they have with them—very little, and consisting mostly of the smallest subsidiary coins. They are always hungry, and spend the time between meals counting their hoards and impatiently clamouring for the next ration. "It is simply incredible," says our contemporary, "that such men should be expected to fight. They have neither intelligence nor even the first rudiments of common sense." We (*Japan Mail*) count the *Mesamashi*'s verdict a very great exaggeration.

BRITISH SQUADRON MOVEMENTS.

BY latest Shanghai advices we learn that H.M.S. *Firebrand* arrived at Shanghai and the *Caroline* at Woosung on October 24th. The *Porpoise* was to come out of dock on October 27th and go on to Woosung to meet the *Caroline*. The *Mercury* was expected to shortly arrive at Shanghai from Chemulpo and Nagasaki. The ships with Admiral Fremantle were also going down to the Yangtze, the *Centurion* remaining at the Saddle, while the Admiral is to go up to Shanghai in the *Alacrity*. The *Esk* left Hankow on Oct. 21; the *Peacock* was passed above Kiukiang on the same day, bound up.

THE CHANGE IN THE GERMAN MINISTRY.

INFORMATION was received by the Government on the 31st ult. from its Representative in Germany to the effect that the resignation of Count Caprivi, Imperial Chancellor, had been accepted by the Emperor and Prince Clovis von Hohenlohe-Schillingen, Statthalder of Alsace, had been appointed to succeed him.

WAR NEWS.

MONDAY, OCTOBER 29TH.

At dawn on the 24th ultimo the Second Army, commanded by General Count Oyama, commenced its debarkation on the Liao-tung peninsula. The place chosen for the purpose is variously located, some speaking of Shuang-ching, others of Pi-tzu-wo, and others again of Talien Bay. But a telegram despatched from Chemulpo at 10 p.m. on the night of the 27th and transmitted to Tokyo from the Headquarters at Hiroshima, indicates the Chin-chiu peninsula, from which we conclude that the transports anchored in the little cove separated from Talien Bay on the south by the promontory of Takou-shan (not to be confounded with Taku-shan near the mouth of the Yalu river). That place being some 40 miles from Port Arthur and on the eastern side of the Liao-tung peninsula, is conveniently situated for purposes of naval protection, since the Japanese squadrons, cruising southward, can defeat any attempt of the Peiyang Fleet to emerge from the Gulf of Pechili and strike at the transports. The Peiyang Fleet, however, does not appear to have made any such attempt. In the opening chapters of the war, when Admiral Ting kept his ships hidden under the shadow of the forts of Port Arthur and Wei-hai-wei, his apologists said that he pursued the wise, though apparently pusillanimous policy, of preserving intact China's great bulwark against invasion. So long as the two iron-clads and their bevy of powerful consorts retained unimpaired capacity to swoop down upon a rash aggressor at any moment, it would be virtually impossible to attempt the landing of a hostile army at any point on the shores of the Gulf of Pechili. That was intelligible enough. But here we have a hostile army landing, and what is more, landing for the plain purpose of assaulting the very home of the Peiyang Fleet, China's chief naval station in the north. Where are Admiral Ting and his ships at such a crisis? If they will not guard their own altars and hearths, what is their *raison d'être*? The fact is, we think, that the Peiyang Fleet suffered far more severely in the battle of September 17th than China's supporters are willing to admit. What is certain is that never since that fatal day has it showed itself in the Gulf of Pechili or the Yellow Sea, so far as the public is aware. Perhaps its repairs have been completed. Perhaps it is once more in perfect fighting trim. But what matter, if it will not fight? We, however, believe that the ships have not been fully repaired and that they are not in fighting trim. Undoubtedly the Japanese cruisers have steamed hither and thither at will, and now a Japanese army of some twenty thousand men has landed to take Port Arthur in the rear. Neither at sea nor on shore was there any obstruction. The engineer corps, says the telegram, at once set about building piers to facilitate the landing of stores, and shortly afterwards fifteen or sixteen Chinese junks were captured laden with timber and mortars, evidently destined for defensive works. The building of those works was a little late. What time the operation of landing occupied we have, as yet, no intelligence. Some Japanese journals have published extras saying that the troops and stores were all on *terra firma* by the evening of the 25th; others indicate the evening of the 26th. But these statements must be mere conjectures. We are not within easy reach of the Liao-tung peninsula. From Port Arthur there is telegraphic communication overland to Tientsin, and therefore, of course, to Shanghai. But it may be taken for granted that these wires were cut at once by the Japanese, and in that case news from the peninsula must come first by steamer to Korea and afterwards by wire to Japan. We should have thought that the quickest route would be *via* Wi-ju, but apparently Chemulpo is preferred, which means that an interval of 3½ days at least must separate any event from our receipt of intelligence of its occurrence. Up to the night of the 28th, the only facts known for certain in Tokyo were that the landing commenced on the 24th at dawn, that no opposition was

encountered on shore; that the Japanese sappers had commenced the construction of piers, and that 15 or 16 junks laden with timber and mortars have been seized. It may be taken for granted, however, that Port Arthur is blockaded by Japanese men-of-war. Rumour says that there are five or six Chinese ships, including one of the iron-clads, in the tidal basin. We can not tell. Perhaps the Japanese Government knows, but it has not taken the public into its confidence, and we find it hard to believe that the Chinese ships have allowed themselves to be caught in such a trap.

On the 24th ultimo the passage of the Yalu was commenced by the First Army under Field-Marshal Count Yamagata. If it was a mere coincidence that the two invasions of China—the irruption into Manchuria by the First Army and the landing of the Second Army on the Liao-tung peninsula—took place on the same day, people will not be persuaded to regard it in that light. Phyang-yang was captured on the day that the Emperor raised his standard in Hiroshima. Manchuria and Liao-tung were invaded simultaneously. Port Arthur will be taken on the Emperor's birthday. These are coups of a strongly dramatic character. It is playing the game of war on a real stage with a degree of assurance and precision that would be very interesting were they less startling.

A little below Wi-ju the Yalu receives a tributary, the Ai. The streams meet at an acute angle, the Ai coming from the north-east and the Yalu flowing west. Near the point of the "V" formed by the two rivers their courses are crossed by the main road leading northward from Wi-ju to Chiu-lien. The portion of the "V" lying beyond this road on the east rises to an eminence, called Hu-shan, which commands the road and moreover offers an excellent position for an army desiring to guard the approaches to Chiu-lien. About two miles from its mouth the course of the Ai, turning northward, becomes parallel to the continuation of the main road beyond Chiu-lien. Thus, to reach Chiu-lien from Wi-ju by the ordinary route, one has first to cross the Yalu, then to pass along the road under the western slope of Hu-shan, and then to cross the Ai. These topographical points premised, we are in a position to form a general idea of the operations.

The invading army deployed throughout such a length of the Yalu river that its point of passage remained to the last uncertain, and all danger of flanking movements by the enemy's cavalry was averted. At dawn on the 24th instant a brigade under the command of Colonel Sato forded the Yalu ten miles above Wi-ju. Its passage was unopposed. Reaching the opposite bank it turned westward, and came, at about noon, within range of one of the forts upon the construction of which the Chinese had been engaged for some weeks. The fort was garrisoned by 500 cavalry and 100 infantry. They made no resolute resistance, and at 1.30 p.m. Colonel Sato's men were in possession of the place, the enemy leaving 20 killed, 2 field-pieces, and 10 rifles upon the field. The brigade then pushed on, and encamped for the night on the north of Hu-shan, near the east bank of the Ai river.

During that night the Japanese pontoon train threw a bridge over the Yalu, just above Wi-ju, and before dawn on the 25th the main body of the army crossed by this bridge, and having assumed attacking formation on the opposite side, moved to the assault of Hu-shan. Colonel Sato's brigade coming into action from the north simultaneously. The exact force of the Chinese at this point is uncertain. By the Japanese commanders the strength was estimated at 3,500, but prisoners captured in the fight said that eighteen regiments were massed on or about Hu-shan. The nominal strength of a Chinese regiment being 500, the force engaged must have mustered from six to nine thousand, according to that statement. The battle lasted about 3½ hours. As usual, the Chinese had failed to take full advantage of the ground. Fighting at first with some resolution, they soon found their position swept by artillery and rifle fire from a hill on their right wing, of which the

Mixed Brigade under Major-General Oseko had obtained possession. This decided the day so far as concerned the enemy's troops in the first line of battle. They broke and fled across the Ai in the direction of Chiu-lien. His reserves, however, moved up in good order and opened a heavy fire upon the Japanese front from a commanding position. Another flanking movement was now made by a Japanese brigade under Major-General Tachimi. Moving round by the east of Hu-shan, this body attacked the enemy from his left rear and the assault being delivered with great vim, the Chinese were quickly routed. They retreated in confusion across the Ai, Major-General Tachimi pursuing so hotly that he captured their camp and compelled them to abandon 10 guns. The east bank of the Ai was now (10.30 a.m.) entirely cleared of Chinese troops. Two divisions of the invading army crossed the river and posted themselves on the east of Chiu-lien, Colonel Sato's brigade taking a position further up stream on the same side, so as to menace the road passing northward to Feng-hwang. Field-Marshal Yamagata and Lieut.-General Nodzu spent the night in a farm house on the north-east of Hu-shan. The Japanese losses in this engagement were 20 killed and 83 wounded. The enemy had about 300 killed, but the number of his wounded had not been clearly ascertained at the time of despatching the latest telegram.

Throughout the night the Chinese kept up a heavy but harmless fire against the Japanese camp, the position of which had been chosen with a view to all such eventualities. Subsequent events proved, however, that this novel manoeuvre on the part of the enemy did not pre-empt any correspondingly unusual strength of resistance.

At 4.40 a.m. on the 26th the Japanese troops resumed their forward movement, threatening Chiu-lien simultaneously from the south, east, and north-east. The Chinese did not await the assault. Most of them had already fled from the town under cover of the darkness and the cannonade. The rest lost no time in following, and at 8 a.m. the Japanese marched into Chiu-lien, encountering no opposition whatever. They found 22 guns, 300 tents, a quantity of large and small arm ammunition, and considerable stores of grain and forage. From the inhabitants it was learned that 43 regiments had been engaged in the defence; namely, 13 regiments from Talien; 24 from Port Arthur, and 6 from Lu-tai and Siao-chan. This statement gives the enemy a force of about twenty thousand, but it is probable that his strength did not exceed sixteen thousand. His troops were neither raw levies, nor undisciplined, ill-armed "banner-men." They had been drafted from corps that rank as the flower of China's forces.

The Chinese have now established complete uniformity of procedure in all their defensive operations. They hold the out-works of a place for a time, and having lost them, they abandon the main position incontinently without further resistance. They did so at A-san; they did so at Phyang-yang; and now they have done so at Chiu-lien. The precedent is pretty well established.

The Japanese detached a flying column to pursue the enemy. His flight had been chiefly in the direction of Ta-tung-ken and ultimately Feng-hwang. Presumably Field-Marshal Yamagata will continue his march against the latter place. It is 33 miles beyond Chiu-lien, and it enjoys the reputation of being the strongest position in Southern Manchuria and of having a garrison of from 20,000 to 30,000 men.

The Tong-haks are still giving much trouble. On the 26th ultimo at 6 a.m. some 2,000 of them surrounded the Japanese commissariat station at Ampo and attempted to set it on fire at several points. The thirty-eight soldiers forming its guard had no little difficulty in driving off their assailants. They succeeded, however, in repulsing them completely and felt strong enough to go in pursuit. We take these facts from a telegram published by the *Mainichi Shimbun*, and do not vouch for their accuracy. Original from the campaign

in Korea the Chinese have lost 84 guns in all; namely, 8 at Sŏng-hwan; 42 at Phŏng-yang and An-ju, and 34 at Chiu-lien. That is by no means a despicable park of artillery. How many guns remain, we wonder, for the defence of Moukden.

Count Inouye reached Chemulpo at 4 p.m. on the 25th ultimo in the *Himeji Maru*. He was received by all the Japanese residents and by a delegate from the King. On the following day he proceeded to Sŏul.

The Korean Prince Wi-hwa left Kyoto on the 26th instant, stopped one night in Yokohama en route, and proceeded the next day (27th) to Tokyo.

TUESDAY, OCTOBER 30TH.

It seems that the landing of the Second Army took place at a point further north than was originally supposed. From a telegram in the *Nichi Nichi Shimbun*, sent from Hiroshima at 1.37 p.m. on the 29th ultimo, the place chosen was Pi-tsz-wo, a long way above Talien Bay. The *Nichi Nichi* adds that the southward march of the invading forces has commenced, and that their assault of Port Arthur will not be delayed many days. We also read that some vessels of the Pei-yang Squadron are still in Port Arthur, undergoing repairs, and that the rest have taken shelter in Wei-hai-wei. The Chinese forces in Chin-chiu, in Port Arthur and at Talien, are said to aggregate 13,000, but 4,000 of them are recruits.

A grand entertainment is to take place on the evening of the 2nd instant in the temporary Houses of the Diet in Hiroshima. The object is to celebrate the signal victories gained by the Army and Navy. It is said that the Emperor will be present.

The *Fiji Shimpō* has a telegram from Shanghai giving intelligence that suggests a blunder on the part of the Japanese men-of-war. On the 15th ultimo, says the story, a vessel called the *Norway* (?) set out from Shanghai carrying 500 troops. The following day she was overhauled by some Japanese men-of-war near the Sian-tung coast. Inasmuch, however, as no arms or contraband of war was found on board, she was allowed to continue her voyage. The *Fiji* calls that a very benevolent procedure on the part of the men-of-war.

Feng-hwang, we observe, is said by the vernacular press to be 38 miles from Chiu-lien, and to be defended by 20,000 men. The most accurate map published makes the two places only 13 *ri* (Japanese), or 32½ miles apart.

German vessels, writes the *Fiji Shimpō*, are conspicuous for violating neutrality by carrying contraband of war. The Chinese Government constantly makes large purchases of arms and other military material in Shanghai and Hong-kong, and the goods always come out in German bottoms. One of the offending ships was recently seized, we read, at Singapore.

The Tong-haks continue to be troublesome in Korea. Two Japanese merchants barely escaped capture by them the other day. The leader is making strenuous exertions to organize a force for the purpose of marching against Sŏul and driving out the Japanese.

WEDNESDAY, OCTOBER 31ST.

The *Fiji Shimpō* speaking of the uncertainty hitherto felt by the public with reference to the landing place of the Second Army on the Liautong peninsula, says that there can be little doubt the place was Shih-tsui-tsz, which is in the vicinity of Pi-tsz-wo. Shih-tsui-tsz is not marked upon any ordinary map, but the most accurate charts show that it lies in a bay considerably north of Talien, and that it is 59 miles from Chin-chiu and 96 from Port Arthur. The *Fiji* observes that the Chinese were wholly unprepared for a hostile descent at such a place, and that, consequently, no preparations whatever had been made for resistance. That is easily understood. But, on the other hand, the distance to be traversed by the Japanese troops before reaching their goal becomes, on this hypothesis, much longer than was anticipated. Assuming that the southward march

commenced on the 27th October, Chin-chiu could scarcely be reached before November 3rd, unless the rate of progress is much more rapid than it has been in Korea. It is thus possible that the assault on Port Arthur may not take place before the 10th of November. There is, however, another report, namely, that a reconnoitering force having been landed and having detected no sign whatever of the enemy, signalled to the transports, and then advanced along the coast, the object being to carry the troops by ship as far south as possible. The *Fiji Shimpō*, in a paragraph of the same issue where Shih-tsui-tsz is given as the place of debarkation, says that the transports were able to carry out the above purpose completely. Our own telegram with reference to the landing indicated the Chin-chiu peninsula, a name certainly not applicable to Pi-tsz-wo, still less to Shih-tsui-tsz. The point must remain doubtful for the moment. The *Fiji Shimpō*, looking to the fact that no sign of the enemy's presence was observed by the scouting party sent from the ships, infers that the Chinese do not intend to defend Port Arthur vigorously, and says that the rumoured retreat of the Pei-yang Squadron to Wei-hai-wei confirms that view.

According to Japanese newspapers, the number of Chinese troops assembled in the Liautong peninsula was 15,000 at the beginning of October. Subsequently, however, they were strongly re-inforced, so that they now aggregate over 20,000. Of these seven or eight thousand are said to be in Chin-chiu.

The *Kokkai* speaks of Kan-tsz-ti-ha as the place of debarkation. Kan-tsz-ti-ha and Shih-tsui-tsz are virtually identical, so far as concerns this question. Both are villages on the high road that passes along the eastern coast of the peninsula, Shih-tsui-tsz being three miles to the north of Kan-tsz-ti-ha. According to the *Kokkai's* measurement, Kan-tsz-ti-ha, which it describes as a little bay, is 50 miles from Chin-chiu, but our map, the accuracy of which we believe trustworthy, shows the two places as 59 miles apart.

The behaviour of the Pei-yang Squadron in failing to make any resistance to the landing of a Japanese army on the Liautong peninsula, naturally evokes much comment. Little doubt is entertained that the Chinese had obtained information sufficiently definite to indicate the south-eastern portion of the Liautong peninsula as the destination of the Second Japanese Army. Yet Admiral Ting's ships carefully avoided coming within range of the guns of the Japanese fleet. What is more, not even was warning conveyed to ships engaged in the transport service, the result being that 16 junks laden with material for constructing forts fell into the hands of the Japanese.

General Count Oyama, Commander-in-Chief of the Second Army, has issued the following general order to the troops under his command:—

Our Army fights for the right and in accordance with the principles of civilization. Our enemies are the military forces of the country with which we are at war, not the individuals of the country. Against the force of our foe we must fight with all resolution, but so soon as any of his soldiers surrender, are taken prisoners, or receive wounds, they cease to be enemies, and it becomes our duty to treat them with all kindness. These principles have already been enunciated in a Notification by the Minister of State for War. They apply with still greater force to the peaceful inhabitants of an enemy's country. Except in cases where the inhabitants offer opposition, they should be treated with the utmost consideration. The smallest thing should not be stolen from them. Should urgent need arise to procure articles of clothing or utensils belonging to them, a proper price must be paid for them. Every possible effort should be made to instil feelings of confidence and to prove to the people that we are animated by the benevolent intention of leaving them in tranquillity. I believe that the soldiers under my command are already imbued with these principles, and that they will not perpetrate any lawless acts. But it is important that the labourers accompanying the Army should be similarly instructed and should be required to observe the regulations. All transgressions should be visited with severe punishment, pardon being in no case extended. The Army has now left our country and is about

to enter the enemy's territory. Therefore this Order is issued. Officers commanding Divisions are held responsible that its import should be conveyed to all under their orders and that its instructions be carefully observed, to the end that the virtue of our gracious Sovereign may be known beyond the seas and that the temper of our troops may be appreciated by the world.

The following, which we take from the *London and China Express*, will be interesting to our Japanese readers:—

With the object of obtaining expert opinion concerning the effects of the Chinese defeat at Ping-yang and of the naval battle off the Yalu River on the future of the campaign, a representative of Reuter's Agency to-day had an interview with Colonel J. F. Maurice, C.B., the well-known tactician and strategist, now in command of the Royal Artillery at Colchester. Colonel Maurice said:—

I think the victory of Ping-yang is somewhat misunderstood. Its strategical value is indeed very great, but it does not in itself imply that the Chinese army as a whole has been defeated, as there are still great numbers of Chinese troops available in various parts of the empire. In such a country as China it is very difficult to foreshadow what will be the moral effect of such a defeat, but that it will largely influence the political situation no one can doubt. Field-Marshal Yamagata has conducted the campaign in the most brilliant manner, and his tactics would not have disgraced a Western general. His strategy is of the order of the 1866 war. In fact, it represents what most military experts who believe in the changes introduced by the telegraph consider to be now feasible, and not to have been feasible in the past. One of the most commendable features in the Field-Marshal's tactics has been the absolute silence of his movements until a victory has been achieved. I do not think that the possible fighting efficiency of the best Chinese troops is to be judged by their defeat at Ping-yang, because the best troops of any nation, out-generalled, taken by surprise at night, and assailed from the rear, would be liable to a very similar panic. Lord Wolseley has the highest opinion of the Chinese if they are properly trained and led. In this connection, however, what applies to one portion of the troops may not apply to others. There has been an attempt to give to the Chinese a European organization based on that of Gordon's army, but it has mainly fallen into the hands of native officers and is, in fact, Gordon's army without Gordon. Li Hung-chang is being treated as a scapegoat. He is the only man in China who has advocated European methods, and he is now being punished on account of the failure of the old Conservatives who refused to follow his advice.

Asked if, in his opinion, the victorious Japanese would push on to Peking, and, if so, how they would be likely to do so, Colonel Maurice replied:—

Such an advance can only follow upon a great naval engagement, in which the Japanese Admiral is able to dispose of the Chinese fleet so decisively as to enable transports to cross the Gulf of Pechili with perfect safety. I scarcely think that Japanese naval victories have so far been sufficiently decisive for her ships to attempt this at present. In the naval engagement off the Yalu River the Japanese fleet, unhampered by transports, attacked Chinese ships embarrassed by transports. If, on the other hand, a Japanese fleet were escorting transports across the Gulf of Pechili with a view to landing troops to advance on Peking it would require a comparatively small Chinese naval force to make the passage very dangerous for the Mikado's force. If, however, the Japanese now score a great naval victory it is urgently necessary for them to follow it up at once, and crush the Chinese fleet before it is possible for them to enter upon a movement by sea from Peking. A march upon Moukden, which as the sacred city of the Manchurian dynasty ought to be well worth capturing, should not be difficult now that the Japanese have effected a landing in Korea, and have broken down the advanced resistance of the Chinese, although it can hardly be a very rapid operation unless the Japanese have accumulated much greater means of transport than we know of. But the whole of the operations have been so brilliantly planned that it is quite possible Marshal Yamagata has succeeded in arranging such means of transport as will enable him at least to follow up and crush the remainder of the Chinese army in south Manchuria, which, however numerous (and I have good reason to suppose it must number many thousands) can hardly be in an effective fighting condition for want of organisation and by reason of the demoralisation following the Ping-yang disaster. That the Japanese will make a rush from Ping-yang to Moukden, a distance of 200 miles, is hardly possible. They could, of course, push on their cavalry, but I have hitherto always supposed that the Japanese cavalry was inferior to that of the Celestial forces. The Japanese commander did everything that could possibly be done at Ping-yang. He has certainly sent advance parties towards the Yalu to take advantage of the panic and surprise among the enemy, but the effect of this operation must depend on the number of Chinese encountered between Ping-yang and the river.

Concerning Japan's immediate future movement's Colonel Maurice said:—

For the next two or three weeks the Mikado's army must content itself with following up the advance on the Yalu. The next engagement will probably take place on the river between the Japanese main body and the Chinese forces from Manchuria. Unless the latter retreat they will certainly be driven back across the frontier, leaving the Japanese masters of Korea, at any rate for the time being.

In reply to a question as to whether a Chinese naval attack upon Japan was likely, Colonel Maurice, in conclusion, said:—

This would simply be a question of the comparative strength and handling of the two fleets, but I should consider such a step unlikely. Hitherto China has had too much work for her ships on her coast to think of attacking Japanese ports, and in any case a naval attack on Japan would have very little effect unless supported by a fighting land body, and I do not think Chinese troops would be successful in Japan.

A telegram from Shanghai says that the Chinese Court and Government are leaving Peking. Experience has taught us that no intelligence coming from Shanghai is trustworthy. Why should this exodus from the Chinese capital take place? Peking is not immediately threatened. And whither should the Court remove? Ichol, which was chosen at the time of the precipitate flight of Hienfung from the capital? But Ichol offers no advantages at present as compared with Peking. We believe that the story must be relegated to the rank of the Shanghai canards, now so familiar.

The *Nippon* publishes a letter said to have been received by his family from an officer on board a Japanese man-of-war. "On the morning of October 13th," says the writer, "smoke was observed in the direction of Takoosha (i.e. on the south-east of the Liau-tung peninsula) and the First Flying Squadron immediately steamed to the place. The smoke was found to proceed from the despatch vessel of the British fleet. Her captain, after signaling for permission, came on board and talked with our officers for some time. He said that he had visited Port Arthur the preceding day and had ascertained that the *Ting-yuen's* upper deck was completely destroyed by fire, so as to disable her for some time. Further, the *Lai-yuen's* stern was shattered, and in her case also the upper deck was burned away. He added that the ships sunk in the naval battle were the *Chao-yung*, the *Ping-yuen*, and the *King-yuen*, and that the ships run aground were the *Yang-wei* and the *Kwang-chia*. The *Chen-yuen* had had 30 killed and 50 wounded. Finally, the vessels not under repair in Port Arthur, were believed to be in Wei-hai-wei."

A telegram from Hiroshima, dated 11 a.m. on the 30th ultimo, and despatched originally from Colonel Tsuchiya at Chiu-lien on the 27th ultimo, says that the Japanese troops have taken 20 guns, a quantity of small arms and ammunition, and 2,000 *koku* of rice in the town of An-tung. It is evident from this intelligence that a force must have been detached to proceed to An-tung, which is an important town lying about 6 miles down the river Yalu from Chiu-lien. Very probably the defenders of Chiu-lien did not fly *en masse* along the road leading northward to Feng-hwang. A portion of them would have been likely to retreat westward to An-tung. There is a road from the latter place that joins the Chiu-lien-Feng-hwang road at a point 7 miles north of Chiu-lien. The total number of guns lost by the Chinese in the Korean campaign up to the present is raised by the above capture to 104.

The *Official Gazette* says that the number of deaths reported from the various military hospitals in the interval commencing August 2nd and ending October 14th, is as follows:—

Majors	2
Lieutenants	1
Ensigns	1
Non-commissioned Officers	12
Nurses	4
Soldiers	74

The causes of death are not recorded by the *Official Gazette*, but we learn independently that dysentery is the chief trouble.

THURSDAY, NOVEMBER 2ND.

The *Nichi Nichi Shimbun* has a telegram sent from Hiroshima at 1 p.m. on the 30th ultimo, from which we learn that a column sent in pursuit of the Chinese entered An-tung and thence pushed on to Ta-tung. This last named place is at the mouth of the Yalu, on the high road passing along the coast southward to Chin-chiu and ultimately Port Arthur. Hence we infer that a portion of the beaten army is endeavouring to effect its escape to the Liau-tung peninsula.

Apropos of the retreating Chinese, a piece of very perplexing intelligence is given by the *Yomiuri*, nominally as coming from official sources. It is to the effect that the Chinese who retreated to An-tung have taken refuge in the fortified town of Tang-shan, and being there united with the Manchurian garrison, constitute a force of some 3,000 men. Tang-shan is 20 miles from Chiu-lien, and lies north of that place on the main road to Feng-hwang, whereas An-tung is 6 miles down the river to the west of Chieu-lien. It seems to us that the *Yomiuri* is a little mixed.

The *Nichi Nichi Shimbun* says that the Chinese Government has assembled a large force in the neighbourhood of Shan-hai-kwan and is taking vigorous measures for the defence of the place. But we have heard that long ago, though not, perhaps, on such good authority.

In the *Shogyo Shimpo* we find a telegram said to have been despatched from Hiroshima at 5.50 p.m. on the 30th ultimo. It says that 16 Chinese ships-of-war left Wei-hai-wei on the 26th ultimo for Port Arthur. If that be true, another great naval engagement must have taken place ere this, for Wei-hai-wei is only 11 hours' steaming from Port Arthur. But is it true? Are the Chinese ships really coming out boldly at last and do battle with the Japanese?

Reverting to the Yalu river and the operations of the Army under Field-Marshal Yamagata, we observe a telegram in the *Shogyo Shimpo* to the effect that an engagement took place between the Japanese pursuing column and the Chinese at Ta-tung (near the mouth of the Yalu), in which the latter were completely defeated, and fled, abandoning their artillery. This fight is said to have occurred on the 29th ultimo. Ta-tung is 36 miles by road from Chiu-lien *via* An-tung, and as Chiu-lien was taken on the 26th ultimo, the pursuing column might easily have reached Ta-tung by the 29th. But with regard to the rumoured fighting, it is conceivable that confusion has arisen between the official account, mentioned in a previous paragraph, which speaks of 20 guns having been captured at An-tung, and the report that Ta-tung has been reached by the pursuing troops. If the *Shogyo's* telegram be correct, a capture of guns was made not only at An-tung but also at Ta-tung.

It seems pretty clear that in their flight from Chiu-lien the Chinese were entirely out of hand, and that, instead of the whole force taking the same direction, with the prospect of rallying at some point farther in the interior of Manchuria, a part retreated along the northern road toward Tang-shan and Feng-hwang, and the remainder took the south-westerly road toward the mouth of the Yalu and toward the route to Talien and Port Arthur. If that be so—and there seems to be little doubt of it—the latter troops are practically out of the arena so far as concerns the defence of the approaches to Moukden. But if Moukden be Field-Marshal Yamagata's objective point, it is not altogether clear why he should detach a column to pursue a fragment of his foes flying in a different direction altogether, unless, indeed, it be his purpose to put an end effectually to all chance of their rallying and heading across country toward the Moukden road. Conjectures, however, are idle at present.

According to the *Kokkai*, the ships of the Pei-yang Squadron have been fully repaired and have assembled at Wei-hai-wei, with the intention of engaging the Japanese again. The iron-clad *Ting-yuen* is to be the flag-ship, as before, and six foreigners have been engaged to go to sea with the ships. Major von Hanneken, we

are further told, is not among them, having been attached to the Viceroy Li's staff.

FRIDAY, NOVEMBER 7TH.

No trustworthy news has yet been received as to the movements of the Pei-yang Squadron. The *Kokkai* says that Admiral Ting's ships left Wei-hai-wei on the 28th instant and steamed in the direction of Port Arthur, but that when, on receipt of this intelligence, the Japanese men-of-war went in search, they could not discover any trace of a Chinese ship. The *Yomiuri* explains how the fact of the enemy's departure from Wei-hai-wei was ascertained, but gives a different date. Its account is that a scouting ship sent out by Admiral Ito, observed six of the enemy's vessels with as many torpedo-boats steam out of Wei-hai-wei in an easterly direction on the 26th instant, and that a squadron was immediately sent in pursuit, but whether it came up with the enemy or not remains uncertain. Various conjectures are hazarded by the vernacular press as to the intentions of Admiral Ting, whether he intends to come out and fight a final battle, or whether his emergence from Wei-hai-wei is dictated by a desire to avoid an encounter. We ourselves incline to the latter belief. The Japanese have not yet attempted to land troops inside the Gulf of Pechili. In other words, they do not yet menace Peking directly. Probably Admiral Ting's instructions are to reserve his Squadron for the duty of averting, if possible, that final catastrophe.

It is stated, on what authority we can not tell, that the engineer corps attached to the Second Army have commenced the construction of a line of telegraph from the Chin-chiu peninsula to the mouth of the Yalu. Were such a line in existence, it would bring the Second Army into direct communication with Japan by wire, for Wi-ju is in telegraphic contact with Fusan and Nagasaki. But the distance from Chin-chiu to Ta-tung, where we last heard of Count Yamagata's Army, is 150 miles. The task of running even a military telegraph would be considerable. On the other hand, the fact that the First Army has detached a column to pursue a section of the fugitive Chinese in a westerly direction, may possibly signify that the two armies are to be brought into touch. So soon as the over-land wires from Port Arthur to Tientsin are cut, there exists no means of communicating from Japan with the Army in the Liau-tung peninsula except by steamer to Korea. We should have thought that the speediest route would be *via* Wi-ju, but probably Chemulpo will be preferred, since it is a Japanese naval basis of operations. It seems as though the Second Army had already cut the Port Arthur-Tientsin wires. Were they in operation, we should have received before now *via* Shanghai, plenty of news of Japanese doings in the Liau-tung peninsula.

The *Shogyo Shimpo* gives some topographical particulars about Feng-hwang, the next stronghold lying in the path of the First Army's advance to Moukden, or Feng-chien. Feng-hwang, we are told, is the outer gate of Moukden. Its walls, built of brick, form a square, the periphery of which is about 2,400 yards. On the east there is a plain running level through a distance of some 2½ miles to the foot of the hills, and traversed by two rivers, the Tsao and the Feng-hwan-hen. On the west and south there are hills at a distance of a little more than 2,000 yards. The hills on the south rise to a height of 500 feet. From Newchwang to Wi-ju there is no city so important as Feng-hwang. It contains some 20,000 houses and is a thriving trade centre. In former times, when Korea used to send an Ambassador every year to China, he was met at Feng-hwang by Chinese officials. The *Hochi Shimbun*, writing on the same subject, says that the distance from Chiu-lien to Feng-hwang being only 38 miles (query, is it so much?), and the former place having fallen on the 26th ultimo, the advance guard of the Japanese Army should have reached the neighbourhood of Feng-hwang on the 30th ultimo. That calculation is based on the hypothesis that the forward movement was resumed on the 27th ultimo and that the troops

moved at the rate of 10 miles daily. But we cannot accept either supposition. After the operations of the 24th, 25th, and 26th ultimo, the Japanese Army must have been allowed some rest. We doubt whether it moved out of Chiu-lien before the 29th or 30th October. In the second place, we see no reason to assume a quicker rate of progress than that hitherto attained, viz., 6 miles a day. If we suppose, then, that the Army left Chiu-lien on the 30th ult. and advanced at an average rate of 6 miles *per diem*, it would be in the immediate neighbourhood of Feng-hwang on the 4th inst. The assault may perhaps be looked for on the 5th or 6th, not sooner we think. But there is also the question of the column sent down the Yalu to Ta-tung. That westward movement may perhaps delay the northern march considerably. The *Hochi* says that as Feng-hwang is commanded by hills in the immediate vicinity, its capture will be an easy matter, and that the Chinese will probably make no resolute effort to defend it.

The News Agency undertakes to determine exactly the landing place of the Second Army. It declares it to be Shin-kin-sho, about 5 miles east of the mouth of the Pi-li river. If that be so, the Army had 63 miles to march before reaching Chin-chiu, and was separated from Port Arthur by 107 miles of road. Its arrival at the former place may consequently be looked for about the 5th instant, and if any serious resistance be encountered at Chin-chiu, Port Arthur can hardly be reached before the 14th or 15th. Shin-kin-sho is only some 90 miles from Ta-tung, at the mouth of the Yalu, which town was taken possession of by a flying column of the First Army on the 29th or 30th ultimo.

We learn also from the News Agency that since considerable portions of Chinese territory are now in Japanese possession the regulations to be observed in dealing with matters relating to the districts in question, have been for some days in process of compilation by experts in international law.

The *Fiji Shimpō* reports the return of the *Tenkyo Maru*, which was detained such a long time at Taku. It appears that the vessel reached Nagasaki on the morning of the 30th ultimo, having on board a crew of four foreigners and 20 Chinese, all of whom are to be sent back to China in a few days. The *Tenkyo Maru*, as our readers may perhaps remember, had left port bound for China long before war was declared. She reached Taku in absolute ignorance that a belligerent state existed, and was seized by the Chinese, who ultimately agreed to restore her.

KOREAN NEWS.

From letters sent to various Tokyo papers by their Korean correspondents, we gather the following:—Owing to want of cordial co-operation among leading Korean statesmen, and also to the outbreak of insurrections at various places, the programme of reforming the Korean Administration is temporarily suspended. To render assistance in suppressing the *emutes* that have occurred in the southern portion of the peninsula, the Japanese troops quartered in Sōul have marched away in two parties. It is believed that the leaders of the insurgents are Chinese fugitives from the troops defeated at Sōng-hwan on July 29th. Some idea of the fighting capacity of the rebels may be gathered from what happened on the 19th of October at a Japanese Commissariat station established at Chou-pun in Chun-Chou-do. The insurgents numbering about 15,000 (?), attacked the station but were repulsed ignominiously by the two bodies of Japanese troops. Thirty of the assailants were killed and 2,000 stand of arms fell into the hands of the little band of defenders, who had only 11 wounded. In consideration of the various calamities that have befallen the people in the southern portion of the peninsula, the Court has announced that a sum of 30,000 dollars will be bestowed to alleviate their suffering. That is a magnificent effort on the part of the Court of Korea, for the Government's finances are in such a miserable state that it was long unable to buy some 300 suits

of wadded clothes for its police, and had to leave them shivering with cold, the temperature being now as low as 10° F. at night, though it rises to about 70° at noon. It was only the other day that the Government could give the order to the Ni-kan Boyeki Shokai, promising to pay one-half of the price on the arrival of the clothes, and the remaining moiety on some future occasion. Among the many Japanese visiting Korea, not a few appear to be knaves and ruffians that make it their business to subsist by violent and lawless acts. For some weeks past burglars have frequently boarded Japanese and Korean junks anchored in Chemulpho and have carried away goods by force. Two of them were arrested, but one made his escape shortly afterward. The Japanese inhabitants are indignant that such rascality should be perpetrated by their countrymen, and are full of zeal to procure the deportation of adventurers that bring disgrace upon the country.

A painful story is told of a policeman who accompanied Mr. Otori as one of his guard. He was a constable of the Metropolitan Police and had been among those specially chosen and sent to Sōul. He set out with a firm resolve to join the Army and to discharge his duty as a brave and patriotic man. Unfortunately he was obliged to stay in Sōul while many of his colleagues were ordered to proceed to the field of battle. Highly mortified to find himself condemned to a peaceful and effeminate life, he received another shock in the shape of intelligence that he was to accompany Mr. Otori back to Japan. He obeyed, but on reaching Chemulpho in the suite of the ex-Minister, he went the same evening to a sequestered place and committed suicide, leaving a letter to the effect that he preferred death to returning home without having joined the Army, as he had originally resolved.

SHANGHAI NEWS.

Mr. John Russell Young, formerly editor of the *New York Herald* and subsequently Representative of the United States in Peking, has written an essay in which he credits the Chinese with qualities and capacities of a high standard, and practically expresses the belief that their future may yet be of the all-conquering kind predicted by Lord Wolseley. The *North China Daily News* is much pleased with the essay, and writes very prettily about the "vitality of China," "the strength of her personality," her power of absorbing her conquerors and turning them into Chinese, and her glacier-like movement through the ages, "ante-dating the most ancient of western civilizations, venerable when Homer sang and before the Roman empire was founded, and Time as yet bringing no decay." Is all that serious? Does any person frankly hold that "time has brought no decay to China?" Surely not. And it is precisely because history never belies itself that we can not share the belief in a mighty Chinese resurrection. The annals of the world contain no instance of an anti-climax in the life of a nation. Nature is too good an artist to make such blunders in the arrangement of her drama. China's star climbed to its zenith long ago and has ever since been descending steadily. It will not rise again. The individual Chinaman is undoubtedly a being of great capacity, but there has faded out of the blood of the people at large the undefinable something that qualifies them for great and successful collective effort.

It has been asked with some curiosity what course would be pursued with reference to the Customs Service in Korea. It is under the able direction of foreigners, members of the Chinese Customs, and the question was whether these men would be allowed to remain. We have never supposed that they could be allowed. After all, they belong to the Chinese Civil Service and their presence in Korea was one of the anomalies resulting from the undefinable relations between the little Kingdom and the big empire. We now observe a report in the leading Shanghai paper, that Count Inouye is

"negotiating with Mr. McLeavy Brown for the transfer of the Customs to Japanese control." "Negotiating with Mr. McLeavy Brown" is decidedly good. But Count Inouye is celebrated for his courteous way of doing disagreeable things.

We take the following from the *North China Daily News*:—

A decree dated the 23rd inst. telegraphed to us last night by our native correspondent at Peking, after enumerating various rewards and posthumous honours to be given to the Chinese officers of the Pei-yang fleet engaged in the naval battle off the Yaloo with the Japanese fleet on the 17th of September last, deals with the subject of our telegram yesterday morning from Tientsin referring to the Emperor's recognition of the valuable services rendered by the foreign officers of the fleet engaged in the same battle. The decree in question goes on to say that Li Hung-chang in a special memorial praises the services rendered to the Pei-yang fleet by the foreign officers, some of whom lost their lives in our service, and that both the living and the dead deserved our Imperial recognition, etc. With reference to von Hanneken, he has already been presented by us with the decoration of the Star of the First Class, Second Division. Let him also be presented with the brevet button of a *Ti-tshu*, i.e., Provincial Commander-in-Chief. With regard to Purvis and Nicholls who met their deaths in the battle, let their families each be presented with two years' full pay. Hekman is appointed Commander; and Tyler, Beasant, and McGiffin are appointed Lieutenant-Commanders in our Imperial Navy. In addition to the above appointments, Hekman, Tyler, Beasant, and McGiffin are each to be decorated with the single-eyed peacock's feather as well as the Star of the First Class, Third Division. Let the *yamén* concerned take note of the same.

Some residents of Newchwang imagined that they could start the pastime of golf at that place. They set about marking links on a plain near the city and buried bottomless jam tins to keep the putting holes clear of mud. But the Chinese, observing these operations, concluded that the foreign devils were about to blow up the plain. Soldiers were despatched to dig up the tins and the Taotai lodged a formal complaint with the British Consul. Great excitement prevailed in military and civilian circles. There will be no golf in Newchwang.

The *Peking Gazette*, contains an Imperial Edict conferring honours on the Chinese officers engaged in the naval fight of September 17th. The Edict contains these words:—

Our squadron consisting of 10 men-of-war kept off 12 Japanese ships, and fighting thus against odds manœuvred without relaxing their efforts throughout the fight thus enabling the troops to land. Four of our ships were sunk and three of the Japanese, while the rest of our vessels were all badly damaged.

That is doubtless the story told to the Emperor. It is cleverly false. The Chinese ships were *en route* for the Gulf of Pechili after the landing of the troops when they encountered the Japanese. They did not manœuvre so as to allow the troops to land. That is a mere myth. Moreover, no Japanese vessel was sunk. The Emperor of China may not know the truth, but everyone else does. We can not doubt, however, the correctness of his Majesty's admission that "four of our ships were sunk and the rest badly damaged." The two falsehoods put into His Majesty's mouth by his faithful statesmen are clever in this, that if the Chinese fleet did really manage to protect the transports by fighting off the Japanese, it won a victory in that sense, whatever the sufferings of the ships. European critics, to whom the same false story was at first told, attached much importance to the transport question, and decided that the Chinese navy had "saved its face" by successfully covering the landing. It was, therefore, astute on the part of the Chinese to invent that fiction.

It is stated that several ships of the Southern Squadron have reached Wei-hai-wei and effected a junction with the Pei-yang Squadron; also, that a number of transports, carrying arms ammunition, and troops, left Taku on September 14th for Port Arthur.

We take the following from the *China Gazette* of the 24th ultimo:—

On the 23rd evening that the Norwegian

steamer *Peik*, Captain Jacobson, had been stopped and searched by Japanese cruisers off the South-East Promontory on her last voyage up to Tientsin. The vessel returned from the North this afternoon and we were enabled to get the narrative which we placed before our readers in last night's issue, fully confirmed. The *Peik* left Shanghai on the 13th inst. with 640 soldiers in ordinary clothes on board, for Tientsin. All went well with her, although she proceeded but slowly, until the morning of the 17th, when she was passing the South-East Promontory. About 10 o'clock a fleet of Japanese war vessels, eight in number, was sighted, from which two cruisers were immediately detached. They made towards the *Peik* at a great rate of speed. As soon as the Chinese General, commanding the soldiers on board, saw the Japanese bearing down on the steamer, he mustered the troops on deck, collected the few uniforms and military books and papers, and consigned the whole bundle to the stove-hole, where they were quickly burned. The arms for the soldiers having been sent up in another steamer, nothing remained on board to distinguish the poor looking rabble of "braves" from ordinary coolies, and it was in this character they posed when the Japanese subsequently boarded the vessel. About 11 o'clock, one of the cruisers, a very large and fast ship, with two funnels (which we have since learned was the *Chiyoda*, Capt. Ichida), having come within signalling distance, hoisted "Stop, or take the consequences." The *Peik* was accordingly hove to, and the cruiser having ascertained her nationality, signalled "You must follow us." Nothing remained for the Captain of the *Peik* to do but to turn his vessel round and proceed in the wake of the cruisers, which piloted him about eight miles back, into smooth water inside the light-ship. Two boats were then lowered from the larger cruiser and some Japanese officers boarded the *Peik*, accompanied by a strong force of armed sailors. The Japanese, officers and men, are described as having behaved most courteously on board the *Peik*. The Senior officer politely apologised for the detention of the steamer, which he regretted the exigencies of war rendered necessary; and in the same manner he asked to see the ship's manifest and other papers. Having examined them, he next asked the Captain of the *Peik*, "Who are all these men?" pointing to the swarms of Chinese soldiers. "Coolies" replied the Captain, upon which the Japanese officer caused a strict search to be made for arms, ammunition, or uniforms. Nothing being found of a warlike nature on board, except a few old swords which any steamer might carry, the Japanese proceeded to search the vessel's cargo, which they did in a very thorough manner, albeit they were extremely careful not to do the least damage to anything. The visitors remained on board for a very long time and at length took their departure; but it was not for a long time after, that the signal, giving the *Peik* permission to proceed on her voyage was hoisted on the cruiser. The *Peik* altogether was delayed for 12 hours by the incident. She arrived at Taku on Sunday morning, landed the troops, and set out the same evening on her return trip to this port. At Taku it was learned that the *Tordenskjold* had left Shanghai with 1,040 soldiers and was expected at the Bar last Saturday, the 20th, but she had not arrived up to the time the *Peik* left. Passing the South-East Promontory on the way down, the *Peik* fell in again with her friends the Japanese, but no communication passed between the merchant steamer and the warships.

ENGLISH NEWS.

In the second week in September the controversy among the Irish Nationalists arising from Mr. Gladstone's contribution to the Irish Parliamentary Fund had become still more bitter. Mr. Healy strongly condemned Mr. Justin McCarthy and his colleagues for their application to British statesmen for pecuniary assistance.

"An Irish Catholic," writing to *The Times*, gives an interesting reminiscence of the methods employed two years ago for the collection of contributions to this same Parliamentary Fund. At this time, he says, he was in County Cork, paying a visit to a relative. When he was out shooting a small tenant of the estate came up to him and asked him for the loan of half-a-crown. There was to be a collection, said the tenant, at the chapel next Sunday for the aid of the Parliamentary Fund. This was the amount he was expected to subscribe, and which

he would be boycotted. On the following Sunday, inside the gate of the chapel, the correspondent saw a table on which was a list of the parishioners, and opposite the name of each the amount he was expected to subscribe. Behind this table were seated two of the prominent members of the Anti-Parnellite party in the district. The correspondent asked one of these men by whom it was decided what sum each person should contribute. By themselves, they answered. "What would happen if any one failed to pay up?" "We would see to them," the men replied, "and see that nobody had any dealings whatsoever with them." The host of the writer and one other gentleman were the only residents in the parish whose names did not appear in the list.

According to a telegram from New York dated September 10th, Mr. Hugh Carroll, one of the oldest members of the Irish Nationalists in America, has issued the following manifesto:—"In August 1884, at Boston, the leading Irish Nationalists in secret meeting voted to suspend work for ten years, so as not to interfere with the Parliamentary movement. The ten years ended last month. The Parliamentary party has gained nothing, and the truce is at an end."

Considerable excitement has been caused in Egypt by the prosecution, before a Court-martial, of two distinguished Pashas for buying slave-girls, a breach of the anti-slavery laws. The point was raised that the law was aimed at dealers, and could not affect the accused, who were charged with buying only. The Court held, however, that according to the terms of the Act, the buyer was an accomplice to the sale, and therefore liable to punishment. On Sept. 13th the Judge Advocate summed up the evidence against the accused, which appeared to be conclusive, but the decision of the Court was not to be published for a few days.

With regard to the Samoan question, German papers strongly disapprove of the idea of a dual protectorate by Great Britain and Germany, and insist that when the revision of the present tripartite status comes to be undertaken, as it must be before long, the German claim to a sole protectorate will be strenuously enforced.

By the terms of the Burmah-China convention, an account of which we publish in another column, the British Government, "wishing to encourage and develop the land-trade of China with Burmah" has specified certain routes along which such trade may be carried on, and has ruled that "the carrying of merchandise through Chinese territory by other routes than those sanctioned by the present Convention, shall, if the Chinese authorities think fit, be punished by the confiscation of the merchandise concerned." In a letter to *The Times*, Mr. Holt S. Hallett complains that the routes by which trade is permitted are practically valueless, that previously British goods had free access to various States from which the terms of the present Convention will exclude them, and that while France, unfettered with such a Convention will be able to push her goods over practicable and comparatively easy routes across the southern frontier of China at any point she chooses, the British Government has thought fit to prevent British merchandise from crossing that frontier, and to make it follow a path hardly fit for goats. The Convention should, he says, be termed "The Convention for permanently excluding British goods from Western China."

The Autumn meeting of the Associated Chambers of Commerce was opened at Huddersfield on September 11th. In his opening address, Sir A. K. Rolit, M.P., the President, said that he thought the prospects of trade, though variable, were on the whole improving. He noticed the relaxation of the United States' tariff, the more settled condition of South America (this is but a frail reed!), and other facts as grounds for this opinion; but, he said, the inability of Parliament to spare time for legislation on commercial questions was a serious hindrance to progress.

A half-yearly court of the Governor and Company of the Bank of England was held on September 13th. Mr. David Powell, the Go-

vernor, presided, and in moving a half-yearly dividend of £4 per cent. cited figures to show that the Baring liquidation had proceeded favourably, the liabilities having been reduced to £2,481,985, and the debt to the bank to £2,409,000. The assets showed an apparent surplus over the liabilities of £667,412.

Notwithstanding the ignominious failure of the syndicate that made a "corner" in tin in the years 1887-8, when the price was run up to £170 per ton, and notwithstanding also the complete collapse of the Société des Métaux a few months later owing to its disastrous speculations in copper, another combination of French and Dutch speculators is endeavouring to obtain control of the tin-market. The syndicate is believed already to hold at least 12,000 tons, three-fourths of the total European supply. The low price of tin, which in July was £65 17s. 6d., seems to have been the main inducement to undertake the present speculation. There has recently been a great increase in the output of mines in the Dutch East Indies and the Straits Settlements, which last year shipped 44,118 tons to Europe and America. It will be necessary for the syndicate to obtain control of these mines before it can hope seriously to affect the price of tin.

Close to the west wall of the Tower of London and at the eastern extremity of Billingsgate is a subway under the Thames. It consists of a metal tube about six feet three inches in diameter. Being more than half a mile below London Bridge, it was largely used by working men coming from the Surrey side to work in the city, and the lessee, who made a charge of a half-penny per head probably made a considerable profit out of the subway. Now that the Tower Bridge, which is only about a hundred and fifty yards away on the east side of the Tower has been opened, most people naturally prefer to avail themselves of this gratuitous means of crossing the river, and the lessee complains that there has been a serious falling off in the receipts from the subway. It is probable that sooner or later some other use will have to be found for it.

On the 7th September the Trades Union Congress adopted a resolution for the election of a committee to draw up a basis of agreement for the federation of all trade and labour organizations. A resolution was also carried calling on the Government to prohibit the landing in England of all pauper aliens that have no visible means of subsistence. On the 8th the Congress passed a resolution condemning the action taken by the House of Lords in connection with the Employers' Liability Bill.

The papers generally speak lightly of the strongly socialistic tone exhibited by the present Trade Union Congress. They regard it merely as the manifestation of a transient wave of socialistic feeling. Socialism, they say, has taken no deep root in the minds of English working-men, and a revival of trade will suffice to turn their attention to other matters.

At a large meeting of railway men, held on September 11th in the Memorial Hall, Farringdon Street, a resolution protesting against the employment of railway servants in any department for more than six days per week was unanimously carried.

During the second week in September the Miners' Federation and the mine-owners were still unable to agree upon terms of settlement, and the strike therefore continued.

A meeting in support of the Independent Labour Party was held in London on September 10th under the presidency of Mr. Keir Hardie, M.P., who said that at the bottom of the party was socialism pure and simple, and they meant to fight ruthlessly onwards. A resolution declaring the collective ownership "of all things essential to life" to be the only permanent solution of the labour question was carried with acclamation.

A conference of the Catholic Truth Society was opened at Preston on September 10th. Cardinal Vaughan presided and delivered an address on "The Reunion of Christendom," in the course of which he observed that the growing desire for such a reunion was one of the happiest signs of the times. The unity of the

Catholic Church was visible and tangible; the Church of England had failed to maintain unity. Among the speakers was the Duke of Norfolk, who urged that it was a duty resting on Catholics to take part in the public life of the country and to do their best to keep it pure.

A cricket match at Hastings between Gentlemen and Players ended in a draw.

A four mile, foot-race between F. E. Bacon, the English champion, and J. J. Mullen, the Irish champion, took place at Dublin on September 12th. It resulted, after a keenly contested finish, in a victory for Bacon by eight yards, in 20 mins. 41 4-5 sec.

There is a well-known proverb about the conditions that most effectually lead to success. This proverb, which is so hacknied that we refrain from quoting it at length, is strikingly exemplified by the tone now taken by the English papers about Japan. We no longer find contemptuous references to the little upstart Power that has disturbed the peace of the East, that has rushed blindly into war with China, and will be soundly drubbed for its pains. The news of the Japanese victory at Phŷng-yang, and of the crushing blow simultaneously inflicted on the Chinese fleet has caused a complete change of tone. *The Times* speaks with admiration of the manner in which the war has been conducted, expresses little doubt of the ultimate success of Japan, and says that the only serious question that remains is whether the Japanese will have their heads turned by their good fortune. Other papers write in a similar strain, the *Spectator* going so far as to say that it is now proved that "the Japanese have assimilated as well as imitated Europe." It is an interesting comment on our own western civilization that a great war has been the example needed to convince the western world of what has long been obvious to those privileged to watch Japan's peaceful advance along the gentler course of civil and industrial progress. But not even the war is enough to convince the *Saturday Review*. This is somewhat puzzling. The *Saturday Review* persists in regarding the Japanese enterprise in Korea as a manifestation of a desire for territorial aggrandizement, as a product, in fact, of that Jingo spirit which is the *Saturday's* ideal of a foreign policy for the British nation. Might we not have expected that poor Japan would receive on this account her meed of praise? But when we remember that

It doesn't follow that he can swallow
Prescriptions signed "J.B."
Put up by you an' me,

we are after all not surprised to find that the *Saturday* is not overflowing with admiration at Japan's progress in the art of war. It writes: "If Japan had only wished to advance in civilization, she would never have plunged into this Korean venture at all. She would have avoided anything of the kind as wasteful and unnecessary. The fact is that she has set herself intelligently to acquire the command of the destructive weapons of civilization in order that she may act more effectually like a barbarian." The whole tone of the article is alarmist. It is a shock to the *Saturday* to discover that there is an Asiatic Power (Asiatic is of course taken as synonymous with barbarian) which not only possesses an army drilled and armed after the European fashion, but is able to use it with European skill and daring. But in its hostile tone the *Saturday Review* is alone among the papers we have had an opportunity of examining. The others show that by her military and naval success Japan has inspired a wholesome respect, a respect which we have for years held that she deserved.

The Court-martial on the persons charged with complicity in slave-dealing at Cairo has returned a verdict of "Not guilty" as regards two of the Pashas and six of the other prisoners. The other defendants have been convicted and sentenced to varying terms of imprisonment. The Sirdar, Sir H. Kitchener, has confirmed all the findings of the Court except in reference to the two Pashas, whose acquittal he does not think justified by the evidence.

At a meeting of the National League held

recently in Dublin, Mr. T. Harrington, M.P., who presided, strongly condemned the attitude of the Government in refusing an amnesty to the Irish political prisoners, and said the action of the Anti-Parcellites in reference to the Gladstone-Tweedmouth cheques had reduced Irish representation to a byword and a disgrace.

Lord Ripon recently spoke at a luncheon given to the members of the Associated Chambers of Commerce at Fountains Abbey. He remarked that a demand had been made for the annexation of Swaziland. That might be all very well for the Swazis or for the British Empire, but by treaties of 1884 and 1890 we were unable, without the sanction of the South African Republic, to annex or absorb the country of the Swazis.

The *Hamburgischer Correspondent* publishes an evidently inspired article on the Samoan question, which may be regarded as the answer of the German Government to the suggestion made in the Vienna *Politische Correspondenz* of a dual control over Samoa to be exercised by England and Germany. The semi-official organ says that Germany prefers to abide by the provisions of the Samoa Act, and will not raise claims which are not reconcilable with that agreement. "If Germany did so it is probable that both England and America would praise the triple protectorate as much as they now condemn it. It would, further, never occur to Germany to offer England a co-protectorate to the exclusion of America, which would be equivalent to an indirect acknowledgment that the Australian colonies have a right to be heard when the future of Samoa is in question. Germany has never acknowledged this, and will leave it to the Cabinet of St. James's to deal with the would-be great ones of Australia."

The Duke of Argyll, writing to a correspondent who had addressed him on the subject of the House of Lords, expresses the conviction that never in the history of human government has such a signal illustration been given of the inestimable value of two separate and independent Houses as in the course of things since 1885.

In the course of an address at Aberdeen, the Bishop of Chester read a letter from Mr. Gladstone, who said that for many years he had been of opinion that the principle of selling liquors for the public profit only offered the sole chance of escape from the present miserable and almost contemptible predicament. He was a friend to local option, but it could be no more than a partial and occasional remedy. This unqualified declaration on the part of the ex-Premier in favour of what is usually known as the Gothenberg system will be a serious blow to the local option movement. The principle of the Gothenberg system is that the liquor-vendor is deprived of any personal interest in the sale of liquor, and may on the other hand, be given a direct interest in the sale of teetotal beverages. This can hardly be managed in any other way than by the socialization or municipalization of the liquor-traffic. And there lies the rub, for the strong teetotal party, by the aid of which alone the reform could be carried, regards the liquor traffic as traffic in sin, and will not be a party to any action that would place the profits of this traffic in the hands of the State. So until the teetotal party learns counsels of moderation, the adoption of the Gothenberg system in England is likely to be postponed.

A great diamond robbery recently took place in Hatton Garden. At the time the mail left no arrests had been made. It is believed that the robbery was the work of a gang who during the past four years have been carrying on a system of diamond robberies on the Continent.

The annual report of the Free Labour Association, which was to be submitted at the conference to be held in the current month, states that up to the end of August last 228,000 seamen had been registered as free labour men. Out of 9,786,073 male persons of 20 years of age and upwards who are working for their living in the United Kingdom, only 1,109,014 are members of trade unions, and the number of trade unionists has decreased since 1891.

In the west of Scotland the coal-strike was practically at an end on September 17th. The

miners had lost confidence in their leaders, and 17,000 men had returned to work, in most cases unconditionally. Elsewhere, however, the strike continued.

Lord Fingall has purchased the lease of the Londonderry gold mine at Coolgardie, in West Australia, for a sum slightly under a quarter of a million sterling. A large quantity of gold is said to be in sight.

A letter left by the late Comte de Paris has been published in Paris, in which, after declaring that all his acts have been inspired solely by his devotion to France, he sets forth his conviction that the political and religious passions which now divide the country can only be appeased by the national and traditional monarchy. He requests his friends to gather round his son and records his belief that France to recover itself must become again a Christian nation.

Mr. Stead has been visiting Scotland, collecting material for the Christmas number of the *Review of Reviews*, which is to deal with the question of deer-forests, with special reference to Mr. Winans, the American millionaire. Mr. Stead will imagine that a wealthy Chinaman comes to Scotland and leases large slices of the country.

THE EARTHQUAKE.

Details furnished by the vernacular press go to show that the earthquake on the 22nd inst. was even more severe than the public had been led to suppose. In the little town of Sakata terrible havoc was wrought. Houses were thrown down so suddenly that their inmates had not time to run out. The ground was rent asunder in many places, and from the fissures streams of muddy water were ejected in such volume that the streets were flooded, the water in one instance attaining a depth of five feet. Finally, to crown the calamity, fire broke out at no less than thirteen different spots simultaneously, and raging for about three hours, reduced 2,500 houses to ruins. Two houses are said to have been completely swallowed up in the earth-cracks. A wealthy merchant, Mr. Hewana, lost 48 warehouses in the conflagration, and the property thus destroyed is estimated at a quarter of a million yen. In one dwelling the whole family of seven persons were killed; in another nine lives were sacrificed. A strange incident occurred in front of the town hospital. A large ornamental stone vase stands there. Seven people huddled at its base, probably believing the place to be especially safe. But the vase toppled over and crushed them all to death. In the streets extending from Funaba to Imamachi 130 persons are said to have been killed and wounded. A special reporter, sent by the *Asahi Shimbun* to the seat of the disturbance, writes that the total number of buildings destroyed by fire was 2,028, which figure, it will be observed, is smaller than that quoted above from other authorities. According to the same reporter the lives lost in Sakata alone totalled 150, which tallies with previous estimates. We are inclined to think, however, that some exaggeration has crept into these accounts, for the separate returns from the various localities give the following figures:—houses overthrown, 2,270; houses burned, 1,438; houses damaged, 391; persons killed, 243; persons wounded, 159. The newspaper accounts also state that the vertical shock, or upheaval, was exceptionally severe, whereas the Meteorological Observatory at Sakata reports the vertical motion at only 10 millimetres, and the horizontal at 120 mm. Seismic experts appear to differ as to the cause and centre of the disturbance. Some put the point of genesis in the Sea of Japan, basing their conclusion on the fact that the littoral regions were most severely shaken. These persons attribute the phenomenon to a sudden subsidence of the bed of the Sea over a wide area. Others assert a volcanic origin, and fix the centre of disturbance at the mountain Chokai, as a point of least resistance. Chokai has certainly burst into activity since the shock. It had been quiet for 33 years previously.

TRULY!

Here is a telegram to which little attention has been paid in the East:—

London, Sept. 22, 1894.—A business firm of this city last evening received a cable despatch from Yokohama requesting that a gunboat be ordered to proceed at once to that port to protect the British subjects residing there, whose lives, the despatch declares, are in danger.

The firm to which the despatch was addressed will to-day approach Lord Kimberley, Secretary of State for Foreign Affairs, with reference to the matter.

The sender of the above message to London is well known in this settlement. He is one of the leaders of the little band of anti-Japanese agitators, whose distrust of the Japanese amounts almost, to a mania, and whose persistent attempts to excite foreign opinion against them are admirably calculated to provoke on Japan's part the very sentiment of umbrage whose consequences they profess to apprehend. These men are perfectly well known, we say, and the nature of their moral malady is so fully appreciated that people are beginning to discount very freely their extravagance and their mischievous phantasies. What conceivable cause did there exist on Sept. 21st, when such a telegram was sent, to apprehend danger to foreign life and property in Yokohama? The defeat of the Chinese army at Phyang-yang and that of the Chinese fleet in the Yellow Sea were then engrossing public attention. The Japanese were completely masters of the situation. Could any sane man have honestly believed that there was danger of a Japanese attempt against the lives of foreigners in Yokohama, or that, even supposing any such intention to be entertained by a handful of fanatics, the Japanese Government was not fully competent and thoroughly resolved to protect us? Wilder nonsense was never sent across the wires. Despite the brutal rancour uniformly displayed towards Japan by a section of the foreign local press, the people of this country have preserved a friendly and quiet demeanour, and a foreigner walking in the streets of Yokohama or Tokyo is as safe as he would be in London or Paris. The truth is that not even the accumulated proofs of a century would have any weight with these lunatic agitators. Throughout the whole of the *Meiji* era they have experienced at Japan's hands the most hospitable and kindly treatment. They have pursued their avocations peacefully; they have travelled throughout the length and breadth of the land, seeing only smiling faces and finding only friendly helpfulness; they have been invited time and again to social *réunions* where the ladies and gentlemen of Japan have treated them with graceful and refined hospitality; they have enjoyed at the hands of Japanese officialdom a degree of consideration that men in their station would never have received elsewhere. Has all this awakened in their breasts any appreciative response? Has friendship begotten friendship or forbearance suggested moderation? We say nothing of gratitude. To such men the notion of indebtedness to any Oriental people can not present itself. They are ineffably persuaded that their mere presence here confers a benefit on Japan, and that by earning their own bread they become large creditors of the country that gives it to them. But they might at least understand that it does not lie within the range of human possibility for any nation to wear an unaltered mask of hypocrisy during thirty years, and that if the Japanese have been friendly and genial ever since the Restoration, it is because friendliness and geniality are their normal mood, not because they are unprecedented simulators. But these men, too, have their normal mood. It is implacable, unmollifiable. They resemble morose animals whose unhappy propensity is to feel aggrieved by caresses and to growl the louder the more numerous the sops thrown to them. Their pretence of insecurity has not a shadow of foundation, and they would acknowledge as much did they reason. But they will not reason. They believe everything evil because they want to believe it, and they are blind to everything good because they do not wish to see. Unhappily their capacity for mischief is considerable,

able, for positive ill-will always produces more effect than negative amiability. We denounce them because we wish the Japanese to understand clearly that such men have not the endorsement of foreigners generally, that they constitute a mere fraction of the foreign community, and that if they are suffered to play their game of mischief-making unchecked, it is simply because their restraint being everybody's business is nobody's duty. But they are simply the sick men of the community, and the latter's frame of mind is no more inferable from their delirium than are the fashions of a nation from the rags worn by its mendicants. Some day or other we shall all understand each other better, and it will then be fully recognised that the alarms and suspicions of these agitators were wholly subjective—reflections of their own mood, not consequences of their surroundings.

THE APPLICATION FOR A GUNBOAT.

The extraordinary telegram sent to London by a Yokohama resident asking for a ship-of-war to protect the community against imaginary perils, has of course caused considerable surprise and amusement. Probably among all the foreigners, of whatever sort or condition, resident in Japan there are not a dozen who would sympathise with such wild alarms or endorse such a method of expressing them. There is a British Legation in Tokyo, one of whose chief functions is to watch over the security of British life and property in this country. A telegram sent direct to London by a Yokohama merchant intimating the existence of a state of danger so imminent as to require the immediate presence of armed succour, implies that Her Majesty's Representative is either too careless or too ill-informed to provide duly for the safety of British subjects placed under his charge. As to the other aspects of the incident, they require no further comment.

But the manner in which our article on the subject has been received journalistically is so characteristic as to be worth brief reference. By the Japanese press our criticisms were summarized thus:—First, strong condemnation of the sender of the telegram, ridicule of his silly alarm, and censure of his mischievous methods; secondly, repudiation, on behalf of the foreign residents, of any sympathy with such action, and explanation that the anti-Japanese agitators, among whom the sender of the telegram is a leader, constitute an insignificant minority of the foreign community, the great majority being fully confident in Japanese good-will and thoroughly persuaded of the Japanese Government's competence and resolution to protect them. How, on the other hand, was the same article treated by the foreign local journals? They began by saying that there never existed the smallest reason for sending such a telegram, and therefore they did not believe that it ever was sent. They preferred to think that the telegram was invented for the purpose of creating a mischievous state of feeling between foreigners and Japanese. In short, they described the whole incident as "supremely ridiculous." Had they suffered the matter to rest there, all sensible persons would have approved their mood, though few could have agreed as to the fictitiousness of the telegram. But they did not suffer it to rest there. They had other interests to serve. They saw an opportunity to traduce the *Japan Mail* by the usual device of misrepresentation, and they seized it. The telegram had been used, they cried, "as a text for abusing the community;" the *Mail* had "tilted at the community," "the community had been publicly whipped;" "serious insults had been hurled indiscriminately at the community," and so forth and so on. Never was falsehood rasher. The words of the *Mail* were:—

We denounce these agitators because we wish the Japanese to understand clearly that such men have not the endorsement of foreigners generally, that they constitute a mere fraction of the foreign community, and that if they are suffered to play their game of mischief-making unchecked, it is because their restraint being everybody's business is nobody's duty. But they are simply the sick men

of the community, and the latter's frame of mind is no more inferable from their delirium than are the fashions of a nation from the rags worn by its mendicants.

In the face of such unequivocal and emphatic writing as the above, it is almost inconceivable that any newspaper editor should venture to accuse the *Japan Mail* of "abusing the community," of "publicly whipping it," and of "hurting serious insults at it indiscriminately." One of the chief purposes of the *Mail's* article was to discriminate the community from "the mere fraction" of its number constituting the Nippon-phobists, and to assure the Japanese that the sender of the telegram and his congeners do not more accurately represent the mood of foreigners in general than a beggar's rags represent the sumptuous fashions of the nation to which he belongs. How can that be described as "insulting the community seriously and indiscriminately," as "tilting at the community," as "publicly whipping the community"? The insult to the community lies in quite another direction. It lies in the supposition that grown men in the possession of their senses can be deceived by such miserable falsehoods, and persuaded to think that a newspaper which, on avowed behalf of the community, repudiates a silly act committed by an individual foreigner, is thereby "whipping," "tilting at," and "insulting" the whole body of foreigners in general. We doubt whether the journal-reading public in any other part of the world is credited with so little discernment as in Yokohama. The editors whose *melior* it is to hound the *Japan Mail* do not hesitate to put into its mouth statements diametrically the opposite of those made by it, and to hold it up to public obloquy on lying pretence that it has asserted the very things denied by it in the plainest terms. To such an extent has this system of contemptible chicanery been carried that if a discreditable act committed by any foreigner be condemned in the columns of the *Mail*, an immediate outcry is raised by the local press that foreigners generally have been traduced, as though this community were to be held collectively responsible for every blunder or crime perpetrated by every one of its members. A more debased and unreasonable out come of journalistic rivalry it would be difficult to conceive.

It has been hinted that information as to the sender of the obnoxious telegram reached us from the Japanese Postal Authorities. The suggestion is baseless. Our knowledge was derived from a foreign source in no way connected with the Japanese.

We are asked by vernacular newspapers to divulge the name of the merchant in question. Certainly not. It is entirely conceivable that he acted under the impulse of honest conviction and that he really felt the fear implied by his telegram. He is a very silly person, much to be pitied for his pusillanimity, but he does not deserve, we think, to be publicly pilloried unless malice prepense can be proved against him. If he chooses to proclaim himself and to defend his conduct, he will at least be credited with the courage of his opinions. We do not see that either duty or expediency demands greater explicitness on our part.

ACCIDENTS ON THE SANYO RAILWAY.

Two accidents that happened on the 22nd and 23rd instant on the Sanyo Railway are said to have been entirely due to negligence on the part of Railway officials. The first occurred in connection with an express train from Hiroshima to Kobe. Most of the members and officials of the two Houses of the Diet, together with a number of private individuals that had been to Hiroshima in connexion with the extraordinary session, took their passage by the train which was to leave Hiroshima at 10.45 a.m. Great confusion prevailed in the *Terminus* of that city, but nothing untoward happened until the train reached a station called Kawachi, about 30 miles from Hiroshima, when a most serious mistake was committed by a

Railway official. The master of the Kawachi Station handed a wrong ticket to the conductor of the train leaving for Hiroshima, and it became necessary for him to send an express messenger to the next station to get back the ticket, which should have been given to the express train bound for Kobe. For two hours the passengers, among whom were many peers and members of parliament, were obliged to wait, and the waiting room of the little station presented the appearance of the waiting rooms of the two Houses of the Diet. Another incident that happened on the same line between the two same stations the previous day, was more serious. It appears—we take these particulars from the *Nichi Nichi*—that when a goods train of 30 cars that started from Hiroshima at 1.45 a.m. came within about two miles of Kawachi station, the couplings became unhooked. The conductor, unconscious of what had happened, started the engine. Next moment he became conscious of the incident, but was then so much confused that he stopped the engine. The detached 16 cars clashed against the engine, and many were smashed to pieces.

THE SUPPOSED MEDIATION OF ENGLAND.

It is a very satisfactory state of affairs both for Japan and England, writes the *Fiji Shimpō*, if the sudden change of tone of the leading English papers reflects public opinion, and if the English people, abandoning their mistaken notions as to the importance of an Anglo-Chinese alliance, have come to think favourably of one with Japan. But one thing that causes our contemporary much anxiety is the attitude of some of the British merchants and military or civil functionaries, old residents in the East, who still adhere to their ancient ideas of the importance of a Chinese alliance. As their opinions are not the result of due deliberation, but are simply an outcome of pertinacious adherence to their old mistake and to the jealousy which they entertain of this country, which they consider unduly arrogant, anything they may say of Japan is in itself quite unimportant. Still, these notions become a means of furnishing erroneous information to the English Government and people. Suppose, for instance, that the British Government, misled by these "Oriental rats," as the *Fiji* terms them, should attempt to prematurely interfere with the present war with a view to rescuing China from her distress, and should even threaten to resort to force if Japan declined to comply with the proposed mediation—nothing would be more serious for Japan than such a contingency. What should she do under the circumstances? The *Fiji* replies that Japan must be fully prepared to face such an emergency and must be resolved to obtain the object she had in view at the commencement of the war. When we consider the general tendency of the civilized Powers, we think that there must be one or two whose interests in the Orient are not consistent with those of England, and the only course open to Japan is to enter into a secret alliance with them and to oppose any hostile design on the part of England. The *Fiji* does not think for a moment that there is any probability of such an emergency, and apologizes for indulging in such chimeras, which are alone justified by the difficulty in which Japan at present finds herself.

THE TONG-HAKS.

The Fusan correspondent of the *Asahi* gives some of the latest particulars about the Tong-haks, from which we take the following. Besides the Tong-haks in Kyong-shan-to and Chun-chon-to, whose agitations we have already heard about, another party of the same insurgents has broken out in Chol-la. One division of that mob is marching upon Sōul, while another has devastated Ha-tung in Kyong-shan. Of the latter one portion has returned to Chol-la, but another has proceeded to Fun-gi and appears to be advancing to Kim-ya, which is only 15 miles distant from Fusan. With a view to suppressing the insurgents that have broken

out in Chol-la, Major Imabashi of the Fusan Garrison, despatched a company of soldiers on the 23rd ult. to Ma-san-po, about 28 miles from Fun-ju. The object of this company was to capture the ring-leaders and to pursue the mob as far as the boundary of Chol-la, should they attempt to fly. It was thought imprudent to go further, as the defence of Fusan would in that case become unduly weakened. The division that has begun to move eastward from Chol-la is supposed to consist of real Tong-haks and to be quite distinct from the rioters that are disturbing Kyong-shan. The ring-leaders of the former are said to be Kin-shokei and Kim Manjin. The cause of the fresh outbreak of the Tong-haks is said to be a mistaken notion that the local Governors who have lately greatly improved in their conduct, would consent to lessen the people's burdens should they be menaced with force. The local officers do not attempt to interfere with the lawlessness of the mobs, and this inaction has encouraged them to indulge in their plundering propensities. The soldiers despatched from Fusan reached Ma-san-po on the afternoon of the 23rd ult. and were cordially received by the officers and people of that place, who were apprehending the approach of the Tong-haks from Fun-ji. The *Asahi's* correspondent has not yet told us whether the company has succeeded in fulfilling its mission.

THE "NICHU NICHU" ON CHINA'S SITUATION.

In one of its recent leading articles headed "Is China still determined to fight," the *Nichi Nichi* argues thus:—Although the pro-Chinese English papers published in Shanghai deny the news that China has applied to England to mediate between her and Japan, there is no reason to question its authenticity. It is quite natural to give credence to that rumour when China's signal defeats both on sea and land are taken into consideration. The greatest defect in the Chinese Army and Navy is their lack of concentrating power. About 50 days intervened between the battle of Sōnghwan and that of Phyōng-yang, yet only 20,000 men could be mustered to defend the latter stronghold. Another forty days elapsed before the Japanese could attack Chiu-lien, yet there were less than 20,000 Chinese soldiers stationed there. Defective equipment, an imperfect system of commissariat, the prevalence of speculation among military and naval circles, want of discipline and of the coöperation of the navy—all these are causes of the slow mobilization of the Chinese Army. China's condition is indeed pitiable. It was remarked some time ago in various foreign newspapers that rigour of climate would prove more disastrous to the Japanese Army than to their enemy. The *Nichi Nichi*, however, is inclined to think that instead of obstructing the march of the Japanese troops, the severe cold will incapacitate China from moving her troops beyond the bounds of their respective garrisons. Is China determined, even under such circumstances, to fight to the bitter end, till her 24 provinces are reduced to ashes? Or is she already convinced of her incapacity to hold out any longer? If so, why not declare herself vanquished and sue for peace directly to Japan instead of appealing to a third Power?

JAPAN'S COMMERCE WITH CHINA AND KOREA DURING THE WAR.

In looking over the Customs returns of trade between Japan and China during the war, says the *Hochi Shimbun*, we find that in the month of August the imports were 440,000 *yen* approximately less than those for the corresponding month of last year, while the exports were increased by some 230,000 *yen*. In September both the imports and exports fell, the former by 400,000 *yen* and the latter by 110,000 *yen* in round numbers. With regard to the commerce with Hong-kong, however, there was a contrary result, the imports in September being 154,000

yen, and that in imports about 288,000 *yen*, in all 442,000 *yen*. On investigating the various items that constitute commerce between Japan and China, it is found that the most perceptible increase has been effected in coal, copper, matches, and some marine products. But as those items are chiefly exported to the Straits Settlements and their vicinity as well as to Europe, the *Hochi* thinks that only the exports for China have suffered by the war. That is not the case with the Japanese-Korean commerce, where the result is thus far decidedly favourable. The following is a table of the exports and imports for the four months of this year ending with September, and the corresponding months of last year:—

	EXPORTS.			
	June.	July.	Aug.	Sept.
This year	170,304	149,277	295,692	302,837
Last year	106,205	70,913	129,100	125,504

	IMPORTS.			
	June.	July.	Aug.	Sept.
This year	396,166	499,270	209,826	40,854
Last year	141,416	160,660	147,127	78,657

It is will thus be seen that the commerce between Japan and Korea has shown a marked improvement this year on the corresponding period of last year, and though that is no doubt due in part to the increase of Japanese in Korea, it is mainly attributable to the fact of Japanese merchants having displaced their Chinese rivals in the Korean market. The *Keisai* says that as the restrictions imposed on Japanese in Korea by an Imperial Ordinance were removed by the Diet at its last extraordinary session—a change which was effected by Mr. Taguchi, the editor of the *Keisai* and a Member of Parliament—Japanese merchants will now enjoy greater facilities in their commerce with Korea.

LAWS AND ORDINANCES.

The following were issued on the 23rd October:—

We, with the Consent of the Imperial Diet, hereby give Our sanction to the present Laws relating to a Special system of Accounts in the matter of Extraordinary War Expenditures, and order them to be promulgated.

[His Imperial Majesty's Sign Manual.]

(Great Seal.)

Dated 25th Oct., of the 27th year of Meiji.

Countersigned

Count ITO HIROBUMI,

Minister President of State.

Count SAIGŌ TSUKUMICHI,

Minister of War and the Navy.

WATANABE KUNITAKE,

Minister of Finance.

LAW No. XXIV.

Art. I.—Accounts of Extraordinary War Expenses relating to the war in which the Empire is involved with China, shall be set apart from Accounts of Ordinary Revenues and Expenditures, and shall be specially adjusted.

Art. II.—In the case of Receipts and Disbursements pertaining to Extraordinary War Expenses, the period extending from June 1st of the 27th year of Meiji to the conclusion of the war shall be considered as one fiscal year.

LAW No. XXV.

For the purpose of meeting War Expenses in connection with the war in which the country is involved with China, a sum not exceeding 100,000,000 *yen* may be raised gradually by floating Public Loans or by other process of borrowing, at rates of interest under 6 per cent. *per annum*.

Note.—All matters connected with the floating of Public loans or borrowing, agreements relating thereto, periods of redemption, and other important points, shall be determined by the Minister of Finance.

ESTIMATES OF EXTRAORDINARY WAR EXPENSES.

The total Receipts and Disbursements relating to Extraordinary War Expenses shall be fixed at 150,000,000 *yen*, and the relative distribution shall be in accordance with the following Special Estimates:—

Receipts	150,000,000 <i>yen</i> .
Disbursements	150,000,000 <i>yen</i> .

IMPERIAL ORDINANCE No. CLXXXIV.

Imperial Ordinance No. CXXXV, issued in the 27th year of Meiji, shall become null and void on and from this day. (The Ordinance in question placed restrictions upon the going of Japanese to Korea.)

A NEW FIELD FOR JAPANESE EMIGRATION.

THE remarkable success that has attended Japanese emigration to Hawaii may well justify the tendency this nation is now developing for enterprise of that nature. It is not often that pioneers succeed. Their lot is generally to dare much and do little. In some branches of human effort the original conception counts for everything: the praise falls to it and so does the profit. But in the majority of cases those that lead the way seldom effect anything on their own account: their toil is expended upon the setting up of landmarks that serve to guide their successors and to record their own unrewarded courage. Japanese emigration to Hawaii, however, was an exception. Though an initial attempt, success waited on it from the first. It has brought wealth to the country, provided a valuable outlet for the congested labour-market, and given a powerful spur to the spirit of enterprise. There can be no doubt, we think, that these results are due to the foresight, shrewdness and excellent organizing ability of Mr. R. IRWIN, no less than to the liberality and prudence of the Japanese Government. If the Japanese nation ever erects a monument to emigration, Mr. IRWIN'S name ought to be blazoned on the pedestal. Following in the footsteps of the Hawaiian effort there have been smaller but apparently promising undertakings—Queensland, Mexico, and so forth,—and now we have to note another similar enterprise. On the 17th instant there sailed from Kobe 498 emigrants. They were all of the male sex, and had been carefully selected from Hiroshima, Yamaguchi, and Wakayama. The steamer that carried them was the *Sendai Maru*, a vessel belonging to the Nippon Yusen Kaisha's fleet; they were accompanied by three inspectors and one doctor, and their destination was the French West Indian island of Guadaloupe. Sugar planting is there carried on extensively, and the necessary labour had hitherto been obtained from British India. But a veto imposed by HER MAJESTY'S Government interrupted the supply from that source, and although the interdiction was withdrawn at the beginning of this year, the planters of Guadaloupe thought that they might find better stuff for their purpose than the comparatively indolent and apathetic Lascar or Malay. Probably the reputation for industry and orderliness won by the Japanese in Hawaii turned attention in this direction. At all events, the Credit Foncier sent to Tokyo, some months ago, its Colonial Agent, Mr. LUTSCHER, a man evidently well esteemed in Paris business circles, since he was Special Commissioner for the Comptoir d'Escompte at the Chicago World's Fair. Mr. LUTSCHER managed matters in this country with admirable tact and assiduity.

outbreak of war between Japan and China might well have interrupted his scheme, but he held steadily to his purpose and was finally enabled to ship 498 Japanese, so carefully chosen that there is little fear of their failing to give satisfaction in Guadaloupe. The terms secured to the emigrants are excellent, and proceeding under such auspices their welfare and general good treatment are assured. An interesting feature of the affair is the fact that Japan has leisure for efforts of this kind while her fight with China is at its height, and that she ventures to send one of her steamers past the shores of Formosa and *via* Singapore through the Suez canal. The *Sendai Maru* will, we believe, be the first Japanese merchant vessel that ever went through the Canal, and the appearance of the Flag of the Rising Sun in the West Indies just now, when the world is eagerly discussing the duel between the two empires, will be a picturesque and significant event, showing that Japan's energies are not at all paralysed or her spirit of enterprise chilled by the large contract of fighting that she has now on hand.

MR. W. E. GLADSTONE, M.P., ON THE ATONEMENT.

IN the *Nineteenth Century* for September Mr. GLADSTONE discusses the Christian doctrine of the Atonement. He was started on this train of thought by reading the recently published autobiography of Mrs. BESANT, a work in which she traces her progress through various phases of belief and unbelief, from the outset as an Evangelical Christian to the close (if it be indeed the close) as a Theosophist. She tells us that the decline of her religious faith resulted from a careful and thorough examination of certain dogmas, of which the most important, from an exclusively Christian point of view, is the following:—"The nature of the Atonement of CHRIST, and the justice of GOD in accepting a vicarious sacrifice from CHRIST and a vicarious righteousness from the sinner." To the view of the Atonement examined by Mrs. BESANT Mr. GLADSTONE takes exception. In addition to the obscurity that, from the nature of the problems involved, invariably attaches to theological discussions, we find in this article that cloudiness of thought and expression so familiar to all readers of Mr. GLADSTONE'S essays on these subjects. But it is worth while taking some trouble to discover his meaning, for the views on so important a topic of so powerful and enthusiastic a champion of the English Church, of the man who is one of the most weighty of the living representatives and exponents of this form of Christianity, cannot fail to be interesting. We shall endeavour, therefore, to summarise his argument in a form in which it will be easily understood. There are, he says, two views of the Atonement, a "forensic" view and an

"ethical" view. The forensic view is simply that man is liable to certain penalties in consequence of certain criminal acts; but that, in accordance with a legal principle which, though not recognized by modern western jurisprudence, is familiar to students of Chinese law, and which is also exemplified in the ancient Hebrew rite of the sending-forth of the scape-goat, the Great Judge has permitted mankind to expiate its guilt by proxy, and all men were enabled to escape punishment through the suffering of the sinless CHRIST. This view is the one examined and rejected by Mrs. BESANT, and it is rejected also by Mr. GLADSTONE, for it is, he admits, inconsistent with our conception of the divine justice. The fact that the sacrifice was a willing one on the part of CHRIST "in no way clears the character of the ALMIGHTY as the universal Governor of the world." If, in one of our courts, the son of a murdered man should, after the condemnation of the murderer, step forward and express his willingness to expiate the crime in his own person, we can imagine what would be the answer of the Judge. He would tell us that it would be unjust to allow the innocent to suffer for the guilty, and that (to quote the words of Mr. GLADSTONE) "injustice is not the less injustice because there may be a willing submission to it." But this forensic view of the Atonement, though it has often, says Mr. GLADSTONE, been put forward by individual indiscreet teachers of Christianity, has never been a part of the authoritative teaching of the Church. The essential aspect of the case is the ethical one.

This ethical aspect is indeed implied in the etymological meaning of the word atonement—the at-one-ment, the act by means of which man became one with GOD. How completely the forensic view has dominated in the average mind is clearly shown by the present meaning of the verb "to atone." But, says Mr. GLADSTONE, there is in Scripture, in Christianity, nothing forensic which is not also ethical; these are two distinct but not clashing forms of expressing the same thing; one of them, it may be said, expressing it as law, the other as command; one as justice, the other as will; it is impossible, if we believe in GOD at all, to sever these two ideas one from another. Mr. GLADSTONE then proceeds to set forth the essence of the ethical view, not, as he says, with any pretensions to authority, but, he believes, in conformity with the established doctrine of Scripture and the Church at large. (Mr. GLADSTONE nowhere distinctly states what he means by "Christianity," what by the "Christian Church;" but as far as we can judge by his general tone, for the purposes of this article he takes a liberal and comprehensive view of Christianity (broad Christianity). The ethical view is, briefly, this: We are born into this world

in a condition of sin. "This fault of nature has not abolished freedom of the will, but it has caused a bias towards the wrong." But by a proper direction of the will through the use of Divine discipline and self-denial, the excellence of our nature before it was impaired by sin may be recovered. CHRIST has at the cost of great suffering, established a type of humanity raised to absolute perfection. Through the teaching, of CHRIST and through the help of the Church based on those teachings, men may be recast according to the type offered by CHRIST, and united one by one with his own perfect humanity. This perfect type of humanity could not have been set forth by CHRIST without His suffering; the setting-forth of this perfect type, with its accompanying provision of the means by which man is to be reformed according to this type, form the essentials of a moral redemption, of relief from evil as well as pain. Herein lies the at-one-ment between man and GOD. CHRIST'S suffering without any merit of ours, and in spite of our guilt, is thus the means of our recovery and sanctification. "And His suffering is truly vicarious; for if He had not thus suffered on our behalf we must have suffered in our own helpless guilt." This appears to be a system purely and absolutely ethical in its basis; such vicarious suffering thus viewed implies no disparagement, even in the smallest particulars, to the justice and righteousness of GOD. The pretexts for impugning the Divine character in connexion with the Redemption of man are based upon an artificial separation of the two aspects of the Atonement; the forensic, which dwells on the vicarious efficacy of CHRIST'S sufferings in relieving mankind from the consequences of in born sin; and the ethical, which dwells on the moral consequences wrought in the sinner by the redeeming power of CHRIST. "Take away this unnatural severance, and the objections fall to the ground."

SOME EFFECTS OF FOREIGN LITERATURE IN JAPAN.

IT has often been said that if a Japanese of forty years ago, unacquainted with the tremendous changes that have taken place in this Empire, should suddenly return to Tokyo he would neither recognise the city nor be able to understand the speech of the people. Not that the Japanese tongue has so greatly changed in that period, but because it has adopted a host of new ideas and consequently novel expressions that would be wholly unintelligible to an old-timer. The difference between the Japan of the present day and that of the beginning of the Meiji era, for instance, is literally world-wide. Externally these changes are apparent even to the least critical observer; but even in those realms where one would expect very little alteration, in

literature, and the structure of the language, there are almost equally remarkable innovations. A great deal of this is due, in so far as the written speech of the people is concerned, to the introduction and wholesale application of the convenient and rapid typography of the Occident. It was not until 1874 that the first daily newspaper made its appearance—the *Tokyo-Yokohama Mainichi Shinbun*—and a comparison of this sheet with, say, the *Mainichi Shinbun* of to-day shows almost as great an advance as that from the first *Gazette* of Venice to the *London Times*. Moreover, closer inspection reveals the adoption or adaptation of a number of thoroughly European signs. We meet with the interrogation point and exclamation mark, and this despite the fact that the Japanese interrogative particle *ka* really renders the employment of any question sign unnecessary. Instead of quotation marks, or inverted commas, we find a new symbol expressive of quotation: two small angles (「」) placed at the upper right and lower left-hand corners of the words cited. The parenthesis, formerly wholly unknown, is also in current use. Words are rendered emphatic or italicized by having circles or black dots placed to the right of the ideographs; "leaders" (.....) are often met with, as is also the dash (—). The curious German fashion of placing both an interrogation point and an exclamation mark at the end of certain phrases is also occasionally to be noted. But more than this, and most important of all, is the system of punctuation now finally adopted. It is still in a transition stage and leaves much to be desired, yet there is a well-developed comma, sometimes also used in place of a colon or semicolon, and a period or full stop, which generally has the form of a circle, while the comma is a pear-shaped dot placed below and at the right of an ideograph.

In the magazines, particularly those devoted to the publication of serial stories or novelettes, we meet with other and equally welcome innovations. The sentences are no longer strung together. The strength and force of the paragraph have become thoroughly appreciated, so that it is now adopted even in the daily press. In magazines of a somewhat higher class of light literature, such as the *Hyak' Kwa En*, or "Garden of a Hundred Flowers," conversations are written and printed exactly as in English books, i.e., each question or answer stands separate. The only thing strange to Western eyes is that an ideograph expressing the name or part of the name of the speaker almost invariably precedes the speech, thus often obviating the use of the Japanese equivalent for our inverted commas. Still more remarkable is it to find that in several instances attempts are made to print and read books from the left to the right, as with us, instead of from right to left, as is the time-honoured custom of

nearly every Asiatic nation. Illustrations of a much higher type than formerly often accompany the text. These are generally wanting in perspective and give the foreign critic a sense of incompleteness and disappointment; yet the blocks are well and cleanly cut, while there is not the least suggestion of any immoral idea, everything of the kind being rigidly expunged.

In the text itself, the written language, we find several other noteworthy innovations. Pronouns are of very much more frequent use than formerly, while honorifics are gradually going out of fashion. The word *kare* is now a real pronoun of the third person, the only true pronoun in the Japanese language. It has a plural form, *karera*, and both singular and plural are used even in ordinary colloquial. The word *aru* is now employed very often in the sense of "some," for which there used to be no exact Japanese equivalent. In older texts *aru* rarely meant anything but "certain," in the pronominal adjective sense. Again, a sharp distinction is no longer made between such verbal forms as *yukishi* ("went") and *yukitari* ("have gone"). Great confusion is still evident in the employment of the past tenses of verbs, and it is plain that it will take years yet for the language to adopt any actual distinction between recent and distant past. Both are confounded in the modern Japanese idiom. A certain precision of speech and style is nevertheless noticeable; redundancy of phrase, somewhat after the style of the English euphuists, is now out of date. On the whole, the changes in this department of Japanese thought are both great and vital. They have not been adopted all at the same time: each year sees some novelty, and the alteration is invariably for the better. The effect of foreign literature on Japan is to remodel the whole language, both written and spoken, and it is one for which the Japanese have reason to be grateful as, particularly in the typographical art, it has resulted in greater clearness, more readiness of comprehension, and a decidedly better systematised mode of expressing thought.

NEWS AND NEWSMONGERS.

THERE has been a great deal of very tall talk about the falsehoods circulated by the Chinese and Japanese in the present war, but we have more than once pointed out that whatever may have been the sources of the false intelligence laid before the foreign public, foreign newsagents and foreign correspondents were the immediate vehicles of its ventilation. There can not be the slightest doubt on that point. The telegrams sent to London and published by all the leading journals do not emanate from Chinese or Japanese: they emanate from British subjects who, as a matter of business or for whatever reason, keep the press supplied with news.

news it is. Nine-tenths of it is either quite incorrect or greatly exaggerated. Up to the time of the battle of Phyōng-yang Shanghai easily carried off the palm as a factory of canards. So ludicrously remote from the truth were its various enunciations that the term "Shanghai" has come to be generically applied to falsehoods generally. The correspondent of the *North China Daily News* was, in great part, responsible. We think it would be difficult to discover among all the stories penned by him a single one not tainted with untruth. Doubtless his intentions have been honest, but it certainly was unfortunate that a person with such a phenomenal appetite for "gup," and such deeply rooted prejudices, should have had free access to the columns of an important journal. To attempt any correction of the innumerable canards wired to London would be a big task. We may, however, notice one that appears in the last batch. It is an allegation sent from Wei-hai-wei that on the very morning of the first naval fight, off Phung-do "Japanese troops arrived from Sōul and attacked the Chinese camp at A-san," and that "these combined operations by sea and land were obviously well concerted." A mistake of date is not in itself very serious. But in this case grave inferences are involved. The claim made by the Japanese is that the war was precipitated by China's persistence in sending troops to Korea after the rebellion had been quelled, and after she had been officially warned that any further despatch of soldiers would be regarded as a belligerent act, since their object must be armed opposition to Japan. Obviously that claim would be seriously vitiated could it be established that the Japanese forces attacked the Chinese camp at A-san before tangible evidence was forthcoming that reinforcements had been sent by China. Hence the date of the attack assumes special importance. It was not July 25th but July 29th. To be quite accurate, the attack on A-san itself occurred on July 30th, its outpost, Sōng-hwan, having been stormed on the 29th. But we need not concern ourselves about that distinction. It suffices to note that the Chinese position was attacked on July 29th, whereas the naval fight took place on July 25th. The Chinese assert that the Japanese fired first; the Japanese that the Chinese began the cannonade. Be that as it may, the unquestionable fact is before us that the Chinese were engaged transporting troops to A-san after they had been distinctly warned of the consequences of any such operation, and that one of their transports, refusing to surrender, was sunk. Whichever side fired first, the onus rests on the Chinese of having deliberately committed an act which Japan had declared her resolve to regard as a belligerent operation. It would have been criminal had Japan waited to wait tamely while Chinese troops, un-

questionably destined to be used against herself, were carried in detachments to a convenient position for attacking.

But we have digressed somewhat from the question of false telegrams. What we have to note is that whereas agents and correspondents in China had a virtual monopoly of falsehood and exaggeration up to the time of the battle of Phyōng-yang, correspondents and agents in Korea have fully vindicated their inventive ability since that event. Really admirable in its audacity is the embroidery done by the representatives of the Central News Agency in Sōul and Phyōng-yang. The Sōul man is not a circumstance upon his Phyōng-yang confrère, but still he has a fine genius. Here are some of his facts:—

Sōul, September 16th.
Meantime the two flanking columns drew a cordon round the Chinese forces. At 3 o'clock in the morning the attack was delivered simultaneously and with admirable precision.

The Chinese lines, which were so strong in front, were found comparatively weak in the rear. The unsuspecting Chinamen, taken completely by surprise, fell into panic and were cut down by hundreds. They were surrounded, and at every point where they sought safety in flight they met the foe.

Some of Li Hung-chang's European-drilled troops stood their ground to the last and were cut down to a man.

The Pong-san column, swarming over the damaged defences in the front, completed the discomfiture of the Chinese. Half an hour after the night attack opened the splendid position of Ping-yang was in the possession of the Japanese.

The Japanese victory was brilliant and complete. They captured the whole of the immense quantities of stores, provisions, arms, and ammunition in the camp. Hundreds of colours are among the spoils.

That is embroidery of an advanced type. Phyōng-yang taken by a night attack at 3.30 a.m.; the unsuspecting Chinamen cut down by hundreds and meeting the foe wherever they sought to escape; the Pong-san (?) column swarming over the damaged defences in the front; the capture of immense quantities of stores, provisions, arms, and ammunition, and hundreds of colours—is it not a magnificent picture of the imagination? But the Phyōng-yang MUNCHAUSEN has a more vivid palette. Here is some of his work:—

Ping-yang, September 17.
Every hour brings fresh evidence of the crushing character of the Chinese defeat. The first accounts of the killed, wounded, and prisoners slightly under-estimated the facts. The total Chinese loss from these causes will exceed 17,000. Very few indeed of the Chinamen could have escaped. Troopers continue to bring in unarmed and dejected fugitives.

The unwounded prisoners were paraded this morning. The total number is 14,500, but probably a few hundreds more will yet be brought in. A great many soldiers were founded hiding in the city ruins.

Besides General Tso Fonk-wai, the great Manchurian leader, the Japanese have succeeded in taking as prisoners General Tso Pan-wei, General Wei Jink-wei, and General Sei Kin-lin. This practically comprises the effective Chinese Staff.

The scene in the city is one of great animation. The captured rifles are packed in huge stacks in the square, the vast stores have also been unearthed and are being utilized where serviceable.

The prisoners are to be sent to Japan in batches of one thousand, carefully guarded. The majority will probably be embarked in the transports in the Ping-Yang Inlet. The prisoners are as well treated as circumstances will allow. They have been warned against making any attempt to escape.

The trouble of it is that all these immense lies will presently be put down to Japanese sources, whereas the Japanese

are wholly innocent of them. Of course we must assume that the Phyōng-yang and Sōul representatives of the Central News Agency and the Korean correspondent of the *North-China Daily News* are conscientious persons who would be horrified to know that they had circulated monstrous falsehoods. All that can be said of them with propriety is that heaven has afflicted them with a minimum of discernment and a maximum of credulity.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MR. J. L. ATKINSON.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I not address some words to the Rev. J. L. Atkinson through your columns? I read the *Mail's* criticism of the Rev. Mr. Atkinson's paper some time ago with no particular attention. A letter of his appeared in the *Mail* to-day. If I remember rightly, the Rev. Mr. Atkinson seems to appeal to the Authorities, complaining that some native Christians are being discriminated against in the public school service and in some departments of the national service. He at least implies that such a discrimination is against the Japanese Constitution, which permits freedom of religion "within limits not prejudicial to peace and order or antagonistic to the duties of a subject" (not exactly "within the limits of law"). The charge is by no means a slight one. The matter should at once be investigated by the proper authority. I regret that the reverend gentleman hesitates to mention the sources of information about a matter so grave. Certainly he could not bring such a charge against the government because some petty officers professing Christianity were discriminated against by their superiors individually. That would merely be a matter of individual conduct, which, as the *Japan Mail* pointed out, would legally be dealt with by the Authorities as soon as known. In a case of parliamentary election the matter is different. It is the individual will that decides one's choice. If A did not elect B because B was a Christian, A could not be complained of. A, as well as any other, is guaranteed by the Constitution perfect liberty in choosing any one he has a mind to. He may consider the political and religious views as well as the industrial position held by those from whom he is to make his choice. He may dislike to elect a bigoted Christian or a Buddhist. It is all within his individual rights. To limit his freedom would be an impossibility, beside being a tyrannical measure without doubt.

As to the teachers in schools, the Rev. Mr. Atkinson says that some teachers professing Christianity have been discriminated against to such an extent that they could not serve there. I must call his attention first to how many foreign teachers and professors professing Christianity have been brought over to Japan to teach. Is there any basis to say that they were discriminated against merely because they professed Christianity? I have unfortunately or fortunately, not yet heard in this country that native teachers were dismissed from public school service on account of their being Christians. Of course the reverend gentleman knows that in Japan no religious service is mixed with the school system, as is the case in some Christian countries, the U.S., for instance, which I am inclined to consider his native country. The exercises in the Japanese public schools are not begun with prayers. The reverend gentleman must also be aware that we have no such "freedom of religion" as to compel the pupils to attend a prayer in our public schools. I am not now discussing the merits of one system or the other. I am merely showing how the Japanese school system differs from that of Christendom. Religions have nothing to do with the public schools in Japan. There may be Christian pupils; there may be Buddhist pupils; there may be others who are neither; they all study the same subjects side by side with consistency; teachers have nothing to do with religion. Neither is there any law disqualifying Christians from being teachers. If they were covertly discriminated against by a master of the school on account of their professing Christianity but publicly on some other charge, the case is beyond remedy so long as the charge is not a reasonable one. I am far from maintaining that there are no

unfair dealings towards the Christians in this country. The Japanese have their own doctrines more or less definite, and are not so weak-minded as to throw them off easily without grasping a new faith. It is certainly natural among such a people that persons believing in certain doctrines should discriminate against others who maintain that those doctrines are false and even pernicious. It is neither they nor the Government that are to be blamed; it is their doctrine that is to be corrected if wrong. If the Rev. Mr. Atkinson is an active missionary, it is surely little fitting for him to sit down and complain in a newspaper of unfair dealings against Christians. That is just exactly where his efforts are needed—to convince them of the truth of Christianity.

I must take the chance to offer my sincere thanks to the reverend gentleman for his warm friendliness towards and deep interest in us, the Japanese, which he professes. I am also aware of his zeal in coming over to the far East, abandoning the comfort of his own home to teach Christianity to the Japanese. I respectfully add one word of advice to him, however, that he might well pay also a little attention to the religious state of his own native country. His native country surely deserves and needs the zeal of the Rev. Mr. Atkinson in the matter of freedom of conscience as well as other religious states. In a country where the name of "heathen" is applied to any one not professing the same religion with themselves, and where still prevail certain religious prejudices as in the ignorant period of the Middle Ages, there can hardly be said to exist "freedom of conscience." To the Christians it is all very well that Christianity is favoured against other religions and doctrines. But looking from a more universal point of view, that state of affairs can hardly be called "freedom of conscience."

Sincerely yours,

A. B. C.

Tokyo, October 25th, 1894.

A PROTEST.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The bit of news published in Saturday's issue of the *Japan Mail* under the caption of "Truly!" has excited feelings of considerable excitement and resentment among a large portion of the Tokyo foreign community. It is simply incredible that any one should have taken the step adopted by the member of the firm to which reference is made, and all those to whom I have spoken repudiate such an action in the strongest terms. That wholly baseless terrorist views are held by a small section of the Yokohama foreign residents is well-known and regretted; but no words are too forcible to condemn the mania—no longer a harmless one—which could find the presence of a British gunboat necessary in Yokohama for the protection of British interests, and thus lead to the sending of a telegram calculated to arouse absolutely uncalled-for fears and cast discredit on the Japanese nation. Foreign interests, British in especial, are as carefully looked after here as are those of the nation's own; no danger can possibly be apprehended to foreigners in Japan, or else surely those who make it their one duty to decry this country and gloat over the prospect of its defeat would surely have been silenced before this. That such a request should have been preferred to the British Government is indicative of criminal weak-mindedness on the part of the sender, and in saying this I only echo the opinion of the foreigners resident in the capital. Enclosing my card, I remain,

Yours, etc.,

W.

Tokyo, October 28th, 1894.

"JOHN BROWN AND THE NEGRO CHILD."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The anecdote of John Brown and the negro infant, referred by the Rev. M. L. Gordon in this day's *Mail*, has no real foundation, though for a long time it was accepted as true, and is perhaps still believed by many. It has been repeated, undoubtedly in good faith, by numerous authors who claim historical accuracy for their works, and has been illustrated by artists of high repute. It is in such harmonious accord with the authentic incidents of the devoted abolitionist's last days, that the popular imagination cherishes it, notwithstanding the conclusive evidence of its fictitious character.

In America the origin of the story was attributed to me, for the reason that I acted as correspondent of the newspaper in which it first appeared (the *New York Tribune*), during the eventful months which followed the seizure of Harper's Ferry, and supplied the greater part of the material from which the later records of John

Brown's death have been compiled. But I never even heard of the alleged incident until long after the tragedy was over. I remained at my post in Charleston, knowing nothing of what was published in the *Tribune*, which, naturally, did not penetrate Virginia at that period. While the general excitement was at its highest point, the tale was carried to the Editor by a trustworthy person, who stated that he had heard it from what he considered good authority in the neighbourhood of Charleston, through which he had just passed. It was put in proper shape for publication (by Mr. Edward Underhill, I think), and was printed at once,—precisely in what form I cannot say, as I never saw it in that paper. On learning its purport, however, I took pains to show that, however *ben trovato* it might appear, it was certainly not true; but it had already secured a hold upon public confidence, and defied contradiction until years had gone by, when attention was again drawn to the subject by the exhibition of a painting in which the supposed scene was portrayed. Then a minute investigation was made, and testimony collected from those who had been in close attendance upon the prisoner, demonstrating that none of the spectators came near him as he was led to the scaffold, and that he could not possibly have given the farewell kiss as narrated. These are the facts; but the fable may outlive them, and keep its place in history more firmly than the actual truth.

Yours, etc.,

E. H. HOUSE.

Tokyo, October 24th, 1894.

A GUNBOAT WANTED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read to-day with not a little satisfaction, the story of the man who wanted, and probably still wants, a gunboat to protect him and his valuable life, and therefore sent a cable despatch to London. He certainly must be an uncommonly cautious person; it may, however, well be questioned, if it would not have been much more cautious in him if he had repaired to London himself instead of sending for a gunboat, considering that, however readily and speedily his modest and natural request might have been granted by the British Foreign Office, the despatching of the desired vehicle would probably have taken a period much longer than his immediate safety seems to have been compatible with. But never too late to mend—if he is still alive and in Yokohama, let us hope that he will avail himself of the next opportunity to bring himself into safety, for instance by the P. M. steamer leaving for America on Tuesday. Really there are things which cannot be done in too great a hurry, if he would therefore leave us already on Monday by C.P.R. Co. (for Hongkong), it would perhaps be still better. At all events, there would be more taste in doing so than in indulging in such curious, not to say silly, and moreover rather expensive jokes as that telegram was. On the other hand, it cannot be denied that there is something very refreshing in its very silliness, which must have done its author much good, the weather on September 21st having been a rather hot day as far as I remember.

Yours truly,

PERICULUM IN MORA.

October 27th, 1894.

THE MAILS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring once more to the subject of mail delivery in Tokyo, I desire to say that the time of the *Oceanic's* arrival at Yokohama was reported in the *Mail* to be 6.57 p.m., on the 15th instant. Mr. Sauta, writing on behalf of the Post Office, asserts that the real hour of arrival was 7.40 a.m. on the 16th. Accepting this and all other statements by Mr. Sauta as accurate, it appears that the mail-bags addressed directly to the Tokyo office did not reach this city until a little before noon on the 16th,—four hours after the ship entered port. As a general rule, I believe, the mails are taken from each steamer the moment she reaches her anchorage. Making liberal allowances, they should surely have been deposited in the Yokohama office before 9 a.m., and the carriage from Yokohama could not occupy more than an hour and a half. Taking into consideration the forty minute's detention of a train, which Mr. Sauta speaks of, a considerable interval remains unaccounted for.

Mr. Sauta tells us that "the processes necessitated by the Postal Regulations took about three and a half hours," and the matter was ready for distribution at 3.30 p.m. There was, however, no regular delivery until 4.05 p.m., when the letters were sent forth to their destination. No one, I presume, will dispute what he says regarding the three and a half hours required for preparation in

Tokyo. I am aware that the Post Office undertakes a difficult task, and one to which, perhaps, it ought not to be held strictly liable, in translating the numerous addresses, but I think it will surprise everybody to hear that so long a time is necessary. I venture to say that foreigners have not hitherto supposed that any such delay was to be expected. If, as Mr. Sauta says, it cannot be avoided, no complaint on that score is warranted.

But I may be allowed to suggest that it cannot always happen that the train bringing the foreign mail to Tokyo is late forty minutes; nor can a space of thirty-five minutes always intervene between the period at which the translating of addresses ends and the time when the carriers start on the delivery. Yet for at least two months past no American letters have reached their address in this city until nine or ten hours after the bags were taken from the steamer. The delay is invariable. It is noticeable that, in every instance, newspapers are carried to the *Japan Mail*, columns taken from them are put in type; and the edition is printed, sent to Tokyo and distributed, three or four hours before any mail matter is delivered by the Tokyo carriers.

Complaints are no more agreeable to those who make them than to those against whom they are directed, but they sometimes become needful. If Benjamin Franklin did not say that fault-finding is the mother of progress, it is one of the things that he probably forgot to say. I hope Mr. Sauta will not take it unkindly if I remark that the last mail from the United States, which came after the publication of my first letter, was delivered more promptly, by some hours, than any proceeding mail of the past eight weeks. And I am sure he would, if called upon, do me the credit to acknowledge that my original statement was, under the circumstances, an extremely moderate one.

H.

Tokyo, October 25th, 1894.

METHODIST UNION IN JAPAN.

The Christian Church in Japan, especially the Protestant branch of it, presents to some a spectacle of about forty sects or factions, more or less hostile, and each spending much time and no little misapplied energy, in striving to perpetuate its particular branch of a foreign church. Of course it is assumed these factions are as actively engaged in drawing adherents from the ranks of the others as in making new converts. The whole attempt is pronounced a miserable fiasco; and the wonder is, why the inflated foreign churches continue to support such an abortive effort.

The real facts, however, are far otherwise. The world may be challenged to present in any other sphere of activity forty great bodies of men working side by side, exhausting every resource to accomplish the same end, and yet all done without contention or friction. And to suppose for a moment that these branches of the Christian Church are trying and expecting to build up Japanese sections of their own home churches which shall remain in organic union therewith, is to jump at conclusions without any real knowledge of the situation.

The work of the foreign church is purely and solely to lay a foundation, upon which the Japanese must build if Christianity ever becomes more than a name in the history of Japan. The Bible, Christian doctrines, systems of church government, etc., are the basal rocks in this foundation that will forever remain to bear witness to the work of the foreign church in Japan during the first half century after the opening of the country.

The development of self-support, the creation of an efficient ministry, the establishment of permanent Christian schools and other benevolent institutions, the production of a Christian literature, are some of the gigantic labours now occupying the thought and calling forth the united energy of both foreign and Japanese workers.

The dream of a single, united Japanese Church has doubtless forever passed away. Certain peculiarities of doctrine and different forms of church government will produce the *nuclei* to which the great body of believers will become attracted, thereby forming permanent branches of the Christian Church in Japan.

In full recognition of the great advantages of more united effort, upon finding a general desire for co-operation, especially on educational lines, Bishop Ninde of the Methodist Episcopal Church, then in Japan, invited those engaged in educational work, and others, both Japanese and foreigners, in the five different branches of the Methodist Church, to an informal meeting in Tokyo, for general discussion of this and allied subjects, on the twenty-third of August. Bishop Galloway, of the Methodist Episcopal Church, South, then also on an episcopal visit to Japan, entered heartily into the scheme, and notwith-

standing the August heat, an enthusiastic company of nearly thirty came from Kobe, Karuizawa, Hakone, Nikko, and other summer resorts to attend the meeting. The minutes of the meeting will soon be published for those specially interested, and space need not be taken to state what was said and done. But the following Resolutions, unanimously adopted, will be of general interest:—

Resolved:—That it is the sense of this informal meeting, composed of representatives of the several Methodist bodies engaged in Mission work in Japan, that with a view to the economising of men and money, and to the conservation of the great interests of our common Methodism in Japan, we favour a union of the Educational interests of the various Methodist Churches, on a basis satisfactory to the several Conferences and Missions concerned.

Resolved:—That this expression of the informal Conference be presented to the several Conferences and Missions at their next annual sessions, and that they be requested to take official action thereon, and to appoint members of a committee (to be composed of one from each Japanese, and one foreign Missionary from each Church), to formulate a scheme and basis of union for such work; and also to consider the advisability of uniting the publishing interests, and so forwarding other church work as to build up more speedily and surely one Methodism in Japan.

At the close of the meeting it was felt that a step had been taken in the direction of that union which ultimately will be effected. It takes years however to bring about such unions; and it is well in these matters to make haste slowly. Each one of these churches has its own peculiar methods of work, and there is a wide difference in polity. These differences should be allowed time to demonstrate fully which are best adapted to their new environment, so that when a union is effected it can be done by intelligently combining those features of each that have proven themselves worthy of being perpetuated by the experience of years.

There are other reasons why these churches can well afford to take time to consummate this union into an independent church. Christian doctrine is far from having reached a settled state; and the Methodist Church that a hundred years ago was regarded as almost heretical in its liberal tendencies, without having shifted its ground in any material degree, must now be regarded as one of the chief bulwarks against the "liberal" tendencies of the present. This healthy influence can be maintained much more efficiently for some time to come by the methods now employed, than it could in an independent church.

Again, the Methodist Church ensures to every pastor and member an impartial trial in case of arraignment. Such a proceeding as resulted recently in the summary expulsion of a Pastor from the ministry of a sister Church by a decidedly one-sided trial, without any opportunity for an appeal, would be an utter impossibility in the Methodist Church. This feature of church government needs time in which to become so fully appreciated as to secure provision for its perpetuity in the new organization.

The financial situation will cause delay in effecting the union, for most of these churches are still organically connected with churches in America, which at the same time have interests in other Mission fields; and if a separation were to be brought about at once it would result in diverting more of the Mission funds into other channels. As the churches increase in self-support, however, this difficulty will diminish, and without doubt the time will come before many decades when the Japanese Christians will be as determined to evangelize Japan without foreign money as the nation now is to wage a foreign war without a foreign loan.

The churches of Japan are stamped with the peculiarities of those foreign churches with which they were most closely allied in the earlier stages of their formation. Accordingly we may reasonably expect this Japanese Methodist Church (by whatever name it may be known) to be especially active in evangelistic work, in the temperance cause, in educational enterprises, in publishing interests; and to be ready to ally itself with any and every attempt of whatsoever sort that has for its object the spiritual, moral, or intellectual uplifting of the Japanese people.

Tokyo, October 31st, 1894.

After a protracted consideration, the Russian Admiralty have resolved upon introducing petroleum as a fuel for warships. The new armoured cruisers *Rostiff* and *Rossia*, the former building at Nicolaieff and the latter at the Baltic Iron Works, will be the first battleships fitted with petroleum furnaces. No other vessels will be similarly fitted for the consumption of naphtha fuel until its merits have been fully tested in the two ships above mentioned.

YAMAGATA EARTHQUAKE RELIEF FUND.

The following amounts have been contributed in aid of the sufferers through the recent earthquake in Yamagata, in response to a telegraphic appeal received from Dr. D. C. Green:—

Mrs. Burns	\$10.00	Mr. G. Booth	\$5.00
Mr. Staniland	2.00	Mr. L. Pollard	5.00
Mrs. MacArthur	5.00	Mrs. Meacham	5.00
Mr. Scidmore	10.00	Miss Moulton	3.00
Mrs. Wood	5.00	Rev. J. H. Ballagh	5.00
Mrs. Komp	2.00	Mr. W. D. S. Edwards	5.00
Miss Thompson	3.00	A Friend	2.00
Mrs. Young	1.00	Miss Brittan	1.00
Mr. Loomis	10.00	Master M. Moulton	1.00
Mrs. Lindsley	25.00	Daily Express	10.00
Mrs. Colton	5.00	Box of Curios Office	6.00
A friend	5.00	Cash	1.00
Ladies at 212	42.00	G.E.M.	1.00
Mrs. Thorne	3.00	E.A.S.	1.00
Mr. Wilkin and the Misses Wilkin	6.00	Mr. G. W. Bramhall	10.00
Mrs. C. V. Sale	5.00	Mr. Carlo Giussani	10.00
Mrs. Monroe	1.20	Mr. and Mrs. E. A. Vincent	5.00
Miss Hill	10.00	Mr. H. R. Russell	10.00
Miss Rowe	1.00	Mrs. and Miss Bloxham	5.00
Miss Griffin	2.00	Mrs. Patton	5.00
Miss N. Griffin & Mr. C. Griffin	1.00	Mrs. Dearing	1.00
Mr. A. H. Lay	5.00		
Mr. W. F. Page	10.00		
Mr. Barrie	10.00		
Captain Crawford	6.00		

Total.....\$282.20

Of this amount \$202.00 have been transmitted to the Rev. Mr. Sedley, by telegram. Further contributions will be gladly received by L. POLLARD, 6, Settlement; or REV. DR. MEACHAM, 66, Bluff.

THE ORIENTAL HOTEL, LIMITED.

The following is the report for presentation to the shareholders at the third annual ordinary general meeting, to be held at the Municipal Hall, Kobe, on Tuesday, the 6th November:—

The Directors have now the pleasure to lay before the Shareholders a statement of the Company's Accounts for the year ended 31st August, 1894.

The total earnings in Working Account during that term amount to \$64,114.57; showing a profit of \$15,565.87.

On reference to the accounts it will be observed that after making provision for depreciation, viz:—

On Furniture	\$2,600.00
On Steam Launch	400.00
	\$3,000.00

there remains a net profit for the year, amounting to \$12,565.87.

From this amount an interim dividend of 5 per cent. on Ordinary Shares, for the half-year ended 28th February, 1894, was paid on the 7th May last, absorbing \$3,700; leaving now available for distribution the sum of \$8,865.87.

From this the Directors recommend the payment of a further dividend of 3 per cent. on Ordinary Shares, making 8 per cent. for the year. They also recommend the distribution of a surplus sum of \$2,960 in equal parts to Ordinary and Founders Shares, in accordance with Article 111 of the Article of Association; making the total return to Shareholders for the year, 10 per cent. on Ordinary Shares and \$18.50 per share on Founders Shares, and that the balance of \$3,716.13 be carried to the credit of Reserve Account, bringing this Account up to \$5,240.65.

The Directors have had in view the fact that the value of land property in Kobe has considerably increased during the past year, and they have therefore deemed it advisable to carry the balance of profit earned to Reserve Account rather than to write off a portion of same to Property Account.

The land property situated on Lot 11, Concession, which was acquired by the Company, under special resolution, was disposed of on the 9th July last, at an advantage to the Company of a net sum of \$3,000.72. The Directors beg to remind Shareholders that in this transaction the main objects conceived were successfully accomplished, the property purchased having been sold under protective conditions advantageous to the Company.

The Directors, from a reference to the Company's past working, regard future prospects as favourable.

The property of the Company has been maintained in an efficient way, and the buildings are now in first-class order and condition.

The Directors have pleasure in stating that Mr. Louis Bénéx has agreed to a further term of service extending over a period of 3 years from the 1st September last.

With regard to the Debentures issued, of which the amount of \$16,400 is outstanding, the Directors, according to notice issued, are redeeming the same.

DIRECTORS.

In accordance with Article 90 of the Articles of Association, Mr. T. W. Hellyer retires from office, but offers himself for re-election.

AUDITORS.

In accordance with Article 129 of the Articles of Association, Mr. Cecil Guinness retires from office, but offers himself for re-election.

By ORDER OF THE BOARD,
TH. DE BRIGNY, Secretary.

C. N. CROSSER }

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 29.

Through differences that have arisen in connection with the Emperor of Germany's proposals against the Poles and socialists, General Count von Caprivi, Imperial German Chancellor, and Count zu Eulenburg, Prime Minister of State and Interior of Prussia, have resigned. Prince Hohenlohe succeeds to both these offices.

The Chinese Silver Loan in London, which is for 10,000,000 taels, at 7 per cent. interest and to run for a period of twenty years, has nearly been completed. The guarantee for the fulfilment of the obligation will be the Customs returns of the Treaty Ports.

The Empire Theatre in London has been closed and has caused a great sensation. A modified licence has been recommended at the instance of the Purty Party.

London, October 30.

The Earl of Rosebery, in a speech at Bradford, said that he favoured the maintenance of a second Chamber, though the attitude of the present Tory Lords had undoubtedly been an incentive to revolution. The Government would

ask the House of Commons to proceed by resolution in asserting the privileges of the Commons against the irresponsible House of Lords, and this would represent the joint demand of the Government and the House of Commons for the revision of the Constitution, which, if defeated, would be followed by an appeal for the verdict of the country.

London, October 30.

The Emperor of Russia is suffering from inflammation of the left lung, and is spitting blood, with a cough that has increased to a dangerous point.

The Prince and Princess of Wales are about to start for Livadia.

Count Caprivi has been decorated with the Order of the Black Eagle.

Prince Hohenlohe has been appointed Governor of Alsace.

London, October 31.

Destructive floods have occurred in France, by which a hundred thousand factory hands have been thrown out of employment in the Department of the Nord. Railway communication has also been interrupted by the floods.

Serious floods have occurred in Belgium, where many factories have had to be closed.

[SPECIAL TELEGRAM.]

London, October 31.

The health of the Emperor of Russia has become much worse, and grave fears are entertained as to the early result of his present condition.

The German Cabinet has resigned.

(FROM THE "N. C. DAILY NEWS.")

Tientsin, October 23rd.

As it is reported that Japanese men-of-war are cruising off the South-east Promontory, Shantung, to waylay transports, the Chinese fleet left Weihaiwei yesterday with orders to attack them.

The Emperor, realising the importance of the naval action at the Yaloo, by which an invasion of China by sea was prevented, has issued a decree awarding honours to the foreign officers of the fleet, and posthumous honours to Mr. Purvis and Mr. Nicholls, with three years' pay to the family of each of them.

(FROM TONGKIN PAPERS.)

Paris, October 12.

The strike of workmen at Port Said is finished.

Paris, October 15.

In the Belgian elections the Liberals have lost many seats, which have been gained by the Socialists.

(FROM JAPANESE PAPERS.)

Hiroshima, October 1st.

A Shanghai telegram states that 15 regiments of newly raised soldiers have been sent up from Hankow to Peking.

A Shanghai telegram says that the number of Chinese soldiers guarding Feng-hwang is 15,000.

It is said that 15,000 Chinese soldiers are encamped at Chin-chiu and Talien. It is expected that the Chinese troops in the Liau-tong peninsula number 28,000, including 13,000 at Port Arthur.

A Shanghai dispatch announces that great trouble is experienced at Tientsin through the want of grain.

The negotiations between the United States and Japan relative to the revision of the Treaty is making remarkable progress, no obstacle arising. It is expected that the new treaty will be signed at no distant date.

H.I.H. Prince Fushimi, Commandant of the Fourth Brigade, arrived here last night.

Dr. Sato Susumu has been appointed President of the provisional military hospitals in this town.

Matsuyama, November 1.

The Chinese prisoners in this town, have been allowed to correspond with their families at home.

Hiroshima, October 31.

The landing of the Second Army on the

Liau-tong peninsula took place at Kwasen-ko, distant about four days' journey from Chin-chiu. The fight at the latter town will take place before the engagement at Feng-hwang.

Sakata, November 1.

The results of investigations carried up to to-day in the earthquake district of Akumi are as follow:—2,155 houses overthrown, 2,006 houses burnt, 482 lives lost, and 661 persons wounded.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Oriental Hotel, 87, Main Street, on Mondays and Thursdays in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

This problem has been highly commended by our usual solvers. It has also been solved by J.M., a young player of the same age as the composer.

PROBLEM No. 148.

By H. KEDIANSKI.

Dedicated to Doctor Tarrasch.

(The position represents the letter T.)

BLACK.

WHITE.

White to play and mate in three moves.

Play in the Club Championship Tournament of the Tokyo Chess Club is now in progress. The new club rooms in the Tokyo Hotel are both comfortable and convenient, and the attendance has been, accordingly, above the average.

LEIPSIK TOURNAMENT.

We take the following five games from the *New York Tribune*, and would remark that Tarrasch lost only two games in the whole tournament; one to Mieses, which we reprint, and one to Blackburne, which we hope to reproduce at an early date.

Appended is the score of the game won by Mieses against Tarrasch in the recent International Chess Masters' Tournament at Leipzig. As will be seen from the score, Tarrasch adopted the Sicilian Defence, in the course of which Mieses managed to establish a strong pawn position in

the centre of the board. In order to press matters he gave up a piece for two pawns, and playing finely after that point, Tarrasch's position became embarrassed. He was compelled to give back the piece, and resigned when called upon to make his fortieth move. The game, with a diagram showing the most interesting position, follows:—

Referring to the match Albin v. Showalter (which we mentioned in our last) we now transcribe the first game of the contest.

Albin won the toss and opened with a Ruy Lopez. The game was prettily played and evenly conducted until thirteen moves had been recorded. Then Albin proceeded with an attack, for which he sacrificed a piece, and later on another, in order to get his opponent's queen. Fine play secured victory for Albin after fifty-one moves. The game follows in full:—

GAME No. 178. RUY LOPEZ.

49--R x P	49--R x R
50--Q x R	50--Kt to Kt 3
51--Q to B 3 ch.	51--Resigns.

NOTES BY ALBIN.

- (a) Now the game has assumed a position of the Giuoco Piano (variation P-Q B 3, but there is the difference here, that Black has a compromised Q P.
(b) If P x P, Q x P follows with a strong attack.
(c) P x B P would have somewhat neutralized White's attack.
(d) If B--H 4, P x B P follows with good prospects of an attack.
(e) Here Kt (K)--Q 3 would have been much better.
(f) Instead of the text move, the sacrifice of the Bishop would have been stronger. For instance, 20, B x P ch. K x B; 21 Q--R 5 ch. K--Kt; 22 Kt--Kt 6, B x K P; 23 R x B, Q x R; 24 Q--K 8 ch. K--B 2; 25 Kt x R and wins.
(g) Kt--H 4 would lose.
(h) If K x R, P x P ch follows and wins.
(i) The game is now hopelessly lost, and it is only a question of time.

REPORTS.

Per American steamer *Peru*, Captain Friele, reports:—Left Hongkong the 20th October, via Nagasaki the 26th, and Kobe the 28th. Arrived at Yokohama the 29th October.

The German steamer *Nürnberg*, Captain Hugo Walter, reports:—Left Hongkong the 26th October at 2 p.m. and arrived at Yokohama bay (stopped off Sagami Light) on the 2nd November at 1 a.m. The first part of voyage up to the Lincolnton had very strong N.E. monsoon and high sea; thence to port strong N. and N.W. winds and very rough sea.

LATEST COMMERCIAL.

IMPORTS.

The gloom, deepens. Yarns are stagnant. Shirtings, still a feeble trade in gln., but other weights neglected. Fancy Cottons give rise to little or no enquiry. Woollens dead. Holidays perhaps account for some part of the dull trade; but the general outlook is by no means good.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds. 39 inches	\$2.25 to 2.75
Grey Shirtings—9 1/2 yds. 45 inches	2.60 to 3.25
F. Cloth—7 1/2 yds. 32 inches	1.60 to 1.90

METALS.

Market quiet and unchanged. Buyers are holiday making: as the fresh movement of troops from the north interferes with the transit of merchandise for the present.

	PER PICUL.
Flat Bars, 1 inch	13.30 to 13.35
Flat Bars, 1 1/2 inch	3.40 to 3.45
Round and square up to 1 inch	3.30 to 3.45
Iron Plates, assorted	3.50 to 3.65
Sheet Iron	4.45 to 4.60
Galvanized Iron sheets	9.00 to 9.25
Wire Nails, assorted	5.60 to 5.90
Tin Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

Nothing fresh since the arrival of the *St. John* (with Comet Oil from New York) a week ago. Market firm but no change in quotations.

Chester	\$2.75 to 1.77 1/2
Comet	1.72 1/2 to 1.75
Devoe	—
Russian Anchor	1.72 1/2 to 1.75
Russian Moon	1.70 to 1.72 1/2

SUGAR.

Brown—Market easy. Arrivals 7,000 piculs. Sales—6,000 piculs, all Manila, etc. Nothing done in Takao kinds. Stocks practically unchanged and prices less firm than they were a week ago. White Refined—No change, market quiet but prices maintained.

	PER PICUL.
Brown Takao	\$4.30 to 4.40
Brown Manila	5.20 to 5.35
Brown Daitong	3.20 to 3.30
Brown Canton	3.70 to 4.40
White Java and Penang	7.25 to 7.50
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

After the large business of the last week in October the market is quiet once more. Holders pushed prices a little higher, but with the comparative absence of demand would be willing to meet buyers at something near last week's quotations. Outgoing steamers, both east and west, are taking large shipments of previous purchases.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.
PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.
Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing, Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes direct into the hands of the WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1894.

January 13th, 1894.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOV. 10TH, 1894.

BIRTH.

Mr. and Mrs. JOSEPH ROGERS HEROD announces the birth of a Son on Friday, November 2, 1894.

MARRIAGE.

HAMILTON-SPENCE—On Thursday, Nov. 1st, at St. Andrew's Church, Shiba, Tokyo, by the Rev. J. Macquenn Baldwin, assisted by the Rev. F. W. Kennedy, the Rev. H. J. HAMILTON, Wycliffe Mission, Nagoya, to MINNIE, only daughter of the late John Locke Spence, Esq., of Toronto, Canada.

DEATH.

At Yokohama, November 1st, 1894, FREDERICK ALEXANDER NAYLOR, District Superintendent of Police, Sanger, India. Aged 46 years, 4 months, and 1 day. English papers please copy.

SUMMARY OF NEWS.

THE Viceroy Li has been called to Peking.

OVERTURES for peace are shortly expected from China.

THE autumn sale of race ponies is announced for Tuesday the 13th.

THE Race Ball has been postponed indefinitely owing to the death of the Czar.

MR. NOSH TATSUGORO has been appointed Japanese Consul at Vancouver.

THE entrance of ships into Tokyo Bay is no longer restricted to the hours of daylight.

THE cricket match on Saturday proved the merriest ever played in Yokohama.

"Colts," ranging between 16 and 66 years of age, meeting Twelve of the Club.

MR. IMAIZUMI TOSHIHARU, Chief Public Prosecutor of Kagoshima, died on 5th inst.

A BILL will be given on the 30th inst., by the Yokohama St. Andrew's Society at the Public Hall.

THE grief felt for the death of H.I.M. the Czar was very profound throughout the Treaty Ports of Japan.

COMMANDER ENDO has been appointed to the command of the captured Chinese man-of-war *Tsao-kiang*.

A MILITARY powder factory was opened at Uji, Kyoto, on the 1st inst., under the supervision of Osaka Arsenal.

MR. NISHI, Japanese Minister to Russia, has been instructed to represent H.I.M. the Emperor at the funeral of the Czar.

THE Yokohama Circle of King's Daughters give a novel entertainment in the Public Hall on Saturday, November 24th.

THE six inmates of a family living at Tamamura, Hara District, Saitama Prefecture, were all murdered on the 2nd inst.

THE Chinese inhabitants of the occupied districts of Manchuria are said to welcome the advance of the Japanese army.

SOME Japanese coolies who murdered a Chinese in the Liau-tung Peninsula were summarily executed by order of General Oyama.

M. BOISSONADE, legal adviser to the Japanese Government, will shortly leave for home, where he intends to spend the rest of his life.

COUNT INOUE, the new Minister Plenipotentiary to Korea, had an enthusiastic reception accorded him on disembarking at Ninsen.

OWING to the death of the Czar, the charity concert originally arranged to be given in Tokyo on the 10th has been postponed to the 24th inst.

THE Tokyo Tramway Company's last month's receipts show an increase of yen 4,014 over the takings of the corresponding month of last year.

THE manufacture of smokeless and noiseless gunpowder, invented by Mr. Sakurai Heikichi, commenced at No. 3 fort in Tokyo Bay on the 3rd inst.

PRINCE WI-HWA, the special Ambassador from the King of Korea, has returned home, after a most hospitable reception in Tokyo and Hiroshima.

FOUR guns, captured at Song-hwang, which were received at the Headquarters of the Ninth Brigade, Hiroshima, have been sent to Tokyo to be exhibited at the Yushu-kan, Kudan.

THE German Minister in Tokyo informed the Minister of War on the 2nd instant that the German Government has decided to lend H.I.G.M.'s Naval Hospital at Yokohama for the use of the Japanese Government.

CAPTAIN M. O'BRIEN, of the U.S. Legation; Captain N. W. H. Du Boulay, and Surgeon-Major Taylor, of the British Army, who have been permitted to follow the Japanese troops in China, leave Hiroshima for that end.

THE O. & O. steamer *Gallic* was searched by the Japanese authorities on Sunday, but the persons "wanted" had left Yokohama the previous day on the M.M. steamer *Sydney*. A telegram to Kobe detained the *Sydney* there.

THE premises of the Artillery School at Toyama, Tokyo, have been turned into a hospital under the supervision of the Tokyo Provisional Military Hospital. Over three hundred patients will be able to find accommodation in the buildings.

A MEETING of the Tokyo City Assembly was held on the 5th inst., at which a resolution making the City Councillors responsible for the delay in the completion of the waterworks was introduced by a member. The motion was rejected, after a long and heated debate, by a majority of one.

THE Emperor of Russia died at 2.15 p.m. on the 1st inst., at the Palace of Livadia. He will probably be buried at St. Petersburg on the 15th instant. The body will lie in State at Odessa, Kieff, and Moscow. The Grand Duke George Alexandrovich has been proclaimed Czarévich until a son is born of the union with Princess Alix.

M. A. MYRE DE VILERS, who demanded the recognition of an exclusive and complete French protectorate in Madagascar, and the establishment of a permanent French garrison in Antananarivo, the capital, has left the Hova Capital without any answer to the demands of France. The Hovas have refused to comply with the demands of France, and an expedition, which will consist of about 12,000 men, is to be sent to Madagascar. China has formally appealed to the Powers to intervene between her and Japan for a restoration of peace. The European Cabinets are discussing the matter, and Great Britain and France have intimated their willingness to co-operate, but decline to take the initiative. The Union Steamship Company's steamer *Wairapa* has been totally wrecked on Great Barrier Island, and 111 passengers and 24 of the crew have perished. Sixty six have reached Auckland. In the United States, the Republican majority in the House of Representatives will exceed the Democrats and Populists combined by fifteen.

THE Import trade shows no improvement. Yarns have been taken in the smallest possible quantities, and Shirtings are in similar case. Low offers have been made for light weights, and while gills only find a few takers at late rates, there is a very large stock, which induces buyers to wait for a reduction. Prints and Fancies are dull all round, though small parcels of some goods have been cleared off. Woollens are generally quiet, the principal feature in this market being the delivery of previous contracts. The Metal trade is not active. Most kinds of Iron are easy, Bars only being taken at late rates. Galvanised Iron is slightly cheaper. Wire Nails are difficult to move, and if the demand for Tin Plates has increased slightly they do not show any improvement in value. The Kerosene market is firm, and, with a fair amount of sales and decreasing stock, holders are enabled to maintain prices. The Sugar trade is not strong, and with a full supply buyers are not anxious for immediate business; present prospects therefore do not indicate an increase in values. In the Silk business buying has come down to very small proportions, but the stock is heavy and reductions on present rates will doubtless have to be made before transactions can again assume normal dimensions. Waste Silk is also neglected, and nothing short of considerable concessions on the part of holders can induce anything like a sensible reduction of the present enormous stock. The demand in the Tea trade has been small, but it may be said that the supply is almost exhausted. The season is now near the end. Exchange has weakened slightly.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The war does not justify, writes the *Yiji*, whose tone seems to have changed of late from vehemence and excitability to calmness and composure, any serious derangement of the credit system in this country's economies. Already the financial equilibrium is somewhat disturbed, and if the proposed war loan be floated entirely at home, we fail to see how a general panic can be avoided. Some take things very quietly, declaring that a loan of 150 million yen can easily be shouldered by the nation, though possibly the five per cent. bonds may fall 20 or 30 per cent. below their face value. But no keen insight is required to perceive that such depreciation of public securities would mean little short of a panic. The opponents of a foreign loan, whose arguments, if they elicit admiration as spirited and energetic, provoke also condemnation, so short-sighted and imprudent are they, declare that it would be derogatory to the dignity of Japan and at variance with the self-reliant and straightforward character of the children of the Rising Sun, to have recourse to foreign aid at such a juncture. But this is not a time when any shame about seeming poor should be suffered to prevent Japan from raising a foreign loan. A nation must adapt itself to its circumstances. Japan stands in need of specie, and must obtain it from abroad if she hopes to tide over the crisis without serious inconvenience. The advocates of a domestic loan are somewhat feverishly excited about the war and appear to be blinded to the simple rules of arithmetic. Otherwise they could not fail to see that the unfavourable terms upon which, as they themselves confess, money for the military chest would have to be procured at home, must lead to grave difficulties in the national finance. They would also appreciate the plain fact that the military strength of a country, unsupported by general prosperity, must necessarily be a very ephemeral affair.

Since there is no telling, writes the *Yiji*, how long the war may continue and to what figure the expense may grow, it is of paramount economical importance for Japan to devise measures for securing an ingress of foreign specie. Nevertheless, while holding that view, the *Yiji* condemns the floating of a foreign loan as both unnecessary and inexpedient. Its idea is that export duties should be abolished *in toto*. Before the admirable conduct of Great Britain made Treaty Revision almost a *fait accompli*, the removal of export duties would have been contrary to the foreign policy of Japan. For though it might have promoted the development of her commerce, it remained always a concession not to be lightly made until Western States adopted a liberal attitude with reference to Revision. Now, however, that consideration has ceased to have any weight, and the duties ought to be abolished with the object of increasing the volume of the export trade, and thus bringing about an inflow of foreign specie as speedily as possible.

The notice issued by the Commander of the Second Army when the troops landed on Chinese soil is alluded to by the *Nichi Nichi Shimbun* as a remarkable addition to the history of International Law. The points relating to the chattels of peaceful citizens, to the employment of native officials in the business of requisitioning, to refraining from the employment of natives in any work having a strict bearing upon warlike operations, and so forth, have been discussed and decided by Western juriconsults, but are now for the first time carried into actual practice. Henceforth they will cease to be mere jurisprudential theories to which belligerents may conform or not as they please. It is no light service to the cause of justice and humanity that Japan is now rendering by giving the sanction of practical application to the speculations of European and American juriconsults.

The *Mainichi* speaks of the coming ordinary

session of the Diet in the following terms:—The fine spirit of the Japanese Parliament so conspicuously displayed in its late special session, will not fail to shine again at its next meeting. If, however, the Government take advantage of the present juncture to institute new taxes or to enlarge its own *personnel*, the House, paying less regard to the nature of such measures than to the craftiness of attempting them at a moment apparently favourable to their success, may radically change its mood. As to the place of convening the eighth session, Tokyo is preferable to Hiroshima—which view, we may note *en passant*, is held by the *Yomiuri* and some other Metropolitan papers also—and the Government will do well to make a clear distinction between the business of the war and ordinary administrative affairs. Nothing would be more inadvisable than to act upon the notion said to be entertained by several statesmen in power, that Hiroshima placed under the Law of Siege, possesses special advantages for passing Government Bills through the Diet. Any Machiavelian policy on the part of the Cabinet will not escape the penetration of the nation's representatives and may cause a serious reaction. If, on the contrary, the Government abide strictly by truth and justice in its attitude toward the Houses, the latter will behave as admirably as they did in the seventh session, making themselves and the Government objects of eulogy to the whole civilized world,

The *Chugwai Shogyo Shimpō* and the *Hochi* devote long leaders to the question of the establishment of government by conquest in Manchuria. Despite the great length of these articles, written as they are after the fashion of professorial dissertations on international law, they can not be described as anything more than elaborations of principles enunciated in Occidental text books. We presume, however, that such writing has its uses for a public like that of Japan at present.

The somewhat hacknied question of Korean reforms still figures in the columns of the vernacular press. The *Mainichi* thinks the centralization of power in a strong and well-united Cabinet, and the establishment of a good police system are all the essentials of the situation. The *Yiji* pities the present Korean Ministers for being absorbed by thoughts of self-aggrandizement, and condemns the seemingly slight attention they pay to State affairs. It declares that something different from Korean independence must be considered by Japan in pursuit of her heaven-imposed mission of establishing permanent peace in the East, unless the Peninsular Statesmen awake, at an early date, to the fact that this is their country's last opportunity to attain the status of an independent nation. In another article the importance of establishing an efficient police system in Korea is strongly urged by the *Yiji*, and the same journal, together with several of its Tokyo contemporaries, takes the Korean Court severely to task for showing itself insensible to Japan's kindness by delaying to give positions in the new Administration to men like Boku Eiko, Jo Kohan, and Jo Saihitsu.

Speaking of the indemnity to be demanded of China before the termination of the war, the *Yiji* says that it should not be less than 500 million yen, and that, in case China failed to pay it immediately, arrangements must be made to hold in occupation at her expense several places important from commercial and military points of view.

The *Nippon* has an article headed "China seen in her true Light." Europeans, says our contemporary, used to over-estimate China even as the Japanese did. Napoleon the First once said that China needed nothing but an efficient knowledge of navigation in order to be able to conquer the whole world. That was a great mistake. Prior to the time of Cook, no nation except the Spaniards excelled the Chinese in the art of navigation. Nevertheless, in these days the Chinese were not able to take

an inch of foreign territory. They confined themselves within the domains bequeathed to them by their ancestors. China is a country utterly destitute of the spirit of progress. If Europeans are disposed to regard China favourably, it is because they look only at her immense size and huge population, and compare her to a sleeping lion, which, when once awakened, is capable of devouring dragons and tigers. At the commencement of the present war, that mistaken thought led many Europeans to cry out that victory would finally rest with the Celestial Kingdom. Yet it is easy to adduce examples showing the fatuity of estimating a country's strength from territorial extent alone. Brazil is 19 times as large as France and 29 times as big as England. Is Brazil's strength in similar proportions? Some folks said that, since the Franco-Chinese war, Chinese military and naval arts have made rapid strides, and that she would sooner or later wage against a foreign country a war the result of which, whether she won it or not, would be her awakening from long sleep. The first part of this prophesy was fulfilled in the present war, but as to the latter part, there is not the smallest symptom of its fulfillment, though did it become an accomplished fact, not only China but also the whole of Asia would be greatly benefited. Our contemporary mentions the Opium War and other troubles that have overtaken the big country within the past fifty years, without apparently accelerating the advent of the time when the sleeping lion is to awake. In short, the *Nippon* concludes, China's greatness is simply territorial and her military strength is a reality on paper only.

The *Hochi* thinks that China is doomed to destruction, if not by Japan, then by Europe. It is, therefore, a question demanding deep thought whether Japan should not take possession of the big empire in the sequel of the present war. Should China fall a prey to one or more European countries, Japan's position would be greatly endangered. Our contemporary entertains little doubt that it lies in the path of Japan's mission, as the peace-maintainer of the Orient, to bring China under the flag of the Rising Sun at the earliest possible opportunity.

EDITORIAL NOTES.

JAPANESE COOLIES WITH THE ARMY.

SEVERAL thousand coolies have so far been sent to the seat of war, and they appear to be on the whole a very well-behaved and orderly company. That is ascribable in the first instance to the fact that careful discrimination has been exercised in the choice of men, and in the second to their being largely recruited from among the ranks of petty farmers and farm-labourers: men therefore accustomed to an out-of-door life and plenty of hard work. The pay of the coolie-inspectors, of whom there is one to every hundred men, is unusually good and competition for such posts has been very keen despite the great amount of responsibility they entail. We have heard of several cases where lawyer's clerks, *banto*, and others of like rank in Tokyo have thrown up their engagements to enter upon an inspectorship, their regular habits and business methods peculiarly fitting them for such situations. Apart from these considerations we learn from the vernacular press that the coolies are allowed to keep or treat as their own whatever they may pick up on the battle-fields or while on the march. Strict honesty is of course insisted upon; indeed the behaviour of the Japanese towards the Koreans has thus far been a model of justice and honest leniency; but when it comes to *trouvailles* of erst Chinese ownership the coolies are left in undisputed possession. One man is reported to have found, in the vicinity of Phýng-yang, a gold watch of elegant workmanship, evidently the one-time treasure of a Chinese officer of high rank. He sold this shortly afterwards for two hundred yen. Another lucky fellow picked up a treasure or jewel-box of Chinese workmanship, which, with its contents

is valued at not less than ten thousand *yen*. Still a third came across a *cache* of Chinese *samshu*, that ardent spirit so strongly resembling the *awa-mori* or millet-beer brewed by the Ryukyu Islanders. This he has been permitted to retail at so much per glass, making quite a large sum out of the business. These are by no means isolated cases, as a number of almost equally fortunate finds are reported in the vernacular press, proving that the occupation of a coolie in following the Japanese Army though perhaps arduous is by no means without its profitable aspects. With all this there is an absolute lack of complaints of dishonesty. Some few are reported to show a disposition to shirk work; but the majority are said to be inspired by the indefatigable, energetic spirit characteristic of the Japanese soldiers in this memorable war. They work with a will and grumble at no burden, however heavy. This is surely an exceptionally good showing.

THE TROUBLES OF THE SODO SECT.

THE Sodo Sect is that Buddhist communion in which a grave difficulty arose last year in consequence of the secession of the Noto centre, as mentioned in these columns at that time. The trouble seems to be by no means at an end. The Central Office of the Sect, which is established in Tokyo, has been enforcing a very strict line of policy since last year, discharging, among other drastic measures, no less than forty priests from their incumbencies as chief priests of Sodo temples. All of these forty belonged to the seceding faction, and four of them were in charge of temples in the capital. But in many cases the anathemas of the Central Office failed to have the least effect, for, backed by a combination favouring the seceders, the priests simply refused to obey the orders sent them and continued to occupy their priestly posts as before. This insubordination was more than the Central Office could tamely submit to, so, the other day, two newly elected chief priests, each accompanied by a number of persons officially connected with Headquarters, were ordered to repair to a temple in Asakusa and another in Fukugawa, with the peremptory demand that the excommunicated incumbents should immediately surrender their or feigned seats. This step became the origin of a trouble of somewhat scandalous type. Things went smoothly in the Fukugawa temple, for the chief priest happened to be absent on the day in question, so that the new *jushoku* was installed in peace and quiet. But the Asakusa installation failed to connect. The resident chief priest seems somehow to have got wind of the affair, and when the new *jushoku* with his official escort arrived at the Temple, they found the incumbent calmly awaiting their approach and surrounded by some fifty men, the greater part of whom bore unmistakable *soshi* ear-marks. A most heated altercation immediately ensued between the two factions, the new arrivals insisting that the incumbent should at once surrender his seat, while the latter violently declared that he saw no reason why he should obey any order coming from the Central Office. The dispute was carried on with unabated vigour till dusk set in, when the temple people caused all the approaches to be shut and then renewed the debate with greater vehemence than ever, indications of their readiness to resort to force being also apparent. At this juncture a constable stationed in front of the temple, hearing the unusual noise, deemed it his duty to interfere. The gate being shut he demanded that it should be thrown open. After a lengthy parley he was at last admitted, whereupon he commanded the disputants to quietly disperse. His well-meant injunction was, however, wholly disregarded by the party of the priest in possession, who protested that they, as parishioners of the temple, had come to protect the person of their spiritual adviser and that they could not therefore yield obedience to any such order from the police. The matter was thereupon at once communicated to the Asakusa Police Station, and with the aid of several hastily-summoned constables, the incumbent and a dozen of the most heated disputants were conveyed to the station, where the

affair was inquired into and the quarrelsome crowd severely reprimanded for their blame-worthy behaviour. The new *jushoku* and his adherents are said to be highly incensed at the rude treatment of which they were the victims, and to have sued their opponents on the ground of illegal confinement. The police have subsequently been closely watching the proceedings of the partisan parishioners and have interfered with their movements in favour of renewed agitation. Bent on encompassing their object they contemplate meeting in the temple in a day or two and then re-opening the discussion, the alleged reason for the gathering being the celebration of certain religious rites. The backers of the priest chosen by the Central Office are similarly devising measures to bring the schemes of their opponents to naught. The Asakusa temple may therefore shortly become the scene of very serious disturbances. There is a party known as the *Konwa-Kwai* ("Friendly Conversation Association"), and it is the members of this body who appear to be supporting the seceders. Trouble of a similar kind seems to occur wherever there is a Sodo temple, so that official interference into the affairs of the Sect is unquestionably called for. We have taken the above particulars from the *Jiyu Shimbun*.

MR. OISHI ON KOREAN REFORMS.

THE *Kokkai* publishes an article said to embody the views of Mr. Oishi, ex-Minister to Korea, on the Korean reform question. The opening statement is that, as the Korean Administration is thoroughly disorganized and both governed and governing are alike devoid of independent spirit, any remonstrance Japan may make or any advice she may give to the Korean Court with a view to reforming the Administration, are practically useless. The only plan is, according to Mr. Oishi, to persuade the Korean Court to leave the whole matter of reform in Japan's hands. In case of its refusal to do this, Japan should be prepared to resort to strong measures. The ex-Minister regrets very much that Count Inouye should have gone over to Korea without awaiting the arrival of the Special Embassy from that country, as he thinks that the present would be an excellent opportunity for furthering the attainment of the programme of reform. The envoy being no less a personage than Prince Wi-hwa, heir-apparent to the Korean throne, he should be made to observe Japan's progress and the ardour with which the nation is upholding the country's cause. He should next be persuaded to telegraph to the King to entrust the power of carrying out reforms in Korea to Count Inouye, Japan's Ambassador. Matters have, however, gone a little too far for this last step, and the only wise course left is to approach the Prince with the former object in view.

COMMISSARIAT REPORTS.

We take the following from the report of the Chief of the Commissariat of the Fifth Division to the Chief of the Commissariat of the Army. The report, under date of October 10th, was forwarded from Sun-an, where the Commissariat had then been established. From Pyöng-yang to Sun-an the highway is comparatively broad and generally admits of the use of waggons. Yet the Commissariat is particularly pressed by the want of fuel, the neighbouring hills being only sparsely covered with trees and low shrubs. Of coolies there are not nearly enough, as the resident Koreans have all fled elsewhere. The people still have a preference for Korean coins and look askance at silver; but owing to the pains taken by the Deputy Governor of Pyöng-yang, who has personally told the people that they should accept silver coin, with the risk of punishment in case of refusal, subsidiary silver is gradually becoming current. Further, on account of the defective facilities of transportation, only rice and beans are sent up to the lines, with *miso* and pickled vegetables as "side-dishes." For the purpose of providing the necessary provisions, clerks are despatched every day to the adjoining villages, with the injunction to use gentle suasion only. They

generally succeed in buying rice at the rate of about eight *yen* per *koku*; millet and barley at three *yen* for a like quantity; wheat at six *yen*; and beans at 3.20 *yen*. The great difficulty is that owing to the small number of villages and the ruthless depredations of the Chinese, only very insufficient quantities of the necessary food-stuffs are obtainable. In view of this circumstances, the Commissariat attached to the Mixed Brigade under Major-General Oshima, has resolved to make the Koreans gather the standing crop of rice, although the season is yet somewhat early. In this way provisions will be made purchasable.

From the report of the Chief of the Commissariat in Seoul we learn that the situation there is far more favourable, as indeed might be expected. The necessary supplies of rice, beans, forage, etc., are obtainable without difficulty, owing to the unusually large harvests of this year. Articles of diet were very high at first, but there has been a gratifying fall all round and rates are no longer exceptionally dear.

FATAL ACCIDENT.

A SAD accident is reported by the vernacular press. It appears that the Engineering students of the Imperial University usually include among their excursions for purposes of scientific experience a trip to the intake of the Yokohama Water-works. The programme pursued is to proceed to Hachioji by train, thence walk over the mountains to the pumping station, and finally descend by the Banyu river to Hiratsuka, thence returning to Yokohama. The trip is a matter of three days. This year the start from Tokyo was made in heavy rain, and two students who are indisposed did not go with the party. It would appear, however, that one of them, Mr. Ono, finding the weather clear up, set out with the idea of overtaking his fellow-students. He hired a boat with two men to take him down the rapids of the Banyu. He never joined the party, however. Arriving at Yokohama his comrades heard of his attempt to overtake them. They heard also that the boat had been dashed to pieces on the rocks and that no trace of Mr. Ono or either of the boatmen had been found. Several officials of the University were despatched to search for the unhappy youth, and on the 8th instant his corpse was discovered. It is evident either that Mr. Ono must have persuaded the boatmen to take him down the river when the water had risen beyond the safe limit, or else that a fresher overtook the boat after the descent had been commenced. The Tenryu rises considerably in wet weather, and when the water is above a certain height the boatmen are found absolutely deaf to any proposals for attempting the descent. Their skill is great, and we can not learn that any accident had occurred for many years previous to the sad mishap now recorded.

THE CHINESE AND THE JAPANESE.

(Translated from the *Norddeutsche Allgemeine Zeitung*.)

ETHNOGRAPHICALLY the Japanese belong to another group of people (*Voelkergruppe*) than the Chinese. Although they originally obtained their civilization from the Middle empire, they developed it in a most unique manner. Their social and political structure was, during the centuries of their seclusion, entirely different from that of the Chinese. The entire civilization of the Chinese is governed by two great ideas, which have evolved and developed in a most unique manner, and have left their impress on the whole national structure. It is the patriarchal idea connected with the bureaucratic reign of the *literati*. Of the ideal emotions, which determine the *ethos* of our social life and its institutions, the Chinaman knows little if anything outside of great respect for paternal authority and ancestral worship. The whole mental perception of the social and civil order, authority and submission, in a Chinaman's mind is adjusted after the pattern of filial relationship. In closest connection with ancestral worship stands the unmeasured

eneration of transmitted knowledge of past ages. To a Chinaman, culture is equivalent to education. Those who by their studies and examinations have qualified themselves for civil service tower up above the floating mass. In consequence of this state of things, the most repugnant ambition is flourishing. As an intrinsic value is not, or at least only to a very limited extent, attached to the knowledge required by the State, the only incentive, in pursuing studies, is the hope of being promoted to be a high-grade mandarin. Even those who stand highest in rank among the "scholars," foster higher intellectual treasures only with the object of gaining thereby material profit. The baldest and most deliberate utilitarianism, led by the one question, how much will it bring? is the life-rule that permeates every stratum of the population. Japanese society was aristocratic and has remained so to the present. A generation ago this country was very much like a European feudal state in the second half of the mediæval age. Vassal loyalty to one's lord and to the emperor; individual devotion to this spirit of loyalty, even at the utmost self-renunciation, were imbued from childhood up among the higher classes, as the highest virtue. Of this self-sacrificing disposition the Japanese aristocracy has now again given an example, in supplying a large war-loan in the shortest possible time, without interest. And yet these *grands seigneurs* stand in opposition, over against the modern reforms, which have transformed the state government since the fall of the Shogunate. However, through these reforms, which here and there, in individual cases, may have been carried on with undue heat, Japan, whose former development and civilization were not dissimilar to those of Europe, has brought herself completely within the rank of civilized states and has won for herself a respected position. Now these two differently developed civilizations stand against each other in a combat, the course and outcome of which will be watched by European nations from more than one point of view with preëminent interest.

UNANIMITY IN THE JAPANESE CABINET.

AMONG the various comments, writes the *Yiji*, on the nine diplomatic notes interchanged between Japan and China before the outbreak of the war, which were read to the House of Peers by the Minister President of State in the last extraordinary session of the Diet, one is specially worthy of notice as showing how unanimous was the opinion of the Cabinet in connection with the preliminaries to the war. The first, second, and third notes were all dated the 7th of June. The Chinese Government intimated to the Japanese the despatch of its troops to Korea, and on the same day Viscount Mutsu, Minister of Foreign Affairs, protested against China's presumption in considering Korea her dependency and caused another despatch to be forwarded to the Yamen to the effect that Japan had also sent troops to Korea. Both of these despatches must have been the result of deliberation with the Cabinet, yet with the most surprising promptitude, the two points were settled on the same day as the communication was received from China. In the fourth note, the Chinese Government, alarmed at the news that Japan had despatched soldiers to Korea, asked her not to send a large number of troops, and to prevent their penetrating to the interior of Korea. Some time must have been spent in negotiations owing to the mediation of a third party, as the Minister President states in his speech, where he says:—"At this stage of the affair certain Powers took upon themselves the friendly office of mediators and approached the Governments of the two countries," but "their well-meant advice was rejected by China." However, on the 12th of June, namely, three days after the first communications, a reply was sent to the effect that Japan had despatched troops by virtue of the rights conferred on her by the Treaty, that as to the number of those troops and their movements in Korea, the Japanese Government would exercise their own judgment, and that it was not likely that their troops, disciplined as they were,

would precipitate a collision with those of China. To the despatch dated the 22nd of June rejecting Japan's three proposals, an answer was sent on the same day. The 9th note was the reply transmitted by the Japanese Government to Mr. Komura, *Chargé d'Affaires* in Peking, to his telegraphic message embodying the result of his personal negotiations at the Tsung-li Yamen on the 9th of July. Although considerable delay has to be allowed for in the transmission of messages and so forth, the reply was sent six days later, on the 14th of July. It is thus apparent that the Japanese Authorities despatched their business in a remarkably prompt manner, which proves how unanimous must have been the views of the different Ministers of State on the affair.

THE "YOROSU CHONO'S" SECOND ANNIVERSARY.

THE *YOROSU CHO* is the youngest of more than a dozen dailies published in the capital, and was established two years ago. But such is the popularity it enjoys among the lower classes that its sale is now believed to rank first, or at any rate second, among the Tokyo papers. That popularity is largely due to the business-like management of its editor and proprietor, Mr. Kuroiwa, who is reputed to be one of the most successful newspapermen in Japan. To celebrate the second anniversary of his paper, Mr. Kuroiwa entertained his Tokyo and Yokohama *compères* and those members of the Tokyo Bar who are professionally connected with the office, at the Matsugen Restaurant in Ueno on the 3rd inst. Nearly 80 guests were present. The entertainment, addition to a Japanese banquet, consisted of Japanese dancing by girls, comical performances by popular actors, Western music adapted to Japanese songs by the well-known Juvenile Amateur Band, all boys from 10 to 12, and lastly a magic lantern exhibition. It was altogether a great success.

We learn that the English Department of the above enterprising paper is attracting considerable attention in England and America, several of the leading papers in London and New York having reproduced the *Yorosu's* English columns. The extension of that Department is now contemplated.

A CUNNING RUSE.

ADEPT swindlers are no longer a rarity in Tokyo. In the golden days of fifteen or twenty years ago it was not unusual for unsuspecting people to be deceived by very simple artifices; but now-a-days the pigeons have grown very shy, so that a degree of artistic swindling is necessary to entrap the prey. The successful swindlers of the metropolis are really most adroit at present, and some of their schemes are worthy of a better object. The *Miyako Shimbun* gives a case in point. Towards dusk, on the 31st of last month, a liveried *kurumaya* stopped at a large silk-mercer's in Yotsuya District with the message that his master desired to look over a large line of dress-goods, principally crape and heavy ribbed-silk for winter wear: would they kindly send an assortment by one of their clerks as soon as possible? This being a common enough custom, a clerk soon set off in company with the *kurumaya*, who led him to a large mansion in Aizumi Cho, one of the finest houses in the district. The master himself came to the door with a lamp in his hand and expressed surprise at the clerk's having come at so late an hour: the *kurumaya* had made a mistake; this was the 31st, and he was too busy to look at the goods. However, there was no use in taking them back again; he would look them over as soon as possible. Impressed with the size and external elegance of the house, the clerk said he should leave the goods, but must first consult his master. In a little while he returned saying that it was all right: the gentleman should look through the silks at his ease; he would call again the next morning to hear the result. The next morning the clerk came at an early hour, but was shocked to find a placard with the words "This House To Let" affixed to the gate. He immediately went to the house-agent, and learned to his horror, that the mansion had stood empty for some months.

Subsequent investigations showed that the *kurumaya* and the supposed master of the house were swindling confederates, who had entered the empty *yashiki* just after dusk and unperceived by any of the neighbours. Profiting by the elegance of the residence, they had in the above way swindled the mercer out of two hundred and fifty *yen* worth of the finest silks.

LIKE OLD TIMES.

THE *Yiji Shimpō* reports a strange incident. When the Third Regiment of the Guards, we read, was passing along Omote-machi in the Akasaka district on its way back to barracks after the review on the Emperor's Birthday, a mechanic named Yamada, in the employment of the Naval Department, in some unaccountable manner came into collision with the regimental colours. One of the officers, angered by this rude act, drew his sword and felled the man with a slash on the head. The officer in command immediately reported the matter to the police and Yamada was carried to hospital. This reminds one of pre-Restoration days, and the terrible law against breaking through the procession of a feudal baron. It is to be hoped that the truculent swordsman will have ample reason to repent of his barbarity.

ARTISTIC WASPS.

WE have already pointed out, on the strength of testimony adduced by a number of *Kō Shimbunshi*, that the domestic animals and even certain winged insects, such as butterflies, bees and wasps, in Japan are in intimate sympathy with the war and try to show in scores of ways that victory will ultimately rest with the arms of this country. That fact is so apparent that it seems hardly worth while for the lower animals to go out of their way to assert it; yet here we have another instance of such intelligence, as gratifying as it is surprising. In Shitaya District, Kami Negishi Machi—not far from the precincts of Ueno Park, Tokyo,—the villa of a well-known banker has for some time been infested with wasps, who have made a huge nest on the branch of a tree in the southern corner of the garden. No particular notice was paid to these wasps or their nest until shortly after the battle of Phōng-yang, when their increased activity showed that something of unusual importance was being meditated. The result of their labour and its deep significance are now apparent to the most superficial observer. The nest has been deftly shaped so as to exactly resemble a *taf*, that dainty fish so beloved by the Japanese and connected by them with the idea of congratulation on account of its somewhat protruding eyes (*me-detai*) and general red hue. The remarkable structure measures one foot nine inches in circumference—how great must have been the heroism of the man who ventured to measure the girth!—and is perfectly modelled in all parts. The *Yamato Shimbun* and several of its colleagues are evidently in the right in saying that the wasps have produced this architectural *chef d'œuvre* with the intent of congratulating the nation at large on the victories hitherto achieved and of prophesying complete success in the immediate future.

THE EMPEROR'S BIRTHDAY.

IN Yokohama general holiday prevailed on the Emperor's Birthday. Much bunting was displayed throughout the Settlement and in the native portions of the Town. At noon a salute was fired from the Kanagawa Fort. A reception and banquet was given by the Governor to the Consular Body and the principal merchants and officials of the port. The weather throughout the day was very charming, leaving nothing to be desired.

The ordinary ceremonies were performed at the Palace, the representatives of Their Imperial Majesties the Emperor, Empress, Empress-Dowager, and H.I.H. the Crown Prince worshipping at the cenotaphs. The Empress gave a banquet to members of the Imperial family and officials of the Court during the afternoon.

H.I.H. the Crown Prince visited the Palace at 10 a.m., and was received by H.I.M. the Empress. Count Kuroda, Viscount Mutsu, Marquis Saionji, and Viscount Nomura, Ministers of State; Privy Councillors, attendants in the *Yakonomo* and *Kinkeinoma*, peers, and other high officials visited the Palace to offer their congratulations upon the occasion. As the Emperor is now absent from Tokyo no review of troops took place at Aoyama parade ground, but the soldiers of the Imperial Body Guards and the First Army Division assembled there at 9 a.m., and performed the *yohai-shiki*, or the ceremony of honouring the Emperor. H.I.H. Prince Komatsu and many prominent military officers were present.
